No one is sure that the anti-inflation steps the administration is contemplating—"tight" money and a so-called "tight" budget with continued high taxes and increasingly higher interest rates—will, in fact, curb inflation.

I've heard some top administration officials privately express serious doubts about their effectiveness. And publicly, some economists, like Leon Keyserling, think restricting the flow of money actually causes inflation instead of stopping it.

But there is one thing of which nearly everyone, in or out of the administration, does seem certain: that conventional anti-inflationary measures will increase unemployment.

Paul W. McCracken, chairman of the Economic Council, tells Congress he wishes prices could be stabilized without any affect at all on unemployment, but he doesn't believe it can be done without a substantial increase in joblessness.

Treasury Secretary David M. Kennedy says that to cool off the economy, a one percent increase in unemployment "would not be too much".

Counselor to the President Arthur F. Burns says unemployment, now at an all-time low of 3.3 percent, may have to rise to 3.5 percent or more. Even with 4.5 percent of our work force out of jobs, Mr. Burns says, he would still consider us to be in an economy of "full employment."

And the Business Council, made up mostly of leaders of large corporations sympathetic to President Nixon, declares that steps taken to curb inflation might have to push the unemployment rate up to 5.5 or perhaps a full 6 percent—double the present number.

For very good reasons, political and humanitarian, the administration has been frightened off by the prospect. And rather than bring about an abrupt, high rise in unemployment by an all-out assault against high prices, the administration talks about taking a cautious approach which, it hopes, will keep unemployment down to something the President calls an "acceptable" level.

Meanwhile, however, prices and wages continue surging upward on all fronts. The latest sorry bulletin just came from Secretary of Housing and Urban Development George Romney, who disclosed skyrocketing prices for the lumber we so desperately need to meet our critical housing shortages.

Softwood lumber prices have gone up 30 percent since last year, Secretary Romney noted, with plywood prices soaring a startling 77 percent!

Protests are mounting not only from labor and consumer groups, but from businessmen as well. Particularly those who by temperament would have no truck with gradualism.

Some members of the National Association of Manufacturers, for example, scorn the pussy-footing pusillanimity of the President's advisers. The NAM's chief economist, George G. Hagedorn, wants Mr. Nixon to plow right in and slash federal spending, with "no time to lose."

As for the increased unemployment such a rash and thoughtless move would bring: Forget it! Full employment, says Mr. Hagedorn, is a "myth" anyway, so why get strung-out on such nonsense?

Besides, a substantial labor pool of unemployed workers is still deemed desirable by a few economists who continue to cling to a vestigial brand of conscienceless capitalism that is long gone but, unfortunately, not forgotten.

Actually, there will always be a labor pool—unless the pill cuts the birth rate to zero and unless the march of science and technology suddenly stops putting so many jobs out of style.

There would even be new sources of labor if we could extricate ourselves from Vietnam. Or end the arms race.

I reject all approaches—Mr. Hagedorn's and everybody else's—that are based upon the notion that any level of unemployment is proper.

I find unacceptable the notion that there is any such thing as an acceptable increase in unemployment. Acceptable to whom? I want to know! And callous, total indifference to how many millions of men and women may be unemployed is, of course, an even worse attitude.

Mr. Hagedorn told the Joint Economic Committee that trying to stop inflation gradually, as the Nixon administration is trying to do, is "like saying if you pull a tooth gradually it will hurt you less".

As an economist, Mr. Hagedorn would make a good dentist. Maybe. What he said about dental extractions may or may not be correct. I don't know.

But nobody's talking about puling teeth; we're talking about throwing men out of work, of cutting off families from their life-sustaining source of income.

Any man who has ever been out of work or has compassion enough to imagine how it might feel to be thrown out of work, would be able to explain to Mr. Hagedorn the obvious: that the longer your job lasts, and the less the cut in income you ultimately have to take, the better.

Still on his irrelevant dentistry kick, Mr. Hagedorn also warned the Congress that there is no painless way to fight inflation. But he never made clear, nor did he show much concern over, whom he expects to bear the pain.

Those unemployment percentages Mr. Hagedorn and others throw about so easily represent people, thousands, even millions, of people. Take those percentages and transpose them into human beings, and what do you get?

Secretary of Labor George P. Shultz concedes that the administration's anti-inflation program could cause an increase of 300,000 to 500,000 jobless by the end of this year. The AFL–CIO thinks the number of lay-offs will be closer to 780,000. A Wall Street Journal article suggests it could be 1,000,000.

They would come in addition to the 2,600,000 Americans already listed among the ranks of the unemployed and the countless numbers of the under-employed who, as Senator Walter F. Mondale has pointed out, "live in pockets of poverty in the midst of unprecedented plenty".

Who are these unhappy Americans, these fellow citizens of ours who are either already unemployed or are likely to lose their precarious hold on their jobs if work becomes more scarce?

We all know who they are. They are those among us who traditionally are the last to be hired when times are good and the first to be fired when things get tough. They are the unskilled and semi-skilled workers, especially, but by no means entirely, those from minority groups; women, working part-time to help support their families; elderly persons, doing odd jobs to make ends meet on pensions suffering from steadily diminishing purchasing power.

Those who are working now have proved they do not fit the stereotypes held by some affluent Americans. They have disproved the theory that they are shiftless, idle loafers who prefer welfare to work.

But though today they have jobs, tomorrow they may be out in the streets—not because of their own failure, but because of their government's anti-inflation moves.

And many who are not working now don't fit the free-loader stereotype either: youngsters who have just graduated from high school, adults who have just completed job-training courses, servicemen who have just returned from fighting in Vietnam.

A large number of them are finding we have no room for them in our economy.

Tragically and predominantly, our unhappy Americans are teenagers and blacks, whose unemployment rate already is two and three times higher than the national average. In some critical urban areas, between 30 and 40 percent of the teenagers and blacks are right now skulking the streets out of work.

The people who will be hit hardest by deflationary attempts to cool down the economy are, in a word, the very people for whom the so-called overheated economy isn't so hot to begin with; people without capital reserves who can least afford to be without an income; people who, because of a fixed and limited income—or no steady income at all—are already being mauled by the soaring cost of living.

That is the bitter paradox: those who already suffer the most from inflation will be the same people who will suffer most from efforts to curb inflation.

That is, unless we show enough imagination and creativity to keep it from happening.

Unemployment is not a private inconvenience to be kept at acceptable levels. It is a national scourge to be wiped out altogether.

I believe that every man and woman willing to work and physically and mentally able to work is entitled to work. I believe that every American who wants productive, gainful employment has a right to productive, gainful employment.

And if, at any moment and for any reason, private industry is not able to provide full employment for our people, then I believe the government has the responsibility to step into the gap as the employer or investor of last resort.

That is especially true, it seems to me, if people lose their jobs in private industry because of deliberate governmental action. Like slowing down our economic growth in order to protect the stability of the dollar.

Let us pause and think this through carefully.

Isn't it unwise, improper and utterly unjust for our government to act to protect the value of some people's dollars—and then do nothing when, as a consequence, other people are deprived of their dollars altogether?

I simply cannot accept the view that the government can stand idly by while our lowest and most vulnerable wage earners pay for the cost of our economic stability with their livelihoods.

It is particularly outrageous for us even to contemplate letting that happen in view of the fact that our so-called anti-inflationary measures are still in their experimental stage: though we know they will cause unemployment, we do not know that they will really cure inflation.

If the national interest demands a policy that puts people out of work, however unintentionally and however temporarily, then the nation owes a special responsibility to those people. If private industry cannot give them employment, the government must.

No measure that will cause a rise in unemployment is acceptable, in my view, unless it is offset by a positive, constructive program to eliminate that unemployment. I believe the President has a responsibility, and I believe we in Congress have a responsibility, to formulate such a program.

I suggest we look into new ways by which the government can create meaningful jobs to absorb the unemployed. More than that, we must explore, more imaginatively than we have in the past, ways by which the government can stimulate new jobs in private industry and the proper training of workers to fill those jobs.

The new administration's plans for tax incentives to business for those purposes may well prove to be part of the answer to the problem. They cannot, however, be the whole answer.

Crying out to us at this time, for example, is the urgency to begin now to plan and program industrial conversion to a peacetime economy. That means manpower conversion as well.

We must find better ways to teach our young men and women how to live and earn a living in our speedily changing, computer-directed society. We need to develop more effective methods of retraining our older workers whose skills, if any, have been rendered obsolete by our never-exhausted technological ingenuity.

Already, in two of our oldest industries—construction and farming—labor-saving machines and time-saving techniques have radically changed the nature of our manpower needs, thus creating all sorts of new problems. But changes of comparable magnitude have not taken place in our thinking about how to go about solving those problems.

I am convinced that the social harm that unadjusted unemployment will surely bring will more than offset whatever benefits we may derive from an artificially imposed economic slowdown.

More crime and more riots are only the more obvious, notorious and violent manifestations of the social ills that will inevitably occur if we don't take preventive measures.

We need a program that will create jobs and tool-up workers for those jobs.

Without such a work-creating, job-filling program, we will always be timid in tackling inflation for we will always be held back by the spectre of unrestrained unemployment. We will take half-measures that will only half-halt inflation if indeed they halt it at all.

And there, finally, is unearthed the essence of a very sensible message that had been hiding all along behind Mr. Hagedorn's extravagant stance. It is a message the administration might well heed.

The President irks the NAM because he hesitates to take more aggressive measures to counter inflation for fear of bringing about a severe upturn in unemployment. For his compassion, I commend him.

But would not the President feel free to deal more forcefully with inflation if he knew that he had at his command a program by which he could eliminate unemployment almost as rapidly as it occurs?

I believe he would, I believe the country would be better for it. And I believe we can do no less.

What I have suggested will inevitably raise the question: If we guarantee every able-bodied American a job, won't that keep too much money in circulation and hence nullify the effects of whatever anti-inflation measures the government takes?

The answer is: No.

Unemployment is not the real aim of anti-inflationary moves, it is only an unintentional by-product. The additional money full employment would put into circulation might partially diminish the effects of anti-inflationary steps. But the alternative—increased unemployment compensation and welfare payments—would have the same general effect, and would be more costly.

On the other hand, aggressive anti-inflation measures, which a full-employment policy would at long last permit, would—hopefully—make a substantial contribution toward stabilizing our dollars.

I was discussing this the other day with a friend who is involved in compensatory education programs for under-privileged children out in California. Here's what he said:

"The greatest thing about keeping an able-bodied man out of the ranks of the unemployed and off welfare isn't what it does for that man's self-esteem. It's what it does for his kids."

He told me he's watched child after child "goof off, get into trouble and drop out while their fathers were idle. But when their fathers landed jobs—and held those jobs—they start to stand up straighter and look at their parents, and themselves, with new respect."

My friend concluded by saying he's noticed that these same youngsters start studying seriously "and begin feeling new hope and confidence in their futures".

That about sums up what for me is probably the best reason for pursuing—and achieving—full employment.

Certainly we have learned enough through job-training programs to know that a great many Americans, who were once written off as unemployable, are perfectly capable of standing on their own feet and earning their own living. If only we help them get started.

Let us set to the task of guaranteeing a job for every able-bodied American.

The result will be good not only for the men and women of today, it will be good for the men and women of tomorrow; it will be good not only for our dollars, it will be good for our souls.

SENATOR RICHARD BREVARD RUSSELL, OF GEORGIA

Mr. TALMADGE. Mr. President, additional editorials in praise of Senator RICHARD B. RUSSELL have been published in a number of Georgia newspapers. They express their hope, and indeed the hopes of all Georgians, for his full, speedy recovery from the tumor on his lung that he announced last week.

I bring these editorials to the attention of the Senate and ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Athens (Ga.) Daily News, Mar. 22, 1969]

BEST WISHES, SENATOR

Georgians and most of their counterparts throughout the country felt a sense of grief Thursday in hearing of the illness of U.S. Senator Richard B. Russell.

With the same dogged determination he has demonstrated in numerous battles in the Senate, Mr. Russell announced the illness himself and went to great length to explain the treatment he will begin undergoing for the lung tumor. Many people were as stunned by his straightforward announcement as by the illness itself.

All Georgians should be proud that a man of Richard Russell's stature serves this state in the federal government. Many times over, the state has been all the better and richer because of his representation in Washington.

The senior senator has indicated he will continue to serve at least through his present term. This statement in itself is gratifying.

We sincerely express to Senator Russell our heartfelt wishes for successful treatment and for the strength to recover.

All of Georgia will be thinking of him and wishing him well in the coming weeks and months.

[From the Columbus (Ga.) Enquirer, Mar. 22, 1969]

OUR PRAYERS WITH RUSSELL

It goes without saying, of course, that we read with deep regret the news that Sen. Richard Russell has cancer.

During the past few years his health has indeed been a serious problem. But despite the great discomfort emphysema has caused him, he has performed his substantial duties amazingly well.

The senator will immediately start cobalt treatments which we pray will be effective. Great strides have been made in the area of nuclear medicine in recent years. And Columbus itself is blessed with one of the most modern nuclear medicine facilities at the Medical Center.

We wish the senior senator, who has served his state and nation so well for so long, Godspeed and every hope for a full recovery.

[From the Macon (Ga.) Telegraph, Mar. 22, 1969]

GEORGIANS JOIN IN HOPE FOR RUSSELL'S RECOVERY

Georgians of all political viewpoints are saddened by the announcement of the serious illness of Sen. Richard B. Russell, widely regarded as the most influential member of the United States Congress.

The Russell announcement has triggered considerable speculation as to what moves Georgia politicians may make if the state's senior U.S. senator is forced to retire before his term expires in January 1973.

Any conjectures must include the name of Gov. Lester Maddox, who might in a "gentleman's agreement" with Lt. Gov. George T. Smith resign and be appointed to the Senate for the unexpired term. There is nothing novel about such procedure when vacancies occur in the Senate.

If such events did, in fact, occur, Maddox would almost certainly face opposition from at least former Gov. Carl Sanders in the 1972 elections. It is probable the Republicans would also field a candidate.

Meanwhile, Sen. Russell says he will undergo treatment for his lung condition and hopes he will be able to continue to serve out at least his present term. Citizens from every part of Georgia hope Sen. Russell's disease will be arrested and that he will add many more years of public service to his already illustrious career.

[From the Thomasville (Ga.) Times-Enterprise, Mar. 22, 1969]

SENATOR RUSSELL'S ILLNESS A MATTER OF CONCERN

The illness of Senator Richard B. Russell, of Georgia, is a matter of serious concern to the people of this country and especially of his home state.

His long and outstanding service in the Senate has made him a national figure, and he is held in high esteem by his colleagues, who recognize him as the best parliamentarian in the Senate, and one of the most powerful figures in the Congress.

As chairman of the appropriations committee he is today fourth in line for the Presidency in event the President should die. He has also served as chairman of the Senate Armed Services Committee, a position he gave up to head the Senate Appropriations committee.

Suffering from emphysema, Sen. Russell is said to have a lung tumor, for which the cobalt treatment will be applied, an operation having been ruled out. The hope is that the treatment, will be effective and his general condition will improve to the end that he may be spared for many more years as one of the nations leading and most influential statesmen.

The senator has many warm friends in his home state. The Times-Enterprise throughout his long career has been one of his most loved supporters. In turn the Senator has proven himself a true friend of this community, as well as of the entire state.

[From the Waycross (Ga.) Journal Herald, Mar. 22, 1969]

PRAYERS FOR SENATOR RUSSELL

Georgians and the people of the nation are distressed and concerned over the news that Sen. Richard B. Russell will undergo treatment for lung cancer.

It is not necessary to say for those familiar with the Washington political scene that Russell is a powerful and influential man.

He has been a key figure in Congress since he left the office of governor of Georgia in 1933.

Not long ago the senior senator of our state gave up his post as chairman of the Armed Services Committee, itself a key office, to take over the chairmanship of the equally important Senate Appropriations Committee.

His counsel has been sought by several Presidents and he was especially close to former President Lyndon B. Johnson who referred to the Georgian in his valedictory address to Congress.

Although Russell has always been clearly identified with Georgia and the South, his ability, dignity and fairness have won him friends from all parts of the nation.

For several years the senator, who calls Winder home, has been suffering from emphysema but he has continued to assume his heavy responsibilities.

It can only be hoped that the treatments he will now undergo will be successful and that the services of this outstanding public servant may not be lost.

Meanwhile, people everywhere and particularly those of us who are his Georgia constituents and friends, pray for his recovery.

[From the Savannah (Ga.) Morning News, Mar. 23, 1969]

THE SENATOR'S TOUGHEST FIGHT

Sen. Richard B. Russell's disclosure that he is suffering from a serious and inoperable illness weighs heavily on the thoughts of his fellow Georgians, who love and respect him as they have few men in public life.

The concern of Georgians is shared by many outside Sen. Russell's native state. Southerners have come to look upon Dick Russell as the voice of the South in Washington. And during his 36 years in the Senate officials of both parties have come to rely on his counsel as well as his ability to lead and persuade. One of his visitors at the hospital before he announced his illness was President Richard Nixon.

Sen. Russell has said he will undergo cobalt treatment for a malignant lung tumor. Lung damage caused by emphysema, from which he has suffered for some time, rules out surgery. He hopes to serve out the remainder of his term, which expires in 1972, and to continue his duties while undergoing treatment.

In Sen. Russell's words, he is "hoping this treatment will enable me to serve out my term. It is too early to make a decision on whether to seek a new term in 1972."

Sen. Russell's illness could have a profound influence on Georgia politics. He is 71 years old, has served in the Senate longer than any other member, and has been considered unbeatable at the polls. His stature and influence in Washington are such that his illness also could have powerful effects there.

Sen. Russell has said that he will be out of his office only for several days and that his treatment is now expected to last six weeks. Medical specialists have told him, he said, that "as of now I am as well qualified and able to carry on my work as I have been for the past seven months."

For the moment, the overriding consideration is that Dick Russell is undertaking what may be his toughest struggle. Georgians who have supported him through many struggles in the past will be supporting him in this one with their prayers and hopes for his recovery.

[Mar. 24, 1969]

SENATOR RUSSELL

One of the saddest things to hit Georgia—and the nation—was the announcement from Senator Russell's office that he was being treated for a potentially cancerous condition.

For many, many years Senator Russell has been a dominant figure on the national scene, and for Georgians he was the epitome of a Senator that should be sent to the nation's Congress.

Amid the sadness of the physical condition of Georgia's Senior Senator there comes the hope that modern medicine can stop the condition and save the Senator for service for the remainder of his term at least.

Georgia has done itself proud in sending Senator Russell back to the Senate time and again, and we are convinced that were his health such, the people of Georgia would continue to return him to the place in the Senate because of the honor and the prestige that he has brought to the State and its people.

The Senator has realized, we are sure, one ambition that he had: he is now the oldest Senator in term of service in the U.S. Senate and is serving as President pro tempore of the Senate.

Other honors have come to the Georgian as he compiled a record of service to his state and nation that is the envy of many of his contemporaries in the Senate.

Just last week Senator Russell was honored as the first member of the Congress ever to receive the James B. Forrestal Award of the National Security Industrial Association. This latest recognition was merely the continuation of the many awards and recognitions that he has been given over the years.

The fondest hope of most Georgians, as well as many people over the nation, is that the treatments the Senator is now undergoing will be successful, and that for four more years at least, Senator Russell will grace the scene of the U.S. Senate.

[From the Gwinnett (Ga.) Daily News, Mar. 24, 1969]

SENATOR RUSSELL'S ILLNESS

All Georgians were saddened by the news Thursday that a malignant tumor has been found on the lung of Sen. Richard Russell. No man is as widely respected in Georgia than the state's senior senator and president pro tem of the Senate.

His constituents join Russell in the hope that he not only can serve out the rest of his present term, but that treatment can arrest the cancer sufficiently to prolong his life and his usefulness for years beyond that. Physicians plan to begin cobalt treatments immediately, and they will know more about this condition after they can see how he responds to the treatment.

Meanwhile, Russell plans to continue his regular Senate duties.

Speculation inevitably will begin on what might happen if the illness forces Russell to resign before the end of his present term. But that is premature at this point. The senator made it clear he has no present intention of stepping down.

Georgia and the nation need his service. He is the dean of the Senate, not only in terms of seniority, but in distinction, contribution and knowledge as well. He has served his state and the cause of sound government exceedingly well.

For our sake as well as for his, we pray that he will remain able to serve for many months to come.

[From the Albany (Ga.) Herald, Mar. 24, 1969]

GOOD LUCK, SENATOR RUSSELL

Young man and old, Richard Brevard Russell has served the people of Georgia as a State legislator, a Governor and United States Senator for well over 40 years, 36 of them in Washington. Consequently, a man of his ability, character and stature must be reflecting ruefully, as he undergoes therapy for a lung tumor which he has good reason to believe is malignant, on how eager so many of his political colleagues back home seem to be to dispose of him. This reaction has not represented any expression of anguish; rather it has been profoundly political.

As Georgians, we can say what Senator Russell never would: We resent these comments. They are in the worst possible taste. Senator Russell is by no means dead. His health, at 71 years of age, is not of the best, admittedly. But like any other human being anywhere, he is entitled to seek and receive medical attention for his infirmities without being consigned, however prematurely, to the grave that awaits not only him, but most assuredly each and every one of us.

Fortunately, none of us, as individuals, knows that day and hour, as an all-wise Providence has planned it. And who really knows? Richard Brevard Russell just might out-live many of those who now deal in shabby speculation about his successor. Permit us to so hope. And good luck, Senator Russell.

[From the Atlanta (Ga.) Constitution, Mar. 24, 1969]

SENATOR RUSSELL'S ILLNESS MAKES MANY PEOPLE SAY, "I REMEMBER"

(By Celestine Sibley)

The illness of Richard Russell has, I feel sure, set all his friends and neighbors in Georgia and probably people in all parts of the world thinking about him with special warmth and concern. The day the word that he had cancer reached the Georgia capitol you could hear people all over the place beginning sentences with, "I remember . . ." They remember all kinds of things about him, important and trivial, funny and solemn. So many of them were inspired to run for public office by his example back in the 1930s when he stumped the state as a bright young reform candidate for governor.

He was my first Georgia politician. I had worked for the paper only a little while when I was sent to Winder to cover a speech by Senator Russell at a barbecue. I don't remember the speech now but I remember the feeling I had about the tall, slender man who moved easily and comfortably among his old neighbors and friends. The smell of smoke from the barbecue pit was rich and pungent with the blend of oak and hickory and succulent roast pork. Hound dogs flapped their tails from beneath parked cars and shade trees. Little children cried out and were hushed by an absent pat of the hand from a listening mother or a father. At the time I was impressed by the fact that Senator Russell arrived without a retinue of aides and flunkies and that he was so approachable.

There were times later when I was to approach him for favors for friends and the marvel to me was that he received each small-seeming request as if it were of the greatest importance and dealt with it with speed and efficiency.

There was the time the teen-age daughter of a friend of mine was missing in Europe. She had been in school in Florence and had told her parents that she had just enough money to get to Paris for a holiday. They told her they would send money to her in care of American Express in Paris and to let them know that she had arrived there safely and collected it.

Days passed and they didn't hear from their daughter. They telephoned American Express in Paris to find that the money still waited for her there, uncollected. They didn't know a soul in Paris to whom they could appeal for help and finally the mother called me, assuming that newspaper friends would have connections in almost every corner of the world.

Oddly enough my newspaper friends who might have had Paris connections didn't take the problem seriously. They had the

"Oh, she's having a good time, she'll turn up," approach.

Incensed because she was a child dear to me too, I stalked to the telephone and called Senator Russell at his home in Winder. He might have sighed a little to himself but he didn't laugh. He said, "Celestine, there are probably three million Americans in Paris this summer but we wouldn't want one little Georgia girl to be lost. I'll see what I can do."

Within 12 hours Senator Russell's "connections" in Paris had had her telephone her frantic parents.

It was a small thing to take to so powerful and important a man, I realize now. But Senator Russell didn't belittle it. He dealt with it. The picture of a great man is built of such little bits and pieces. No wonder so many of us grieve that he is ill and pray for his recovery.

[From the Rome (Ga.) News Tribune, Mar. 21, 1969]

RUSSELL ILLNESS

Not only Georgia, but the entire nation, has cause to regret the serious illness which afflicts Sen. Richard B. Russell.

Although he has faithfully represented his state for more than 30 years, Senator Russell is far from being a partisan servitor of either state or party. His service encompasses the entire range of United States interests.

Never, in its long history has the U.S. Senate had a more able and informed member. Senator Russell has been a valued advisor to five American presidents. We all hope that such a career will not be untimely interrupted by illness.

GENERAL SHOUP ASSAILS NEW AMERICAN MILITARISM

Mr. YOUNG of Ohio. Mr. President, Gen. David M. Shoup, one of our Nation's greatest fighting men and former Commandant of the U.S. Marine Corps, has written an extremely important article, "The New American Militarism," which appears in the April 1969 edition of the Atlantic. General Shoup's article is without doubt the most damning indictment of the Military Establishment and of the military-industrial complex ever written by one who was so intimately involved in the Defense Establishment.

General Shoup was a heroic leader in the victorious invasion of Tarawa in 1943 and rose to become Commandant of the U.S. Marine Corps for 4 years until his retirement in December 1963. He has been one of the most vociferous critics of our involvement in the ugly civil war in Vietnam, and in 1966 stated:

In my judgment, the whole of Southeast Asia as related to the present and future safety and freedom of the American people is not worth the life of a single American.

General Shoup has charged that an ambitious elite of high-ranking officers from all branches of our Armed Forces prefer war to peace and are turning the United States into "a militaristic and aggressive nation." He has asserted that the search for promotion, interservice rivalry, and an eagerness to test military doctrines were the prime factors behind our involvement in Vietnam and the top-heavy invasion of the Dominican Republic with more than 20,000 marines and infantry. He condemns the bombing of Vietnam, including North Vietnam, as "one of the most wasteful and expensive hoaxes ever to be put over on the American people."

General Shoup charges that military, naval, Marine, and Air Force leaders were so eager and so obsessed to test new equipment and tactics in Vietnam that they encouraged the Johnson administration to mire the United States in the quagmire of Vietnam.

This former Commandant of the Marine Corps assails the warlike propensities of high-ranking officers as a natural product of their training, selection, and code. He writes:

Civilians can scarcely understand or even believe that many ambitious military professionals truly yearn for wars and the opportunities for glory and distinction afforded only in combat. A career of peacetime duty is a dull and frustrating prospect for the normal regular officer to contemplate.

Since the end of World War II—

The general wrote—

these officers have gained a new respect and the voice and views of the professional military people became increasingly prominent.

Their position—

General Shoup stated—

was enhanced by the millions of veterans from that and succeeding wars for whom the military indoctrination may well be the most impressive and influential experience they have ever had.

Mr. President, General Shoup's relentless and sweeping comments should be read by every American concerned with the future security and well-being of our Nation. In my view it should be "must" reading in every home, in every high school and college classroom in the Nation.

General Shoup, who will undoubtedly now be assailed by some rightwing extremists and apologists for the military-industrial complex such as members of the Liberty Lobby, so called, has performed a very great public service in bringing the views as he sees them and as he lived them to the attention of his countrymen. He is indeed a hero in peace as well as in war and deserves the thanks of all Americans for his efforts to stem the rampant trend toward militarism in our Nation. I commend his article to Senators and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW AMERICAN MILITARISM

(By Gen. David M. Shoup)

(NOTE.—Its roots are in the experience of World War II. The burgeoning military establishment and associated industries fuel it. Anti-Communism provides the climate which nurtures it. "It" is a "new American militarism." General Shoup, a hero of the Battle of Tarawa in 1943, who rose to become Commandant of the United States Marine Corps for four years until his retirement in December, 1963, doesn't like it. He has written this essay in collaboration with another retired Marine officer, Colonel James A. Donovan.)

America has become a militaristic and aggressive nation. Our massive and swift invasion of the Dominican Republic in 1965, concurrent with the rapid buildup of U.S. military power in Vietnam, constituted an impressive demonstration of America's readiness to execute military contingency plans and to seek military solutions to problems of political disorder and potential Communist threats in the areas of our interest.

This "military task force" type of diplomacy is in the tradition of our more primitive, pre-World War II "gunboat diplomacy," in which we landed small forces of Marines to protect American lives and property from the perils of native bandits and revolutionaries. In those days the U.S. Navy and its Marine landing forces were our chief means, short of war, for showing the flag, exercising American power, and protecting U.S. interests abroad. The Navy, enjoying the freedom of the seas, was a visible and effective representative of the nation's sovereign power. The Marines could be employed ashore "on such other duties as the President might direct" without congressional approval or a declaration of war. The U.S. Army was not then used so freely because it was rarely ready for expeditionary service without some degree of mobilization, and its use overseas normally required a declaration of emergency or war. Now, however, we have numerous contingency plans involving large joint Air Force-Army-Navy-Marine task forces to defend U.S. interests and to safeguard our allies wherever and whenever we suspect Communist aggression. We maintain more than 1,517,000 Americans in uniform overseas in 119 countries. We have 8 treaties to help defend 48 nations if they ask us to—or if we choose to intervene in their affairs. We have an immense and expensive military establishment, fueled by a gigantic defense industry, and millions of proud, patriotic, and frequently bellicose and militaristic citizens. How did this militarist culture evolve? How did this militarism steer us into the tragic military and political morass of Vietnam?

Prior to World War II, American attitudes were typically isolationist, pacifist, and generally antimilitary. The regular peacetime military establishment enjoyed small prestige and limited influence upon national affairs. The public knew little about the armed forces, and only a few thousand men were attracted to military service and careers. In 1940 there were but 428,000 officers and enlisted men in the Army and Navy. The scale of the war, and the world's power relationships which resulted, created the American military giant. Today the active armed forces contain over 3.4 million men and women, with an additional 1.6 million ready reserves and National Guardsmen.

America's vastly expanded world role after World War II hinged upon military power. The voice and views of the professional military people became increasingly prominent. During the postwar period, distinguished military leaders from the war years filled many top positions in government. Generals Marshall, Eisenhower, MacArthur, Taylor, Ridgeway, LeMay, and others were not only popular heroes but respected opinion-makers. It was a time of international readjustment; military minds offered the benefits of firm views and problem-solving experience to the management of the nation's affairs. Military procedures—including the general staff system, briefings, estimates of the situation, and the organizational and operational techniques of the highly schooled, confident military professionals—spread throughout American culture.

World War II had been a long war. Millions of young American men had matured, been educated, and gained rank and stature during their years in uniform. In spite of themselves, many returned to civilian life as indoctrinated, combat-experienced military professionals. They were veterans, and for better or worse would never be the same again. America will never be the same either. We are now a nation of veterans. To the 14.9 million veterans of World War II, Korea added another 5.7 million five years later, and ever since, the large peacetime military

establishment has been training and releasing draftees, enlistees, and short-term reservists by the hundreds of thousands each year. In 1968 the total living veterans of U.S. military service numbered over 23 million, or about 20 percent of the adult population.

Today most middle-aged men, most business, government, civic, and professional leaders, have served some time in uniform. Whether they liked it or not, their military training and experience have affected them, for the creeds and attitudes of the armed forces are powerful medicine, and can become habit-forming. The military codes include all the virtues and beliefs used to motivate men of high principle: patriotism, duty and service to country, honor among fellowmen, courage in the face of danger, loyalty to organization and leaders, self-sacrifice for comrades, leadership, discipline, and physical fitness. For many veterans the military's efforts to train and indoctrinate them may well be the most impressive and influential experience they have ever had—especially so for the young and less educated.

In addition, each of the armed forces has its own special doctrinal beliefs and well-catalogued customs, traditions, rituals, and folklore upon which it strives to build a fiercely loyal military character and esprit de corps. All ranks are taught that their unit and their branch of the military service are the most elite, important, efficient, or effective in the military establishment. By believing in the superiority and importance of their own service they also provide themselves a degree of personal status, pride, and self-confidence.

As they get older, many veterans seem to romanticize and exaggerate their own military experience and loyalties. The policies, attitudes, and positions of the powerful veterans' organizations such as the American Legion, Veterans of Foreign Wars, and AMVETS, totaling over 4 million men, frequently reflect this pugnacious and chauvinistic tendency. Their memberships generally favor military solutions to world problems in the pattern of their own earlier experience, and often assert that their military service and sacrifice should be repeated by the younger generations.

Closely related to the attitudes and influence of America's millions of veterans is the vast and powerful complex of the defense industries, which have been described in detail many times in the eight years since General Eisenhower first warned of the military-industrial power complex in his farewell address as President. The relationship between the defense industry and the military establishment is closer than many citizens realize. Together they form a powerful public opinion lobby. The several military service associations provide both a forum and a meeting ground for the military and its industries. The associations also provide each of the armed services with a means of fostering their respective roles, objectives, and propaganda.

Each of the four services has its own association, and there are also additional military function associations, for ordnance, management, defense industry, and defense transportation, to name some of the more prominent. The Air Force Association and the Association of the U.S. Army are the largest, best organized, and most effective of the service associations. The Navy League, typical of the "silent service" traditions, is not as well coordinated in its public relations efforts, and the small Marine Corps Association is not even in the same arena with the other contenders, the Marine Association's main activity being the publication of a semiofficial monthly magazine. Actually, the service associations' respective magazines, with an estimated combined circulation of over 270,000, are the primary medium serving the several associations' purposes.

Air Force and Space Digest, to cite one example, is the magazine of the Air Force Association and the unofficial mouthpiece of the U.S. Air Force doctrine, "party line," and propaganda. It frequently promotes Air Force policy that has been officially frustrated or suppressed within the Department of Defense. It beats the tub for strength through aerospace power, interprets diplomatic, strategic, and tactical problems in terms of airpower, stresses the requirements for quantities of every type of aircraft, and frequently perpetuates the extravagant fictions about the effectiveness of bombing. This, of course, is well coordinated with and supported by the multibillion-dollar aerospace industry, which thrives upon the boundless desires of the Air Force. They reciprocate with lavish and expensive ads in every issue of *Air Force*. Over 96,000 members of the Air Force Association receive the magazine. Members include active, reserve, retired personnel, and veterans of the U.S. Air Force. Additional thousands of copies go to people engaged in the defense industry. The thick mixture of advertising, propaganda, and Air Force doctrine continuously repeated in this publication provides its readers and writers with a form of intellectual hypnosis, and they are prone to believe their own propaganda because they read it in *Air Force*.

The American people have also become more and more accustomed to militarism, to uniforms, to the cult of the gun, and to the violence of combat. Whole generations have been brought up on war news and wartime propaganda; the few years of peace since 1939 have seen a steady stream of war novels, war movies, comic strips, and television programs with war or military settings. To many Americans, military training, expeditionary service, and warfare are merely extensions of the entertainment and games of childhood. Even the weaponry and hardware they use at war are similar to the highly realistic toys of their youth. Soldiering loses appeal for some of the relatively few who experience the blood, terror, and filth of battle; for many, however, including far too many senior professional officers, war and combat are an exciting adventure, a competitive game, and an escape from the dull routines of peacetime.

It is this influential nucleus of aggressive, ambitious professional military leaders who are the root of America's evolving militarism. There are over 410,000 commissioned officers on active duty in the four armed services. Of these, well over half are junior ranking reserve officers on temporary active duty. Of the 150,000 or so regular career officers, only a portion are senior ranking colonels, generals, and admirals, but it is they who constitute the elite core of the military establishment. It is these few thousand top-ranking professionals who command and manage the armed forces and plan and formulate military policy and opinion. How is it, then, that in spite of civilian controls and the national desire for peace, this small group of men exert so much martial influence upon the government and life of the American people?

The military will disclaim any excess of power or influence on their part. They will point to their small numbers, low pay, and subordination to civilian masters as proof of their modest status and innocence. Nevertheless, the professional military, as a group, is probably one of the best organized and most influential of the various segments of the American scene. Three wars and six major contingencies since 1940 have forced the American people to become abnormally aware of the armed forces and their leaders. In turn the military services have produced an unending supply of distinguished, capable, articulate, and effective leaders. The sheer skill, energy, and dedication of America's military officers make them dominant in almost every government or civic organization they may inhabit, from the federal Cabinet to the local PTA.

The hard core of high-ranking professionals are, first of all, mostly service academy graduates: they had to be physically and intellectually above average among their peers just to gain entrance to an academy. Thereafter for the rest of their careers they are exposed to constant competition for selection and promotion. Attrition is high, and only the most capable survive to reach the elite senior ranks. Few other professions have such rigorous selection systems; as a result, the top military leaders are top-caliber men.

Not many industries, institutions, or civilian branches of government have the resources, techniques, or experience in training leaders such as are now employed by the armed forces in their excellent and elaborate school systems. Military leaders are taught to command large organizations and to plan big operations. They learn the techniques of influencing others. Their education is not, however, liberal or cultural. It stresses the tactics, doctrines, traditions, and codes of the military trade. It produces technicians and disciples, not philosophers.

The men who rise to the top of the military heirarchy have usually demonstrated their effectiveness as leaders, planners, and organization managers. They have perhaps performed heroically in combat, but most of all they have demonstrated, their loyalty as proponents of their own service's doctrine and their dedication to the defense establishment. The paramount sense of duty to follow orders is at the root of the military professional's performance. As a result the military often operate more efficiently and effectively in the arena of defense policy planning than do their civilian counterparts in the State Department. The military planners have their doctrinal beliefs, their loyalties, their discipline, and their typical desire to compete and win. The civilians in government can scarcely play the same policy-planning game. In general the military are better organized, they work harder, they think straighter, and they keep their eyes on the objective, which is to be instantly ready to solve the problem through military action while ensuring that their respective service gets its proper mission, role, and recognition in the operation. In an emergency the military usually have a ready plan; if not, their numerous doctrinal manuals provide firm guidelines for action. Politicians, civilian appointees, and diplomats do not normally have the same confidence about how to react to threats and violence as do the military.

The motivations behind these endeavors are difficult for civilians to understand. For example, military professionals cannot measure the success of their individual efforts in terms of personal financial gain. The armed forces are not profit-making organizations, and the rewards for excellence in the military profession are acquired in less tangible forms. Thus it is that promotion and the responsibilities of higher command, with the related fringe benefits of quarters, servants, privileges, and prestige, motivate most career officers. Promotions and choice job opportunities are attained by constantly performing well, conforming to the expected patterns, and pleasing the senior officers. Promotions and awards also frequently result from heroic and distinguished performance in combat, and it takes a war to become a military hero. Civilians can scarcely understand or even believe that many ambitious military professionals truly yearn for wars and the opportunities for glory and distinction afforded only in combat. A career of peacetime duty is a dull and frustrating prospect for the normal regular officer to contemplate.

The professional military leaders of the U.S. Armed Forces have some additional motivations which influence their readiness to involve their country in military ventures. Unlike some of the civilian policy-makers, the military has not been obsessed with the

threat of Communism per se. Most military people know very little about Communism either as a doctrine or as a form of government. But they have been given reason enough to presume that it is bad and represents the force of evil. When they can identify "Communist aggression," however, the matter then becomes of direct concern to the armed forces. Aggressors are the enemy in the war games, the "bad guys," the "Reds." Defeating aggression is a gigantic combat-area competition rather than a crusade to save the world from Communism. In the military view, all "Communist aggression" is certain to be interpreted as a threat to the United States.

The armed forces' role in performing its part of the national security policy—in addition to defense against actual direct attack on the United States and to maintaining the strategic atomic deterrent forces—is to be prepared to employ its *General Purpose Forces* in support of our collective security policy and the related treaties and alliances. To do this it deploys certain forces to forward zones in the Unified Commands, and maintains an up-to-date file of scores of detailed contingency plans which have been thrashed out and approved by the Joint Chiefs of Staff. Important features of these are the movement or deployment schedules of task forces assigned to each plan. The various details of these plans continue to create intense rivalries between the Navy-Marine sea-lift forces and the Army-Air Force team of air-mobility proponents. At the senior command levels parochial pride in service, personal ambitions, and old Army-Navy game rivalry stemming back to academy loyalties can influence strategic planning far more than most civilians would care to believe. The game is to be ready for deployment sooner than the other elements of the joint task force and to be so disposed as to be the "first to fight." The danger presented by this practice is that readiness and deployment speed become ends in themselves. This was clearly revealed in the massive and rapid intervention in the Dominican Republic in 1965 when the contingency plans and interservice rivalry appeared to supersede diplomacy. Before the world realized what was happening, the momentum and velocity of the military plans propelled almost 20,000 U.S. soldiers and Marines into the small turbulent republic in an impressive race to test the respective mobility of the Army and the Marines, and to attain overall command of "U.S. Forces Dom. Rep." Only a fraction of the force deployed was needed or justified. A small 1935-model Marine landing force could probably have handled the situation. But the Army airlifted much of the 82nd Airborne Division to the scene, included a lieutenant general, and took charge of the operation.

Simultaneously, in Vietnam during 1965 the four services were racing to build up combat strength in that hapless country. This effort was ostensibly to save South Vietnam from Viet Cong and North Vietnamese aggression. It should also be noted that it was motivated in part by the same old interservice rivalry to demonstrate respective importance and combat effectiveness.

The punitive air strikes immediately following the Tonkin Gulf incident in late 1964 revealed the readiness of naval air forces to bomb North Vietnam. (It now appears that the Navy actually had attack plans ready even before the alleged incident took place!) So by early 1965 the Navy carrier people and the Air Force initiated a contest of comparative strikes, sorties, tonnages dropped, "Killed by Air" claims, and target grabbing which continued up to the 1968 bombing pause. Much of the reporting on air action has consisted of misleading data or propaganda to serve Air Force and Navy purposes. In fact, it became increasingly apparent that the U.S. bombing effort in both North and South Vietnam has been one of the most wasteful and expensive hoaxes ever to be put over on the American people. Tactical and close air support of ground operations is essential, but air power use in general has to a large degree been a contest for the operations planners, "fine experience" for young pilots, and opportunity for career officers.

The highly trained professional and aggressive career officers of the Army and Marine Corps played a similar game. Prior to the decision to send combat units to South Vietnam in early 1965, both services were striving to increase their involvement. The Army already had over 16,000 military aid personnel serving in South Vietnam in the military adviser role, in training missions, logistic services, supporting helicopter companies, and in Special Forces teams. This investment of men and materiel justified a requirement for additional U.S. combat units to provide local security and to help protect our growing commitment of aid to the South Vietnam regime.

There were also top-ranking Army officers who wanted to project Army ground combat units into the Vietnam struggle for a variety of other reasons; to test plans and new equipment, to test the new air-mobile theories and tactics, to try the tactics and techniques of counterinsurgency, and to gain combat experience for young officers and noncommissioned officers. It also appeared to be a case of the military's duty to stop "Communist aggression" in Vietnam.

The Marines had somewhat similar motivations, the least of which was any real concern about the political or social problems of the Vietnamese people. In early 1965 there was a shooting war going on and the Marines were being left out of it, contrary to all their traditions. The Army's military advisory people were hogging American participation—except for a Marine Corps transport helicopter squadron at Danang which was helping the Army of the Republic of Vietnam. For several years young Marine officers had been going to South Vietnam from the 3rd Marine Division on Okinawa for short tours of "on-the-job training" with the small South Vietnam Marine Corps. There was a growing concern, however, among some senior Marines that the Corps should get involved on a larger scale and be the "first to fight" in keeping with the Corps' traditions. This would help justify the Corps' continued existence, which many Marines seem to consider to be in constant jeopardy.

The Corps had also spent several years exploring the theories of counterinsurgency and as early as 1961 had developed an elaborate lecture-demonstration called OPERATION CORMORANT, for school and Marine Corps promotion purposes, which depicted the Marines conducting a large-scale amphibious operation on the coast of Vietnam and thereby helping resolve a hypothetical aggressor-insurgency problem. As always it was important to Marine planners and doctrinaires to apply an amphibious operation to the Vietnam situation and provide justification for this special Marine functional responsibility. So Marine planners were seeking an acceptable excuse to thrust a landing force over the beaches of Vietnam when the Viet Cong attacked the U.S. Army Special Forces camp at Pleiku in February, 1965. It was considered unacceptable aggression, and the President was thereby prompted to put U.S. ground combat units into the war. Elements of the 3rd Marine Division at Okinawa were already aboard ship and eager to go, for the Marines also intended to get to Vietnam before their neighbor on Okinawa, the Army's 173rd Airborne Brigade, arrived. (Actually the initial Marine unit to deploy was an airlifted antiaircraft missile battalion which arrived to protect the Danang air base.) With these initial deployments the Army-Marine race to build forces in Vietnam began in earnest and did not slow down until both became overextended, overcommitted, and depleted at home.

For years up to 1964 the chiefs of the armed services, of whom the author was then one, deemed it unnecessary and unwise for U.S. forces to become involved in any ground war in Southeast Asia. In 1964 there were changes in the composition of the Joint Chiefs of Staff, and in a matter of a few months the Johnson Administration, encouraged by the aggressive military, hastened into what has become the quagmire of Vietnam. The intention at the time was that the war effort be kept small and "limited." But as the momentum and involvement built up, the military leaders rationalized a case that this was not a limited-objective exercise, but was a proper war in defense of the United States against "Communist aggression" and in honor of our area commitments.

The battle successes and heroic exploits of America's fine young fighting men have added to the military's traditions which extol service, bravery, and sacrifice, and so it has somehow become unpatriotic to question our military strategy and tactics or the motives of military leaders. Actually, however, the military commanders have directed the war in Vietnam, they have managed the details of its conduct; and more than most civilian officials, the top military planners were initially ready to become involved in Vietnam combat and have the opportunity to practice their trade. It has been popular to blame the civilian administration for the conduct and failures of the war rather than to question the motives of the military. But some of the generals and admirals are by no means without responsibility for the Vietnam miscalculations.

Some of the credibility difficulties experienced by the Johnson Administration over its war situation reports and Vietnam policy can also be blamed in part upon the military advisers. By its very nature most military activity falls under various degrees of security classification. Much that the military plans or does must be kept from the enemy. Thus the military is indoctrinated to be secretive, devious, and misleading in its plans and operations. It does not, however, always confine its security restrictions to purely military operations. Each of the services and all of the major commands practice techniques of controlling the news and the release of self-serving propaganda: in "the interests of national defense," to make the service look good, to cover up mistakes, to build up and publicize a distinguished military personality, or to win a round in the continuous gamesmanship of the interservice contest. If the Johnson Administration suffered from lack of credibility in its reporting of the war, the truth would reveal that much of the hocus-pocus stemmed from schemers in the military services, both at home and abroad.

Our militaristic culture was born of the necessities of World War II, nurtured by the Korean War, and became an accepted aspect of American life during the years of cold war emergencies and real or imagined threats from the Communist bloc. Both the philosophy and the institutions of militarism grew during these years because of the momentum of their own dynamism, the vigor of their ideas, their large size and scope, and because of the dedicated concentration of the emergent military leaders upon their doctrinal objectives. The dynamism of the defense establishment and its culture is also inspired and stimulated by vast amounts of money, by the new creations of military research and materiel development, and by the concepts of the Defense Department-supported "think factories." These latter are extravagantly funded civilian organizations of scientists, analysts, and retired military strategists who feed new militaristic philosophies into the Defense Department to help broaden the views of the single service doctrinaires, to create fresh policies and new requirements for ever larger, more expensive defense forces.

Somewhat like a religion, the basic appeals of anti-Communism, national defense, and patriotism provide the foundation for a powerful creed upon which the defense establishment can build, grow, and justify its cost. More so than many large bureaucratic organizations, the defense establishment now devotes a large share of its efforts to self-perpetuation, to justifying its organizations, to preaching its doctrines, and to self-maintenance and management. Warfare becomes an extension of war games and field tests. War justifies the existence of the establishment, provides experience for the military novice and challenges for the senior officer. Wars and emergencies put the military and their leaders on the front pages and give status and prestige to the professionals. Wars add to the military traditions, the self-nourishment of heroic deeds, and provide a new crop of military leaders who become the rededicated disciples of the code of service and military action. Being recognized public figures in a nation always seeking folk heroes, the military leaders have been largely exempt from the criticism experienced by the more plebeian politician. Flag officers are considered "experts," and their views are often accepted by press and Congress as the gospel. In turn, the distinguished military leader feels obligated not only to perpetuate loyally the doctrine of his service but to comply with the stereotyped military characteristics by being tough, aggressive, and firm in his resistance to Communist aggression and his belief in the military solutions to world problems. Standing closely behind these leaders, encouraging and prompting them are the rich and powerful defense industries. Standing in front, adorned with service caps, ribbons, and lapel emblems, is a nation of veterans—patriotic, belligerent, romantic, and well intentioned, finding a certain sublimation and excitement in their country's latest military venture. Militarism in America is in full bloom and promises a future of vigorous self-pollination—unless the blight of Vietnam reveals that militarism is more a poisonous weed than a glorious blossom.

THE PRESIDENT'S OIL IMPORT POLICY

Mr. KENNEDY. Mr. President, when the President first announced that he was taking it upon himself to decide all future questions of oil import policy, I expressed the hope that the new study he was ordering would not be used as an excuse for delay. I ask unanimous consent that the text of the press release I issued on February 20 be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR EDWARD M. KENNEDY

Today's announcement by President Nixon that he is assuming personal responsibility for all decisions in the area of oil import controls is a welcome one to the extent that fact-finding and decisions regarding the oil import program will be taken out of the Interior Department where they tend to be most vulnerable to the importunings of the oil industry.

On the other hand, the oil industry's response to all proposals for the long overdue rethinking of the oil import program has always been "further study", i.e., delay. I hope President Nixon will give us assurance that "extensive review in detail" does not mean indefinite delay. Congressional committees, executive agencies, and other groups have developed sufficient information, statistics, and testimony over the past decade to enable the President and Congress to move immediately to the action stage. I, for one, have expressed my intention to introduce legislation to change the oil import program, and I am proceeding on this course.

I do not think appointment of a Cabinet level or non-Government study group is necessary or justified. However, if the President appoints such a group, it should be fully representative of consumer and citizen interests, with a strictly limited representation from the petroleum-petrochemical industry. It should have a mandate to report quickly, certainly within 90 days.

I am also hopeful that today's announcement will not presage any delay in two pending actions affecting New England's access to reasonably priced oil products. Both the Machiasport free trade zone proposal and the pending regulation regarding independent oil terminal operators constitute relief which should and must be granted in any event as long as the present system of controls continues. Thus these should be implemented immediately, regardless of what major overhauls in the system may eventually take place.

I am communicating these suggestions directly to the President in a telegram tonight, and am asking for an early opportunity to meet with the person in his office who will have responsibility for this area.

Mr. KENNEDY. Mr. President, I also indicated that I thought that it would be a waste of time and effort to appoint a Cabinet-level committee to study this problem. Yesterday, 1 month and 6 days after his original announcement, the President revealed that he is convening such a Cabinet-level committee. Thus not only will we have the additional delay which working through such a committee will engender, but we have also presumably had 5 weeks of inaction before the Cabinet committee has even begun its work. During those 5 weeks, I would have thought that the entire machinery of the Federal Government could have assembled all the conceivable information necessary to make an enlightened decision. In our recent hearings before the Senate Antitrust Subcommittee, I asked the expert witnesses who are experienced in this field how long it should take to make the necessary decisions once the available information was assembled, and they indicated that 2 or 3 months would certainly be sufficient time. The entire Nation has suffered for 10 years now under the yoke of the oil import program, and it has cost consumers and businessmen some $40 to $70 billion. Every week that goes by means more millions of dollars of unnecessary expense to the American public.

The people of the Nation, especially the people of my section of the country, deserve relief, and deserve it immediately.

President Nixon owes them an explanation for the delays, and he owes them action.

SENATOR RICHARD RUSSELL HAS OUR HOPES FOR COMPLETE RECOVERY

Mr. YARBOROUGH. Mr. President, I join with Senators in wishing the distinguished senior Senator from Georgia, RICHARD B. RUSSELL, a speedy and complete recovery.

I was shocked and disturbed to learn of his illness this past weekend. It is my fervent hope that the miracles of modern medical science will provide a cure for his illness.

Since he came into the Senate in 1933, Senator RICHARD RUSSELL has eptomized integrity, dignity, fairness, and all of the great qualities that make him the Senators' Senator. His illness has stunned this body. We all look to him as the premier parliamentarian among us. Any Senator could approach him and could ask for counsel or advice on parliamentary procedure. He always gave it freely, accurately, and truly.

It has been my privilege this past 4 years to serve with Senator RUSSELL as a member of the Committee on Appropriations.

Now, after 36 years in the Senate, Senator RUSSELL has become President pro tempore and also chairman of the Committee on Appropriations. He has compiled a record of dedication and service to his constituents and to this country which brings credit to his name, to his State, and to the Senate as a body.

Even though he is away for treatment for only a short period of time, we miss his wisdom and counsel from day to day. All Members of this body wish him well and look forward to his return from the hospital soon.

COAL MINER'S PNEUMOCONIOSIS

Mr. BYRD of West Virginia. Mr. President, earlier today I sent to the desk a bill to provide Federal financial assistance to States to enable them to pay compensation to certain disabled individuals who, as a result of their employment in the coal-mining industry, suffer from pneumoconiosis and who are not entitled to compensation under any workmen's compensation law. The bill is being cosponsored by my senior colleague, Mr. RANDOLPH, and myself, and we hope that other Senators will join in cosponsoring the bill. We would welcome additional names in support of this measure.

The purpose of the bill is to provide compensation to disabled coal miners suffering from "black lung," and other forms of pneumoconiosis, who are not covered by State laws.

My colleague and I believe that here is a legislative gap which should be bridged, and it seems to us that the only way to do it is through the enactment of Federal legislation.

For example, the West Virginia Legislature recently enacted a new compensation law covering pneumoconiosis, but I am advised that some of the "black lung" sufferers may not benefit from it because such workmen's compensation legislation cannot be retroactive.

So, unless a Federal law is enacted to include those who may have retired before the new State law goes into effect, or for whom the statute of limitations may have expired, I am told that some of these people may have no recourse to compensation. Therefore, the bill which my colleague and I are sponsoring would authorize compensation in such cases on a Federal-State matching basis. The legislation would only affect those miners disabled from pulmonary diseases contracted through exposure to coal dust,

silica, et cetera, and who are not covered by State laws.

Under the bill, the Secretary of Labor would be authorized to enter into an agreement with any State for the purpose of assisting that State in providing compensation to disabled individuals who, as a result of their employment in the coal mining industry, are suffering from pneumoconiosis and who are not entitled to receive compensation under any workmen's compensation law.

The State agency administering the workmen's compensation law of the State would be responsible for administering the act which we are proposing. The amount of compensation payable to any individual would be $25 per week. This amount would be lower than the benefits to which miners would be entitled under the compensation laws of any State, but the amount would at least provide an income from $100 to perhaps $115 per month, which would prevent many families from having to depend on public welfare. The $25 benefit payment, being lower, I am told, than that provided by any compensation law of any State would encourage miners to explore eligibility before a State's statute of limitations expires rather than take the chance of receiving benefits under the Federal-State program at a level lower than the benefits provided in a State's workmen's compensation program.

Under this bill the State of West Virginia would not have to bear the burden of paying compensation under the Federal-State program to a former West Virginian who would now be living, let us say, in the State of California or Ohio or Kentucky. An individual would have to be a resident of West Virginia in order to qualify under this program in West Virginia.

This legislation would leave the definition of pneumoconiosis to the respective State laws, but a person entitled to benefits under this act would have to be unable, by reason of pneumoconiosis contracted as a result of employment in or in connection with the mining of coal, to engage in substantial gainful activity requiring skills or abilities comparable to those of any gainful activity in which he has previously engaged with regularity and over a substantial period of time.

The act would expire in 20 years—specifically with the close of December 31, 1989. The Federal Government would provide 100 percent of compensation and administrative costs in the first calendar year, commencing on January 1, 1970. The Federal share, for both compensation and administrative costs, would be reduced 5 percent for each calendar year thereafter. This would gradually shift the burden to the States. The justification for the Federal Government's bearing 100 percent of the burden during the first year is based partly on the fact that many claims would have to be processed during the first year of operation of the act. Consequently, it would be extremely burdensome upon a State to have to deal with the congestion of such claims which would be bound to occur at the beginning of the 20-year period. Moreover, many of the State legislatures would not meet until a year after the program had begun, and unless the Federal Government pays 100 percent of the costs during that first year, those same States would be prevented from participation because their legislatures would not have authorized the expenditure of State matching funds.

The act requires that, in order for a State to qualify for benefits under this program, the pertinent statute of limitations could not be less than 3 years.

In fine, Mr. President, the bill which is being introduced by my colleague and myself has as its purpose the compensating of miners disabled because of pneumoconiosis who cannot qualify under State laws because the statute of limitations may have run or because of the prohibition on retroaction of State laws, and so forth. This program would serve as an adjunct to, not as a substitute for, the workmen's compensation program in a particular State. It is not meant to displace a State's workmen's compensation program, and, of course, it is to be funded in a different manner, as I have already described.

My colleague and I believe that this is a good bill. Indubitably, it can be altered and improved by the committee to which it will be referred. For example, the committee may wish to make it applicable also to other types of mining. Senator RANDOLPH and I are not wedded to any particular provision in the measure, and we would both like to see it improved in whatever way the Labor Committee deems advisable. But we do feel that the basic idea embraced by this bill is one which, through necessity, must be implemented and we hope that the committee will consider the bill, make whatever changes may appear to be advisable, and favorably report the resulting legislation for action by the Senate. As I said in the beginning, there is a gap in the workmen's compensation laws of the States, and it is hoped that this bill will be the instrument whereby this gap will be closed.

FARMERS' TAX INEQUITIES

Mr. METCALF. Mr. President, on January 22 I reintroduced, as S. 500, a bill designed to remove the inequities between legitimate farm operators and taxpayers who are in the business of farming mainly because of the tax advantages that serve to put their nonfarm income in a lower tax bracket. The problem is that liberal tax rules designed for the benefit of the ordinary farmer are being abused by tax-dodge farmers—people who engage in farming for the purpose of creating artificial losses which can be used to offset substantial amounts of their nonfarm income. Collectively, a bipartisan group of members from at least 30 different State congressional delegations have specifically endorsed this legislation.

One of the finest statements discussing the whole question of tax-dodge farming was the statement submitted to the House Ways and Means Committee on March 10 by John W. Scott, master of the National Grange. In his statement, Mr. Scott points out that as early as 1939 the Grange adopted a resolution in opposition to the practice of tax-dodge farming.

Mr. President, I ask unanimous consent that the exhaustive analysis made by the Grange in support of this legislation be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY JOHN W. SCOTT, MASTER OF THE NATIONAL GRANGE, BEFORE THE WAYS AND MEANS COMMITTEE, U.S. HOUSE OF REPRESENTATIVES, MARCH 10, 1969

Mr. Chairman and Members of the Committee: I am John W. Scott, Master of the National Grange, with offices at 1616 H Street N.W., Washington, D.C. The National Grange is a farm and rural-urban community and family organization, representing 7,000 community Granges located in rural America. Our membership lives in rural-urban areas in 40 of the 50 states and has a vital interest in the matter being considered by this Committee over a long period of our 102 years.

We are in support of H.R. 4257, and identical bills, to eliminate existing tax loopholes which benefit wealthy nonfarmers who enter farm loss operations and distort the agricultural economy at the expense of legitimate farmers and the average taxpayer.

The Grange has a long history of interest in this particular area of income tax revision, as it has been of vital concern to our members since 1939. At the 73rd Annual Session of the National Grange, held in Peoria, Illinois, the delegate body adopted the following resolution:

"In order to discourage corporation farming and capitalists acquiring large acreage of farm land, we recommend that the Federal income tax be amended to provide that losses on agricultural operations can be deducted only from incomes derived from agricultural operations."

The policy of the National Grange, adopted 28 years ago, was a lone voice against the inequities contained in the Internal Revenue Code. The continuing validity of this objective has been subsequently recognized by action of the Delegate Body taken in 1963, 1964, 1965 and again in 1967 at the 100th Anniversary of the founding of the National Grange.

At our 102nd Annual Session held in Peoria, Illinois, in November 1968, as we started our second century of service to rural America, the Delegate Body once more reaffirmed Grange position on this important and vital matter of great concern to family farms and rural communities.

The Taxation and Fiscal Policy Committee that considered tax revision resolutions made the following statement:

"The mounting concern of the family farm operator over the accelerating acquisition of agricultural lands by individuals and organizations for the purpose of building up a loss position from farming operations conducted on the lands acquired and deducting such losses from income tax liability is indicated by the fact that resolutions to prevent this practice have been received at this Annual Session of the National Grange from eighteen of the 38 State Granges.

"Farmers and their families engaged in bona fide farming operations are being forced to leave the farm, as a result of net income being at a depressed level.

"Competition of non-farm investors inflating the price of agricultural land and using loss on farming operations as a deduction against non-farm income is a factor in this lower net farm income.

"Resolved, that the National Grange vigorously support amending the Internal Revenue Code to prohibit any substantial portion of farm operating losses being used as a tax deduction or write-off against non-farm income."

The Delegate Body adopted the above statement and resolution, once more raising their voices against the unfair competition such tax advantages provide for those non-

farm interests engaged in agricultural production, for the family and commercial farmers who are dependent upon the profit from agriculture for their livelihood.

We welcome and commend Senator Lee Metcalf of Montana for taking the leadership in introducing legislation to close the "loophole" in the Internal Revenue Code that makes "tax-loss" farming possible and profitable for non-farm interests. We also are appreciative of the efforts of Representative John Culver of Iowa for his sponsorship of identical legislation in the House of Representatives. We further appreciate the 26 other Senators and 29 additional Representatives that have co-sponsored this important legislation. For 25 years the Grange was the lone voice speaking out for tax reforms pertaining to "tax-loss" farming. We are grateful that our voices have been joined by the Departments of Agriculture, Treasury and some additional 11 farm organizations as well as the AFL–CIO. To paraphrase a statement made by President Nixon in his inaugural address on January 20, 1969, "We hope now that our words will be heard as well as our voices", as we speak out for tax reforms to help preserve the family farm structure in American agriculture.

THE PROBLEM OF TAX-LOSS FARMING

We do not presume to be tax specialists and we do not want to fill the record with information that is not based on pertinent data, therefore, we would like to quote from Part 2 "Tax Reform Studies and Proposals, U.S. Treasury Department", which outlines the tax rules that encourage "tax-loss farming" and defines the problem far better than we would be able to do with our limited knowledge of the Internal Revenue Code.

"Methods of Accounting.—There are two principal methods of accounting used in reporting business income for tax purposes. In general, those businesses which do not involve the production or sale of merchandise may use the cash method. Under it, income is reported when received in cash or its equivalent, and expenses are deducted when paid in cash or its equivalent.

"On the other hand, in businesses where the production or sale of merchandise is a significant factor, income can be properly reflected only if the costs of the merchandise are deducted in the accounting period in which the income from its sale is realized. This is accomplished by recording costs when incurred and sales when made, and including in inventory those costs attributable to unsold goods on hand at year's end. Deduction of the costs included in inventory must be deferred until the goods to which they relate are sold, and deduction is not permitted when the costs are incurred. Thus, under this method of accounting, income from sales of inventory and the costs of producing or purchasing such inventory are matched in the same accounting period, thereby properly reflecting income.

"Farmers, however, have been excepted from these general rules. Even in those cases where inventories are a material factor, they have historically been permitted to use the cash accounting method and ignore their year-end inventories of crops, cattle, et cetera. This results in an inaccurate reflection of annual income in situations when expenditures are fully deducted in the year incurred, but the assets produced by those expenditures (inventories) are not sold, and the income not reported, until a later year.

"Capitalization of Costs.—Farmers are also permitted another liberal tax accounting rule. In most businesses, the costs of constructing an asset (including maintenance of the asset prior to its being used in the business) is a capital expenditure which may not be deducted as incurerd but may be recovered only by depreciation over the useful life of the asset. In this manner, the cost of the asset is matched with the income earned by the asset. Farmers, however, have been permitted to deduct some admittedly capital costs as they are incurred. For example, a citrus grove may not bear a commercial crop until 6 or 7 years after it has been planted. Yet, the farmer may elect to deduct as incurred all costs of raising the grove to a producing state even though such expenditures are capital in nature. Similarly, the capital nature of expenditures associated with the raising of livestock held for breeding may be ignored, and the expenditures may be deducted currently.

"The Problem.—These liberal deviations from good accounting practices were permitted for farm operations in order to spare the ordinary farmer the bookkeeping chores associated with inventories and accrual accounting.

"However, some high-bracket taxpayers whose primary economic activity is other than farming, carry on limited farming activities such as citrus farming or cattle raising. By electing the special farm accounting rules which allow premature deductions, many of these high-bracket taxpayers show farm losses which are not true economic losses. These 'tax losses' are then deducted from their high bracket non-farm income, resulting in large tax savings. Moreover, these 'tax losses' which arise from deductions taken because of capital costs or inventory costs usually thus represent an investment in farm assets rather than funds actually lost. This investment quite often will ultimately be sold and taxed only at low capital gains rates. Thus, deductions are set off against ordinary income while the sale price of the resulting assets represents capital gain. The gain is usually the entire sales price since the full cost of creating the asset has previously been deducted against ordinary income.

"The existing 'hobby loss' provision of the Internal Revenue Code is ineffectual in dealing with this problem. While that provision disallows deductions for continuing heavy losses in a trade or business over a period of at least 5 consecutive years, the fact of a loss and its extent are measured by comparing the expenses of the business with the total income from the business including the full amount of capital gain income although only one-half of that income is subject to tax. Thus, to escape the hobby loss provision, it is merely necessary that the taxpayer realize capital gain farm income at least once every 5 years. If the capital gain income just equals the farm expenses for a year, the hobby loss provision is inapplicable for 5 years even though the taxpayer will show a tax loss for that year equal to one-half his farm expenses.

"Effect of tax benefits on farm economy.—When a taxpayer purchases and operates a farm for its tax benefits, the transaction leads to a distortion of the farm economy. The tax benefits allow an individual to operate a farm at an economic breakeven or even a loss and still realize an overall profit. For example, for a top-bracket taxpayer, where a deduction is associated with eventual capital gains income, each $1 of deduction means an immediate tax savings of 70 cents to be offset in the future by only 25 cents of tax. This cannot help but result in a distortion of the farm economy, and is harmful to the ordinary farmer who depends on his farm to produce the income needed to support him and his family.

"This distortion may be evidenced in various ways: For one, the attractive farm tax benefits available to wealthy persons have caused them to bid up the price of farmland beyond that which would prevail in a normal farm economy. Furthermore, because of the present tax rules, the ordinary farmer must compete in the marketplace with these wealthy farmowners who may consider a farm profit—in the economic sense—unnecessary for their purposes."

We believe that this clearly demonstrates what has caused the problem and the scope and serious effect our tax laws have spawned in distorting the farm economy. In addition it pinpoints the competition this outside interest that *farms for tax dollars* presents to the family farm.

CORRECTION OF THE PROBLEM

The correction of the problem lies in eliminating the tax advantage high-bracket, part-time farmers have in using the generous farm accounting rules to reduce their tax liability on their nonfarm incomes.

It is our belief that the provisions of H.R. 4257 and H.R. 7575, introduced by Rep. Culver and 28 other Representatives in the House of Representatives, and S. 500, introduced by Senator Metcalf and 26 other Senators, will correct the abuse of the liberal tax rules provided in the Internal Revenue Code for the use of bona fide farmers.

This corrective legislation will affect only non-farmers with large amounts of non-farm income who invest in farming in order to secure tax losses which may be set off against their non-farm income.

There are numerous safeguards in the bill to protect the family farmer who depends on his farm to produce the income needed to support his family.

There is an important exception to the dollar limitation in the bill. This legislation in no event prevents the deduction of farm losses to the extent they relate to taxes, interest, casualty losses, losses from drought, and losses from the sale of farm property. An exception is made for those deductions, since they are in general deductions which would be allowed to anyone holding property without regard to whether it was being used in farming or because they represent deductions which are clearly beyond the control of the farmer; such as losses from casualty and drought. Under provisions of the bill, if the total of these deductions is higher than fifteen thousand dollars then the higher figure may be used without any reduction because of nonfarm income above fifteen thousand dollars. In other words, the fifteen thousand dollar limitation is directed solely at the type of deductions that are artificially created through the abuse of the special accounting rules designed for ordinary farmers.

We are confident that the legislation will not have a detrimental effect on *legitimate farmers or non-farmers who invest in farming to earn farm profits.* The legislation is unique, in that it is pointed directly at the abuse of the liberal tax accounting rules of the Internal Revenue Code, provided by Congress for ordinary farmers or those interests outside of agriculture that make investments in farming for a profit.

The legislation also provides for the large commercial farming interests in cattle, citrus and other farm specialty crops to be exempt from the provisions of the Act if they follow standard accrual accounting methods. Surely, such large privately-owned agricultural interests or investors in agriculture that use either grove management firms or cattle management firms have available to them the accounting expertise to follow such accounting methods.

The National Grange would be the last organization to support legislation to prohibit persons outside of agriculture from entering agriculture as full-time farmers or as investors supplying capital for those already engaged in agricultural production. We have insisted, however, and will continue to insist, that the rules for playing the game be the same. The enactment of H.R. 4257 will equalize the rules and make farming a fair game for all interested in agriculture for profit.

INVASION BY CONGLOMERATES

We realize that the elimination of tax loopholes in the Internal Revenue Code as it applies to individuals and corporations investing or engaged in agriculture will not stop the conglomerate corporation invasion. It will, however, eliminate the financing of such mergers and take-overs by the American

taxpayer by the use of "tax shelter" windfalls.

The real control over conglomerate corporate invasion can be done by tightening of the anti-trust laws, which we realize does not come under the jurisdiction of this Committee. However, we feel that this intrusion into agriculture is part of the same kind of problem which the Committee is considering today and perhaps is a far greater danger to the family farm structure of American agriculture. Curtailing tax abuse is the first step, and a necessary step, in controlling conglomerate corporation invasion of agriculture. We welcome this and similar tax legislation to take the "tax profit" out of such acquisitions by non-farm interests.

BENEFITS FROM TAX SHELTERS

We, as responsible members of the agricultural society, would be amiss if we did not consider any possible economic benefit to agriculture and rural America of the so-called "tax incentives" provided in the Internal Revenue Code.

Those who are in opposition to plugging the Internal Revenue loopholes that permit "tax-loss" farming present the following arguments in favor of a continuation of the laissez faire:

1. They are not tax loopholes but are tax incentives to attract into agriculture outside "risk" money;

2. That outside capital investments in agriculture have assisted in improvement in livestock breeds;

3. That farmers have benefited by outside capital in that they can expand their operations, buy more cattle, more land, which in turn benefits rural America.

We cannot help but agree that outside capital has benefited *certain individuals in agriculture* as well as *certain specific rural communities*. However, we hasten to ask, is it worth the total cost to the *Federal Treasury of approximately $145 million in lost revenue?* The total increase in Federal revenue would be much higher since farm operations carried on by corporations usually are not separately reported on the corporation tax return. Consequently, data concerning the number of corporations and revenue effect with respect thereto are not available.

Thousands upon thousands of family farms, the backbone of rural communities, are adversely affected by the activity of a small percentage of individuals who are lucky enough to have benefited directly from outside "risk" capital.

Improvement in livestock breeds has been and continues to be a major research function of our land grant colleges. These institutions are supported by public funds and devote time, money and labor into herd improvement by breeding as well as scientific feeding. We suggest that these laboratories of animal research have made major contributions to breed improvement, feeding improvement and similar advancements in the livestock industry far in excess of contributions made from outside "risk" capital.

We submit to this Committee that the interest of American agriculture and rural communities will be best served if the family farm structure does not have to compete with a select few individuals who are deriving direct benefit from the loopholes in the Internal Revenue Code.

Three categories of people receive direct benefit from the abuse of the liberal provisions in the Internal Revenue Code created for the use of the ordinary farmer: the investor, the financial manager and the farmer who manages the livestock or agricultural crops in which outside risk capital is invested, this at a tremendous loss to the Federal Treasury and the further economic loss to the family farm structure that is dependent upon profit for its very existence. Gentlemen, can we afford this kind of "Cowboy Economics"?

CONCLUSIONS

The National Grange recognizes the importance of preserving and protecting the integrity of the owner-operator-manager farm, as a guarantee to the Nation of the efficient and abundant production of high-quality food and fiber at reasonable prices for the domestic and world market.

We seek to obtain for American farmers a return for their labor, management, risk and investment which bears a reasonable relationship to that received for these same economic factors in any other segment of our economy, as well as adequate compensation for their contribution to the general welfare.

The activities of conglomerate corporations and other nonfarm interests in agriculture are not consistent with long-range Grange objectives and have resulted in commodity market price manipulation, unrealistically high prices for farm land and increased farm real estate taxes, (which have made it increasingly difficult to pass farms on to heirs). The net result has been a loss in rural America of farm families. These farm families are frequently forced to migrate to urban centers and into situations for which they are ill-prepared, which further aggravates the explosive problem of our central cities and urban areas, including flooding of the labor market with additional unskilled workers.

If large corporations and non-farm interests become predominant in agriculture, the need for many Main Street businesses, schools, churches and municipal facilities will be eliminated. It will destroy job opportunities in rural America and will not be in the best interest of long-term national objectives.

This impact on community life makes the non-agricultural corporate farm invasion a human as well as an economic problem. It is a problem that should concern all Americans and demand their immediate attention.

We again express our thanks to the Chairman and this Committee for allowing the National Grange to present our views on this problem that is so vital to rural America and the preservation of the family farm structure of American Agriculture.

DR. JAMES P. WESBERRY, PASTOR OF THE MORNINGSIDE BAPTIST CHURCH, ATLANTA

Mr. TALMADGE. Mr. President, one of the State of Georgia's most beloved and respected pastors, Dr. James P. Wesberry, observed his 25th anniversary on March 1 as pastor of the Morningside Baptist Church in Atlanta.

Dr. Wesberry was honored at special services on that occasion by his congregation and his many friends and associates in Atlanta, throughout Georgia, and from across the Nation. Dr. Wesberry's ministry has carried him all over the world and for a time in 1949 he served as Acting Chaplain of the U.S. House of Representatives.

On March 4, the Georgia State Senate adopted a resolution commending and congratulating Dr. Wesberry on his long and distinguished service. Jim Wesberry is a great man, and a great pastor. I am proud to count him as one of my warmest friends.

I ask unanimous consent that the Georgia State Senate resolution, along with portions of Dr. Wesberry's biographical profile, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. RES. 87

A resolution commending and congratulating Dr. James Pickett Wesberry; and for other purposes

Whereas, on Saturday, March 1, 1969, Dr. James Pickett Wesberry will celebrate his Twenty-fifth Anniversary as Pastor of the Morningside Baptist Church of Atlanta; and

Whereas, Dr. Wesberry is one of Georgia's most highly respected citizens who is loved by thousands of people throughout the world; and

Whereas, he has dedicated himself to the betterment of his fellowman and is an outstanding representative of the great principles of Christianity; and

Whereas, his remarkable ability and devotion to the improvement of mankind have been widely recognized for many years as demonstrated by the numerous positions of honor, trust and responsibility which have been placed upon him; and

Whereas, in recognition of the great contributions he has made to his City, State and Nation, many honors have been bestowed upon him; and

Whereas, he is the father of a distinguished former member of the State Senate, Honorable James P. Wesberry, Jr.

Now, therefore, be it resolved by the Senate that the members of this body do hereby commend Dr. James Pickett Wesberry for his many years of dedicated service to his fellowman and congratulate him on the occasion of his Twenty-fifth Anniversary as Pastor of the Morningside Baptist Church of Atlanta.

Be it further resolved that the Secretary of the Senate is hereby authorized and directed to transmit an appropriate copy of this Resolution to Dr. James Picket Wesberry.

Adopted in Senate March 4, 1969.

GEO. G. SMITH,
President of the Senate.
HAMILTON MCWHORTER, Jr.
Secretary of the Senate.

DR. JAMES PICKETT WESBERRY

Dr. Wesberry is known and loved by thousands of people throughout the world. He is in his twenty-fifth year as Pastor of the Morningside Baptist Church of Atlanta. . . . He was born in the little town of Bishopville, South Carolina, and reared in Columbia, the state's capital. He was destined to walk in paths of service as a humble, devoted Minister of the Gospel of Jesus Christ—Preacher, Pastor, Teacher, Counselor, Author, Statesman, and Friend—keenly sensitive to the heart throbs of humanity, a devoted lover of souls, and a true zealot for the cause of righteousness.

On September 5, 1929, he was married to Ruby Lee Perry of Columbia who died Christmas Day, 1941. To this union was born one son, James Pickett, Jr., who is a Certified Public Accountant and former Georgia State Senator, now Financial Consultant to the Government of Peru in Lima. He later married Mary Sue Latimer, of Greenville, South Carolina, a graduate of Furman and the Southern Baptist Theological Seminary (M.R.E. Degree), the daughter of the late Dr. and Mrs. Leon M. Latimer.

As a boy Dr. Wesberry attended public schools in his hometown of Columbia. During his high school years, except for the time he was manager of student athletics, he was employed by the Federal Land Bank of Columbia, working before and after school hours. He holds the A.B. and M.A. Degrees from his beloved Alma Mater, Mercer University; the B.D. and S.T.M., from Andover Newton Theological School; and has received four honorary Doctor's Degrees: LL.D., D.D., L.H.D., and Lit.D. He was a special student at Harvard in 1931; attended summer conferences at Union Theological Seminary in New York City, 1935 and 1965, Yale

School of Alcohol Studies in 1946, Southern Baptist Theological Seminary in 1957, and at Princeton Theological Seminary in 1958. While at Mercer University he received the highest honor accorded a student in 1931 by both faculty and fellow students, that of Master Mercerian.

On June 4, 1962 Dr. Westberry was signally honored by LaGrange College by being the first minister outside the Methodist denomination to receive an honorary degree from this 137-year-old institution. The citation read by President Waites Henry said: "LaGrange College takes note of the qualities of life and contribution that have brought honor to your name," and referred to him as a "faithful servant of the Church." "In particular," it read, "we hereby recognize your special service to the people of Georgia in the report of this Commission (State Literature) and, in token of our appreciation, confer on you the honorary degree of Doctor of Humanities." Dr. Wesberry cherishes his friendships with those of all denominations, and has contributed much to the ecumenical spirit of Atlanta.

At the age of 20 Dr. Wesberry was ordained to the Gospel Ministry by his home church, Park Street Baptist, Columbia, South Carolina, J. Dean Crain, Pastor, while a sophomore at Mercer University serving country churches in Georgia. From 1928 to 1931 during his last three years at Mercer he was Pastor at Soperton, where he led his people in the erection of a beautiful new church and made many lasting influential friends. He later served as Pastor of the South Medford Baptist Church, Medford, Massachusetts; the Kingstree Baptist Church, Kingstree, South Carolina; and the Bamberg Baptist Church, Bamberg, South Carolina for eleven years before coming to Morningside.

Dr. Wesberry has distinguished himself as a true statesman, extending his influence beyond denominational lines into many other avenues of life. From July 27 to August 25, 1949 he served as Acting Chaplain of the U.S. House of Representatives, receiving the confidence and esteem of every member. In his book of *Prayers* published by Congress, the Honorable Sam Rayburn, Speaker of the House, wrote this tribute: "His daily ministrations were helpful and inspiring, lifting all who heard him to a deeper realization of their need for divine guidance." Since 1953 as Chairman of the Georgia Commission on Literature, his voice has been no uncertain sound regarding the evils of obscene literature, arousing and stimulating similar action throughout the nation. And, he has just completed an appointment on the Governor's Citizens Penal Reform Commission in which he served as Chairman of the Editorial Committee to compile and write its Report to the Governor, The General Assembly and The People of Georgia.

In addition to his Book of *Prayers*, he is the author of the *Life and Work of William Screven; Every Citizen Has a Right to Know*, a Report of the Georgia Literature Commission, 1954; *The Georgia Literature Commission*, 1957 Report; *Rainbow Over Russia;* and *Baptists in South Carolina Before the War Between the States* which was published in 1968. In 1962–63 he published a newspaper column, The People's Pulpit, in forty-five county weeklies in Georgia and South Carolina. He has contributed editorials, articles, and sermons to various sources, including the Young People's Training Union Quarterly of the Southern Baptist Convention, and Dr. Andrew W. Blackwood's latest *Special-Day Sermons for Evangelicals* carries his sermon, "Beating Swords into Plowshares."

Dr. Wesberry has traveled extensively to at least thirty-five different countries of our world including the Holy Land (twice), the Pacific (twice), and Soviet Russia. On five different occasions he has been chosen by the Department of Chaplains, United States Air Force, Washington, as Missioner for Preaching Missions or as a Special Representative of the Chief of Chaplains visiting some thirty odd Air Bases in Korea, Japan, Okinawa, Taiwan, the Philippines, Guam, Hawaii, Newfoundland, Labrador, Spain, and also as a Co-Ordinator for a Spiritual Life Conference at Lake Tahoe, Nevada, such engagements being in 1960, 1962, 1963, 1964, and 1966.

In 1962, he was Protestant Chaplain on the M.S. Bergensfjord 45-day summer North Cape Cruise to eleven countries, including Russia. More recently, in 1967 and 1968, he visited his son in Peru, conducted the first Revival meeting ever held in English in the First Baptist Church in Lima, and served as a missionary to the missionaries there. . . .

On March 1, 1969 Dr. Wesberry celebrated his Twenty-fifth Anniversary as Pastor of the Morningside Baptist Church, becoming the third Baptist minister in Atlanta in terms of years of service.

THE PACIFIC: TOO BIG TO SEE

Mr. FONG. Mr. President, it is somewhat paradoxical that the largest ocean on this planet—the Pacific—should be the one often overlooked by Americans.

Traditionally, America has looked eastward to the Atlantic, and understandably so. For the roots of the Nation were largely transplanted from that side of the globe.

But to those who live in the Pacific, like the people of Hawaii, it is both painful and annoying to continue to see instances of oversight concerning the importance of that vast ocean area.

I invite attention to an article aptly titled, "The Pacific: Too Big to See," written by William H. Ewing, editor emeritus of the Honolulu Star-Bulletin, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PACIFIC: TOO BIG TO SEE

(By William H. Ewing)

Those of us who live in the middle of the Pacific world and comprehend its basic dynamism and potential are sometimes jolted by the almost subconscious manner in which some of our most important opinion-makers ignore it.

The case in point is a new book by the Lowell Thomases, father and son, called "Famous First Flights That Changed History." It lists these as 16 aviation achievements beginning with Louis Bleriot's flight across the English Channel in 1909 and ends with a jet's circuling the globe by way of the Poles in 1965. The Thomases were aboard the latter flight.

Nowhere does the book mention the John Rodgers flight of 1925, in which a Navy seaplane flew 1,870 (nautical) miles from San Francisco toward Hawaii, ran out of gasoline and literally sailed the remaining 450 miles to Kauai.

The first successful flight from California to Hawaii, that of Army Air Corps Lts. Lester J. Maitland and Albert F. Hegenberger, in June, 1927, is likewise ignored. So is the first civilian flight over the same route by Ernest Smith and Emory Bronte in July that year.

The Dole Air Derby, which followed in August, is mentioned mainly as a tragedy, though two of the eight planes entered made the flight successfully, those flown by Art Goebel and Martin Jensen. Crashes and loss of life were no novelty in those early days of overloaded airplanes trying to cross oceans.

Interestingly enough, the Dole flight came about because of the circumstance mentioned in the first paragraph above—the widespread disposition on the Mainland to look eastward toward the Atlantic.

In 1927 the managing editor of the Star-Bulletin was Joseph R. Farrington. His father, Wallace R. Farrington, was publisher and also Governor. The Star-Bulletin was the then Territory's most vocal advocate of Statehood, an often lonely distinction at the time.

The attention concentrated on the Atlantic by air crossings such as Lindbergh's and Rear Adm. Richard E. Byrd's prompted the younger Farrington to seek a sponsor who could attract the same interest in the Pacific. He found one in James D. Dole, founder and then president of the company bearing his name. Dole offered a $25,000 first prize and $10,000 second prize for a flight to Hawaii.

The winning team was Goebel and his navigator, Navy Lt. William Davis, who arrived at Wheeler Field Aug. 17. Jensen came in second.

Years later, on one of a number of trips to Honolulu, Goebel told a group of friends how he happened to get into the Dole Derby and how it had affected his life.

"I was in the business of testing airplanes," he said. "One of the planes was a fighter for the Navy. No matter how I tried I couldn't get it into a spin." A spin was considered a necessary test of airworthiness.

"Somebody came up with the idea of weighting the tail with a couple of hundred pounds of sand packed in sacks. I took her up and kicked her into a spin. She spun, all right, but I was almost to the ground before I could get it out.

"After that sort of work the danger of flying to Honolulu seemed hardly worth considering. Actually I never doubted for a minute that we could make it."

In 1927, $25,000 was a nice slug of cash to come by. Goebel didn't say how he split with Davis, but he kept enough to invest for himself in ventures which later made him a relatively wealthy man.

The only Pacific flights included in the Thomas top 16 were those of the Southern Cross, manned by two Australians and two Americans, which flew from Oakland to Brisbane in 1928 by way of Honolulu and Fiji; and that of Clyde Pangborn and Hugh Herndon, Jr., who flew 4,558 miles nonstop from Japan to the United States over the northern route in 1931.

These were unquestionably outstanding achievements in the early days of flight, especially that of the Southern Cross led by Charles Kingsford-Smith. Pangborn and Herndon barely preceded the first exploratory commercial flights by Pan American in the Pacific.

The preoccupation of the authors with parts of the world other than the Pacific is perhaps best demonstrated by their allotting a chapter to the non-stop cross-country flight of Army Air Corps Lts. Oakley Kelly and John Macready in 1922 while overlooking the Maitland-Hegenberger crossing from California to Hawaii. Kelly and Macready hardly made history; Maitland and Hegenberger certainly did.

SENATOR RICHARD B. RUSSELL, OF GEORGIA

Mr. CANNON. Mr. President, crisis and challenge are no new experiences to the distinguished senior Senator from Georgia (Mr. RUSSELL). During his many years of distinguished service in the Senate, RICHARD RUSSELL has put his substantial energies and skills into meeting and resolving a great many serious problems that have plagued his own State and the United States.

It is with these qualities of stout-hearted and dauntless courage and fortitude that Senator RUSSELL now faces his

own personal test. He has my prayers, and my family's prayers, for a complete recovery, and we are confident that his health will be fully restored.

Senator RUSSELL has long been the leading statesman of the South, and an influential and much respected public figure throughout the country. I have been privileged to serve under his committee chairmanship for a decade. He has always acted out of devotion to the Senate, loyalty to his State, and love of country.

I salute RICHARD RUSSELL as a great Senator and public servant, and one who has been a model and inspiration to me. My petitions for his recovery will include the hope that he will be serving many more years in this institution to which he has given so much.

BIRTH RATES CANCEL ALLIANCE FOR PROGRESS GAINS

Mr. PERCY. Mr. President, a recent report by the Agency for International Development to Congress reveals the disturbing fact that the high hopes of North and South Americans alike for economic growth through the Alliance for Progress have been largely disappointing. According to the report, the average annual increase in gross national product has been about 4.5 percent, but the annual increase in population has been 3 percent. As a result, the actual increase in the gross national product, when computed on a per capita basis, was only 1.5 percent in the first 7 years of the Alliance. This is well below the Alliance goals of an annual growth rate of 2.5 percent per capita.

As one specific example of the way population growth has thwarted economic development, it is calculated that enrollment in primary schools has increased from 24 million in 1960 to 36 million in 1967. But at the same time, there were 27 million children not enrolled in 1967 which represents an increase of nearly 1 million over the children not enrolled in 1960. Even by running forward full speed in the education field, many of the Latin American countries are slipping backwards because of the exceedingly high birth rates. A substantial number of children are therefore deprived of the opportunity for adequate education largely because their parents have been deprived of access to modern methods of family planning. The blame for not providing adequate family planning facilities must rest upon the policies of many Latin American governments as well as our own programs which have in fact impeded economic development which is their ultimate object.

Mr. President, the report further indicates that population control has not been considered one of the goals of the Alliance for Progress. At the same time it is clear that "until these problems are better recognized and addressed in most of the hemisphere countries, the question of attaining a satisfactory level of development remains uncertain."

Mr. President, I believe this report has significant implications for the total AID program in Latin America as well as other parts of the world. It indicates increased needs to focus our efforts in the field of population and family planning to increase the funds, staff, and activities of AID in this area.

I ask unanimous consent to have printed in the RECORD a New York Times article on this subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AID AGENCY REPORTS BIRTH RATE OFFSETS LATIN ALLIANCE GAINS

(By Felix Belair, Jr.)

WASHINGTON, March 15.—The Agency for International Development reported to Congress today that the goals of the Alliance for Progress with Latin-American countries were neither realistic nor attainable until the people of the region took steps to control population growth.

In a report to a House "watchdog" committee, the Agency said that although there had been substantial progress toward economic, political and social objectives of the Alliance since its inception in 1961, such gains had been "largely canceled out" in per-capita terms because of "staggeringly high" birth rates.

The United States provided $9.2-billion in the Alliance through loans and grants and other economic aid through last June 30, with $4.1-billion of it coming from the aid agency. Other assistance was provided through the Peace Corps, the Food and Peace programs, the Export-Import Bank and the Inter-American Development Bank.

Total United States economic aid since 1949 to the Latin-American countries has been about $13.2-billion. Project loans and technical assistance grants from 1949 through 1960 totaled $3.9-billion.

One of the chief goals of the Alliance set forth in the Declaration of Punta del Este, named for the meeting in 1961 at which the Alliance was created, was an annual increase of 2.5 per cent in the combined gross national product of the 18 member nations. All citizens and social groups were to share in this economic advance through high income and living standards.

In the first seven years of the Alliance, the combined gross national product of member countries actually showed an average annual increase of 4.5 per cent. But on a per-capita basis, this was an increase of only 1.5 per cent, because birth rates in those countries were among the world's highest, the agency reported.

"It is evident that Latin-American nations, with population increasing at some of the fastest rates in the world, must attain total growth rates of 5.5 per cent and more—higher than the United States average of 5.1 per cent for the same seven-year period—to attain the Alliance goals of 2.5 per cent per capital," the agency's report said.

The agency noted that population control, "because of its political volatility," was not mentioned among the goals of the Alliance. It said that "while there are growing signs of growing recognition of the population issue throughout the hemisphere, there are few countries in which the issue is yet being squarely met." The report added:

"Until these problems are better recognized and addressed in most of the hemisphere countries, the question of attaining a satisfactory level of development remains uncertain."

The report came in response to a demand from the House Government Operations Subcommittee on Foreign Operations and Government Information that the agency reassess Alliance goals in the light of the last seven years' experience.

The report said at the outset that realization of Alliance goals was not possible in the 10 years originally contemplated. It said "the framers of the charter erected a goal structure which anticipated too much too soon and in recognition of this, the time frame of the Alliance has been extended beyond 1971."

The House subcommittee noted in a report last August that United States administrators of the Alliance had extended the time period to 18 years, or three six-year periods. The first was described as an organization and mobilization phase, the second as one of social and political development and the third as one of integration of the market economies of member countries.

The subcommittee chairman, Representative John E. Moss, Democrat of California, said he welcomed the agency's report as "an honest evaluation of performance toward Alliance objectives and of the need to restate its goals."

"Unquestionably real progress has been made toward these goals," said Mr. Moss, "but I feel that Congress and the people are weary of financing programs that fall short of stated goals. I want to be able to say for once that our objectives have been achieved, but this requires their restatement in more realistic terms.

The agency's report said that "despite the initial unrealistic 10-year time frame, the goal structure still affords an attainable set of priority guideposts for development of the hemisphere." It added that "the development progress and momentum generated under the alliance justify promise for the future and merit continued United States support."

On the other hand, the report made it clear that if the Alliance's goals were to be attained even in the extended 18-year period, the population issue must be made a matter of priority concern by all major governments.

SCHOOL ATTENDANCE CITED

Illustrative of the impact of birth rates on other Alliance goals, the report said:

"The number of school-age children not in school tends to grow at the very moment when new schools are being built at a record rate. Substantially increased food production and remarkably expanded educational facilities barely keep pace with population increase."

The report made the following points regarding progress toward other Alliance goals:

Taxation: Although tax collections have increased by 30 per cent since 1961 for all Latin America, there is need for more effective enforcement.

Public Health: There has been "dramatic progress" in this area but much remains to be done. The target of providing potable water to 70 per cent of the urban populations will be achieved by 1971. New or improved water supplies already have been provided for 43 million city dwellers, or 69 per cent of the total, but only 19 million out of a rural population of 128 million have been so benefited.

Deaths from communicable diseases have been reduced markedly since 1961, but still are 10 times the rate for North America.

Agrarian reform: The member nations with some exceptions, such as Mexico, Venezuela and Chile, have not yet effectively "tackled this major issue." The reason is that the breaking up of large land holdings immediately brings "a confrontation with an element of the power structure well represented in national government."

Monetary and Fiscal Stability: Most countries have managed to keep a reasonable degree of price stability despite increased public expenditures. Nine countries had inflation of less than 3 per cent annually. In three others, price increases amounted to about 6 per cent a year. But stabilization is still "precarious" in Brazil, Chile and Colombia.

Income Distribution: The only indicators available show little change from 1960. A study showed remarkably similar income structures, with the top 10 per cent of the

population receiving 40 per cent of the income in Argentina, Brazil and Mexico. The bottom 40 per cent of the population received 10 to 14 per cent of total income in those countries.

Education: Enrollment of school-age children in primary schools increased by about 50 per cent between 1960 and 1967, or from 24 million to 36 million. But there were 27 million children not enrolled in primary schools in 1967—740,000 more than in 1960.

With an expansion by 1979 of primary education facilities sufficient to give all school-age children six years of schooling before their 15th birthday, the adult illiteracy rate would be reduced to about 37 per cent or some three-fifths of the 1964 rate, which was 62.1 per cent.

CIGARETTE ADVERTISING—RESOLUTION ADOPTED BY GEORGIA ASSEMBLY

Mr. TALMADGE. Mr. President, I ask unanimous consent that a resolution adopted by the Georgia General Assembly meeting in Atlanta be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

H.R. 181–470

A resolution expressing opposition to the Federal Communications Commission's proposal to ban cigarette advertising on radio and television; and for other purposes

Whereas, the Federal Communications Commission plans to ban all cigarette advertising on radio and television unless the United States Congress intervenes to prevent said Commission from carrying out said plan; and

Whereas, if carried out, this proposed ban on cigarette advertising would do violence to the principles of free enterprise which have been the source of the greatness of our country; and

Whereas, the tobacco industry has always been and still is of fundamental importance to the economy of the South; and

Whereas, the importance of the tobacco industry to our own State is demonstrated by the fact that Georgia growers produced an average of over 78 million dollars worth of tobacco per annum during the past three years; and

Whereas, the impact that tobacco has on the Georgia economy is further demonstrated by the fact that there are over 26,000 tobacco growers in this State, and many times that number of people depend on the tobacco industry, either directly or indirectly, for their livelihood; and

Whereas, at a time when further taxation of our citizens is being considered, it should be noted that over thirty-seven and one-half million dollars in cigarette and tobacco taxes was collected by the State of Georgia during the fiscal year ended June 30, 1968; and

Whereas, cigarette advertising is directed toward people who already smoke and amounts to competition among brands rather than an inducement to people to begin smoking; and

Whereas, while convincing evidence has been presented to show that cigarette smoking is harmful to health, the alleged impact of cigarette advertising on actual smoking is sheer speculation which has not been backed up by objective and factual information; and

Whereas, since no reasonable justification for banning cigarette advertising on radio and television has been demonstrated and such a ban could have far-reaching adverse effects on the economy of our county, the Federal Communication Commission's plan to implement such a ban should be abandoned.

Now, therefore, be it resolved by the General Assembly of Georgia that the members of this body do hereby express their firm opposition to the proposal by the Federal Communications Commission to ban cigarette advertising on radio and television.

Be it further resolved that all members of the Georgia delegation to the United States Congress are hereby requested and urged to use their power and influence in prohibiting the implementation of the proposed ban of cigarette advertising on radio and television.

Be it further resolved that the Clerk of the House of Representatives is hereby authorized and directed to transmit appropriate copies of this resolution to Honorable Richard M. Nixon, President of the United States; Honorable Clifford M. Hardin, Secretary of Agriculture; Honorable Phil Campbell, Undersecretary of Agriculture; each member of the Georgia delegation to the United States Congress; the Federal Communications Commission; Honorable Lester Maddox, Governor of Georgia and Honorable Thomas T. Irvin, Georgia Commissioner of Agriculture.

In House, read and adopted March 3, 1969.

GLENN W. ELLARD,
Clerk.

In Senate, read and adopted March 17, 1969.

HAMILTON MCWHORTER, Jr.
Secretary.

PARTICIPATION AND ALIENATION

Mr. MONDALE. Mr. President, on several occasions in the past I have spoken about "Toward a Social Report" and its relation to the Full Opportunity Act of 1969—S. 5. Today I invite attention to the last chapter of that report: "Participation and Alienation." Some of the other chapters of this report have dealt with relatively more simple topics. This is one area where, at present, it is more intelligent to concentrate on the formulation of the proper questions than it is to seek answers to irrelevant questions. The seventh chapter of "Toward a Social Report" does precisely this.

This chapter attempts to pose questions which will enable us to judge not simply whether our institutions accomplish their tasks but, equally important, how they accomplish their tasks. Such questioning will "remind us of the range of considerations we should keep in mind when setting public policy, and encourage the collection of needed data in the future." In time, perhaps, we will be in a position to know how to reform our institutions so as make certain that they respect the rights of individuals; facilitate democratic participation; provide congenial group affiliations, and insure the survival and orderly development of our society.

The chapter asks questions in three major areas. We can all agree that our institutions should function in a manner which will not unduly infringe on our individual liberties. Accordingly, the first section of the chapter "asks questions about the degree of freedom and constraint in American life." The report suggests:

We need to develop survey data that can discern any major changes in the degree of tolerance and in the willingness to state unpopular points of view, as well as information about the legal enforcement of constitutional guarantees.

We can also agree that the protection of the individual liberties of only a selected few is not sufficient. It is necessary that every American's civil liberties are protected. Therefore, the second section of this chapter "raises questions about the extent to which the ideal of equality and justice is realized." Once again we are faced with the situation where those who are least educated and who have the least income often have the least chance to make their interests known. We must ask, How can the groups with the least organized power assert their interests against those with the most? This question urgently needs to be answered.

Finally, we can agree that even if people "enjoy freedom, and a just and equal political system" they can still lack a "sense of community." That is, they can still feel alienated: from their family, neighborhood, Nation, or any other social group. It is in this section where we come face to face with a problem which most Americans are deeply concerned about: the problem of a nation divided against itself. We desperately need to know how deep or serious "are the divisions in our society." It is only after we have such information that we will be able to act intelligently to eliminate the divisions which are not socially advantageous.

I wish to stress one other point which is highlighted in "Toward a Social Report." Social reporting in not a panacea. The difficult policy decisions we face will not be solved automatically by social reporting. As the report notes:

Social Reporting cannot make the hard choices the Nation must make any easier, but ultimately it can help to insure that they are not made in ignorance of the Nation's needs.

What social reporting can do is to keep us from continually "stumbling into the future."

Mr. President, I ask unanimous consent that the seventh chapter of "Toward a Social Report," entitled "Participation and Alienation," be printed in the RECORD.

There being no objection, the chapter was ordered to be printed in the RECORD, as follows:

CHAPTER VII. PARTICIPATION AND ALIENATION

WHAT DO WE NEED TO LEARN?

The preceding chapters neglect many of the Nation's major concerns. They have, for example, scarcely mentioned the divisions in our society which separate young and old, black and white, left and right. Yet these divisions trouble many Americans, and help explain the demonstrations at universities, the disorders in cities, and the manifestations of racist and extremist strength. The preceding chapters have similarly neglected the controversies about court decisions defining our individual liberties, demands for "democratic participation" in the organizational life of the society, and the concern some Americans have about the viability and stability of family life.

The most notable of the problems that have been neglected are those that concern the functioning of our social and political institutions. To the extent that these institutions have promoted health, deterred crime, and the like, their achievements belong in preceding chapters. But we also care about *how* we combine our efforts to achieve our goals, about our loyalty toward our institutions, about our attitudes toward each other, and about the implications of our social and

political institutions for the future of the Nation, However good our health or high our incomes, we would not be satisfied with institutions that failed to respect individual rights, allow democratic participation, provide congenial group affiliations, or insure the survival and orderly development of our society.

Unfortunately, it is concerns such as these that we know least about. It is more difficult to assess the extent to which our political and social institutions satisfy democratic values, or prevent alienation, than it is to assess the level of health, income, or crime.

Therefore, we can do little more than ask the right questions. Yet it is important that these questions be asked. If assessments of the state of the Nation take account only of those variables that are readily measurable, our social priorities and public policies will be distorted. It will not be possible to obtain the needed information in the future unless the questions are asked now.

Since the primary purpose of this report is to examine the condition of American society, the questions should pertain to the basic functions our social and political institutions perform, rather than to their structures or characteristics.

One purpose our institutions should surely serve is that of protecting our individual liberties—one of the first ideals of our Nation. Democratic processes are meaningless if citizens do not have a large measure of freedom, particularly freedom to dissent from the policy of the Government and the views of the majority. Thus the first section of this chapter asks questions about the degrees of "Freedom and Constraint" in American life.

In a modern democracy, individual liberty cannot be the privilege of a few: It must be available on an equal basis to every law-abiding citizen. A system in which some stand above the law, while others are denied its protection, is repugnant to the idea of justice. Equality before the law in turn implies that every citizen have access to public services on an equal basis according to law. The citizens must also be able to influence public policy, and in the aggregate influence it decisively, or they are not truly free. There must be meaningful voting, and the vote of each citizen must count equally. The second section of this chapter therefore raises questions about the extent to which the ideal of "Equality and Justice" is being realized.

A people may enjoy freedom, and a just and equal political system, yet lack any sense of community. Many may be alienated, not only from the Nation, but also from their families, neighborhoods, and other social groups. Some degree of alienation and disunity is acceptable in a society that values individual freedom, and the alienated may be creative and bring about reforms which benefit society as a whole. But if alienation becomes so pervasive that all sense of community is lost, the result can be disaster.

The degree of alienation also depends on the functioning of all the social groups in the society. A person may be alienated because of the failure of his family, the shortcomings of his neighborhood, the lack of a congenial club, or the policies of the National Government.

Thus the third section of this chapter, on "Community and Alienation," asks how strong are the bonds which maintain our relationships to social institutions, from the family to the National Government. Here we encounter what many Americans find the most worrisome questions of contemporary life: How serious are the divisions in our society? How can we bridge the generation gap that divides families and universities, and the racial and ideological differences that divide neighborhood and Nation?

QUESTIONS ABOUT FREEDOM AND CONSTRAINT

It is a sign of the profound value placed on freedom that many use this word to describe a great many of the things they want. Better education, more goods and services, and higher incomes give people the freedom to do things they could not have done before. But we are discussing freedom here in its most ancient and basic sense: those rights that allow an individual to use his time, talents, and resources in whatever way he pleases, so long as this does not interfere with the rights of others.

Freedom of expression

Democracy cannot be meaningful if those who disagree with the policy of the government have no opportunity to persuade their fellow citizens to vote it out of office. Thus freedom of expression, both for individuals and for groups, is absolutely indispensable to a democratic society.[1] We must therefore ask particularly about the freedom to express dissenting and unpopular views.

There can be little doubt that court decisions in the recent past have expanded the legal protection for free speech. Important as these legal developments have been, they are by no means the whole story. Freedom of expression can be restricted not only by government officials, but also by popular intolerance. However, the extent of such intolerance is not known.

There is some evidence that a majority of Americans on occasion have wanted to deny free speech to their fellow citizens, and that this disposition has been more prevalent among the rank and file than among community leaders. In the period of the Red scare of the early fifties, only 27 percent of Americans thought that an admitted Communist should be allowed to make a speech in their communities; but 51 percent of community leaders felt such a speech should be permitted. Among the general population, only about 37 percent thought that a person who wanted to speak against religion should be allowed to speak in their communities. Again, community leaders were more tolerant; 64 percent of them believed such a speech should be allowed.[2]

There is a need for tolerance not only in national political forums, but also in daily life. How much tolerance of dissent is there in our schools, factories, and offices? We do not know, but some approximate answers could be obtained, as one study shows.

In this study, representative samples of persons in the United States, the United Kingdom, Germany, Italy, and Mexico were asked about the extent to which they had as students felt free to discuss unfair treatment in school or disagree with the teacher, and whether they had participated in school debates on political and social issues. As tables 1 and 2 reveal, American respondents were more likely than those in any of the other countries surveyed to say that they had felt free to disagree with their teachers, discuss unfair treatment with them, and participate in school discussions and debates. Americans were also more likely to be consulted about job decisions and to protest job decisions than those in most of the countries surveyed.

The lack of information about the extent of our liberties may suggest that we are not as vigilant about the state of our freedom as we purport to be. Here we can do little more than pose the question of how well the Nation is protecting the individual rights its rhetoric emphasizes. But the question is itself important. If it is asked more often, we will in time be able to provide better answers.

TABLE 1.—FREEDOM TO DISCUSS UNFAIR TREATMENT IN SCHOOL OR TO DISAGREE WITH TEACHER, BY NATION

[In percent]

Percent who remember they felt—	United States	United Kingdom	Germany	Italy	Mexico
Free	45	35	34	29	40
Uneasy	23	18	24	19	16
Better not to talk to teacher	25	41	30	36	39

QUESTIONS ABOUT EQUALITY AND JUSTICE

Equal treatment is a cornerstone of our society. We believe in equality before the law: The judicial system must deal equally with the great and the small, or there is no justice. We believe in the right to equal access to public services: The administrative apparatus should treat all citizens in the same way, according to law. We believe in the one-man-one-vote ideal: The political system should give each citizen equal access to the electoral process so that no group can wield political power disproportionate to its numbers. These ideas of equality and justice are not only enshrined in our rhetoric; they are essential to the viability and integrity of our democratic processes. If those who oppose the existing leadership cannot depend on the protection of the courts, or equal access to public services, or voting power comparable to their numbers, democracy is threatened.

[1] If there is freedom of expression and organization, there is automatically a good deal of religious freedom as well.

[2] Samuel Stouffer, *Communism, Conformity, and Civil Liberties* (New York: Doubleday & Co., 1954), pp. 26–44.

Justice in the courts

A democratic society must always ask whether everyone accused has a right to counsel and all of the other requisites of a fair trial; whether justice is so long delayed it is in effect denied; whether every citizen has equal access to publicly provided services.

The American system of justice with its ancient roots in the common law, its elaborate rights of appeal, and thoroughgoing system of judicial review, is properly a source of national pride. Yet there is evidence that some suffer rough and ready justice at the hands of the police; that some are tried without adequate counsel; that publicity and prejudice may sometimes prevent a jury from rendering justice. In some parts of the country, the punishment of those accused of rape has varied with their race and the race of their victims.

One reason why so little is known about the exact extent of such inequities in our system of justice is that virtually *any* such wrong is a matter of great seriousness. It can result in the impeachment of a judge, or the expulsion or loss of pay of a policeman. Because so much is at stake, it is extremely difficult to collect information on shortcomings as a matter of statistical routine. Yet, if we believe in justice, we are obliged to ask to whom it has been denied.

Access and redress in large organizations

A growing group of Americans, especially among the young and the black, are intensely concerned about the relationship between the individual and the large bureaucracies. They are concerned about the relationship between the citizen and the police force, the student and the university, the claimant and the insurance company, the welfare client and the public assistance office, the tenant and the housing authority, the employee and the hierarchy.

The concern about the relationship between the individual and the bureaucracy is coming from diverse segments of the political spectrum. Historically, those on the right have been most anxious about the evils of bureaucracy and most enthusiastic about decentralization. But recently, the "new left" seems on its way to putting democratic participation in large organizations, including some forms of decentralization, above the left's traditional advocacy of central planning and the nationalization of industry.

The problem is this: How can the individual citizen, especially the citizen who is lacking in education, influence, and self-confidence, get the services he should expect from large bureaucracies, or get redress from the wrongs they may commit against him? The person accused of a crime has recourse to an elaborate system of justice replete with features designed to protect those unjustly accused. But the citizen who cannot get the police protection he needs, or who suffers rude treatment from the police, may find that the courts are irrelevant, or so costly and cumbersome that they are of no use. The man who can't get a license to work, or get a public utility bill corrected, or have an insurance claim processed promptly, may not have the option of turning to the courts. He may know that "you can't fight city hall," or influence a large corporation.

It is always possible to complain, and complaints sometimes help. Yet all too often complaints get lost in a snarl of red tape. This is especially true for the person who lacks education, or experience with large organizations, or who lacks the stamina, resources, and gall needed to make a large issue out of what the bureaucracy may take to be a small matter.

Today, as never before in our history, people seem to be at the mercy of huge, impersonal bureaucracies. Even when large bureaucracies function efficiently, there still may be resistance and resentment. People want to be treated personally and humanely. They do not want to be only a cog in a machine. The courtesy of an explanation, or a sympathetic ear, may make all the difference.

The expansion of government services, both at Federal and local levels, has increased the multiplicity of offices and agencies with which the citizen must deal. Millions of Americans think of their government as distant and unresponsive, though paradoxically many seem to think the city government more remote than the Federal.

The decline of the political machine typical of the 19th century city may also be a factor. Corrupt as these machines were, they nonetheless were responsive to the needs of many of the immigrants from Europe, and helped assimilate them into American life. The mid-20th century immigrants to the city are mainly Negroes from rural areas of the South who have not been assimilated into the political structure nor had the personal relationships with the city government that the political machines afforded earlier immigrants.

The difficulty of the relationships between bureaucracies and Negroes is illustrated in table 3. Whereas 87 percent of the whites expect "equal treatment" by administrative officials, only 49 percent of the Negroes do. Negroes are also less likely to feel that administrative officials will pay attention to their point of view, less likely to expect equal treatment from the police, and less likely to think the Government or the Congress pays much attention to what people think.

TABLE 3.—RESPONSIVENESS OF GOVERNMENT OFFICIALS

	Total	White	Negro
Percent who expect equal treatment in administrative office [1]	83 (970)	87 (866)	49 (100)
Percent who expect equal treatment from the police [1]	85 (970)	88 (866)	60 (100)
Percent who expect administrative official to pay attention to their point of view [1]	48 (970)	50 (856)	30 (100)
Percent who expect police to pay attention to their point of view [1]	56 (970)	58 (866)	36 (100)
Percent who feel elections make the Government pay much or some attention [2]	89.2 (1,450)	90 (1,291)	83.8 (148)
Percent who feel most Congressmen pay much or some attention to what people think [2]	79.2 (1,450)	79.3 (1,291)	78.4 (148)

Note: Numbers in parentheses refer to the bases upon which percentages are calculated.

Source: Almond and Verba, "The Civic Culture," 1960.
[2] Source: Survey Research Center, University of Michigan, Election Survey, 1964.

A study of the attitudes of Southern whites and Negroes, on what they would do about the problem of a dangerous school crossing, again shows the Negro's sense of uneasiness in dealing with officialdom. Though Negro responses indicated they would be about as likely to take action about a dangerous school crossing as whites, they were less likely to deal with the official directly, and more likely to speak to "influential" private persons. Whereas 49 percent of the whites would talk to the school officials, only 33 percent of the Negroes would. Though only 1 percent of the whites would talk to an influential private person, 8 percent of the Negroes would.

We need to consider a wide variety of new options that will improve participation and help individuals to deal with bureaucracies. Many things can be done. We must consider the merits of ombudsmen or independent investigators who can look into citizen complaints against administrative actions; neighborhood city halls that can bring local government closer to the people; neighborhood service centers that help people find their way to the right agency; consumer protection units; expanded legal aid for the poor; improvement in administrative law, so that the protection of the courts can be broadened; decentralization of police forces, schools, and other governmental functions; effective employee grievance procedures; councils of student representation in university communities, so that student reactions can effectively reach faculty and administration; and informal networks of communication that tell the administrator what his clients are thinking.

Large organizations are a fixture in today's world. How to keep them from colliding with the individual need for identity and participation is a complex problem. It will take a great deal of study to understand this problem, and probably a wide variety of policies to deal with it.

Political inequities

Universal suffrage, with one vote for each citizen, is one of the requisites of a system in which every individual, whatever his economic or social status, has an equal voice. As recent Supreme Court decisions about "reapportionment" suggest, there is in our constitutional and democratic ethic a concern that each group of citizens have the opportunity to play a role proportionate to its numbers.

Are any groups denied the role in the political system to which their numbers should entitle them?

In some Southern States, most Negroes have historically been denied the right to vote, and the proportion of Negroes registered in these States is still often a great deal smaller than the proportion of whites that are registered. Such inequities are an affront to democracy. Yet it is also significant that these differences in registration rates are steadily getting smaller, partly because of the Civil Rights Acts of recent years, and that in the Northern States Negro registration rates are not much different from those of whites.

There are also distinct differences in the proportion of the *total* population that is registered in the Nation's major cities. A study of 104 major cities showed that rates of voter registration were greater than 90 percent in some cities (such as Detroit, Seattle, and Minneapolis), and less than 70 percent in others (such as Baltimore, Newark, and New York). If literacy tests, methods of purging registration rolls, and inconvenient arrangements for registration are among the factors that account for these differences, they have distinct implications for the distribution of power among different socioeconomic groups.

There is also the question of the fairness of the apportionment of state legislatures and state congressional delegations, but again there is a clear trend toward more equal representation. Gerrymandering also appears to be declining, though this defies accurate measurement.

Insofar as the right to vote and apportionment are concerned, the situation is one of distinct, if not rapid, improvement.

Political power, however, involves more than the right to vote. It can require, among other things, money to finance campaigns, effective political organization, and lobbying or other pressure on the officeholder between elections. In many cases a group will have a major influence on public policy only if it is organized.

Although America has been called a nation of joiners, the fact remains that most Amer-

icans do not belong to any organization that represents them in the political system. Only one American in 25 reports membership in an explicitly political club or organization, and only 24 percent report belonging to any organization that they consider to be involved in political or governmental affairs. Only 57 percent report belonging to a voluntary association of any kind, including religious groups. A number of surveys indicate that less than 8 percent attend any political meetings or rallies.

Thus most Americans are without any organizational affiliations that would give them an organized voice in the governmental process.

The frequent lack of significant organized representation for major groups should not be surprising. When a large group of citizens has some common interest of purpose to seek in the political arena, the typical *individual* in that group often finds that it is *not* in his self-interest to contribute his money or time to an organization that attempts to further that common interest. He would get the benefits of any legislation that the organization succeeded in getting passed whether he contributed to that organization or not. And the typical individual in a large group could not by himself be decisive in determining whether or not the desired legislation would be passed. Thus he has little incentive to support an organization working in his political interest, and may very well not do so. The voluntary association seeking favorable legislation for a large group is in a position analogous to that of a government, in that it produces a service that cannot usually be sold in the market, yet it lacks the power to collect taxes, which governments (however popular their policies) require. Accordingly, we cannot assume that every large group of citizens will organize whenever its interests are threatened.

Industries with a small number of large firms will, because the resources are great and the number that need to be organized is small, usually be able to establish trade associations to further their political and other interests. Similarly, some professions, such as medicine, are well organized in part because each doctor can get professional advantages from joining his medical association. Labor unions can sometimes confer some similar benefits through grievance procedures and shop stewards, and often have the benefit of "union shop" provisions as well. Some farm organizations restrict the benefits of their cooperatives and mutual insurance companies to their members, thereby making it more advantageous for farmers to join.

Whereas some groups have the benefit of organization for reasons such as these, other groups, whose interests should have as much claim to attention, do not have these organizational advantages. This introduces an important inequality into our political system, which explains some of the unevenness in governmental attention to different problems.

This inequality particularly affects those with the least income and education. A survey by the National Opinion Research Center found that 52 percent of those with an income over $7,000 belonged to some voluntary association, but only 24 percent of those with an income under $2,000 did Some 53 percent of the professionals, proprietors, managers, and officials belonged to voluntary associations, but only 32 percent of the skilled laborers, and 21 percent of the unskilled. Forty-two percent of farm owners, belonged to such organizations but only 13 percent of farm laborers.

Organizational inequities such as these help us understand the paradoxical strength of "special interests" in a democratic system formally designed to treat everyone alike.

How can the groups with the least organized power assert their interests against those with the most? Enlightened public officials can help. A government can set up an office of consumer affairs, or an agency for migrant workers, and so on. But, in the end, can the problem be solved unless we organize the weak, or weaken the strong?

QUESTIONS ABOUT COMMUNITY AND ALIENATION

The concern about social division and alienation in American society seems greater now than it has been for some time. The rising tempo of protest, especially among the young and the Negro, and the recent manifestations of right-wing discontent, have prompted some Americans to ask why the Nation faces these divisions now.

There are undoubtedly many reasons. The sharp differences about the war probably explain some of the division. Another factor is our growing affluence and new social legislation which lift the expectations of some people and, at the same time, arouse resentment and fear of change among others. A complete analysis of social cohesion would also have to consider, among other things, the ways children are brought up and educated, and the effectiveness of society's mechanisms for mediating and resolving disputes. It would also have to do justice to the positive functions of alienation and division, as sources of innovation and reform.

The alienation from the university, neighborhood, and family may well be of greater concern than the national political divisions. This alienation suggests one of the most fundamental causes of national division—the lack of satsifactory group relationships. People need a sense of belonging, a feeling of community, in some small social group. If such associations are lacking, they will feel alienated; they will have a tendency either to "cop out" of the central life of the society, or else try to reverse the direction of the society by extreme or even violent methods. The more numerous and stronger the social ties that bind an individual to the social order, the more likely he is to feel an attachment to the society, and work within existing rules to improve it.

We then need to ask questions about some of the principal social relationships in the society, and particularly the family, the neighborhood, and the voluntary association.

The effects of marital status

The need for social relationships may be seen in the association between marital status and health. Married people have distinctly lower death rates and lower rates of suicide, alcoholism, and mental illness than those who have never married or whose marriages have been disrupted by death or divorce.

With the important factors of age, race, and sex accounted for, differentials in death rates by marital status are very great. For every age, race, and sex, married persons have the lowest death rates. This cannot be explained by any difficulties those who are ill might have in getting or keeping a spouse, for the death rates for widowed persons, at all ages and for both sexes, exceed those of the married. Nor are the differences in suicide rates large enough to account for the differences in mortality rates.

Such statistical associations are particularly important here because they illustrate the pervasive and far-reaching consequences close social relationships can have. They add plausibility to the observations which suggest that alienation from society often reflects a lack of satisfactory relationships in small, primary groups, rather than solely global or national developments, and they show the need to inquire into the functioning of all types of social groups.

The condition of the family

The family has undergone profound changes in modern times. It was once the basic unit of society—the source of cohesion and security, the unit of economic activity, the means of education and recreation. Today, many of the functions of the family are performed by other institutions, from the Social Security Administration to the school.

The change in the structure and role of the family has had two important consequences. First, young but unmarried adults have had less family affiliation in recent times than in earlier periods. For many Americans now between 18 and 22, the college or university is *in loco parentis*. For some others, a hippie community may play the role the extended family served in earlier periods. Neither the college nor the communities of drop-outs bring different generations together on the intimate terms the extended family once did, nor do they provide the same kind of emotional security and support.

The second consequence is that changes in the family as an institution are sometimes read as signs of the collapse of family life. Thus, increases in divorce rates suggest to some that the value put upon family life is declining, yet the proportion of the population that is married has been increasing.

Between 1940 and 1965 the proportion of the population, after age-adjustment, that is married increased by 7.5 percent, but the proportion divorced increased only 1.3 percent. Those with disrupted marriages tend to marry again, and fewer stay single. Longer life expectancy means that marriage partners have a longer life together, much of it without the obligations of young children. We need much better information on what such changes mean for our well-being and the strength of our institutions.

The Negro family has suffered adversities going back to the days of slavery. A large percentage of Negro children live in disrupted families. In 1965, about 38 percent of the Nation's Negro children did not live with both parents, whereas only 10 percent of white children were in that situation. About twice as many nonwhite children were living with their fathers only, four times as many with their mothers only, and five times as many with neither parent.

A substantial part of this difference is due to the greater rate of illegitimacy in the Negro population. In 1965, 1.2 percent of single white women had a child, but 9.8 percent, over eight times as large a proportion, of the nonwhite women did. This difference can, however, easily be misinterpreted because white couples are more likely to use contraceptive techniques, or to marry after the discovery of a premarital conception. Moreover, the illegitimacy rate among whites appears to be increasing, whereas that of nonwhites is, if anything, going down.

Still, Negroes are much less likely to belong to intact families than whites. This fact adds interest to the question of whether there is more alienation among the Negro population than the white.

Voluntary associations

There is some evidence that membership in voluntary associations reduces an individual's sense of powerlessness and alienation. One survey [3] attempted to measure the extent to which a sample group felt they had control over the events that affected them. The responses, especially those of manual workers, suggested that members of a labor organization consistently had lower "powerlessness" scores than those who did not belong to any organization. The results are given in table 4.

---

[3] From A. Neal and M. Seeman, "Organizations and Powerlessness: A Test of the Mediation Hypothesis," *American Sociological Review* (1964), 29, 216–226.

TABLE 4.—MEAN SCORES ON POWERLESSNESS FOR UNORGANIZED AND ORGANIZED MANUAL WORKERS, WITH INCOME CONTROLLED (N EQUALS 244)

Income	Unorganized	Organized
Under $3,000	2.50 (14)	2.20 (5)
$3,000 to $4,999	3.20 (46)	2.81 (52)
$5,000 to $6,999	3.20 (25)	2.55 (75)
Over $7,000	3.00 (4)	2.65 (20)
Total (mean)	3.08 (89)	2.64 (153)
S.D.	1.5	1.8

Note: Scores on the powerlessness scale ranged from 0 to 7

Though the evidence is ambiguous, those with the most pronounced sense of powerlessness and alienation often seem to display an ambivalent attitude toward political participation. On the one hand, they are less likely to vote, keep track of political issues, and the like. On the other hand, there is also some evidence that they are disproportionately active in particular circumstances. Some studies have suggested, for example, that alienated and powerless voters are especially likely to be vigorous opponents of fluoridation and school bond issues.[4]

These results are consistent with a theory advanced by a number of sociologists: alienation usually leads to political apathy; yet alienated people become easily aroused in certain circumstances, such as when extremist and totalitarian forces are gaining strength. We need to continue seeking further evidence on this and other explanations.

The neighborhood

The immediate neighborhood, though not so important as a social unit as it once was, still has some significance. The slum neighborhood is of particular interest, since it generally has less organization and social structure. Slums have disproportionate numbers of people who suffer from social pathologies, and slum communities lack the internal structure to deal with these problems.

In fact, social problems—from family disruption to suicide—cluster in the slum. This does not necessarily mean that the problems could disappear if there were no slums. It is logically possible that people with problems gravitate to the slum.

However, there is evidence that suggests that personal and social pathologies are contagious, and that slums *generate* many problems which they have no way of controlling.

If the probability of falling victim to a social pathology is greatly increased if one is brought up in a slum, then the slum is more than a private problem. It is a public and social problem. Private action cannot be expected to cure the social contagions of the slum environment any more than it can deal adequately with contagious diseases. They demand organized action, and organization is what many slums above all lack.

The lack of organization and social structure in the Negro slum therefore appears to be a major problem, and probably one that is related to the recent civil disorders. Cohesion or solidarity would be a great asset for it would give Negroes collective strength both in making external demands (e.g., on city government, or employers), and in enforcing internal constraints (e.g., against delinquency and crime). Its relative absence leaves the individual Negro particularly vulnerable to the unrestrained predations of persons within his community or outside it. The examples of the solidarity of other ethnic groups, such as Jews and Chinese, indicate the tangible assets community solidarity provides: political power, aid to those in trouble, and lending arrangements for those establishing or expanding businesses.

Alienation

The net effect of an individual's praticipation can be partially revealed by surveys which seek to find out whether the individual feels he has control over his own destiny, an intelligible part to play in social life, and values he shares with others. According to such surveys the degree of alienation is substantially different for different groups.

Negroes are much more likely to feel powerless and alienated than whites. A comparison of white and Negro employed men in Los Angeles, for example, showed the following results:

[In percent]

	Negro choices (N=312)	White choices (N=390)
1a. Becoming a success is a matter of hard work; luck has little or nothing to do with it	58	77
1b. Getting a good job depends mainly on being in the right place at the right time	42	23
2a. By studying the world situation, one can greatly improve his political effectiveness	58	70
2b. Whether one likes it or not, chance plays an awfully large part in world events	42	30
3a. Wars between countries seem inevitable despite the efforts of men to prevent them	69	66
3b. Wars between countries can be avoided	31	34

Studies have also indicated that the difference in the sense of powerlessness between Negroes and whites is not explained solely by differences in education. When a sample of whites and Negroes were asked to react to the statement that "There is not much I can do about most of the important problems that we face today," the proportions responding affirmatively, at different educational levels, were as follows:

	Percent
Negroes:	
Less than 12 years education	73
12 years or more	60
Whites:	
Less than 12 years education	57
12 years or more	34

Most other minorities also show a high degree of powerlessness, though the Jewish minority appears to be an exception.

Some surveys have suggested that Negroes in integrated areas, or with relatively integrated life styles, tend to feel less powerlessness than Negroes in highly segregated circumstances. The willingness to use violence, by contrast, appears to be greater among Negroes with a high degree of powerlessness, at least according to one survey of the Watts area of Los Angeles.

Among white Americans, alienation is apparently less likely to show up as a feeling of powerlessness and more likely to show up as a conviction that socially disapproved means must be used to attain objectives. Alienation in this sense is greatest among those with lower socioeconomic status. Those who are the most alienated, moreover, tend to have considerable prejudice against members of minority groups.

Alienation accordingly appears to play a role both in the discontents of the black minority, especially those who feel violent means are necessary, and also among those in the white population who show most prejudice against minority groups. Its importance among disaffected young people is not in dispute.

Conclusion

A sense of community, which would do a great deal to lessen alienation, is only one of our social and political objectives. We also cherish individual freedom and equality which too much cohesion in our social groups can sometimes restrict. Some alienation may also be related to intellectual and artistic creativity, and thus socially desirable. Moreover, it often strengthens the forces of reform, and enables the society to change with the times.

Thus a sense of community is not the only good. But, as the present divisions in our society reveal, it is very much worth asking whether we have as much as we need.

PROTECTION OF CERTAIN SPECIES

Mr. STEVENS. Mr. President, I have joined the Senator from Texas (Mr. YARBOROUGH) in cosponsoring S. 335, a bill to prohibit the importation of species which are in danger of extinction and to protect certain species in the United States.

Mr. President, this is a good piece of proposed legislation. We in Alaska know and value the beauty and pleasure that are derived from our wild animals, and anything the Federal Government can do to help to preserve this priceless natural heritage is for the better.

I hope that S. 335 can be passed quickly; every day of delay will mean further loss to the world's dwindling irreplaceable supply of wild creatures.

RELOCATION FROM KANSAS CITY NOT JUSTIFIED

Mr. SYMINGTON. Mr. President, for some time rumors have been circulating that the administration was considering reorganization in several of the most important departments, with a possible relocation of regional offices. We had heard reports that this relocation would involve moving the regional offices of the Department of Labor, the Department of Health, Education, and Welfare, and the Office of Economic Opportunity from Kansas City, with a consequent transfer of hundreds, if not thousands, of career employees from that community, all for the commendable objective of improved service.

The possibility of transferring these offices from Kansas City has been advanced several times in the past, but was always tabled after careful study revealed the superb transportation and communication facilities at Kansas City, as well as its central location for the majority of the people to be served.

Only yesterday, the Kansas City Star, in a story by Mr. Joe Lastelic of the Washington bureau of that newspaper, gave what appeared to be a more authoritative report than we had previously been able to obtain from the administration about this possible relocation.

Immediately, Senator EAGLETON, Representatives BOLLING, HULL, RANDALL, and I joined in a telegram to the President asking that before any such change is made, the civic and business leaders of Greater Kansas City, representing both Missouri and Kansas, be given an opportunity to present the facts as to what

that metropolitan area has provided over the years and will continue to provide in outstanding services for these Government functions. I ask unanimous consent that our telegram be printed at this point in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

MARCH 26, 1969.

The PRESIDENT,
The White House,
Washington, D.C.:

The Kansas City Times this morning reports the administration is considering reorganization of Labor, HEW and OEO regional offices with transfer of 825 employees from that community.

With its central location and unexcelled transportation and communications facilities centered in the Kansas City area, it is impossible for us to understand how such a move would add to Government efficiency or save money.

Before any such change is made we would appreciate opportuntiy for civic and business leaders of Greater Kansas City, Missouri and Kansas, to present the facts as to what this metropolitan area provides and will continue to provide in outstanding services for these Government functions.

Senator STUART SYMINGTON,
Senator THOMAS F. EAGLETON,
Congressman RICHARD BOLLING,
Fifth District.
Congressman W. R. HULL, Jr.,
Sixth District.
Congressman WILLIAM J. RANDALL,
Fourth District.

Mr. SYMINGTON. Mr. President, we understand that members of the Kansas delegation who represent the western part of Metropolitan Kansas City area have made a similar request to the President.

This morning, however, we learn that the President does plan to issue a directive to the Departments of Labor and Health, Education, and Welfare and the Office of Economic Opportunity to move their regional offices from Kansas City.

A telegram yesterday afternoon from the mayors of Kansas City, Mo., and Kansas City, Kans., and the presidents of the chambers of commerce of the two cities reports they also wired the President offering their cooperation in further study of the facts. I ask unanimous consent that that telegram be printed at this point in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

KANSAS CITY, MO.,
March 26, 1969.

Hon. STUART SYMINGTON,
Senate Office Building,
Washington, D.C.:

Following telegram has been sent to the President, White House, Washington, D.C.

"We are concerned in the national interest at local press reports this date alleging relocation in Denver of regional offices of Departments of Labor and Health, Education, and Welfare and Office of Economic Opportunity.

"We commend your desire to effect economy in government and increase efficiency. Respectfully urge delay in final decision by Budget Bureau and your personal study of all facts. Some factors for consideration follow.

"Nineteen hundred and sixty-eight task force studying same proposal found it more economical to operate from Kansas City than from Denver. Subsequent transfer of some Department of Labor operations from Denver to Kansas City and recommendation that regional office of HUD be located in Kansas City are consistent with task force findings.

"States involved are Colorado, Idaho, Iowa, Kansas, Minnesota, Missouri, Montana, Nebraska, New Mexico, North Dakota, Utah, Wyoming. Functions of all offices are concerned basically with people and population center are found mainly in States of Iowa, Kansas, Minnesota and Missouri.

"Strong orientation of Department to urban problems suggests better service may be provided from Kansas City's closer proximity to population centers than in Denver nearer to more sparsely populated States.

"Travel costs and time of Department employees traveling from Denver back through Kansas City to population centers certain to increase with proposed relocation.

"Kansas City air service superior and current development of Kansas City International Airport sure to achieve cost and time reductions in future.

"Departments now located in Federal facilities in Kansas City. Denver relocation would require Federal Government leasing space from private sector. Estimate eight hundred employees at one hundred and thirty square feet per employee at Denver rate of four dollars and fifty cents per square foot indicates conservative estimate of four hundred and sixty eight thousand dollars per year continuing additional cost to Federal Government for space alone.

"Relocation of Federal employees and families taking into account number of homes owned and inevitable commission on sale of homes, actual movement of individuals and personal belongings estimated conservatively at four thousand dollars per employee resulting in additional three million, two hundred thousand dollar cost to Federal Government.

"No estimate of moving supplies in equipment of various offices available at present but again certain to be additional cost to Federal Government.

"Relocation constitutes personal hardships to many competent, dedicated and loyal Federal employees.

"Once again respectfully urge reconsideration and further study. We stand ready to assist.

"Appreciate all immediate assistance you can give.

"ILUS W. DAVIS,
"Mayor, Kansas City, Mo.
"JOSPEH H. MCDOWELL,
"Mayor, Kansas City, Kansas.
"BERT BERKELEY,
"President, Chamber of Commerce, Greater Kansas City.
"JAY DILLINGHAM,
"President, Kansas City, Kansas Area Chamber of Commerce."

Mr. SYMINGTON. Mr. President, the purported objective of this proposed relocation is decentralization of authority from Washington through centralization in eight cities away from Washington. It is our understanding that the headquarters for our region would serve 11 States—Colorado, Idaho, Iowa, Kansas, Missouri, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming—and would be located in Denver, Colo.

On a map of this region, without any consideration for the distribution of population, Denver would appear to be centrally located, at least geographically. In that the mission of these Federal agencies is to serve people, however, we believe the greatest service at the lowest cost can be given by continuing these offices in the city nearest the center of population. According to 1967 census estimates, 11 million people reside in Missouri and the three States adjacent to Missouri in the proposed 11-State region, whereas 6 million people reside in the other seven States.

It is difficult to understand how relocation of the regional offices to a point more distant from the major concentration of population is going to aid the quality and promptness of service. Surely it would be better to keep these three regional offices where they are and put the proposed subregional offices at the point of lower population density.

According to newspaper reports, city mayors have been asking for this relocation. This would not appear to hold true in our region, as I have received wires from the mayors of the two largest metropolitan areas, from affected Federal employees, and from business groups served through these offices. They are uniform in expressing their opposition to removal of the regional offices from Kansas City and their belief that such a move would, in fact, impair the services that can be rendered our region.

The largest metropolitan area to be served in this region is also disturbed about this possible move. I ask unanimous consent to have printed at this point in the RECORD a telegram received this morning from Mayor A. J. Cervantes of St. Louis, Mo.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

ST. LOUIS, MO.,
March 26, 1969.

Hon. STUART SYMINGTON,
U.S. Senator,
Senate Office Building,
Washington, D.C.:

Urgently request you to assist in delaying any decision regarding the moving from Kansas City, Missouri, to Denver of the regional offices of the Department of Labor, HEW and OEO. Kansas City business and civic leaders are preparing economic and professional facts and figures concerning this matter. The move would be a severe blow to St. Louis programs.

ALFONSO J. CERVANTES,
Mayor, City of St. Louis.

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram from Efton A. Stanfield, manager of the National Electrical Contractors Association of Kansas City, expressing the views of that organization.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

KANSAS CITY, MO.,
March 27, 1969.

Hon. STUART SYMINGTON,
U.S. Senator,
Senate Office Building,
Washington, D.C.:

Re proposed relocation of regional offices of U.S. Department of Labor, HEW and OEO from Kansas City, Missouri to Denver, Colorado. Urgently request that you oppose the proposed relocation of regional offices, U.S. Department of Labor, HEW, and OEO, from Kansas City. Cost of such relocation would, in opinion of membership of this large trade association, result in exorbitant expenditures in these austere times. Furthermore, due to mid America location of Kansas City, relocation would, obviously, result in added travel and per diem expenditures above and beyond that now in force. Relocation expenses of families, per diem and travel wise,

shall, obviously, result in unnecessary expenditures of tax payers money. Finally, such relocation shall drastically affect the economic welfare of the greater Kansas City area. Due to untimeliness of this announcement, together with reported imminent decision of the President, your opposition to this relocation effort is urgently requested.

Respectfully yours,

EFTON A. STANFIELD,
Manager, National Electrical Contractors Association.

Mr. SYMINGTON. Mr. President, before Congress is asked to appropriate funds to pay for this relocation, it is to be hoped we will be given the facts and figures upon which this recommendation is based, and working with the State and local officials to be served, we will also be given the opportunity to present the facts as to why we believe these agencies have best been able to serve the people by the maintenance of their regional offices in Kansas City.

AMERICAN JEWISH COMMITTEE AWARD TO LEO WEISFIELD, SEATTLE, WASH.

Mr. JACKSON. Mr. President, last fall, a distinguished citizen of the State of Washington received the American Jewish Committee Award at the Jewelry Industry Dinner of the American Jewish Committee Appeal for Human Relations at the Hotel Plaza in New York City.

This gentleman is Mr. Leo Weisfield, a prominent businessman of Seattle, Wash.

I have just received a transcript of that meeting which was highlighted by an excellent address by Mr. Hyman Bookbinder, former Assistant Director of the Office of Economic Opportunity.

A wire that I sent to Dinner Chairman M. Fred Cartoun was read. It said:

It is indeed fitting that the Jewelry Industry Human Relations Award sponsored by the American Jewish Committee Appeal for Human Relations should be given to Leo Weisfield. It has been my honor to have known and worked with Leo Weisfield over a period of 30 years. He is not only a distinguished Northwest businessman, honored and respected by our people, but he has been able to find the time to give of himself in behalf of those causes that have been for the betterment of mankind. He is a kind and gentlemanly man, who has never hesitated to come to the aid of the poor and the oppressed. He has been a firm defender of civil liberties and civil rights. He has never hesitated to speak out, no matter how unpopular the cause. As he is a man of integrity, his influence for good has made our own area a much better place in which to live. I am honored to salute my long-time good personal friend Leo Weisfield, and extend to him my warmest congratulations on this occasion.

Among those gathering for this outstanding event were Walter Karlan, Tobias Stern, Irving Abel, Simon C. Gershey, Milton Weill, Norman M. Morris, Arthur B. Sinkler, Henry Peterson, Julian Lazrus, Ben Natchez and Henry M. Margolis. Mr. Ben Lazrus, in making the presentation to Mr. Weisfield said:

Leo has done much to improve the lives of others. He is a busy man. Leo is chairman of the Weisfield chain of some 43 stores, yet he's devoted to many civic and philanthropic endeavors. The list is too long to remember, so let me read a few of his community achievements. He is Chairman of the Washington State Committee for the Handicapped, President of the Jewish National Fund for the Pacific Northwest Region; a Board member and former President of the Jewish Federation in Seattle; Treasurer of Greater Seattle, Inc.; and a former regent of Washington State University. He holds the Jewish National Fund's John F. Kennedy Peace Award.

Leo Weisfield's career has been a contributing one, and we of the Northwest who know him best, are especially pleased on his receiving this high award which had most recently been given to General of the Army Omar Bradley.

I ask unanimous consent to have printed in the RECORD Mr. Weisfield's acceptance remarks.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY MR. LEO WEISFIELD ON RECEIVING HUMAN RELATIONS AWARD OF AMERICAN JEWISH COMMITTEE, OCTOBER 9, 1968

Thank you very much. I was first advised that this was merely a group of the American Jewish Committee. I did not know until I arrived in New York that I was being honored. I accept it in this manner more graciously and with more enthusiasm and with more love, because it's from my fellow jewelers.

Now, I know from experience that one who receives an award should stand up and be trembling and nervous and accept every statement made about him as being factual and thanking the person and telling him how humble he is and how much he appreciates all these comments that were made about him.

I asked for the privilege of making a few comments when I found out that this was really a group of friends. I haven't had the pleasure of meeting all of you but I know most of you. I never leave a meeting or accept an award without trying to leave one thought. By the way, before I get started, I cried a little bit this evening because, without my knowing it, my daughter and my grandson—and we are that type of a family—flew in without telling me. When I saw them coming here to be part of this meeting and sharing with me the pleasure of receiving this award, tears came to my eyes. Then my nephew, whom I love so much and is part of our business and who is the local chairman of the American Jewish Committee in Seattle, surprised me as well, and so that added more to the historical event of this particular evening. I want to tell you that I really feel honored and flattered that the Jewelry Division selected me to receive this honor. And I do accept it in the spirit in which it was presented. I accept it in this spirit. I want to tell the Committee that I have never accepted an award in my life for what I did in the past. It is true that one likes to be respected for what he did in the past, and in accepting an award, as I do, I accept it for what I shall do in the future for the American Jewish Committee, not for the past. That has been my life and that will always be my life. I shall merit this award when I prove that statement to the Committee.

I couldn't help looking over the Committee's activities of the years 1967 and 1968. I don't know who drew up the AJC pamphlet; it's marvelous; it's wonderful; and although I haven't been too active in this particular organization, I have been a dedicated Jew since the day I could say, "Mother" and "Father." I was brought up that way, and I shall always be.

This is the thought that I want to leave with each and every one of you and for how long you will carry it in your mind, I don't know. I am not only speaking as a representative of a Jewish organization, but I am also speaking in the broad terms of all religions. I was looking very carefully to the future. Who would carry on the work of the American Jewish Committee? At a glance, I can see there are some young men in this audience; I, too, am a young man of 76; and I shall remain young as God gives me life. I am challenging the American Jewish Committee to accept as a responsibility the carrying on of their work to the youth—the Jewish youth. By Jewish youth, I mean Jews mostly in the religious sense. This can apply to any religion, because, in my humble opinion, most of the problems today must be decided by future generations; and even you, sir, as a public relations man, know that.

We have many problems, and we are going to solve them. The majority of the young men are good Americans and will be as good as anyone in this audience. But there are problems that must be solved, and we as Jews have one of the most serious problems in relation to that particular phase of life. We are not teaching our youth, the Jewish youth, the proper respect for their religion and love, as some of us were taught. I can dare to say to the world, as well as to you, that the foundation of religion was created by the Jews, and I can dare to say to you that one of the most important gifts to the world was religion.

I can make a personal confession; recently my wife was ill for a few months, and I prayed every moment of my life at that time for her recovery. God answered my prayer, and I shall never forget it as long as I live. That's the reason I chose that particular thought to leave with you this evening. Yes, it's true that everyone sitting at this front table and most of those sitting around listening to us are good Jews and dedicated Jews; but I dare to stand before you this evening and say to you, you are neglecting one of your most important responsibilities. I know it from experience and by every-day action. You are not inculcating in the lives of your children what you were taught in respect to what Judaism really means. What is the good if every part of this particular program of 1967 and 1968 was developed? What is the good of it all if it cannot be carried from generation to generation? I defy anyone to tell me what good it is if it will die with the Jewish religion. I dare to say "die," and I have talked with many a rabbi on this particular problem.

I am not going to abuse the program by taking more time than I said I would, but this is the thought I want to leave with you tonight. When you think of anti-Semitism, when you think of the help you are giving the American Jewish Committee, don't think of it as a personal matter as it relates to you or your wife or, casually, to your children. Think of it for the future generations of the Jewish people, and you will get a different concept and accept that responsibility in a different matter.

In conclusion, with all my heart, I accept this award and appreciate the thought behind it. With all my heart, I consider this as one of the great evenings of my life, because I have not only my friends, not only the members—a good many members and leaders of the jewelry industry, to which I have dedicated my most precious possession, my life—sitting around these tables and sharing with me this pleasure and this hour, and my family. I pledge you, through my family and myself, my dedication and my willingness to accept any responsibility that the American Jewish Committee gives to me or asks me to do. I want to thank each one of you for coming here this evening. I more than thank you, because I know you so well, for sharing with me this honor.

YOUTH CAMP SAFETY

Mr. RIBICOFF. Mr. President, with the coming of spring, millions of par-

ents will turn their thoughts toward finding a suitable summer camp for their children. They will talk to neighbors. Fancy brochures will come in the mail. Perhaps, on rare occasions, they will find it possible to actually travel to a campsite. But in the end, it is likely that a son or daughter will be sent off to a camp when in fact very little is known about the place, its personnel or its safety record.

The real tragedy is that far too many camps in America are not very safe or healthy places for children. Less than half the States have comprehensive safety regulations to govern the establishment and operation of camps. Many fail to set standards for the type and ability of the staff who will act as "summer parents" for periods ranging from 1 week to 2 months.

Mr. President, I recently reintroduced a bill (S. 809), to establish Federal minimum safety standards for camps. Under this bill, all the States would be encouraged to set up programs to insure compliance with the standards. It is a reasonable and commonsense way of providing a safer environment for our children. It will allow parents to ask one simple question of camps: "Do you meet Federal standards?"

On March 24, the New York Times published an editorial supporting the proposed legislation. In the spring issue of Family Safety, a publication of the National Safety Council, an article on the subject of camp safety, written by Harris Edward Dark, also discusses this problem.

I ask unanimous consent that the editorial and article be printed in the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 24, 1969]

WAITING FOR DISASTER

If twenty or thirty children were to die at a summer camp, the public outcry would probably force Congress to approve a bill establishing minimum Federal standards for camps. Senator Ribicoff of Connecticut believes that it should not be necessary to wait for a disaster to occur before Congress takes action. We agree.

Between seven and eight million children go to camp in the summer. The exact number is not known and neither is the number of camps in existence. What is known is that camping is a booming business, and that most camps operate totally without Government supervision. Nearly half of the states have no regulations governing camps at all, and most of the rest have no training requirements of counselors, no regulations about the condition of buses and trucks used to transport children or the qualifications of the drivers and no annual camp inspection.

Information about injuries and deaths at camps is hard to come by. Astonishingly, the only survey of camp safety was made back in 1929. That study concluded that two-thirds of all accidents at camp could have been prevented by better supervision or higher standards of camp maintenance. Even the most conscientious parents cannot be expected to know that a camp's bridle path follows a hazardous route or that all of the water sports counselors are not fully trained in life-saving techniques or that any one of a hundred other conditions at camp may in some way be deficient.

The Ribicoff bill would authorize the Secretary of Health, Education and Welfare to establish minimum standards and would reimburse each state that adopted those standards for one-half of the administrative costs. A dozen co-sponsors from both parties have joined in support of the bill. Senator Ralph Yarborough of Texas, the new chairman of Senate Labor and Public Welfare Committee ought to begin moving this bill toward final enactment before another summer camping season begins.

[From Family Safety, spring, 1969]

WHAT DO YOU KNOW ABOUT YOUR KID'S CAMP?

(By Harris Edward Dark)

The accident prevention specialist for the U.S. Public Health Service was making a spot check of children's summer camps for research purposes. He was appalled by what he found at one camp.

The camp's director said that hazardous equipment and substances were carefully kept in his living quarters under lock and key at all times. But in walking across the cluttered yard to the director's door, the PHS man tripped over a can of gasoline. Nearby were two beat-up power mowers and other equipment, just the kinds of things that curious children get in trouble with.

This wasn't all. The camp director spoke very positively about how a camp's staff should continually look for hazards around the grounds and make necessary corrections immediately. Yet the inspector, who could not restrain himself from sarcasm, wrote in his report, "I know he feels deeply about this because the broken steps going down to the bathing area are going to get fixed one of these years."

In the same vein, the inspector commented on the "very unique garbage disposal" system at the camp: "I found out, much to the director's embarrassment, that when the cooks think the meat is spoiled, they throw it out the window for the stray dogs and other animals around the camp."

But perhaps worst of all from the standpoint of danger was this camp's poor security system. The director told the inspector that a strict policy of the camp made it mandatory for each counselor to know where the children were at all times. At the swimming and dock area the director displayed a board on which the children's numbered badges were placed; the badges indicated whether the children were in a canoe or rowboat or in swimming. At that time, the canoes and rowboats were in, and there was apparently no one in swimming. Yet the badges indicated that three children were in a canoe. The lifeguard remembered seeing the missing children bring in the canoe and walk into the woods. No one seemed alarmed, reported the inspector, since "the children always show up at mealtime."

Children don't "always show up at mealtime." In the unfamiliar setting of a summer camp, every child needs special instruction and a kind of super-supervision—compared to what he is used to at home—until he becomes thoroughly familiar with the new environment. Most children never get enough camping experience to reach that point. So they will always need alert supervision. Without it, a child can get lost, suffer a serious injury or even be killed while at camp.

Only a small minority of states have regulations specifically pertaining to resident camping. There are public-health laws that deal with such things as water supply and sewage disposal, but in most of our states there's no check, for example, on the age or physical, mental or moral qualifications of the camp director or any of the counselors. Often, the only person who has had to qualify for his or her job is the lifeguard.

Yet simple incompetence is only part of the problem. There's ample evidence that many camp counselors can be woefully ill-equipped to take on the responsibility of safe-guarding the activities of young folk.

The fancy brochures published as sales promotion pieces by many camps don't always tell the whole story. As an isolated case in point, a camp that published a folder extolling its excellent safety record continued to mail them, even though a season with several accidents made the claim untruthful.

A parent may use the brochures as a general guide, but there's no reason to accept them as gospel. The only really good way to judge a camp is to go there yourself—fore-armed with the right questions to ask.

About 6 million American children go to camp each year—that's about 1 in 7 of the 6-to-16-year age group. There are no national figures on how many campers and counselors are injured each year but the number would be in the thousands if all injuries were reported.

Certain patterns do show up in surveys made of camping accidents. Continental National American Group's commercial special risks division, the insurer that handles the nation's largest load of camping children, found that the 11-year-old age group—both boys and girls—is the most accident-plagued. But the insurance company says that boys have far more accidents than girls do. Professor Arthur E. Gjertsen, a member of the faculty at the State University of New York, conducted a study of accidents that occurred in 69 camps in a midwestern state. His survey showed that of all camping accidents, 41 per cent occurred during supervised periods of the day, including waterfront and game times. Collisions of the people-to-people type were high on the list of injury causes. Older children, ages 10 to 14, are more likely to be involved, and their accidents tend to be more serious, probably because of their greater physical venturesomeness.

Far and away the greatest cause of death at camp is drowning, in spite of the fact that the waterfront of the average camp is the best supervised area. This points up the risks in swimming, boating and canoeing that every parent should keep in mind when checking on a prospective camp for a child.

No one knows this better than Mitch Kurman, a furniture dealer of Westport, Connecticut, whose 15-year-old son, David, drowned in what the father considers a senseless camping-trip accident about four years ago. The Kurmans had picked the camp in upstate New York because it offered canoe trips into Maine, New Hampshire and Ontario. Kurman says the family simply assumed the camp and its side trips were safe.

But after checking into the death of his son, spilled from a canoe on the west branch of the Penobscot River in Maine, Kurman realized his assumption was tragically wrong. He learned from other campers on the trip and from Ontario and Maine police that the young counselor guiding the boys had previously had a narrow escape on a river he had been warned against, and that a forest ranger had specifically warned the same counselor not to try the river where David was lost (described as "wilder than the Niagara Gorge"). Yet the counselor had rashly led his boys into danger in canoes that lacked fast-water safety equipment—life preservers, ropes or snubbing poles.

"If David hadn't been able to swim, if he had wandered off by himself, if he had been ill, it would have been one thing. But this was too raw to let (camps) get away with."

Transformed by tragedy into a crusader, Kurman carried his case to Washington and then virtually all over the country at his own expense. His dead son, a Connecticut resident, had been sent to camp in New York and had suffered his fatal accident in Maine. So Kurman went to Washington first to explore the possibility of national legislation to insure the safety of the estimated 10,000 summer camps from coast to coast. At

Washington, he was told that camp safety is a state matter.

At the New York attorney general's office, it was explained to Kurman that the state's camp safety is governed by the sanitation code—in Kurman's words, "safe food and safe water." There are no regulations for screening camp personnel in most states, Kurman found.

Also, Kurman found that camps do not have to record publicly any accidents or injuries except fatal ones. Thus, as he puts it, "A kid breaks his arms, gets first aid, is sent home and only the camp and parents know it." This accounts in large part for the dearth of camp-accident information.

With so little regulation and inspection, what assurance does a parent have for the reasonable safety of his children? This—and more specific questions—have been pondered by the American Camping Association for a long time.

The ACA has developed a set of specifications over the years that must be met and adhered to by its 3,000 member camps, roughly one to every three or four camps in the nation. A camp requesting membership is first visited by a pair of inspector-advisors who spend a couple of days, sometimes longer, looking over the facilities and observing how activities are managed.

Seldom does a camp come up with a perfect record. The ACA has no police power; the consultants who visit the camp make recommendations for improvement, and in most cases the camp management is anxious to comply. In the rare case of a flagrant defect and a refusal of cooperation on the part of the management, the camp can only be denied ACA membership.

Of the 10,000 to 11,000 youth camps across the nation, less than one-third are accredited by the ACA. And 14 to 17 percent of the camps that apply for accreditation do not meet the ACA standards the first time around. Some camps, of course, could meet the standards but do not choose to apply for ACA accreditation and membership. Organizations such as the YMCA and Boy Scouts of America have their own standards, though many such camps are also ACA members. The ACA has the only set of standards that call for on-the-spot inspection. There is no way to determine how many of the thousands of non-ACA-member camps could meet ACA standards.

Well aware of this, Kurman wrote to Connecticut Senator Abraham Ribicoff, whom he knew to be a grandfather: "Would you, with all your power and resources as a senator, have any better way of determining a camp's safety than I have?"

That letter started the legislative ball rolling, but both Senate and House bills died in committee last year. The type of bill that's most likely to become federal law is one which defines the safety standards and encourages the 50 state governments to enforce them. There may be a provision allowing complying camps to advertise that they meet federal and state standards.

This type of federal-state cooperation takes time—years. In the meantime, late figures show that only 17 states require that a camp operator be licensed; only 26 states have general regulatory guidelines of any sort; only four states prescribe age requirements for counselors.

If you have a child to send to camp this summer, how can you possibly select a camp that will be relatively safe?

First, an important "don't"—don't attempt to judge any camp merely by its literature. You must visit the camp and make up your mind from personal observation, or rely on the recommendation of someone in whom you have implicit confidence. This pertains to day camps as well as resident camps, and it is as important for sports, music, religious and other specialized camps as for general camps.

But merely inspecting a camp will have limited value unless you know what to look for. Use the following guidelines, extracted from detailed information from various camping authorities:

PERSONNEL

Is the camp director at least 25 years of age, with camping education or training within the past three years and at least 16 weeks of active experience in administration or supervision of an organized camp?

Does the camp have a carefully written job description for each position, to be used in selecting the staff?

Are the minimum age levels for counselors maintained, according to type of camp; day camp, 18; family and resident camp, 19; travel camp, 21. Do the travel counselors have the extra qualifications in age and experience prescribed by the ACA?

Does the counselor/camper ratio meet recommendations? In a resident camp this should be one counselor to eight campers who are 8 years old and over, and one to six campers under 8.

SITE, FACILITIES AND EQUIPMENT

Is the waterfront area shelving safe, adequately roped and free from treacherous currents and underwater hazards?

Are foot trails kept separate from vehicular roads to the greatest possible extent?

Are there unusual natural hazards (cliffs, swamps) that require special protective measures?

Are all sleeping accommodations on the ground level or, alternatively, are fire escapes and protective devices provided on all other floors?

HEALTH

Is a physical examination by a physician and a medical history required for all people at the camp within three months before camp starts? Is a physical checkup also given to each person, either immediately before departure to camp or upon arrival, by a doctor or registered nurse? Does the camp require all innoculations stipulated by public health authorities? Is a daily record of all first aid and other medical treatment kept by the doctor, nurse or director?

If a family or resident camp, is there a doctor or registered nurse in residence at all times? If a day camp, is a doctor or registered nurse on call at all times, and is there a person on the camp site who holds a current ARC certificate in advanced first aid?

Are all staff members drilled on standard procedures to follow in event of health emergencies?

Is a night patrol operated after hours?

GENERAL SAFETY

Is the waterfront program at all times under the direction of an experienced person over 21 who holds a current American Red Cross water safety instructor's certificate? In addition to the waterfront director, is there on duty a *minimum* ratio of one *senior* lifesaver for every 25 persons in the water? Do all waterfront practices and equipment, including watercraft, comply with American Red Cross and U.S. Coast Guard standards or equivalent? For example, can all watercraft be locked up when not in use, and are they always locked at night? Is the swimming pool fenced?

Does the riflery program comply with National Rifle Association standards? Are the archery and riding programs planned and conducted in a manner to ensure the safety of all participants?

Are tools, including power tools, as well as their safety devices such as guards, used and maintained in good repair, and are they operated only under qualified supervision? Are gasoline, kerosene, explosives and inflammables stored away from inhabited buildings and kept away from children, under lock and key?

Is firefighting equipment adequate, are all staff members knowledgeable and practiced in its use, and have arrangements been made with the nearest local fire department or with fire wardens or forest rangers for special help if needed? Are disaster procedures planned and regularly practiced in the form of drills?

SANITATION

Does the camp comply with all applicable sanitation laws? Has it been recently verified that the water supply is approved as safe? Is the milk pasteurized or certified? Is storage for milk and perishable foods adequate and safe? Do dishwashing procedures and care of equipment comply with all applicable laws? Are waste disposal and toilet facilities adequate and in compliance with all applicable laws?

TRANSPORTATION

Is all equipment maintained in top condition? Is there a program of safety education for all camp personnel that is properly adjusted to the transportation practices of the camp? Are all persons who operate vehicles qualified under law to do so? Are all transportation units covered by adequate liability insurance? Do units provide safe seating for all passengers? Do chartered transportation units meet ACA transportation standards?

Concern shown by you and other parents will alert camp directors to the fact that the public is interested in first-class standards. A camp that is spending time and money to meet top standards should be anxious to answer questions, and personnel will make arrangements to show you around. Evasiveness may be a sign that all is not high-caliber.

PROPOSED AMENDMENT TO IRANIAN AGREEMENT FOR COOPERATION FOR CIVIL USES OF ATOMIC ENERGY

Mr. GORE. Mr. President, as chairman of the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy, I wish to inform the Senate that pursuant to section 123c of the Atomic Energy Act of 1954, as amended, the Atomic Energy Commission on March 17, 1969, submitted to the Joint Committee proposed amendments to the Agreement for Cooperation between the Government of the United States and the Government of Iran in the peaceful uses of atomic energy. The Atomic Energy Act of 1954 requires that such proposed amendments lie before the Joint Committee for a period of 30 days while the Congress is in session before becoming effective.

The main purpose of the proposed amendments is to extend the period of the existing Agreement for Cooperation due to expire on April 26, 1969, for an additional 10 years. In addition, various provisions of the Agreement for Cooperation are being updated in order to reflect changes that have been made in the Atomic Energy Act relating to private ownership of nuclear materials. Moreover, the provisions providing for the transfer of safeguards responsibilities to the International Atomic Energy Agency are being updated to reflect the fact that such transfer has been accomplished under a trilateral safeguards agreement signed in 1964 and that that agency will continue to apply the safeguards.

In keeping with the committee's general practice of including such agree-

ments in the CONGRESSIONAL RECORD for the information of interested Members of Congress, I ask unanimous consent to have printed in the RECORD the text of the proposed amendments to the civilian Agreement for Cooperation with Iran, together with supporting correspondence.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., March 17, 1969.

HON. CHET HOLIFIELD,
Chairman, Joint Committee on Atomic Energy, Congress of the United States

DEAR MR. HOLIFIELD: Pursuant to Section 123c of the Atomic Energy Act of 1954, as amended, there are submitted with this letter copies of the following:

a. a proposed amendment to the "Agreement for Cooperation Between the Government of the United States of America and the Government of Iran Concerning Civil Uses of Atomic Energy";

b. a letter from the Commission to the President recommending approval of the amendment; and

c. a letter from the President to the Commission containing his determination that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and approving the amendment and authorizing its execution.

The amendment has been negotiated by the Department of State and the Atomic Energy Commission pursuant to the Atomic Energy Act of 1954, as amended. It will revise and extend the Agreement for Cooperation between the United States of America and Iran which was signed on March 5, 1957, as amended by the agreement signed on June 8, 1964.

The two most significant aspects of the amendment are the extension of the term of the agreement and changes occasioned by the 1964 "private ownership" legislation. The present agreement is scheduled to expire on April 26, 1969. It will be extended for ten years, pursuant to Article VI of the amendment. Pursuant to Article II thereof, authority will be incorporated for authorized persons in either the United States or Iran to make arrangements directly with authorized persons under the jurisdiction of the other for the transfer of special nuclear material; such transactions would also be permitted between either government and authorized persons under the jurisdiction of the other.

The purpose of the remaining articles of the amendment is to update the aspects of the agreement, as discussed below.

Article I modifies the fuel article, Article IV, to (a) permit fueling of reactor experiments in addition to research reactors; (b) discontinue the obsolete requirement that title to enriched uranium, purchased from the Commission, be retained by the Government of Iran until such time as private users in the United States are permitted to acquire title to such material; and (c) discontinue the present options of the United States to retain special nuclear material produced in U.S.-origin leased material, following reprocessing, and to purchase special nuclear material produced in U.S.-origin material which Iran acquired by means other than lease. The United States, however, will have the right to approve transfers of such produced special nuclear material from Iran to any other nation or group of nations. The formulation governing the quantity of material, which may be transferred under Article IV of the current agreement, will be retained under the amended article. Also, the authority to provide this material enriched to greater than 20% in the isotope U-235 will be continued, subject to a finding of technical or economic justification for such enrichment.

Article III brings the present comprehensive safeguards article, Article VIII, into conformity with the similar provision in current agreements and incorporates changes in cross-references necessitated by the new fuel article.

Article IV extends Iran's "peaceful uses" guarantee in the present Article IX to cover special nuclear material produced through the use of material, equipment and devices transferred under the agreement.

Article V updates the article providing for the transfer of safeguards responsibilities to the International Atomic Energy Agency [Article IX(A)] to reflect that such a transfer has been accomplished under a trilateral safeguards agreement signed in 1964 and to provide for the continued application of safeguards by the Agency.

The amendment will enter into force on the date on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for entry into force.

Cordially,

GLENN T. SEABORG,
Chairman.

THE WHITE HOUSE,
Washington, March 17, 1969.

HON. GLENN T. SEABORG,
Chairman, U.S. Atomic Energy Commission, Washington, D.C.

DEAR DR. SEABORG: In accordance with Section 123a of the Atomic Energy Act of 1954, as amended, the Atomic Energy Commission has submitted to me a proposed "Amendment to Agreement for Cooperation Between the Government of the United States of America and the Government of Iran Concerning Civil Uses of Atomic Energy" and has recommended that I approve the proposed Amendment, determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution.

Pursuant to the provisions of Section 123b of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby:

a. Approve the proposed Amendment, and determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security of the United States of America.

b. Authorize the execution of the proposed Amendment on behalf of the Government of the United States of America by appropriate authorities of the Department of State and the Atomic Energy Commission.

Sincerely,

RICHARD NIXON.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., February 20, 1969.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: Knowing of your deep interest in furthering the peaceful uses of nuclear energy, I am pleased to enclose for your consideration a proposed amendment to the "Agreement for Cooperation Between the Government of the United States of America and the Government of Iran Concerning Civil Uses of Atomic Energy."

In submitting to you for the first time an action relating to our program of Agreements for Cooperation, I should like to note that other such submissions will be forwarded to you from time to time pursuant to Section 123a of the Atomic Energy Act of 1954. Some, as in the case of the agreement with Iran, will pertain to cooperation in the research aspects of nuclear energy; others will include not only research but power applications as well and will provide for the supply of uranium enriched in U-235 to fuel power reactors over periods of up to thirty years. The purpose of these agreements will be to extend and develop, on a peaceful basis, the humanitarian and economic benefits of scientific and technological advances in nuclear energy. They will also serve to help keep the United States in the forefront of international developments of both an economic and scientific nature in the peaceful applications of atomic energy.

The Atomic Energy Commission recommends that you approve the proposed amendment to the "Agreement for Cooperation Between the Government of the United States of America and the Government of Iran Concerning Civil Uses of Atomic Energy," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The Department of State supports the Commission's recommendation.

The proposed amendment has been negotiated by the Department of State and the Atomic Energy Commission pursuant to the Atomic Energy Act of 1954, as amended. It would revise and extend the Agreement for Cooperation between the United States of America and Iran which was signed at Washington on March 5, 1957, as amended by the agreement signed on June 8, 1964.

The present agreement is scheduled to expire on April 26, 1969. Accordingly, the main purpose of the amendment is to extend the agreement; an additional period of ten years would be established pursuant to proposed Article VI.

In extending the agreement, the opportunity has been taken to bring other aspects of the agreement up to date. As regularly reflected in other recent amendments and agreements, changes have been occasioned by the 1964 "private ownership" legislation. Pursuant to proposed Article II, therefore, authorized persons in either the United States or Iran would be permitted to make arrangements directly with authorized persons in the other country to transfer special nuclear material; such transactions would also be permitted between either government and authorized persons under the jurisdiction of the other.

The other articles of the amendment would update the aspects of the current agreement as noted below.

Article I of the amendment would modify the fuel article, Article IV of the agreement, to (a) permit fueling of reactor experiments in addition to research reactors; (b) discontinue the obsolete requirement that title to enriched uranium, purchased from the Commission, be retained by the Government of Iran until such time as private users in the United States are permitted to acquire title to such material; and (c) discontinue the present option of the United States to retain special nuclear material produced in U.S.-origin leased material, following reprocessing, and to purchase special nuclear material produced in U.S.-origin material which Iran acquired by means other than lease. The United States, however, would have the right to approve transfers of such produced special nuclear material from Iran to any other nation or group of nations. The formulation governing the quantity of material, which may be transferred under Article IV of the current agreement, would be retained under the amended article. Also, the authority to provide this material enriched to greater than 20% in the isotope U-235 would be continued, subject to a finding of technical or economic justification for such enrichment.

Article III would bring the present comprehensive safeguards article, Article VIII, into conformity with the similar provision in

current agreements and incorporate changes in cross-references necessitated by the new fuel article. At Iran's request, proposed Article III would also amend the safeguards article to make the present U.S. right to consult with Iran on health and safety matters a mutual right.

Article IV would expressly extend Iran's "peaceful uses" guarantee in the present Article IX to cover special nuclear material produced through the use of material, equipment and devices transferred under the agreement.

Article V would update the article providing for the transfer of safeguards responsibilities to the International Atomic Energy Agency [Article IX(A)] to reflect that such a transfer has been accomplished under a trilateral safeguards agreement signed in 1964 and to provide for the continued application of safeguards by the Agency.

Following your approval, determination, and authorization, the proposed amendment will be formally executed by appropriate authorities of the Government of the United States of America and the Government of Iran. In compliance with Section 123c of the Atomic Energy Act of 1954, as amended, the amendment will be placed before the Joint Committee on Atomic Energy.

Respectfully yours,

GLENN T. SEABORG,
Chairman.

AMENDMENT TO AGREEMENT FOR COOPERATION BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF IRAN CONCERNING CIVIL USES OF ATOMIC ENERGY

The Government of the United States of America and the Government of Iran,

Desiring to amend the Agreement for Cooperation between the Government of the United States of America and the Government of Iran Concerning Civil Uses of Atomic Energy, signed at Washington on March 5, 1957 (hereinafter referred to as the "Agreement for Cooperation"), which was amended by the Agreement signed on June 8, 1964,

Agree as follows:

ARTICLE I

Article IV of the Agreement for Cooperation, as amended, is amended to read as follows:

"1. As may be agreed, the Commission will transfer to the Government of Iran or authorized persons under its jurisdiction, uranium enriched in the isotope U–235 for use as fuel in defined research applications, including research reactors and reactor experiments, which the Government of Iran decides to construct or operate or authorizes private persons to construct or operate in Iran. Contracts setting forth the terms, conditions, and delivery schedule of each transfer shall be agreed upon in advance.

"2. The quantity of uranium enriched in the isotope U–235 transferred under this Article and within the jurisdiction of the Government of Iran shall not at any time be in excess of six (6) kilograms of contained U–235 in enriched uranium plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of such reactors or reactor experiments while replaced fuel elements are radioactively cooling in Iran or while fuel elements are in transit, it being the intent of the Commission to make possible the maximum usefulness of the six (6) kilograms of said material.

"3. The enriched uranium supplied hereunder may contain up to twenty percent (20%) in the isotope U–235. All or a portion of the foregoing special nuclear material may be made available as uranium enriched to more than twenty percent (20%) by weight in the isotope U–235 when the Commission finds there is a technical or economic justification for such a transfer for use in research reactors and reactor experiments, each capable of operating with a fuel load not to exceed six (6) kilograms of the isotope U–235 contained in such uranium.

"4. When any source or special nuclear material received from the United States of America requires reprocessing, such reprocessing shall be performed at the discretion of the Commission in either Commission facilities or facilities acceptable to the Commission, on terms and conditions to be later agreed; and it is understood, except as may be otherwise agreed, that the form and content of any irradiated fuel elements shall not be altered after removal from a reactor and prior to delivery to the Commission or the facilities acceptable to the Commission for reprocessing.

"5. Special nuclear material produced as a result of irradiation processes in any part of fuel leased by the Commission hereunder shall be for the account of the lessee and, after reprocessing as provided in paragraph 4 of this Article, shall be returned to the lessee, at which time title to such material shall be transferred to the lessee.

"6. No special nuclear material produced through the use of material transferred to the Government of Iran or to authorized persons under its jurisdiction, pursuant to this Agreement, will be transferred to any other nation or group of nations, except as the Commission may agree to such a transfer.

"7. Some atomic energy materials which the Commission may be requested to provide in accordance with this Agreement are harmful to persons and property unless handled and used carefully. After delivery of such materials, the Government of Iran shall bear all responsibility insofar as the Government of the United States of America is concerned, for the safe handling and use of such materials. With respect to any source material or special nuclear material or reactor materials which the Commission may, pursuant to this Agreement, lease to the Government of Iran or to any private individual or private organization under its jurisdiction, the Government of Iran shall indemnify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever rising out of the production or fabrication, the ownership, the lease, and the possession and use of such source material or special nuclear material or reactor materials after delivery by the Commission to the Government of Iran or to any private individual or private organization under its jurisdiction."

ARTICLE II

Article VII of the Agreement for Cooperation is amended to read as follows:

"1. With respect to the application of atomic energy to peaceful uses, it is understood that arrangements may be made between either Party or authorized persons under its jurisdiction and authorized persons under the jurisdiction of the other Party for the transfer of equipment and devices and materials other than special nuclear material and for the performance of services with respect thereto.

"2. With respect to the application of atomic energy to peaceful uses, it is understood that arrangements may be made between either Party or authorized persons under its jurisdiction and authorized persons under the jurisdiction of the other Party for the transfer of special nuclear material and for the performance of services with respect thereto for the uses specified in articles IV and V and subject to the limitations of Article IV, paragraph 2.

"3. The Parties agree that the activities referred to in paragraphs 1 and 2 of this Article shall be subject to the limitations in Article II, to the applicable laws, regulations and license requirements of the Parties, and to the policies of the Parties with regard to transactions involving the authorized persons referred to in paragraphs 1 and 2."

ARTICLE III

Article VIII of the Agreement for Cooperation, as amended, is amended to read as follows:

"1. The Government of the United States of America and the Government of Iran emphasize their common interest in assuring that any material, equipment or devices made available to the Government of Iran or any person under its jurisdiction pursuant to this Agreement shall be used solely for civil purposes.

"2. Except to the extent that the safeguards rights provided for in this Agreement are suspended by virtue of the application of safeguards of the International Atomic Energy Agency, as provided in Article IX(A), the Government of the United States of America, notwithstanding any other provisions of this Agreement, shall have the following rights:

"(A) With the objective of assuring design and operation for civil purposes and permitting effective application of safeguards, to review the design of any

"(1) reactor, and

"(2) other equipment and devices the design of which the Commission determines to be relevant to the effective application of safeguards,

which are to be made available under this Agreement to the Government of Iran or to any person under its jurisdiction by the Government of the United States of America or any person under its jurisdiction, or which are to use, fabricate, or process any of the following materials so made available: source material, special nuclear material, moderator material, or other material designated by the Commission;

"(B) With respect to any source material or special nuclear material made available under this Agreement to the Government of Iran or to any person under its jurisdiction by the Government of the United States of America or any person under its jurisdiction and any source material or special nuclear material utilized in, recovered from, or produced as a result of the use of any of the following materials, equipment or devices so made available:

"(1) source material, special nuclear material, moderator material, or other material designated by the Commission,

"(2) reactors, and

"(3) any other equipment or devices designated by the Commission as an item to be made available on the condition that the provisions of this paragraph 2 (B) will apply,

"(i) to require the maintenance and production of operating records and to request and receive reports for the purpose of assisting in ensuring accountability for such materials, and

"(ii) to require that any such materials in the custody of the Government of Iran or any person under its jurisdiction be subject to all of the safeguards provided for in this Article and the guarantees set forth in Article IX;

"(C) To require the deposit in storage facilities designated by the Commission of any of the special nuclear material referred to in paragraph 2 (B) of this Article which is not currently utilized for civil purposes in Iran and which is not transferred pursuant to Article IV or otherwise disposed of pursuant to an arrangement mutually acceptable to the Parties;

"(D) To designate, after consultation with the Government of Iran, personnel who, accompanied, if either Party so requests, by personnel designated by the Government of Iran, shall have access in Iran to all places and data necessary to account for the source material and special nuclear material which are subject to paragraph 2 (B) of this Arti-

cle, to determine whether there is compliance with this Agreement and to make such independent measurements as may be deemed necessary;

"(E) In the event of non-compliance with the provisions of this Article or the guarantees set forth in Article IX and the failure of the Government of Iran to carry out the provisions of this Article within a reasonable time, to suspend or terminate this Agreement and to require the return of any materials, equipment and devices referred to in paragraph 2 (B) of this Article.

"3. The Government of the United States of America and the Government of Iran shall have the right to consult one with the other in the matter of health and safety.

"4. The Government of Iran undertakes to facilitate the application of the safeguards provided for in this Article."

ARTICLE IV

Article IX of the Agreement for Cooperation is amended to read as follows:

"The Government of Iran guarantees that:

"(1) Safeguards provided in Article VIII shall be maintained.

"(2) No material, including equipment and devices, transferred to the Government of Iran or authorized persons under its jurisdiction by purchase or otherwise pursuant to this Agreement and no special nuclear material produced through the use of such material, equipment or devices, shall be used for atomic weapons, or for research on or development of atomic weapons, or for any other military purposes.

"(3) No material, including equipment and devices, transferred to the Government of Iran or authorized persons under its jurisdiction pursuant to this Agreement will be transferred to unauthorized persons or beyond the jurisdiction of the Government of Iran, except as the Commission may agree to such a transfer to another nation or group of nations, and then only if, in the opinion of the Commission, the transfer of the material is within the scope of an Agreement for Cooperation between the Government of the United States of America and the other nation or group of nations."

ARTICLE V

Article IX (A) of the Agreement for Cooperation is amended to read as follows:

"1. The Government of the United States of America and the Government of Iran note that, by an agreement signed by them and the International Atomic Energy Agency on December 4, 1964, the Agency has been applying safeguards to materials, equipment and facilities transferred to the Government of Iran under this Agreement for Cooperation. The Parties agree that Agency safeguards either as provided in the trilateral agreement, as it may be amended from time to time, or as provided in a new supplanting trilateral agreement shall continue to apply to such materials, equipment and facilities transferred under this Agreement, recognizing that the safeguards rights accorded to the Government of the United States of America by Article VIII of this Agreement are suspended during the time and to the extent that Agency safeguards apply to such materials, equipment and facilities.

"2. In the event that the applicable trilateral agreement referred to in paragraph 1 of this Article should be terminated prior to the expiration of this Agreement and the Parties should fail to agree promptly upon a resumption of Agency safeguards, either Party may, by notification, terminate this Agreement. In the event of termination by either Party, the Government of Iran shall, at the request of the Government of the United States of America, return to the Government of the United States of America all special nuclear material received pursuant to this Agreement and still in its possession or in the possession of persons under its jurisdiction. The Government of the United States of America will compensate the Government of Iran or the persons under its jurisdiction for their interest in such material so returned at the Commission's schedule of prices then in effect in the United States of America."

ARTICLE VI

Article XI of the Agreement for Cooperation, as amended, is amended to read as follows:

"This Agreement shall enter into force on the date on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Agreement and shall remain in force for a period of twenty years."

ARTICLE VII

This Amendment shall enter into force on the date on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Amendment and shall remain in force for the period of the Agreement for Cooperation, as hereby amended.

In witness whereof, the undersigned, duly authorized, have signed this Amendment.

Done at Washington, in duplicate, this ——— day of ———, 1969.

For the Government of the United States of America:

DONOVAN Q. ZOOK,
Director, Office of Atomic Energy Affairs, International Scientific and Technological Affairs, U.S. Department of State.

BARBARA H. THOMAS,
Foreign Affairs Officer, Division of International Affairs, U.S. Atomic Energy Commission.

For the Government of Iran:

His Excellency HUSHANG ANSARY,
Ambassador E and P from Iran.

Initialed: February 17, 1969.

Certified to be a true copy:

BARBARA H. THOMAS.

FELLOWSHIP AWARD TO GARY H. LAMBERT, SALT LAKE CITY

Mr. MOSS. Mr. President, I have received word that a junior medical student from the University of Utah has received a fellowship for 10 weeks of study at a mission hospital in the West Indies.

I am proud of the fact that Gary H. Lambert and his wife, the former Jane Barber, will be participating in this very worthwhile project.

I ask unanimous consent that the report announcing the fellowship be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., March 21, 1969.—Gary H. Lambert, a junior at the University of Utah School of Medicine, Salt Lake City, has been awarded a $555 Fellowship which will permit him to assist for 10 weeks this summer at a mission hospital in the West Indies.

Lambert, the son of Mr. and Mrs. Norval H. Lambert, of 3787 Springhollow Drive, Salt Lake City, is one of 31 American medical students selected to receive Smith Kline & French Foreign Fellowships from the Association of American Medical Colleges. The fellowships are supported by a grant from the Philadelphia manufacturer of prescription medicines and other health-related products.

Lambert, accompanied by his wife and two sons, will leave May 1 for L'Hospital Bon Samaritain, in Limbe, Haiti. The medical student will work under the supervision of William H. Hodges, M.D.

The hospital at Limbe serves the rural tropical area of northern Haiti which has a population of about 20,000. The usual number of in-patients is 90, and the outpatient clinic is visited by some 3,000 persons monthly. Lambert will assist with all of the work of the hospital, including complicated maternity cases and surgery.

Lambert's wife, the former Jane Barber, plans to assist in the hospital laboratory. Mrs. Lambert has a Bachelor of Science degree in medical technology and three years of experience as a registered technician at the University of Utah Medical Center.

Lambert was graduated magna cum laude from the University of Utah, where he was a three-year letterman on the track and cross-country teams. In 1962 and 1963 he served a mission in England for the Latter Day Saints church.

The Lamberts live at 3787 Springhollow Drive, Salt Lake City.

Now entering its tenth year, the Smith Kline & French Foreign Fellowships program was established to permit American medical students to widen their medical horizons in cultures different from their own.

In the past nine years, 277 Fellows representing 80 medical schools have served in 52 countries of Africa, Asia, Latin America and Oceania.

JUVENILE DECENCY

Mr. DODD. Mr. President, juvenile delinquency is a phrase with which Americans are all too familiar. Hardly a day goes by when our newspapers and broadcasters fail to tell us about the juvenile delinquents and the trouble they have caused and are causing.

Therefore, it was indeed a refreshing and welcome relief to read of the recent Teenage Rally for Decency at the Orange Bowl in Miami. According to the reports, there were some 30,000 young Americans gathered together to voice their support of the cause of decency in America, their support of their country, and their belief in God.

These young Americans, 30,000 strong, decided it was time to stand up and be heard. They told it like it is, Mr. President. They spoke up, not for juvenile delinquency, but for juvenile decency. They gathered not to protest something, or to be against something, but to be for something.

Mr. President, it is my belief that the demonstration in Miami last Sunday could be duplicated in virtually every city in America overnight, and it is my hope that it will. Because an overwhelming majority of our young people are good people. I believe that our youth has taken a bum rap for the few misfits and malcontents in their midst.

Let us all take a closer look at our young people and let us all gain a new perspective by which to judge their conduct. In many ways, the actions of our young are mere reflections of our own youth. Let us not be so eager to condemn so many because of the misdeeds of so few.

To the thousands of young people in Miami, and to the many adults and personalities who took part in Sunday's

rally, we owe our thanks for restoring our faith in the young people of America, who are the future caretakers of the greatest heritage known to mankind.

THE AIR TAXI

Mr. PEARSON. Mr. President, as many of us here know, the aviation industry is one of the most dynamic segments of our economy today. The air industry far outpaces the growth of our national economy and transportation in general. One indication of the health and maturity of this industry, I think, has been its ability to broaden and diversify its scope of activity. Within the aviation community new areas of economic activity are springing to life, and this activity is creating intense competition for the transportation dollar.

An article written by Guy Halverson and published in the Christian Science Monitor describes one area of aviation which is booming—the air taxi business. The article points out that the air taxi business has jumped from 12 operators in late 1965 to 185 today—nearly 15 times over in a period of 3 years. Many other favorable trends in this business are also discussed.

The need for air taxi operation exists because there are nearly 8,000 airports in this Nation which are not served by the airlines. The air taxi makes it possible to go anywhere in the Nation or in the world which has a legal airstrip. When there is no airline to a particular destination, you can take the air taxi. Routes develop where demands exist; they grow as the need and traffic does.

Air taxi companies generally fly light or medium sized aircraft, and their operators are licensed by the FAA. But I think their operators would be quick to point out that they meet standards even higher than those required by the FAA.

I am particularly proud that the Kansas aviation industry provides aircraft which are helping to meet this public demand.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Guy Halverson)

CHICAGO.—Paul G. Delman, president of Chicago-based Commuter Airlines, is "flying high."

For not only is Commuter (the nation's largest "third-level," or air-taxi service) now entering its fourth year of operation, but in that time it has established 11 routes (all but one direct), built a hefty fleet of modern Beechcraft propeller and turboprop all-weather aircraft, cracked the $1.5 million barrier in operating revenues, and trail-blazed an entirely new approach in air service.

"The 'hub approach,'" says Mr. Delman, a former Sioux City, Iowa, insurance man and World War II B–26 bomber pilot. "I saw that most third-level lines were starting with inadequate capital, poor equipment, and maybe one or two multistop routes. What we did was to start with strong capitalization, a first-rate fleet, and, using a central city—Chicago—as a hub, extended nonstop direct routes outward."

For time-conscious businessmen who balk at often seemingly interminable taxi rides to outlying big-city jet airports as well as for residents of towns of 50,000 or less whose limited airports have been virtually by-passed by the national and regional carriers like United, American, Western, and Ozark, third-level lines have filled a crucial need.

NET LOSS RECORDED

Under federal regulations, however, third-level airlines need not adhere to their published schedules. Passengers with reservations on smaller lines have occasionally come out to airports only to find the operator refusing to fly with just one or two passengers because he would lose money on the run.

Well-established lines such as Commuter and Executive Airlines in New England do stick to their schedules, though. In Commuters' case, Illinois is one of the few states to require it.

Since the first nine-passenger Commuter Beechcraft Queen lifted into the Iowa sky in November, 1965, the industry has galloped from 12 to 185 companies, including such other established carriers as Cable Commuter Airways in California and Suburban Airlines in the mid-Atlantic states. Industrywise 1968 revenues are expected to pass $40 million, up from $35 million in 1967.

For the investor, the publicly listed third-level carrier represents a long shot indeed. Many lines remain poorly financed and equipped. Few expect to turn a profit during their first half-decade. And yet the mere growth of the industry, as well as the professional performance of the larger third-level carriers, suggests the eventual profit potential.

Commuter was capitalized at $2.75 million, most of that sold in Iowa by Mr. Delman, who, after an initial $250,000 investment by associates, issued 1,250,000 shares of stock at $2 a share. (A 1967 public offering of 400,000 shares by McCormick & Co. went for $4.75 per share. The stock has been traded over the counter since November 1966.)

Though operating revenues, like passenger miles, continue to soar (projected at $2.5 million for the 1969 fiscal year ending May 31, compared to $1.5 million in fiscal 1968), Commuter officers don't expect to post a profit for another two years. The company had a net loss of $770,000, or 50 cents a share, for fiscal 1968, compared with a loss of $181,000 or 14 cents a share for the year-earlier period.

A net loss is again expected for fiscal 1969, mainly reflecting changeover costs in converting to an all turbo-prop fleet.

Still, the company expects that the smaller break-even load factor of the newer 15-passenger Beechcraft 99's—40 to 45 percent, compared to 60 to 65 percent for the present older nine-passenger aircraft—will substantially speed that expected fiscal 1970 profit.

As with most third-level carriers, Commuter's main growth potential is still its businessman passenger traffic, though students and housewives plus charter tours are being actively courted through extensive newspaper advertising.

CARGO RUN DROPPED

Cargo traffic, which currently accounts for only 5 percent of sales, is expected to reach 10 percent next year. (One test-run nighttime all-cargo flight between Chicago and Sheboygan, Wisc., was scuttled due to poor volume.)

The carrier presently operates flights to Wisconsin, Iowa, Indiana, Ohio, and Michigan, as well as within Illinois. Under the "hub concept," each two-man crew and plane will fly back and forth along the same route. All told, 112 flights are made daily between Chicago and a dozen midwest cities.

Mr. Delman says that Commuter's main problem at this time is what he feels to be lack of adequate instrument-approach and landing facilities at Chicago's downtown Meig's Field.

Mr. Delman predicts that as many as 500 third-level lines will be established within the next few years. By 1980, however, through mergers, or surprise tender offers by growth-conscious conglomerates, he expects that number to be chopped to about 50.

The prospect of such heavy consolidation is prompting many carriers to snap up new routes as quickly as possible—both to forestall competition, and as an "asset" in any possible merger negotiations. Commuter, for example, opened six routes in a three-month period earlier this year (even while closing off an unprofitable route to Milwaukee).

But there remains another reason explaining such feverish activity. While equipment and pilot standards for third-level carriers are certified under federal regulation, there is no pesent Civil Aeronautics Board control over routes or fares. Congressional pressures continue to mount for regulation, however, and it's believed that when the CAB does eventually establish jurisdiction, it will honor most established routes.

Whatever the case, Mr. Delman expects Commuter to continue to be "first among the remaining few," just as it's now first among the almost 200 third-level air-carriers.

SEABED ARMS CONTROL AGREEMENT

Mr. PELL. Mr. President, in the midst of the ABM controversy, I am compelled to draw attention to the reopening of the 18-nation disarmament conference and the momentous pronouncement from Geneva during the last week. After a delay of almost 2 weeks, the conference reopened on Tuesday last, and the news was well worth waiting for: both the United States and the Soviet Union recommended the formulation of a treaty prohibiting the emplacement of weapons of mass destruction on the ocean floor. When one considers that the area under discussion encompasses approximately 70 percent of the globe, the significance of such a joint recommendation is readily apparent. Moreover, to those of us who have an awareness of the weapons systems which are possible for this vast, virgin area, the discussions now going on in Geneva take on an even greater meaning, if not a sense of the utmost urgency. As chairman of the Consultative Subcommittee on Ocean Space of the Foreign Relations Committee, I applaud President Nixon's decision to move this country toward a seabed arms control agreement.

At my request and based on prior commitments to the Foreign Relations Committee, I have been in close contact during the past week with the Arms Control and Disarmament Agency, and I am convinced that serious negotiations toward such an agreement are now underway. Although I am personally disappointed that the United States was unable to table a draft treaty, such as the Soviet Union has done, I fully appreciate the variety of views within the executive branch which thus far have precluded our doing so. But, now is the time for a harmonization of views within the administration; our negotiators must be allowed to respond meaningfully to the Soviet proposal, as I am informed was

done today on at least three of the Soviet's four major points. On the fourth point, the boundary issue, I myself would urge acceptance of the broadest zone possible to be devoid of mass destruction weaponry.

I can assure Senators that the Subcommittee on Ocean Space will keep close watch on the developments in Geneva. If an early agreement can be reached on the arms control aspect of the seabed issue, I am certain that progress in fashioning a new regime for the international marine environment will be accelerated. As one of the U.S. congressional advisers to the United Nations Committee on the Peaceful Uses of the Seabed, I urge the United States and the Soviet Union to fulfill their commitment to this Committee by reaching as soon as possible a viable, workable seabed arms control arrangement.

Mr. President we all owe a deep debt of gratitude to Mr. Gerard Smith, Director of the Arms Control and Disarmament Agency, for his unswerving perseverance in moving this country toward banning the emplacement of nuclear weapons on the ocean floor. Mr. Smith and his fine staff certainly deserve our full support on this crucial arms control issue.

NATIONAL FUTURE HOMEMAKERS OF AMERICA

Mr. BAKER. Mr. President, during this week the national youth organization, Future Homemakers of America, is observing National FHA Week. More than 600,000 members in over 12,000 local FHA chapters throughout the country are carrying out projects and activities to give exposure to what youth is doing in a positive way to promote the principles of good citizenship.

I rise to commend this organization on its endeavors. FHA members continually stress constructive activities indicating that they are dedicated to improving life for all citizens of our country. They are proving that youth is aware, that youth does care, and that youth can contribute constructively.

I am most pleased that there are 35,000 members of the Future Homemakers of America in the State of Tennessee, located in 415 high school chapters. I am particularly proud of Miss Carolyn Walker, of Greenbrier, Tenn., who is the national secretary of this organization.

CIGARETTE CURBS IN CANADA

Mr. MOSS. Mr. President, since we have under consideration in this country proposed regulations of cigarette advertising on radio and TV, it is interesting to note that our neighbor to the north—Canada—is also moving toward curbing the promotion of cigarette smoking.

I ask unanimous consent that an article on this subject which was written by James Post for the Christian Science Monitor be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Mar. 18, 1969]

CIGARETTE-PROMOTION CURB GAINS IMPETUS IN CANADA

(By James Post)

OTTAWA.—The Canadian Government is moving inexorably toward introduction of legislation curbing promotion of cigarette smoking. This move has the recently avowed support or organized medicine.

Legislation could be ready for presentation to Parliament before the end of the year and is seen as a direct result of the growing strength of antismoking forces.

The Canadian Medical Association (CMA), official voice of the country's doctors, recently abandoned its guarded role on the subject of smoking health hazards.

It told a parliamentary committee conducting a smoking inquiry that prevention of smoking is an important preventive measure.

The CMA suggested the federal government ban outright cigarette advertising and cigarette packages be labeled to warn of health hazards.

It is not yet certain whether the Liberal government will seek an outright ban on the advertising of smoking which it considers to be a social and health problem.

CONTROLS SOUGHT

Health Minister John Munro says that cigarettes must come under legislative control, especially in regard to their advertising and labeling.

At the moment, the administration of Prime Minister Pierre Elliott Trudeau is in the conflicting position of spending about $200,000 a year on a public antismoking campaign while spending more than double that amount (through the Agriculture Department) on tobacco-crop research.

Although the tobacco-growing industry in Canada and the cigarette manufacturers are not strong enough to prevent antismoking legislation, it is thought possible that they could have some success in weakening the proposed legislation.

The government still has a number of alternatives. These include partial rather than complete bans on advertising, as well as no ban at all.

But partial bans are not viewed with much favor because of the likelihood that tobacco companies will merely switch their advertising emphasis to the permitted avenues.

A Health Department study notes that in Britain "the elimination of cigarette advertising on television was followed by increases in overall promotional budgets and in coupon gift schemes."

Despite its modest $200,000 budget, the government's public-education campaign seems to be having some effect in curbing of smoking. But it is only marginal.

A study shows that the proportion of regular cigarette smokers among men 15 and over decreased from 55 percent in September, 1965, to 52 percent in October, 1968. The program has been in effect for four years.

DATA PUBLISHED

One contradictory note is that the trend does not apply to women. In the same period, regular smokers among women increased from 31 to 33 percent of the female population over 15.

During the same time, smoking among girls 15 to 19 increased at the same rate. Smoking among boys in the same age group has remained unchanged.

The study was conducted by the Federal Health Department, which does many things to convince people to stop. There is a fairly extensive television advertising campaign.

Periodically, the Federal Health Department publishes a list of the nicotine and tar levels of various cigarette brands for people who feel they cannot quit but want to reduce their intake of these substances.

Mr. Munro recognizes the inequality of the completion between the tobacco industry and the antismoking forces. The advertising budgets of the manufacturers total millions of dollars, but he feels some progress has been made.

WASHINGTON DAILY NEWS CRIME CLOCK

Mr. FANNIN. Mr. President, I ask unanimous consent to have printed in the RECORD the Washington Daily News "Crime Clock" for March 27, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRIME CLOCK

Here is the Washington Daily News tally of robberies and crimes of violence—many of them accomplished with guns—reported in the District of Columbia in the 24-hour period ending at 8 a.m. today.

1:30 p.m.: Thomas Clark, 79, Negro, was in the rear of his Northwest home when two Negro men, one armed with a knife, walked up to him and took his wallet containing $15.

2:15 p.m.: Franklin L. Pergerof, 29, white, Carroll Durkitt, 65, white, and Edward J. Woodrow, 25, white, were painting a building behind 1413 5th-st nw when three Negro men, one armed with a knife, demanded money. The bandits escaped with $6.

2:20 p.m.: James Clemens, 68, Negro, was standing near Fifth and Kennedy streets nw when three Negro men walked up to him, one grabbing him while the other two took $21 from his pockets.

2:30 p.m.: A Negro gunman walked into the St. Vincent DePaul's Store, 1432 U-st nw, and forced clerk Beatrice Jordan, 63, Negro, to hand over $160 in cash and checks.

3:55 p.m.: A Negro man walked into the High's Store, 4601 Sheriff Road ne, and demanded money at gunpoint from clerk Evelyn Douglas, 51, Negro. The bandit escaped with an undetermined amount of money.

5:25 p.m.: Maxine Huff, 20, Negro, of Northeast was at Seventh and U streets nw, when she was robbed of $3 by a lone Negro bandit.

6:25 p.m.: Two Negro men, one with his hand in his pocket as tho he had a gun, walked into Helen's Grocery, 1418 12th-st nw and took $130 from owner Helen Nakahara, 49.

6:30 p.m.: Jesse James, 15, Negro, was riding his bicycle near 14th-st and Rhode Island-av nw when three Negro youths took $10 from him.

6:50 p.m.: William B. Boswell, 56, white, was held up in the 1600 block of Lamont-st nw by a Negro man who had his hand in his pocket, as tho he had a gun.

7:25 p.m.: Alice Tally, 25, Negro, a cashier at the Central Cardozo Credit Union, 2418 14th-st nw, lost $1,000 to a Negro man, who asked if he could join the credit union and pulled a gun.

8 p.m.: Jesse White, 20, Negro, of Northwest, was at 15th and Belmont streets nw, when he was robbed at knifepoint of $5 and his leather coat by a Negro man.

9:15 p.m.: Charles Anderson, 17, Negro, a clerk at Campbell's Drug Store, 4730 14th-st nw, said a Negro man and Negro woman took an undetermined amount of money. The woman had a .45 caliber automatic pistol.

8:40 p.m.: Joan Francis Gardfall, 33, white, said two Negro teenagers, about 15 years old forced her into her car in the 1500 block of Ogden-st nw, and took $15 and her purse at gunpoint.

9 p.m.: Jennifer Butler, 12, Negro, was near her home near 14th and Euclid streets

nw, when she was struck in the head with a bottle by a 15-year-old Negro youth, who took $4.

10:45 p.m.: Lewis Sharp, manager of the Hot Shoppe at 1400 Rhode Island-av ne, said two Negroes walked up to the cash register and one pointed a revolver at him. Mr. Sharp walked to the back of the store, the men ran out with no money.

11:30 p.m.: Margaret Gilbert, 23, Negro, cashier at the Hot Shoppe, 2230 New York-av ne, refused to give any money to one of two Negro bandits, who pointed a gun at her. The bandits left with no money.

2:25 a.m.: Luther Whitaker, 24, Negro, a clerk at the Macke Vending Company, 12th and O streets nw, was robbed at gunpoint of an undetermined amount of money by two white bandits.

TWENTY-FOUR TEXAS CONSERVATION ORGANIZATIONS SUPPORT S. 4, BILL TO ESTABLISH A BIG THICKET NATIONAL PARK

Mr. YARBOROUGH. Mr. President, public support for the preservation of a portion of the Big Thicket area in Southeast Texas has been growing steadily since I introduced the first Big Thicket bill in Congress in 1966. Many persons, groups, and organizations have endorsed my bill, S. 4, which calls for the establishment of a Big Thicket National Park of not less than 100,000 acres. They have recognized the value of this beautiful and unique land, and are working diligently to preserve the remaining forest lands, river bottoms, and wildlife habitat areas.

The preservation of the Big Thicket has now gained national support and recognition. The National Park Service has made a thorough study of the area, and has made two different recommendations regarding its future development. Such prestigeous groups as the Sierra Club, the Isaac Walton League and the Wilderness Society have also endorsed the project, and are lending their support to my efforts to establish a national park in the area. In addition, President Johnson called for the protection of the Big Thicket in a statement issued on January 18, 1969.

Mr. President, since the publication of the National Park Service proposals and the introduction of my bill, S. 4, 24 different Texas conservation organizations have endorsed a policy statement on the preservation of the Big Thicket. These groups have called for broadening of the Park Service proposals, and are supporting my bill to establish a Big Thicket National Park of not less than 100,000 acres. I ask unanimous consent that the text of the "Policy Statement on Big Thicket National Monument" and a list of the organizations supporting this statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLICY STATEMENT ON BIG THICKET NATIONAL MONUMENT

We favor a Big Thicket National Park or Monument which would include a minimum of the 35,500 acres proposed in the Preliminary Report by the National Park Service study team, with the following modifications and additions:

1. Extend the Pine Island Bayou section southward and eastward down both sides of Pine Island Bayou to its confluence with the Neches River.

2. Extend the Neches Bottom Unit to cover a strip, a maximum of three miles, but not less than four hundred feet, wide on both sides of the Neches River from Highway 1746, just below Dam B, down to the confluence of Pine Island Bayou.

3. Extend the Beaumont Unit northward to include all the area between the LNVA Canal and the Neches.

4. Incorporate a Village Creek Unit, comprising a strip up to one mile wide where feasible, and no less than 400 feet wide on each side of Big Sandy-Village Creek from the proposed Profile Unit down to the Neches confluence. Wherever residences have already been constructed, an effort should be made to reach agreement with the owners for scenic easements, limiting further development on such tracts and preserving the natural environment. Pioneer architecture within these areas should also be preserved.

5. Incorporate a squarish area of at least 20,000 acres so that larger species such as black bear, puma and red wolf may survive there. An ideal area for this purpose would be the area southeast of Saratoga, surrounded by Highways 770, 326 and 105. Although there are pipeline crossing in this area, they do not destroy the ecosystem; therefore the National Park Service should revise its standards pertaining to such incumbrances, in this case, leaving them under scenic easement rules instead of acquiring them.

6. Connect the major units with corridors at least one-half mile wide, with a hiking trail along each corridor but without new public roads cutting any forest. A portion of Menard Creek would be good for one such corridor. The entire watershed of Rush Creek would be excellent for another.

Such additions would form a connected two-looped green belt of about 100,000 acres (there are more than 3 million acres in the overall Big Thicket area) through which wildlife and people could move along a continuous circle of more than 100 miles.

We recommend that the headquarters be in or near the line of the Profile Unit.

We are absolutely opposed to any trading or cession of any National Forest areas in the formation of the Big Thicket National Park or Monument.

In addition, but not as a part of the Big Thicket National Monument, we recommend: (a) the establishment of a National Wildlife Refuge comprising the lands of the U.S. Corps of Engineers around Dam B, (b) a state historical area encompassing communities of typical pioneer dwellings, farms, etc., such as that between Beech and Theuvenins Creeks off Road 1943 in Tyler County, and (c) other state parks to supplement the national reserve.

Adopted by the following organizations: Texas Committee on Natural Resources; Conservation Federation of Texas; Texas Ornithological Society; Texas Explorers Club; Northeast Texas Nature and Wildlife Association; Tyler Audubon Society; Travis County Audubon Society; San Antonio Audubon Society; Fort Worth Audubon Society; Fort Worth Conservation Council; the Citizens Committee on Natural Resources; Outdoor Nature Club of Houston, Tex.; Houston Sportsman's Club; Dallas County Audubon Society; East Texas Nature Club; Lone Star Chapter of the Sierra Club; Waco Ornithological Society; Texoma Outdoor Club; Stephen F. Austin Ornithological Society; Isaak Walton League of America; the Texas Academy of Science; the Magnolia Garden Club of Beaumont, Tex.; Texas Federation of Women's Clubs; Marianne Scroogs Garden Club of Dallas, Tex.

SUPPORT FOR ABM FROM WASHINGTON POST EDITORIAL PAGE

Mr. FANNIN. Mr. President, today the Washington Post editorial page contained a letter of support concerning the current ABM controversy that I think is worthy of being included in the record of debate.

This correspondent's thinking, I believe, coincides with that of the vast majority of Americans. He calls the anti-ABM arguments "balderdash."

Mr. Frederick Ayer obviously has more knowledge in this area, because of his experience in the intelligence profession, than most Americans. The logic he applies, with the publicly revealed facts to back them up, is sound. To quote just one paragraph from his letter:

To restate the obvious but often forgotten—an anti-ballistic missile missile is not an offensive weapon any more than were city walls, bronze shields or drawbridges. The earth is deep with the dust of civilizations which believed when it was said to them "you have no need for those defenses, we will never attack you"—or who were too slothful, corrupted or misguided to look to their own defense.

The speech which I made in this Chamber on Monday, March 24, puts me squarely in agreement with Mr. Ayer's conclusion:

President Nixon has looked to the best advice obtainable and, acting thereon, has taken a reasoned, balanced, and courageous stand.

Mr. President, I ask unanimous consent that a letter by Mr. Frederick Ayer, Jr., published in the Washington Post of March 27, 1969, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BACKING THE PRESIDENT'S ABM DECISION

As a former *civilian* inmate of the Pentagon for eight years as assistant for intelligence matters to a series of secretaries of the Air Force, I protest.

And, as a citizen I protest the spate of spurious logic pouring into print and inundating the airwaves on the subject of the Anti-Ballistic Missile Missile. Setting up a Sentinel system will provoke the Russians and escalate the arms race and, likewise the presence of ABM sites will imperil the neighboring residents, furthermore, it will do no good. The scientists, the social commentators and the political hacks all say so. Therefore these things must be so.

To use a good old-fashioned epithet, balderdash! There are presently 83 reported ABM sites around Moscow alone. Has this provoked us into escalation? If missile interceptor systems are valueless, why has Russia with far less economic riches than have we wasted their substance on useless toys? Has the presence of hundreds of Nike Zeus missiles and launchers surrounding our population centers visibly endangered the residents or provoked the Soviets. The Nike Zeus has a thermonuclear warhead, but most people I know were glad to see them around—just as an honest citizen walking a darkly ominous street is cheered at the sight of an armed patrolman.

Probably one reason for the vocal distrust of the present ABM plan was the ridiculous justification given for its predecessor under the Johnson Administration—that it would

be built to counter any Chinese threat. That really was balderdash.

The Nixon-Laird Sentinel system is designed to protect our own ICBM launching sites and nothing more. And it is essential. The Russians have pinpointed our sites as we have theirs. If the Soviets know that they can knock out our retaliatory weapons on their first strike we have obviously lost all deterrent power. If they know that they cannot do so, the stalemate remains. Admittedly, the situation may reasonably be designated a balance of terror, but this is better than no balance at all.

It is obvious that with a power balance between nations, and if there be good will, negotiation is always possible and can become ever more likely. If, however, one nation holds all the cards, it can say "Now we will negotiate, but on our terms and ours alone." History has surely demonstrated that such a sentence is not unknown in the Russian lexicon. What one can wonder would have been the situation had the Soviets been successful in installing a concentration of ICBM launchers and warheads in Cuba?

Dr. Robert Oppenheimer once likened Russia and the United States, with their potentials for thermonuclear destruction, to two scorpions in a glass jar each with the power simultaneously to sting each other to death. I venture to say that if one scorpion knew that he could, with impunity, destroy the stinger of his rival he would not hesitate to strike. On the other hand, if these two scorpions were capable of reason, as we must assume Americans and Russians still are, they might become wearied of this endless confrontation of terror and agree gradually to empty their poison sacks and move around more happily in their narrow glassed-in world.

To restate the obvious but often forgotten—an anti-ballistic missile missile is not an offensive weapon any more than were city walls, bronze shields or drawbridges. The earth is deep with the dust of civilizations which believed when it was said to them "you have no need for those defenses, we will never attack you"—or who were too slothful, corrupted or misguided to look to their own defense.

It is my considered opinion that President Nixon has looked to the best advice obtainable and, acting thereon, has taken a reasoned, balanced, and courageous stand.

FREDERICK AYER JR.,

WASHINGTON.

PENN CENTRAL NONSTOP METROLINER SERVICE BETWEEN WASHINGTON AND NEW YORK

Mr. PELL. Mr. President, the Penn Central Railroad yesterday announced that it will initiate nonstop service between Washington and New York next week utilizing the new high-speed Metroliners. The nonstop service will reduce running time between the two cities to two and a half hours.

Mr. President, this is another significant advance in providing modern and convenient high-speed ground transportation between these two major centers in the congested northeast urban complex.

It is an important addition to the existing limited Metroliner service which makes the Washington-New York run in 2 hours and 59 minutes.

I bring this development to the attention of Senators because the Metroliner demonstration is a direct product of the High Speed Ground Transportation Act which the Senate approved in 1965. I ask unanimous consent that articles, published in yesterday's Washington Star and today's Washington Post on the new nonstop service be printed in the RECORD at the conclusion of my remarks.

Mr. President, the Metroliner service, even in its initial limited offering of two round trips a day, has been an outstanding success. The public has responded enthusiastically. The Metroliners have been running at near capacity, and because of the limited number of trains now running and the public demand for tickets, the Penn Central has placed the service on an advance-reservation basis.

The success of the Metroliner has brought with it new problems. I refer particularly to the inconveniences required in obtaining reservations. I have personally received many complaints about the problem from individuals, businessmen, and government officials who are eager to use the Metroliner service.

In the not-too-distant future, I would expect this difficulty to be largely resolved by the implementation of a full schedule of Metroliner service. When the Metroliner is running 11 round trips a day between New York and Washington, I would hope that advance reservations, at least for coach accommodations, would not be required.

In addition, I have been informed by the Penn Central that plans are underway to install in the very near future a new ticket system that will improve the handling of ticket sales and eliminate much of the inconvenience and confusion that now exists.

It is regrettable that these ticket sales problems have occurred. I take some comfort, however, in the fact that these are problems of success, and that the Penn Central has focused its attention on providing an early solution.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, Mar. 27, 1969]

METROLINER'S NONSTOP RUNS DUE IN WEEK

Nonstop Metroliner train service between Washington and New York will start next Wednesday, cutting the travel time to 2½ hours and putting rail schedules for the first time into direct competition with those of the airlines.

The first nonstop trains will operate from New York to Washington in the early morning and return to New York in the late afternoon Mondays through Fridays. This will permit New Yorkers to spend a full business day in the Nation's Capital and return home the same night.

Present Metroliners, which began service Jan. 16, take 2 hours and 59 minutes and make two round trips a day with five stops. Standard trains take from 3 hours 35 minutes to 4 hours.

Alfred E. Perlman, president of the Penn Central Co., announced the new service yesterday at the railroad's Philadelphia headquarters.

"This is an important breakthrough in rail passenger transportation," Perlman said. "It is designed to provide an all-weather 'ground shuttle' that will be competitive with other modes of travel from center city to center city in this crowded corridor."

The nonstop trains will average 90.6 miles per hour for the 227-mile trip.

The new trains will leave Pennsylvania Station in New York at 7:10 a.m. and arrive at Union Station in Washington at 9:40 a.m. They will leave Washington at 4:30 p.m. and arrive at New York at 7 p.m., just 1 minute before the Metroliner that leaves Washington at 3:55.

The other existing New York-bound Metroliner leaves Washington at 8:30 a.m. The trains leave New York at 8:30 a.m. and 4:15 p.m.

[From the Washington (D.C.) Evening Star, Mar. 26, 1969]

METROLINER TO SLASH NEW YORK TRIP TO 2½ HOURS

(By Lee Flor)

The Penn Central Railroad announced today it is adding nonstop, 2½-hour Metroliner service between New York and Washington on April 2, cutting its present fastest schedule time by 29 minutes and placing the Metroliner in direct competition with the air shuttle.

Alfred E. Perlman, the railroad president, said the special nonstop service, at the present fare, would provide "the fastest service ever to operate on the 226-mile New York to Washington route."

The new trains will leave New York at 7:10 a.m. and arrive here in Washington at 9:40 a.m. The return service will leave Washington's Union Station at 4:30 p.m. and arrive at the Penn Central station in New York at 7 p.m.

Perlman said the new service was started in prime travel time so it could be directly competitive with the air shuttle now offered by airlines between Washington and New York. The "ground shuttle" will run in all kinds of weather, from center city to center city, he noted.

ALLOCATION OF IMPORTED NO. 2 FUEL OIL TO NEW ENGLAND AND ESTABLISHMENT OF OIL REFINERY AT MACHIASPORT, MAINE

Mr. BROOKE. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution of the Commonwealth of Massachusetts urging the President of the United States to order an immediate increase in the discriminatory allocation of barrels of imported No. 2 fuel oil to New England and to establish an oil refinery at Machiasport, Maine.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolution urging the President of United States to order an immediate increase in the discriminatory allocation of barrels of imported No. 2 fuel oil to New England and to establish an oil refinery at Machiasport, Maine

Whereas, The consumers of home heating oil in the Commonwealth, as well as those of the other New England states, have been discriminated against for the past decade because of stringent quotas relating to the imports of No. 2 fuel oil; and

Whereas, According to the Massachusetts Consumers' Council the consumers of Massachusetts are overcharged forty-two million dollars annually because of the imposition of such quotas under the Eisenhower Administration; and

Whereas, Said Consumers' Council and the New England Council consistently presented the facts of such discriminatory policies before the appropriate federal bodies; and

Whereas, There has been no decision to

rescind the executive order establishing such quotas; and

Whereas, Secretary of the Interior Stewart Udall during his term of office reportedly indicated a willingness to recommend an allocation of 30,000 barrels a day of imported No. 2 fuel oil to New England; and

Whereas, The proposed Foreign Trade Zone in Portland, Maine could help to correct the inequities occasioned by the #2 fuel oil quota discrimination, by (allowing) making available an addition 90,000 to 101,000 barrels of #2 fuel oil in New England at reduced prices; and

Whereas, The establishment and operation of an oil refinery at Machiasport, Maine would relieve the shortage of #2 fuel oil for the consumers of heating oil in the Commonwealth in peak heating seasons and retard price increases of this necessity of life; now, therefore, be it

Resolved, That the Massachusetts Senate respectfully urges President Nixon to direct the Secretary of the Interior and Secretary of Commerce to implement forthwith the Udall recommendations relative to the allocation of additional oil imports to New England; and be it further

Resolved, That the Massachusetts Senate supports the efforts of Senator Kennedy and other members of the Massachusetts Congressional delegation to gain approval of the application by the Maine Port Authority to establish, operate and maintain a general-purpose foreign trade zone in Portland, Maine and a subzone for the purpose of oil refining in Machiasport, Maine; and be it further

Resolved, That copies of these resolutions be forwarded by the Secretary of State to the President of the United States, the presiding officer of each branch of the Congress and to the members thereof from the Commonwealth.

Senate, adopted, March 12, 1969.

NORMAN L. PIDGEON,
Clerk.

Attest:

JOHN F. X. DAVOREN,
Secretary of the Commonwealth.

FRONTIER ALASKA

Mr. STEVENS. Mr. President, I ask unanimous consent that an excellent article from the February 24 U.S. News & World Report be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACTS ABOUT THE "LAST FRONTIER"

ANCHORAGE, ALASKA.—If Alaska seems to be out of step with the rest of the U.S., there is a reason.

This is America's last frontier. Its people think in the same terms as the rough-and-ready pioneers who pushed the boundaries of the U.S. westward to the Pacific Ocean by the end of the nineteenth century.

Up here, the drive is to open land for development, rather than fence it off for parks and recreation as in the "lower 48" States. That is understandable when you learn that 97 per cent of Alaska's land still is owned by the Federal Government. Most of it remains untouched by the plow, bulldozer, chain saw or drilling tool.

Though more than twice as big as Texas, Alaska has fewer highway miles than Massachusetts. Along the Alaska Railroad, which runs 481 miles from Seward to Fairbanks, live two thirds of the State's people. The pack horse and the dog sled still are common means of transportation.

ROOM FOR FREEWHEELERS

Alaska's rugged scenery, its forbidding climate and its vastness are a magnet for the frontier breed. It is the land of the freewheeler, a term of approval in the 49th State. Men with "git-up-and-go" are drawn here by the opportunity to branch out on their own. Up here, the fellow who is first with a new product or a new idea can make it big.

Don't be fooled by the veneer of sophistication in Alaska's cities. In Anchorage and in Fairbanks, there are posh hotels, high-rise apartment buildings, fancy supermarkets. But you don't have to go far to find the sights and hear the sounds of the frontier. Dress is casual, often rough, dictated by climate rather than fashion. Bars are crowded, noisy and sometimes disorderly.

The airplane has replaced the cow pony of the nineteenth-century West. Alaskans are the most air-minded of all Americans. They have to be, with so few highways. The State has 749 airports and seaplane facilities, a total of 4,500 licensed pilots, and nearly 3,000 aircraft—one for every 100 people.

You see small planes parked in front yards, blocks from any landing field. An Alaskan explains:

"One of the great attractions of living up here is the freedom to move about. We can jump in a plane, go where we want, and when we want, for fishing or hunting, or just to get away from the crowds."

That last is a shocker. What crowds? Anchorage, with 50,000 population, is Alaska's largest city. The people of the State, if spread out over its 586,000 square miles, would have 2 square miles apiece.

Here you can rear a family without facing problems that proliferate in cities and suburbs of the "lower 48" States. Theodore F. Stevens, one of Alaska's two new U.S. Senators, plans to have his five children go to school back home at least half the time "so they can grow up loving it as much as I do."

A 20-minute flight in a bush plane from Anchorage, says Senator Stevens, "will put you in wilderness where you probably won't see another person." After only a few weeks in Washington, he says with deep feeling:

"When you see that sun come up over the snow-capped Chugach Range on a clear winter morning, then you know what it means to be in Alaska."

THE INDIVIDUALISTS

This country draws all kinds of people. Along with the frontier builders come the misfits. "We have our share of them," says a federal official with long experience in Alaska. He adds:

"They are people who by temperament are unable to adjust to the demands of big-city life, or of the more settled community. Many of them find their place, become useful citizens. Some are crackpots, and some give us endless trouble. But they are the sure mark of the frontier."

Business—like life—tends to be free and easy. Says an Alaskan official:

"We have our so-called robber barons. They are the ones who get the things done that must be done. If these fellows were hedged in too tightly, they wouldn't stay and Alaska wouldn't be growing at the rate it is."

YOUNG AND TOUGH

Youth dominates for the most part. Median age is 23.3 years, compared to 27.7 years for the U.S. as a whole. Most of the young frontiersmen are skilled workers, lured by high wages in oil, mining, lumbering and construction.

The harsh climate, the isolation, the sometimes primitive housing send about half the immigrants back to the "lower 48."

"If you sweat it out for a year, you'll never leave, or if you do, you'll come back," says Paul Choquette, a broker in Juneau. "If the wife can last it, you've got it made."

RIDING THE BOOM

Alaska's growth in recent years has been based largely on mineral and forest development. Advances in fishing methods, however, have brought rich new fisheries in the Gulf of Alaska and Bristol Bay.

The future of the oil boom that is giving new thrust to the Alaskan economy is said by officials to depend upon opening more of the federally owned lands for leasing and drilling.

For the 800 or so men involved in the oil boom on the North Slope, cold down to minus 50 degrees is compenstated by earnings of $15,000 to $25,000 a year. In addition the men get free room and board and transportation to and from Fairbanks for two weeks' rest after four weeks of work.

Another boom is in tourism.

"This is the most beautiful place I have ever seen," said a California businessman visiting Fairbanks. "Up here you can look as far as you can see."

Nature is on a lavish scale. In spring, there is a wild profusion of flowers. In summer daylight lasts almost 24 hours a day. For hunters and fishermen, there is every kind of quarry.

FACING THE FUTURE

Perhaps Alaska was best described by a young serviceman who chided "U.S. News & World Report" for failing to mention his home State in an article about wilderness areas. He wrote:

"I would like to say that the author of that article must be unaware that Alaska has been a part of the union since 1959. . . . Alaska is the only State left with wildlife and habitat untouched by civilization. Alaska is the next wonder of the world."

Alaskans are determined that this wondrous State is not going to be ruined by the debris of twentieth-century technology. Says Senator Stevens:

"Alaska is a land where conservation is a watchword. There is no smog and little pollution, and if humanly possible there never will be more because Alaskans know and value pure air, pure water, and virgin country."

THIS IS ALASKA: ONE-SIXTH OF THE ENTIRE UNITED STATES

Population: Smallest State. 280,000 people, or 1 person for every 2 square miles.

Largest city: Anchorage, with 50,000 people. Juneau, State capital, has 8,000 people.

Size: Largest State. 375 million acres. More than twice as big as Texas.

Airplanes: Flyingest State in the union, with 1 airplane for every 100 Alaskans.

Statehood: Became 49th State on Jan. 3, 1959.

Highest mountain: McKinley. 20,320 feet, highest peak in North America.

Coastline: 6,640 miles, or more than that of all the rest of the U.S. combined.

Railroads: Two, with 500 miles of track.

Economy: Fishing, mining, lumbering are biggest industries. Oil boom is under way. Tourist trade growing fast. Federal Government owns 97 per cent of land, but State is promised 104 million acres by 1984.

Acquired by U.S.: 1867. Bought from Russia for 7.2 million dollars, or about 2 cents an acre.

Highways: 6,042 miles. Less than Massachusetts has.

A TRIBUTE TO NORTH CAROLINA'S MANPOWER DEVELOPMENT CORP.

Mr. ERVIN. Mr. President, in carrying out our function of legislative oversight, there is a natural and proper concern—especially with respect to experimental social welfare programs—which leads us to speak largely of the failures and the debacles, leaving the successes to speak for themselves. This is much as it should be. But there are some local success stories of such far-reaching significance for the Nation at large as to mandate their telling in the national forum.

One such story has been unfolding over

the past year in my State—that is the story of the North Carolina Manpower Development Corp.

MDC is a private, nonprofit corporation with a statewide board of directors elected to represent industry, the public sector, and the population to be served. Luther H. Hodges, Jr., senior vice president of North Carolina National Bank and son of the former Secretary of Commerce, serves as chairman of the board. The corporation's staff is directed by George B. Autry, formerly chief counsel for the Senate Subcommittee on Constitutional Rights.

Using both Federal and private financial support and the technical assistance of the National Association of Manufacturers, MDC is moving toward its objective of increasing productivity and improving per capita income through the fullest possible development of our State's neglected manpower resources. MDC is, in effect, working toward the establishment of the Nation's first technology-based, statewide manpower model. If this goal is reached, other models, including perhaps a national one, can be fashioned after it.

Mr. President, in order that Senators and other interested parties may acquaint themselves with the accomplishments of MDC and with the corporation's plans for the future, I ask unanimous consent that a sampling of articles and editorials dealing with the various facets of MDC's program be printed in the RECORD:

"North Carolina's Dire Waste of Manpower," from the Charlotte News, Charlotte, N.C., December 1, 1967.

"Opening More Job Opportunities," from the Durham Morning Herald, Durham, N.C., December 11, 1967.

"NAM-OEO 'Marriage of Convenience' Bears Promise of Cure for Jobless," by Don Riding, from the Carolina Financial Times, Chapel Hill, N.C., March 18, 1968.

An editorial by C. A. McKnight, from the Charlotte Observer, Charlotte, N.C., March 24, 1968.

"A Promising Tool Blunted by the Poverty of Policy," from the Greensboro Record, Greensboro, N.C., March 30, 1968.

"Training Key to Stemming Manpower Loss," by Luther H. Hodges, Jr., from the American Banker, May 3, 1968.

"Manpower Center Reaches Goal," by Rick Gray, from the Greensboro Daily News," Greensboro, N.C., July 11, 1968.

"Moving People to Jobs," by Charles B. Garnett, from the Employment Service Review, September 1968.

"Computer Matches Workers and Jobs," by Stacie Steele, from the Durham Morning Herald, Durham, N.C., September 10, 1968.

"To Find the Jobless, To Find the Jobs," from the North Carolina magazine, published by the North Carolina Citizens Association, November 1968.

"He 'Freshed Up' on Schooling, Got Job," by Dwayne Walls, from the Charlotte Observer, Charlotte, N.C., November 24, 1968.

"Manpower Project Looks at Results, They're Impressive," from the Charlotte News, Charlotte, N.C., November 30, 1968.

"At MDC—Success Stories," by Owen Lewis, from the Greensboro Daily News, Greensboro, N.C., January 1, 1969.

"Labor Pool Going Dry, Hodges Says," from the Charlotte News, Charlotte, N.C., February 6, 1969.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Charlotte (N.C.) News, Dec. 1, 1967]

NORTH CAROLINA'S DIRE WASTE OF MANPOWER

(EDITORS' NOTE.—Following are excerpts from a speech made by Luther H. Hodges, Jr., chairman of the North Carolina Manpower Development Corporation's board of directors, in Winston Salem yesterday.)

In our industrialized society with much capital going into new plants and equipment, we require an increasingly skilled manpower pool, in fact, manpower resources, in terms of availability and skill have become almost the single most important economic and industrial development ingredient.

The question, then, is whether or not, in this kind of society, our manpower is being properly developed and efficiently allocated. I would like to suggest that, not only because it is necessary, but because it is right, we must make a 180 degree turn and face the handicapped, disadvantaged, citizen of our country, and more specifically, our own state. He has been excluded, in most cases through no fault of his own, from participating in a full society, from realizing what we have come to think of as the American Dream—namely a job, decent housing, education for himself and for his children, and a place in the decision making processes which affect his life.

ARBITRARY STANDARDS

This person has been excluded from employment offices entirely on a middle-class frame of reference, by job descriptions which set arbitrary standards without regard to aptitudes and potential for training; by the economics of poverty which forces him to become a school drop-out; and by the inferiority of education offered in slum and poor rural schools.

I hope that our society has made a decision that America cannot afford the luxury of poverty in its midst and that we are moving toward what Kruger calls a policy of inclusion. I hope that what the economist Norton E. Long wrote in his monograph on the reduction of poverty isn't true. He has said, "We are in danger of drifting into cosmetic cures. We already have a model for how an affluent society might deal with surplus people the way we deal with surplus grain . . . store it and keep it off the market so it won't hurt the price. We do the same with the poor—we store them in slums and public housing to keep them off the labor market so they won't reduce wage rates or otherwise complete in the only way they can . . . the evil of this agricultural storage policy for dealing with people is not simply that of keeping needed resources from meeting human wants but that of creating traditions by which the evil multiplies rather than diminishes."

WITHIN A PROBLEM

In all of this there is a problem within a problem which cannot be ignored; namely, that of our disadvantaged minority citizens. The Negro will not live as long, be housed as well, nor earn as much as his white counterpart no matter what level he achieves. I decry the irresponsibility of those in the public eye and elsewhere who invoke convenient "whipping boys" to explain our difficult society while making no analysis of causes and no constructive suggestions for our country or our state.

What about North Carolina? What is our situation in regard to manpower and human resource development and all the ramifications of these problems? Let me quote some statistics which I have quoted before, but which bear repeating:

Nearly a million and a half adult North Carolinians cannot read well enough to qualify for jobs paying a living wage.

One-third of our work force is below an eighth-grade level of education, Many of the persons presently employed cannot advance past entry-level jobs because of lack of education.

Diversification of industry is not proceeding as rapidly as it could because we lack a skilled manpower pool.

Past development has not benefited all North Carolina citizens equally. For example, there were 37,000 fewer jobs for nonwhite males in 1960 than there were in 1950

We are 44th in per capita income and 49th for average hourly industrial wages.

LOSE FEDERAL MONEY

In spite of this situation, hardly a year goes by that we do not lose federal money allocated to this state. For example, in 1966, we failed to apply for our total guideline allocations under the Economic Opportunity Act and the Applachia Bill.

We know that one of our major resources in North Carolina is our manpower. The problem is that we have failed to develop this valuable resource.

What is the answer to all of these problems? If there is one answer, it is jobs. Jobs to upgrade our economy, jobs to reduce the burden of the taxpayer, jobs to keep families together, jobs to provide dignity and decent standards of living. The November 20th Newsweek magazine said, "If Negroes alone among the poor had been full participants in the economy last year, the President's Council of Economic Advisors has calculated they would have added $23.7 billion to the gross national product."

If you are poor, how do you get a job? Training—literacy training and skill training, along with essential supportive services. Who is going to attack and solve this massive problem? And why haven't we succeeded before?

AMERICAN DREAM

Dick Cornuelle, executive vice president of the National Association of Manufacturers, in his book "Reclaiming The American Dream," has two chapters entitled: "Why the Liberals Can't Win" and "Why the Conservatives Can't Win." He says, "As the conservative is losing his battle because he has no program at all, the liberal is coming to a different dead end. He finds out he can't achieve his ideal—that of a society that solves social problems—with the program he has." I would like to suggest that we discard these nomenclatures, for as applied to this problem they are unrealistic. Instead of right and left, liberal or conservative, we are either outside or inside, a participant or a spectator, and we can't afford many spectators.

No one segment of our society can solve these problems alone. The federal government, state and local governments, the whole public sector must join the private sector or else we will be licked.

INDUSTRY MOVES

Within our economy, industry can move the quickest; it is geared to pragmatic and efficient problem-solving and to getting a job done. In addition there is not only great interest on the part of industry in these problems, but characteristically, industry has already moved. You probably read in the paper a few weeks ago about Ford Motor Company's setting up two employment offices in ghetto areas in Detroit. In this experiment, seven hundred disadvantaged have been employed—without written tests. Aerojet General has a plant in Watts; and Honeywell is also ready to build in a slum area;

Corn Products has instituted inplant literacy training in locations all over the country; and Xerox is employing hard-core unemployed. Moreover some 300 insurance companies in the country have participated in a billion dollar financing program for ghetto housing. The National Association of Manufacturers, which helped start the ball rolling in this effort, has so many calls from companies asking for help in reaching the hard-core unemployed that they are unable to meet the demands.

Is all this consistent with the profit motive? Here is one quote recently reported in the press: Gerald L. Phillippe, Chairman of General Electric, said: "We have to say to our shareholders that we just have to deal with this problem, or in five or 10 years there will be nothing left."

Now, at last, we come to the North Carolina Manpower Development Corporation. As a solution to the problems of our economy, this particular project is meaningless unless we are all aware of, and committed to accepting the challenges I have been discussing. This corporation was not developed to create administrative jobs or bring money into North Carolina, rather it was planned with a single goal in mind—to provide the unemployed and unemployable with jobs, and to stay with them until they are productive.

MDC'S PLAN

MDC, as I shall call our corporation, is a sophisticated program. We are contracting for a series of action-oriented studies and surveys relevant to the problems of manpower development. These studies include: Outreach techniques, supportive services, job-development, post-employment followup, a survey of North Carolina training capacity, basic education innovations—that is to say, what are the best literacy systems in existence and how is new technology being applied to this training; vocational skill training, with the same applications, economic development studies and the surveys which lead to the computer match project.

There are two current action components. First, computer match. This involves the development of a whole new system of computer technology as applied to the disadvantaged. With it we hope to match the unemployed either to training or to jobs . . .

TO STORE DATA

MDC will also use the computer to store data. For example, in addition to training available in the public sector, we will feed in data on vocational skill and on the job training available from private industry. We may use the computer for a talent bank—that is to say, to locate human resources, technical and otherwise. We may use it to match low income high school graduates to jobs or vocational training, and thus help prevent the top level youngsters in this group from searching for opportunity outside our state, as so many do now.

The second action component currently funded calls for the establishment of two Manpower Development Centers. These centers will offer basic literacy training through a system called Mind, developed by the National Association of Manufacturers. Mind uses technological equipment and programmed learning. It has been extremely successful so far, with early experiments revealing a gain of four grade levels in 180 hours. . .

PEOPLE ORIENTED

What we seek is a manpower training model which is both industry and people oriented. We think our industrialists will insure a practical problem solving approach and we are confident that our community action agency representatives will not let us forget or neglect the hard problems of the disadvantaged.

May I close with a few recommendations:

1. The industrial sector must become more involved in solving the employment problems of the hard core poor. Industry must work with the community, as indeed it is doing right here in Winston-Salem.

2. The business community must temper its policies of excluding the disadvantaged and attempt to reach and train this population. Let us face the fact that many job standards are arbitrarily set and often bear little resemblance to the characteristics and backgrounds of persons who are successfully performing a given job.

3. There must be vigorous community leadership. Leadership which is willing to become involved in complicated social problems. Leadership which is willing to face what it finds, whether it likes it or not. This leadership must establish the fact that local control is required to effectively handle local problems.

4. Much money is required to meet our manpower development needs. We must stop fighting the federal government and become partners, for we need all its financing and then some to solve our problems. If we don't like the terms, let's have the leadership to change the terms.

5. We need a citizenry aware of our problems and willing to face them.

We must remember too that manpower and employment are not isolated problems and that we must also solve housing, race relations, health, educational and other problems.

Certainly I have not answered the questions I have raised. But for the time being my solution has to do with the effort in which I am engaged: namely, the North Carolina Manpower Development Corporation. I am impressed with the commitment of our staff and of our board of directors. May I ask a similar commitment from you in your work.

In a nation where the gross national product approaches $800 billion a year, there is little justification for the poverty and unemployment in our midst. It has been said that we in North Carolina are leading the way with our Manpower Development Corporation. Clearly it is in our own best interest to do so.

[From the Durham (N.C.) Morning Herald, Dec. 11, 1967]

OPENING MORE JOB OPPORTUNITIES

One of North Carolina's major resources, as long recognized, is its manpower supply. One of the state's major failures, as shown in its 44th ranking in per capita income and 49th place in average hourly industrial wages, is proper development of manpower resources.

That the state, in a several-pronged attack, is attempting to remedy the situation stands to its credit. But that progress often is slow, as the several approaches mesh gears, is apparent and understandable. The total task, in relationship to the total need, presents formidable problems.

How to speed improvements that will lead to more and better job opportunities has concerned itself, perhaps out of necessity, primarily with teaching skills to the large work force potential readily available for employment. Important as that phase is, however, it stands as only part of the total problem.

Luther H. Hodges Jr., chairman of the North Carolina Manpower Development Corporation's Board of Directors, points to another vital area with his suggestion that "we must take a 180-degree turn and face the handicapped, disadvantaged citizen. He has been excluded, in most cases through no fault of his own, from participating in a full society, from realizing what we have come to think of as the American Dream—namely a job, decent housing, education for himself and for his children, and a place in the decision making processes which affect his life."

Mr. Hodges, son of the former governor, speaks both as a business executive and as a person familiar, through personal observation, with problems in the area of concern he has cited. He, in fact, grew up with them around him when his father served as a textile executive. In later years, through association with the state's efforts to pull itself up by its own bootstraps, he has witnessed the needs of the many who have been denied, through various reasons, full opportunity to participate in the state's economic fortune.

The handicapped, disadvantaged citizen, as cited by Mr. Hodges, deserves every consideration, indeed extra effort, on the part of those who can help make him an asset instead of a liability in the economic and social community. He is, without regard to race, an important part in North Carolina's manpower potential so vital to the state's total development.

[From the Carolina Financial Times, Mar. 18, 1968]

NAM-OEO "MARRIAGE OF CONVENIENCE" BEARS PROMISE OF CURE FOR JOBLESS

(By Don Ridings)

With the Great Society's alphabet agencies almost as plentiful as Carolina basketball fans these days, it's tough coming up with an attention-getting gimmick. But a new organization with headquarters in Chapel Hill has one that just might succeed.

MDC—that stands for Manpower Development Corporation—is hard to miss because of an unlikely parentage: the National Association of Manufacturers and the Office of Economic Opportunity—what MDC Executive Director George B. Autry referred to in a Sea Island, Ga., speech recently as a "marriage of convenience," as well as a "marriage of logic."

As Autry sees it, the well-publicized differences of style between NAM and OEO have obscured some fundamental agreements concerning ends: productive people filling productive jobs.

MDC's corporate charge is broad enough to encompass both the poverty-fighters and the businessmen: "To plan and implement a comprehensive manpower development program for North Carolina. To experiment with and develop new systems for job training, job placement, and job upgrading . . . To carry on activities of whatever nature which have as their objective the improvement of economic and social conditions in North Carolina, including conditions of employment of persons employed in North Carolina."

Any mandate that large, of course, is easier to recite than to implement, and it is the implementation—or program development—that MDC is busily concerned with now.

MDC was incorporated in August, 1967, but Autry didn't leave his job as chief counsel and staff director of the U.S. Senate Subcommittee on Constitutional Rights until December, and the last of four directors working under Autry arrived only this month.

So the homework that has piled up on MDC desks—in the form of various consultants' studies—was assigned before the current MDC staff came on the scene. The North Carolina Fund, which through Director George Esser was instrumental in interesting NAM in the state manpower program, contracted for the studies.

The last director to join the staff, former Associate Editor Bob Smith of the Charlotte News, is responsible for developing programs with the help of the studies and is in the process of reviewing the early arrivals.

Originally, 15 studies were scheduled. These were reduced to nine, the general purposes of which are to reveal ways of finding people who need jobs and training, finding jobs

that need employees, giving skills and basic literacy training to the unskilled and developing basic facilities (such as transportation and housing) needed by the unskilled, and matching the jobs and the people.

More specifically, the studies break down this way:

Outreach techniques: ways of reaching and motivating the poor so as to attract them into manpower development programs and give them the attitude of success.

Job development (computer match): relating job vacancies to job potentials by use of computer techniques to determine what kind of training and upgrading to provide.

Supportive services: studying what sort of services must be supplied to make it possible for poor rural-oriented people to make the transition to an urban job market. One particular phase of the study will concentrate on experimental uses of transportation.

Basic education-skill training: how to tie literacy and skill training to the needs of the state's poor and the manpower demands of the state's industry.

Job development: ways of opening new avenues to employment for the poor through indentification of the real job potential in the state and encouragement of industry to report vacancies and restructure qualifications.

New careers: studying the actual and potential effect of developing new careers on the employment of the poor. For example, such career opportunities as police patrolman assistant and caseworker aide are being studied.

Housing: ways of making low-income housing available to the poor being brought into job areas, including an effort to tie training to housing by providing a would-be worker on-the-job training in constructing homes for himself and his fellow workers.

Planning, Programming, Budgeting System (PPBS): how to modify these techniques (made famous by former Secretary McNamara at the Department of Defense) to MDC's needs in providing precise information on educational and training costs and thereby alternatives and their costs.

Survey of industrial training capacity: an in-depth study of what capacity now exists in North Carolina, actual and potential, for training the unemployed and underemployed. This includes both public and private.

Using the studies as a starting point, Smith hopes MDC can build a program that will "get the most out of the people and out of industry," as well as out of public agencies at all levels. He doesn't see MDC as a "super coordinator"—it has no legal authority—but as a method of generalizing methods that can be exported to other states.

In Smith's view, MDC should concern itself not only with training people for existing jobs, but for jobs not yet available—"but within practical limits, something that can be put to use."

One aspect of this approach is the new careers study described above, which will attempt to define new sub-professional jobs that now sometimes occupy the time of high-priced personnel with time-consuming detail work.

What has just been described is the broad framework for MDC, which mostly is in the study and development phase.

But there is something "on the ground" already: the first of two experimental manpower development centers, located in Greensboro, turns out its first "graduates" on the last day of this month. With the active participation of industry representatives and the backing of Greensboro Mayor Carson Bain, the center enrolled 70 people for the 10-week cycle.

The primary purpose of the cram course is to prepare "entry-level" people—that's the jargon for unskilled workers—for jobs by moving them up four grade levels in 10 weeks and acclimating them to the industrial job environment.

Day-class students spend four hours a day on literacy training and two hours on "H.R.D."—human resources development. This last piece of jargon refers to an effort to inject into people a worker's attitude: the importance of being at work on time, how to deal with personnel people and supervisors, etc.

Autry spoke of the manpower development center idea in that Sea Island speech:

"They will teach the functionally illiterate to read and write, not how to read sonnets or write plays . . . but that level of literacy only which is necessary to get and hold a job.

"They will teach country people who want to work in the city how to live in the city and how to do a new kind of job.

"This concept is not theoretical, but practical. . . . It has been worked out by private industry. . . . The literacy program was developed not by some English department trying to create Shakespearean scholars, but by the National Association of Manufacturers."

Night-class students, many of whom work during the day, spend two hours on literacy, one on H.R.D.

The day students get a weekly stipend of $20, the night students $10.

Greensboro's training program doesn't have a skill component. Industry personnel representatives, who will interview the students during the last days of the cycle, say they will provide their own skill training.

MDC's computer match program also will be tested in Greensboro, in conjunction with the manpower development center.

A second experimental center for Eastern North Carolina currently is being planned by MDC.

The people around MDC seem to think that an effective manpower development program is a continuing thing, which has to adapt to changing economic conditions, technology and the life—a job of continuous fitting, involving all levels of public agencies, as well as the private sector.

Funding being what it is, however, MDC's existence presently is guaranteed only through December, 1968. The money comes from OEO ($1.182 million), the North Carolina Fund ($73,000), and the Department of Labor ($892,000). That last item is to finance the mobility program, which MDC expects to pick up from the North Carolina Fund. This has been an effort to transplant workers from job-short Eastern North Carolina to job-plentiful Piedmont North Carolina.

MDC came about because of the state's well-publicized position near the bottom of the nation in per capita income, industrial wages, and disturbing above-the-national-average unemployment and underemployment rates. Much of the impetus for the creation of the agency came from a North Carolina Fund Report, "The State We're In," published in June, 1967, which focused on these economic conditions.

Autry himself, who at 30 held an enviable position as well as respect in the U.S. Senate, said in an interview last fall that correcting this situation "was so important" that he had decided to leave Washington and return to his native state as executive director of MDC.

After graduating from Duke University Law School in 1961, Autry had gone to Washington as a Richardson Foundation Congressional Fellow and was assigned to the office of N.C. Sen. Sam J. Ervin, Jr.

When he left Washington late last year, it was as chief counsel and staff director of the Senate Subcommittee on Constitutional Rights. He trailed elaborate praise from his former boss, Sen. Edvin, tribute in the Congressional Record from other senators, and complimentary press reports.

Autry's boss MDC's Board of Directors, is heavily larded with businessmen, including Chairman Luther Hodges, Jr., as well as such people as educators representatives of other agencies, and the state NAACP president. This composition reflects what NAM Vice President A. Wright Elliott said in a Chapel Hill speech in January should be the stance of MDC: "We . . . envision the MDC as an effective interface between the public and private sectors, thereby enabling them to work together toward a goal desirable for both."

"Interface," of course, is another bit of jargon that means close-fitting coordination. It recalls President Johnson's first references to "creative federalism," when he talked about increasing private involvement in "public" matters—such as manpower development.

All of which demonstrates that even if the NAM-OEO marriages at MDC came as a surprise to some—it was only after a proper courtship.

[From the Charlotte (N.C.) Observer, Mar. 28, 1968]

(By C. A. McKnight, editor)

I have been listening attentively but I have yet to hear our candidates for state offices speak out on one of the most urgent and distressing problems of the day, i.e., the nature and extent of rural poverty in North Carolina.

I made mention recently of the "scores of thousands of eastern North Carolina Negroes who will lose their jobs in the next five years through the mechanization of tobacco growing."

I also found fault with the report of the National Advisory Commission on Civil Disorders because it looked only at the nation's urban ghettoes and ignored the rural impoverishment and despair that forced the migration of poor whites and Negroes to congested urban areas.

Bob Smith, who recently left the associate editorship of The Charlotte News to join the N.C. Manpower Development Corporation, points out that the Johnson administration also doesn't seem to understand the nature of our manpower problem and the underlying cause of urban riots.

Smith notes that the President's manpower message of January 23 put all its emphasis on attacking unemployment in the big cities.

"Not many reporters picked this up, but while the administration took on the unemployment problems of 45 of the biggest cities it dropped plans to conduct two rural unemployment programs. . . . In brief, by setting up the National Alliance of Businessmen, the administration opted for $350 million for urban unemployment and not a cent for rural unemployment."

FROM POVERTY TO POVERTY

"You know where those angry people in the cities came from and so do I," Smith writes.

"They came from deprived mountain-locked Appalachia and tobacco-poor towns like the one I saw in the course of a recent day's visit with as much bedrock poverty as I ever care to see in one place.

"Whites, Negroes, Indians—they are all out there waiting for farm mechanization to strip them of their last feeble excuse for staying. And they are leaving without skills, without realizable hope, with the blind unreason of a man sure that things can be no worse where he is going. Three hundred thousand North Carolinians got on that northern migration route in the 1950's, and we understand th half of those left on the farms may be off in the next five years.

"If they follow mindlessly the old migration pattern it will be in part because we as a nation helped convince them that jobs would be there. But it is precisely because jobs aren't there and the welfare rolls are swollen that trouble plagues these cities.

"So North Carolina's manpower oozes away and so the ghettos bloat and the thermostat rises and pretty soon some other President has to come up with an even bigger and more expensive program for employment in the poor, sick, big cities. Can this be sound national policy?"

MODEL MANPOWER PROGRAM

Smith's Manpower Development Corporation was spun off by the North Carolina Fund, which pioneered several experimental manpower programs in this state. The Fund is to end its five-year existence in October and its directors saw a need for a continuing manpower program.

Like the Fund, MDC sees North Carolina as America in miniscule. Our state has shrinking manpower needs in rural areas and small towns and growing manpower needs in urban centers, thus duplicating the national pattern.

Is it possible to establish a model manpower program for North Carolina that will be useful in developing the national policy of the future?

And in lieu of such a national policy, which would either make it possible for Americans to remain in rural areas or at least give them employable skills to take with them in the cities, is it possible to put out the fires that smoulder in the ghettos, ready to be fanned into hot blazes?

In sum, if MDC, in Smith's words, "can demonstrate how a semi-literate, marginally productive tobacco farmer in Robeson County can become a skilled manufacturing worker in Fayetteville, the worker profits, industry profits, and we all have a national manpower model that just might work."

ONE OF THE GUT ISSUES

I don't want to hit this subject so frequently that you readers become bored with it, but I feel very strongly that rural poverty is one of the gut issues in North Carolina today.

I believe that the people of North Carolina ought to know more about the nature and extent of rural poverty.

I believe, also, that the State of North Carolina ought to involve itself deeply in a program to improve income and living conditions in our rural areas, instead of standing by while our undereducated, undertrained, underskilled rural residents pack their belongings and head toward an even more dismal fate in the Urban ghettoes.

To that end, The Observer is making its own study of rural poverty in this state. The undertaking is complex and time-consuming but the results, I am quite confident, will shock the people of our state.

I hope they will also prompt candidates for state office to stop uttering banalities and address themselves to one of the basic issues of our day.

[From the Greensboro (N.C.) Record, Mar. 30, 1968]

A PROMISING TOOL BLUNTED BY THE POVERTY OF POLICY

It must have been with feelings mixed of "amen" and "so what?" that leaders of North Carolina's Manpower Development Corporation received the vice president's Thursday message.

Hubert Humphrey came to the state to shore up the farm vote for his superior. As is his custom, he said things both wise and true. He spoke primarily to the businessman farmer handicapped at the marketplace—the one able to sell products and buy supplies.

He also had something to say about a problem which weighs more heavily on that farmer's laborer than on that farmer.

Rural poverty has led to much of the poverty in city slums, said the vice president. "Rural trouble means city trouble. And, until rural America—all of it—becomes a rewarding and inviting place to live, until we can make rural America worthy of America, we will be that much further from stopping the costly human and material waste in our cities today."

ACCURATE BUT OLD

The problems of deprivation in the countryside and rebellion in the cities are one. Mr. Humphrey accurately stated an issue; he did not define a new one.

Last October, President Johnson acknowledged it with the announcement of a test program to develop job opportunities for the hard-core unemployed. Initially, he said, $40 million would be used to work with industry in salvaging the jobless who in hopelessness flee farms and choke cities. The experiments, he said, would be concentrated in five cities and in several centers of rural growth.

The secretary of commerce dutifully mailed out notices of the breakthrough. One went to the N.C. Manpower Development Corporation whose assignment it is to learn how a state can refine and use "the precious raw resource of its working people."

By January 23, the lessons of a cataclysmic summer having been more fully digested, the President turned again to the issue. Giving it place of highest priority after his State of the Union address, he delivered to the Congress his manpower message.

The sights, said he, were being raised. The objective was to prepare 100,000 men and women for jobs by June, 1969, and 500,000 by June, 1971. A National Alliance of Businessmen, headed by Henry Ford II, would direct the effort in the nation's 50 largest cities. The outlay would be $350 million.

It was an assignment no more challenging than essential. It was a plan rooted less in Christian charity than in sound economics. It was also too little.

There was no call to expand the attack on rural seedbeds of poverty. There was no mention of rural centers promised in October.

The omission, MDC officials are by now convinced, was not one of oversight. The January goals have superseded those of October; the administration has made its choice—$350 million to allay the cities' fever, nothing to treat the rural virus.

A director, sending up distress signals, judges that we are "missing a critical turn nationally in understanding the nature of our manpower problem and the underlying causes of urban riots". Subsequent to the President's restrictive message, he notes, the Civil Disorders Commission—for all its perceptive analysis of the dilemma—disclosed scant comprehension of "where all those angry people in the cities came from."

MDC—working in a state which sent 300,000 out on the trail north in the 1950s—believes it knows. And, it discerns, as many as half of those left on Tar Heel farms may depart in the next five years.

Ruefully contemplating a continuing flight to the urban ghettos, a director writes:

"They came from deprived, mountain-locked Appalachian and tobacco-poor towns like Lumberton where I saw in the course of a recent day's visit as much bedrock poverty as I ever care to see in one place. White, Negroes, Indians—they are all out there waiting for farm mechanization to strip them of their last feeble excuse for staying. And they are leaving without skills, without realizable hope, with the blind unreason of a man sure that things can be no worse where he is going.

"With shrinking manpower needs in farm and small town and expanding needs in cities, North Carolina is America in minuscule. If we can't keep our potential work force or at least give them skills to take away with them, no fire extinguisher program will be big enough to salve the woes that will be heaped on the cities. And if it comes to fire extinguishers all round, we shall probably need some right here in North Carolina where it is surely not lost on the poor that they lack a fire visible from Washington."

MDC'S STAKE

MDC is not merely concerned with principle wounded. It has a very real stake in challenge denied.

Its leaders—and they are men of vision and substance—believe that North Carolina is the ideal state for a test battle with rural unemployment and that their organization is ideally equipped to conduct it. They want to "demonstrate how a semi-literate, marginally productive tobacco farmer in Robeson County can become a skilled manufacturing worker in Fayetteville." They want to show that industry profits as worker profits. They want to provide for the nation a "manpower model that just might work."

In competition with the clamor from the cities—and that clamor must be heeded—their's is a small voice, of course. But reinforced by those of all who know treatment of a disease requires more than a soothing of symptoms that voice can carry to the White House and to the Congress.

We hope Mr. Humphrey hears it and moves to undergird with substance some persuasive ideals. We hope Mr. Johnson hears and applies the economy of foresight in healing the cities. We hope MDC gets the chance to prove its point. It is the best chance not alone for the Robeson sharecropper but for all of us.

[From the American Banker, May 3, 1968]

AMERICAN BANKERS TRAINING KEY TO STEMMING MANPOWER LOSS

(By Luther H. Hodges, Jr., senior vice president, North Carolina National Bank, Charlotte, and chairman, North Carolina Manpower Development Corp., Chapel Hill)

While other states try to lure industry inside their borders with promises of sunny economic skies, North Carolina is turning, through the auspices of a unique organization, to a comprehensive program for developing a trained manpower pool.

The North Carolina Manpower Development Corp. is unique in having sprung from an unusual parentage—the National Association of Manufacturers and the Office of Economic Opportunity.

For the first time businessmen and poverty fighters have united under one corporate charge to plan and implement a comprehensive manpower development program on a state-wide basis.

In North Carolina, manpower resources have become the single most important ingredient of economic and industrial development. MDC proposes to refine and replenish the supply of this ingredient with training.

By demonstrating that North Carolina can meet the manpower needs of presently existing industries, the state hopes to increase its attraction for out-of-state industry. Only through the combined efforts of industry, government, and the affected communities can this program succeed.

North Carolina, like most southern states, is in a period of transition. We are experiencing the pains as well as the rewards of industrialization. Three million of our five million people still live in rural settings. Many of these people have become victims rather than beneficiaries of industrial development. Mechanization has stripped them of their only livelihood—farming.

In the 1950s, 155,000 farm workers fled unproductive rural life for northern urban centers. Impending tobacco mechanization has spurred dire predictions for the future—80,000 farmers in North Carolina may be displaced in the next five years. Many of them will follow ancient migration patterns to northern ghettos.

Meanwhile North Carolina loses manpower very crucial to its industrial development. North Carolina is a state industrially on the go. In the 10-year period 1958–1967, investments for new and expanding industry totaled $3.75 billion, more than any other state in the South. Industrial expansion in 1967 alone created jobs for 24,774 people.

Employers are frantic for competent help, yet thousands of workers leave the state for jobs that prove to be merely mirages on the northern landscape. The economic future of this state depends on its ability to stop wasting this manpower.

The North Carolina Manpower Development Corp. is initiating innovative methods to treat the ills of both the employer and the unemployed. The manpower development process is alive, but none too well, in this state. There are people and there are jobs, but in far too many cases the twain never meet.

MDC has to first answer these questions: What are the gaps in the present manpower process and how can we plug them? MDC is pinpointing the gaps, a few of which are locating and effectively contacting the hard-core poor, coordinating the efforts of supportive services, providing training (pre-vocational and skill), promoting nondiscriminatory hiring practices, and developing jobs and placement on a man-to-job match basis.

To plug these gaps, MDC has contracted a series of action-oriented studies:

Outreach to discover techniques to contact and motivate the poor; job development, a computer match of job potential to job vacancies; supportive services, especially in the areas of transportation and housing; basic education and skill training, applying new technology; a planning, programming, budgeting system to provide precise information about education and training costs; a survey of industrial training capacity; the development of new careers; post-employment follow-up, and techniques for promoting nondiscriminatory practices.

The results of these studies, many of which are near completion, should place MDC in a strategic position to remedy the manpower problems of North Carolina.

The initial program of MDC also calls for two pilot demonstration projects: the computer job match and two manpower development centers.

The job match project uses computer science technology to match specific factors about people to specified requirements of jobs or job-training. For the purpose of demonstration, this system will operate on a small scale, but is capable of expanding to serve the entire state.

The computer data system will resolve optimally the geographical imbalance of people and jobs. Piedmont industries will be supplied with a data pool of men and their job potential from all over the state.

Relocating industries will be able to obtain valid information about labor supply and demand in an area in question.

The computer shows additional promise for the corporation; it will be used to mobilize other necessary resources, supportive services for instance. It may also help place low-income high school graduates in vocational training or on jobs, or place college graduates of minority groups in high-level jobs, thus curbing the "brain drain" that this state suffers through the loss of talented citizens who seek out-of-state employment.

The second pilot project calls for the establishment of two manpower development training centers. These centers apply a new system of teaching basic literacy.

This system, called "MIND," developed by the National Association of Manufacturers, utilizes technological equipment and programmed instruction. It has a reputation of high success in upgrading the target population.

A human resource development component accompanies classroom work at the center. An experienced instructor leads sessions of sensitivity training in an effort to change attitudes and create self-esteem.

The importance of good employee-employer relations is stressed, as well as personal hygiene, punctuality, and overall conscientiousness. Human resources development, it is felt, contributes significantly toward the development of a productive worker.

The first training center, established in Guilford County of the Piedmont, has completed its first cycle. It graduated 57 trainees. Basic education test results show that average class improvement was as high as a 2.1 grade level increase in some cases.

Apathy, muteness and fear marked the general trainee attitudes at the beginning of the cycle. By the end, these had been displaced by confidence and assuredness reflected in the increased trainee involvement in center activities. The majority of these trainees have been placed on jobs or in advanced training, or have appointments pending.

The second center will be located in the eastern part of the state. These two centers, it is hoped, will demonstrate the need for a rapid establishment of a network of centers to serve all parts of the state.

The MDC centers so envisioned would be sophisticated operations capable of supplying flexible training to meet specific manpower needs. Newly trained rural farmers in the East would be able to find productive employment in their home state. Small businesses would surely benefit, since they cannot afford to do their own training. They must count on outside services, and in North Carolina, that service will be the Manpower Development Corp.

[From the Greensboro (N.C.) Daily News, July 11, 1968]

FACILITY UNIQUE IN STATE: MANPOWER CENTER REACHES GOAL

(By Rick Gray)

The object of the Manpower Development Center in Greensboro is to train people to get jobs, and after the first cycle of classes, the center has obtained its objective.

The center, the only such center in the state and one of eight in the nation, graduated 57 trainees from its first 10-week program and placed 52 of those graduates in jobs. Of the five that were not placed in jobs, two left town and three are pregnant.

"The purpose of the center," says Training Director Al Varn, "is to train people so that they can either get jobs or progress in jobs they already have."

The 57 who graduated in March were all but 18 who began the first cycle of classes in January. Of the 18 who did not complete the program, according to Al Boyles, director of the center, five found jobs before the program was completed, four had family problems, three had illnesses which caused them to miss more than a tenth of the program, three moved out of town and three dropped out for miscellaneous reasons.

The average wage of the graduating class, according to Boyles is $1.65 per hour (five cents an hour above the minimum), but some of the new workers are earning as high as $2.50 per hour. The average weekly income is $66.

If the graduates earn the national annual wage, Boyles says, the class will earn over $170,000 per year, pay a total of $16,000 in federal income taxes, pay over $2,800 in state income taxes and approximately $4,000 in sales taxes.

These payments by the graduating class would give the equivalent of a 25 per cent annual return on the costs of the school expended by the Office of Economic Opportunity, according to Varn.

"After four years (with total employment of the class) it's all free," he says.

When the graduates of this first class began the program, most were unemployed; however, a majority of the 44 women in the group had, at one time or another, Boyles says, been employed as domestic help, earning $25–30 a week.

The training program concentrates on basic education and motivation training, Varn says. The trainees are tested for placement level when they begin classes, and they are then placed in individual education programs.

Varn stresses that advancement is on an individual basis with no competition for grades or the like among trainees. Educational programs include math, reading and English training.

The math program, for example, begins with elementary addition, subtraction, multiplication and division. The upper level combines these four processes into more difficult problems: "Twenty-seven divided by nine plus two times five plus seven divided by four minus seven plus nine. Write your answer."

In the motivation training, Varn says, "We use role-playing situations that enable the trainees to see both sides of the fence.

"In our civics class, for example, we pick out someone who says that the mayor has an easy job and let him be the mayor. Then we confront him with two people—one representing churches and the other grocers. Then, after listening to both representatives present their views on blue laws, he has to decide which would be best for the city.

"Sometimes the trainee will go through the rest of the day thinking about whether he did the right thing."

And that, Varn says, is the point of the motivation training—to get the trainees to think and to see both sides of a question.

The center uses tape recordings and video tapes of classroom proceedings to allow the trainees to see themselves as a personnel manager would, and then as a class they criticize the way that classmates play their roles.

"We try to show them that the man interviewing them has to hire qualified personnel to keep his own job," Varn says.

He concludes that when the trainees realize that the personnel manager is trying to keep his own job, they are motivated to prove that they are qualified so that they can get, and keep, the job.

[From the Employment Service Review, September 1968]

A NORTH CAROLINA STUDY: MOVING PEOPLE TO JOBS

(By Charles B. Garnett)

In an economy capable of sustaining high employment, how can we assure every American who is willing and able to work the right to earn a good living?

This is an era of prosperity and affluence for this Nation, yet there are many Americans for whom the right to earn a living has never been a reality.

There may be jobs available which require specific skills or training, but for the man who lacks those skills or that training they mean nothing. Those jobs may be in certain places, but for the man who isn't there and does not have the know-how or the means to get there, the "right to earn a living" does not exist.

This article is concerned with the man who isn't there. It deals wtih a group of jobless people—rural people—whose opportunity for employment was lost as mechanization and modern technology replaced manpower in agricultural production. It is about rural areas of one State where few, if any, nonagricultural jobs can be found.

It is a story about an experimental and demonstration project, financed by the U.S. Department of Labor, designed to find out if moving people to places where there are jobs is feasible. It is based on a monograph prepared by the North Carolina Manpower Development Corp., to describe a mobility project it is conducting.[1]

There are, in North Carolina, a great many people for whom society has not made a place. These are the people who have been displaced by mechanization or for whom there has never been a solid place in society. Among them are Negroes, Caucasians, and Indians, and they have one common bond—a great need of help in the solution of their economic problems.

The basic concept of mobility is to identify and recruit individuals from an area which offers them little or nothing and to place them in an area which can provide them with a new chance in life. This does not involve a mass movement of persons from one area to another, but rather a selective movement based on natural migratory patterns from rural to urban areas which will afford the people concerned the opportunity to become productive, self-sustaining citizens.

This effort is designed to equip a man and his family with the tools they need to effect that change. The objective of the person to be relocated is to find a job which means survival for himself and his family. Mobility provides him with help in securing the job, financial aid while looking for the job, assistance in locating a house that will afford him more than minimum shelter, and counseling.

To find a job in an urban environment is not exceedingly difficult—to keep it is. Finding a house to live is not the biggest problem—adapting to a new type of living is. The purpose of the mobility project is to offer the many supportive services necessary to equip the family to make the adjustments. The accomplishment of that task requires extensive counsel through every step of the mobility process.

Counseling begins in the recruiting or supply area, where the counselor must determine the problems and prepare the person to be relocated for the transition to city life. Here he learns about the goals of the project and what it can mean to him.

Not every applicant will move; some are skeptical, some are apathetic, some will be eager to move, and still others will require a great deal of convincing.

THE NUMBERS INVOLVED

The many problems which are encountered during the convincing period can be best illustrated by citing the number of persons involved. In the areas of North Carolina covered in the report (Oct. 1, 1967, through Mar. 31, 1968) some 2,310 people were identified and contacted. Among those, 1,061 were found to be initially eligible for mobility services. Some 224 of those eligible actually were referred to specific out-of-area jobs and 190 individuals and their families were relocated.

It is obvious from the original number of persons contacted that time alone would prohibit too much concentration on the unconvinced, since available funds necessarily limit the number of counselors. Yet each of the individuals must be given the opportunity for participation.

Counselors must use many different approaches in the convincing process, including a full discussion of the benefits mobility will offer. For some people, a visit to the demand area is necessary. For others, supportive services from existing agencies are required to help with social, physical, economic, or psychological problems. In this particular mobility project, all of those initially eligible received some service from the counselors.

Family ties often make people hesitant to move. In such a situation the counselor must make every effort to move several members of a family to the new location, or to move people to a place where there will be someone they know. An additional incentive for those who are reluctant to leave their families is the fact that assistance will be offered to get the family back together again once the move has been accomplished.

Some persons may have prison records or be on probation. In themselves, these are not disqualifying factors but do require more concerted effort on the part of a counselor. Because of legal considerations, the applicant must have permission from his probation or parole officer before he is able to move. If permission is granted, the whereabouts and the employer of the parolee must be reported to the responsible officer.

In addition, many seemingly trivial duties must be performed by counselors—checking on or helping to secure draft status or social security cards, and school records for children. As unimportant as those tasks may seem, they may make the difference between success and failure of the mobility program.

Many times, in his eagerness for a job, the applicant will insist that he is 1–Y or 4–F; that he has completed his military service; or that he has a social security number. A check of the facts may disclose that he is not registered at all or that his draft status is not updated. Upon the applicant's arrival in a demand area, employers request registration cards, discharge papers, and other documents. If they are not available, it is difficult to place the job seeker. Long delays are encountered in obtaining the papers. Therefore, the work should be completed before the individual leaves the supply area.

Once the decision to relocate has been made, the second step in the mobility process begins—preparation for the move. Again there is a great need for counseling and assistance.

The rural poor do not have the conveniences available in the urban area, nor do they even have most of the necessities. They have not been concerned with the social amenities which exist in urban situations. They are primarily concerned with getting a job and "doing better," but they must be made aware of the differences in attitude and of the style of life in the city.

Counselors are often faced with a fear, a negativism that has been inculcated since birth which must be overcome. Although the workers may have had earnings far below the poverty level, and perhaps been allowed to rent cheaply or live rent-free in a substandard shack, loyalties to landlords or employers may be strong. Counselors are frequently told that "He promised me it would be better this year; besides, he's been good to me and mine." Tactful counsel is required to change this attitude of acceptance and defeat and to prepare the individual for a new way of life.

As the person leaves his home area, he becomes more reliant upon the counselor. More often than not, he has never been to the big city. He often leaves his old home with the deep and abiding fear that his family will not be provided for adequately. Although this wrenching away from the loved ones is only temporary, it is a traumatic situation for many. This is a critical stage in the mobility process, for it is a period of transition from the known to the unknown.

Success or failure at this point is dependent upon how effectively the previous counselors have instilled confidence in the individuals concerned. While it is a time of greater reliance upon counsel, the individual is now asked to transfer both faith and trust to a strange counselor. The newcomer brings with him largely unknown problems which must be met with the greatest tact and diplomacy on the part of the new counselor.

The person who has just moved to a new area is in the kind of place that he may have seen only in pictures before. He seeks a familiar face or just a familiar expression. He must be given a painstakingly detailed orientation period, yet he cannot be treated like a child. He needs and deserves the dignity afforded to all men, yet he must learn certain rudimentary things that are second nature to most urban children.

He may have been told about flush toilets, but many rural people have never used one, or in some cases, have never seen one. Simple tasks that many take for granted can be new and frightening experiences for the uninitiated.

The counselor must now attempt to reach a common ground of understanding with the new arrival in order to acclimate him to the total urban situation. This covers a broad spectrum ranging from the advantages and disadvantages of urban living to demands made upon workers by industrial employers.

The relocated worker is generally unaware of the demands that industry will make of him. He is used to the relatively bucolic existence of rural areas. He does not recognize the 8-hour day or the necessity for working on designated days. If the sun shines he feels it is a workday, and if it rains he considers it an automatic day off. It is as simple as that. He cannot comprehend the close working relationships that exist; he is not used to being told what to do in every step. He does not understand industry, and industry does not understand him.

All areas of living must be covered by the counselor. How to budget for the higher cost of living in the city and knowledge of the transportation and communication systems of the city must be passed on. It is not unusual to find newcomers who do not know the basic "niceties" of urban living—garbage pickup is often an unheard of thing. Old habits are hard to break, yet they must be broken.

As the newcomer is taught to participate in the system, he will be made aware of what the system can do for him. If he is in need, he should be able to draw upon the system for aid. He is mostly unaware of such things as police, fire, and medical services, and it is often difficult for him to comprehend them.

Then there are the necessary preparations for the future in the job itself. Education and training are things about which he has little or no understanding, nor will he participate in such programs unless they are prerequisites for his job. Since he feels that a job meets all his needs, he has little concern for the future. He has been in want for so long that the needs of the present are paramount and he tends to answer only them.

A motivational process must start with the counselor and culminate with the relocated worker. It is a slow, tedious, wearing-away type of situation that is slow in showing results. It is not an integral part of the mobility program; nonetheless, it is a necessity for the long-term betterment of the man and the program.

Up to this point, discussion has centered primarily on the counseling needs of the individual worker. Next must come consideration of the needs of his family. Before they can join him in his new location he must have a job and a place for them to live. Once he has been assisted in reaching those goals, attention must be turned to assisting him in bringing his family to the city. Once again intensive counseling is needed.

This aid to the family can take many forms, from actual shopping trips to infor-

[1] Copies of pamphlet titled "Mobility" can be obtained by writing North Carolina Manpower Development Corp., Post Office Box 435, Durham, N.C. 27702.

mation on how to use supportive services available in the city from other agencies. Selecting what and where to buy are important items to the family, but not everyone is amenable to suggestions. Buying is a personal thing and each person acts or reacts in a different manner. Some reject any advice. They feel that a few extra dollars can buy the world, and they make every attempt to do so. They soon are disillusioned and many become the target of a stream of bill collectors. That situation calls for a new type of counseling if serious trouble is to be avoided.

The children of the families involved also present counseling demands. Among the 190 relocated families in the mobility project under discussion, 43 had school-age children. The parents were assisted in getting these youngsters enrolled in appropriate schools and advised of the other requirements that must be met in an urban area.

In many rural areas, children frequently take "crop vacations"—time out from school to help tend and harvest the crops. In some isolated areas, absences from school often do not warrant the attention of the truant officer. Regular attendance must be encouraged in the new situation. In the city imposition of penalties for unexcused absences and the ultimate threat of court action are real possibilities.

CARE OF CHILDREN

Many relocated families have little conception of how children should be cared for in an urban environment. In the country, a child is not in much danger of being hit by a car on a busy street. A child in the country is not much of an annoyance to neighbors, for there are few neighbors. In the city there are many busy streets and many other dangers, and children can easily be an annoyance to the many nearby residents. In some instances, those neighbors may be able to turn to the law for recourse to children's activities.

Mention of court action and laws brings up another task for the counselor. Although he must refrain from interfering with any due process of law or with law officers in the conduct of their duty, he does have the responsibility of advising the family as to how and where they can receive legal assistance to protect their rights.

There are countless other tasks which fall into the category of counseling. All are important, but there are far too many to be listed here. Each situation demands particular action on the part of the responsible counselor. There has been a measure of success in the North Carolina experimental mobility project, certainly enough to demonstrate that mobility may be one of the answers to how some disadvantaged Americans can be assured the "right to earn a living."

COMPUTER MATCHES WORKERS AND JOBS

(By Stacie Steele)

CHAPEL HILL.—A uniquely advanced computer match program has been developed by the North Carolina Manpower Development Corp. as part of an effort to devise a high-speed system to pinpoint by computer potential workers across the state and match them with jobs available to them.

George Autry, director of the corporation, said objectives of the organization are to "increase productivity and improve per capita income through the fullest possible development of the state's manpower resources."

The computer match project is still in the experimental stages and is being funded by the Office of Economic Opportunity.

A computer demonstration using live data acquired during a pilot installation in Greensboro will be conducted here Wednesday for Republican presidential candidate Richard M. Nixon.

In the Greensboro installation approximately 300 hardcore unemployed people were matched by computer for job opportunities in the area.

Erwin M. Danziger, director of administrative data processing at the University of North Carolina, is acting as consultant to Manpower Development Corp. Working with him is Leonard Stroebel, manager of systems, software and scientific programming at UNC.

Danziger, who says that the program here is unique because "we have reached a more advanced stage in the use of modern technology, the computer, in attempting to match jobs and the unemployed," stresses that the most important part of the total project is outreach.

"I think we ought to place the greatest emphasis of the program, not on the computer match portion," Danziger said, "but rather on getting the unemployed, making them aware of job opportunities, and getting them to fill out information about themselves on forms which can then be keypunched and put into the computer system."

The most difficult part of the project, Danziger said, "is finding the practically unlocatable people, the underemployed and unemployed, and once having the computer assist in matching these individuals to job requests which are provided by North Carolina industry, helping them to move to a job which may have been offered to him, getting him oriented to a new work situation and keeping him on that job."

Practical difficulties present themselves in attempting to do these things, Danziger said, because of the lack of the preparedness of the unemployed.

"Many of our unemployed in North Carolina are not in a position to accept jobs because they simply do not know in large cities how to use a bus system, what to wear to go to a job or how to use a telephone."

Stroebel, working with Danziger on the project, sees a wide range of uses for the experiment.

"The real potential of this system lies not only in matching people to jobs," Stroebel said, "but in utilizing the wealth of information gathered by the outreach people to do correlation studies on skills and interests of the hard core unemployed people, and perhaps determining some factors for motivating them so that they may become better equipped to handle life, and to contribute somewhat more to the society in which they live."

Autry noted that the computer match program is only one of several related projects which are being conducted simultaneously by his organization.

It is operating a model training center in Greensboro where the chronically unemployed are given a combination of basic educational and motivational training to provide them with a running start toward useful and productive working lives.

That center is to be the model for several others to be established around the state, directly tied to the job needs of industry.

It is operating Project Mobility under the auspices of the Labor Department—a statewide effort to move the unemployed individuals from job scarce areas and find them work and housing in job surplus areas.

It is sorting through the results of more than a dozen operational studies of how the manpower process presently works in North Carolina.

[From North Carolina magazine, November 1968]

MANPOWER DEVELOPMENT CORP: TO FIND THE JOBLESS, TO FIND THE JOBS

The first time that many North Carolinians had heard of the North Carolina Manpower Development Corporation was the sunny September day that Republican presidential candidate Richard Nixon came to have a look at the corporation's people-to-jobs computer matching program in Chapel Hill.

MDC is scarcely a year old, but the purpose and scope of its operations have already been circulated about the country; word of the computer experiment had reached Nixon. He came to watch and listen and he was impressed.

The private, nonprofit corporation owes its existence to a tripartite alliance of the North Carolina Fund, the U.S. Office of Economic Opportunity and the National Association of Manufacturers. The N.C. Fund provided the idea; the OEO provided funding grants and the NAM provided additional finances and advice from its Urban Affairs Division.

Business and governmental leaders of North Carolina occupy the organization's directorships. Its staff is headed by Executive Director George Autry, former chief counsel and staff director of Senator Sam Ervin's Subcommittee on Constitutional Rights. Its programs, proposed and in progress, are many and ambitious. Its goal is to discover the full extent and fundamental causes of the state's manpower problems and the means of solving them.

Behind the creation of MDC was the North Carolina Fund's assertion, made after considerable study of North Carolina's economic structure and society, that conditions of poverty, unemployment and educational lack in many parts of the state were far more serious than anyone had hitherto recognized.

MDC came into being as a result of the Fund's studies. It was incorporated in August of last year with North Carolina National Bank Senior Vice President Luther H. Hodges, Jr., as chairman of the board of directors. A program embracing 15 separate studies and projects was originally envisioned; it was later reduced to ten. They include:

1. The computer match program. Using computer equipment owned by the University of North Carolina at Chapel Hill, the program is an experiment to determine whether the aptitudes and basic skills of a person can be accurately matched up to job requirements through the data process method. Factual data was obtained from a group of chronically unemployed people who were recruited for a pilot training program in Greensboro. The data was keypunched in New York and returned to Chapel Hill. Requirements for various types of industrial positions were also reduced to computer language and the matchup process began. The experiment, though not yet complete, already shows considerable promise in some day providing a high-speed method of matching people to jobs. It is also expected to provide information as to why certain people do not match to jobs, and how their skills might be improved to make them a part of the work force. Eventually, MDC hopes to establish computer information centers in various parts of the state.

2. Prevocational training. The first of these programs was begun earlier this year in Greensboro. Subcontracted to a New York agency and directed by Al Boyles, formerly with H. L. Coble Construction Company, the center is training chronically unemployed people in basic literacy and job readiness. The first ten-week session began with 75 trainees; 57 completed the course and most of them improved their literacy at least one grade level while others advanced as many as five grade levels. Nearly half the trainees were placed in jobs soon after graduation; others later found work or embarked on advanced skill training.

The program is purely experimental but MDC officials are delighted at the progress of the trainees and the information that has been gathered from the experience. Other such training centers are planned as MDC's funds and priorities permit, including one at Rocky Mount scheduled to open late this year.

3. Mobility project. MDC took over from the North Carolina Fund a project of moving people to where the jobs are located. Reception centers for the relocated jobless are located in Charlotte, Greensboro and High Point, but housing availability remains a serious obstacle in the mobility process. A staff member of the State Employment Security Commission works full-time in this phase of MDC's operations.

Those are MDC projects already fully operational. Others in the start-up stage include:

1. Development of what are called "outreach" techniques—finding means of communicating with the poor, motivating them into wanting to become useful members of society and to prepare themselves for success in holding jobs.

2. Supportive services. This involves learning the kind of services that will be needed to help the rural poor and unemployed in their painful transition to urban living and occupation.

3. Basic education and training. How to relate education and training to the poor and jobless and vice versa.

4. Development of jobs: The idea here basically is to learn through comprehensive study just what North Carolina's job potential for the poor really is and how to assemble and report the available jobs.

5. Job development careers. This would involve development of career work in helping the unemployed and the underemployed.

6. Housing. Finding low-income housing for the jobless being uprooted from rural environments; possibly even training workers for building their own dwellings is the concern of this program.

7. Determining North Carolina's industrial training capacity, both public and private, and determining what in the way of additional programs are needed and where.

The Manpower Development Corporation does not envision a permanent existence. Its long-range goal is to develop effective programs for dealing with the manpower problem that will be assumed by the appropriate public and private agencies. Its year-to-year existence depends upon the amount of government and private funds that will be made available to it, but the recognition it has already received would seem to guarantee continued operation for the foreseeable future.

Although the organization does not enjoy universal approbation of all those working in the same general areas, it has the genuine official approval of the State of North Carolina and most of its higher officials. Many of the heads of state agencies which are working on the same problems are members of MDC's board, including Employment Security Commission Chairman Henry E. Kendall and Department of Community Colleges Director I. E. Ready. Among leading businessmen on the board are Burlington Industries Vice President William H. Ruffin of Durham and Duke Power Company President William B. McGuire of Charlotte and many others.

The organization's staff includes, in addition to Autry, Dewitt Sullivan, director of finance and administration; John L. Allen, Jr., director of operations; Lionel H. Aselton, director of industry relations and technical assistance; and Robert C. Smith, director of program development and public relations.

MDC hopes to answer all the questions of manpower development, but in so doing, an important primary part of the job is to learn how to ask the questions. While the problem's broad outlines are easily discernible, its many details are far from clear. The unemployed, the unemployable and the underemployed are not all known. Still in the unanswered category is the question of why they are the way they are. The most complicated and elusive scientific study of all is the study of human beings and their motivations and lack of same.

No one can guarantee that the Manpower Development Corporation will find the answers, or, if it does, that they will be accepted and used by the public and private agencies to which they will be offered. Today's answers may not be applicable to the changing situations of tomorrow.

But the agency is busy seeking to define the questions and go after the answers. It has the blessings of government and of private business. There is a deepening pool of concern over the manpower problem and a quickening eagerness to discover the solutions. What MDC may find will be of direct help not only to North Carolina, but to every area of the country where the problem exists.

[From the Charlotte (N.C.) Observer, Nov. 24, 1968]

HE FRESHED UP ON SCHOOLING, GOT JOB—DIFFERENT POVERTY WAR BREAKING THE CYCLE

(By Dwayne Walls)

GREENSBORO.—Grover Saunders, a gentle man not accustomed to asserting himself, walked through a light snowfall to put in his application and then he never heard anything from it.

So he asserted himself.

"I didn't hear anything and I didn't hear anything," he said, "so I went up there and I told them I hadn't gone up there just to be a-going."

And he told the Manpower Development people something else, too.

"Now, I want to know something," he told them. "Am I a-going to get in or am I not a-going to get in?"

He got in. He began training that very day, and he went to class for 10 weeks.

"I learned a lot of things I didn't learn in school," he said, "and I freshed up on a lot that I did learn."

Grover Saunders had worked briefly as a shipping clerk in a warehouse years ago. But for most of his 44 years he had been a practical nurse, working for low pay in a risky market.

"You had to keep a-scratching," he said "Now and then I would make $70 a week when I was lucky."

He completed one of the 10-week training courses at Greensboro's Manpower Development Center and got a job as a shipping clerk at $1.85 an hour.

He got his first raise a few weeks ago and eventually will qualify for a retirement program.

When Grover Saunders made out his application for employment, he left one question blank, the one that asked what kind of wage he expected. "I don't know how much I'm worth," he said.

But now his outlook has changed.

"Why, you know," he said. "They've already got me in training to be head of the shipping department some day."

Grover Saunders' sudden rise to steady employment is a modest success story.

Thousands of other North Carolinians have done as well in climbing out of steady unemployment or grinding under-employment since the war on poverty began five years ago.

But the Saunders journey is noteworthy because he and about 200 other graduates of the Manpower Development Center here are the early products of a new stage in the poverty war.

The Manpower Development Center is the first and fairest child in a houseful of experiments spawned in the past year by the N.C. Manpower Development Corporation (MDC) of Chapel Hill.

This non-profit corporation is seen by some observers as the new kind of poverty program—that is, one dominated by hardnosed businessmen and industrialists instead of idealistic dogooders.

MDC sees itself differently, preferring to describe itself as a collaboration of industry and government to attack unemployment and labor turnover across the nation.

One MDC official likes to think of it as "a way out of the endless, ceaseless poverty programs of the past."

Whatever its generic description—poverty program or economic development program—MDC clearly is the strongest indication yet that private industry is willing—even determined—to do more than criticize the poverty war.

MDC is the brainchild of the North Carolina Fund. Its major source of funds so far is the U.S. Office of Economic Opportunity.

But the rock-ribbed National Association of Manufacturers has bestowed its blessing and some technical assistance, and MDC is banking heavily on private industry for its success.

The organization was born last fall at a time when the war on poverty was beginning to fall apart or to settle down, depending on who viewed it and where and how it was viewed.

In North Carolina alone half a million people—about one-fourth of the state's labor force—still need jobs or better jobs, even after millions of dollars have been spent to break the cycle of poverty.

That was roughly the time also when the nation's business and industry began awakening fully to a critical shortage of labor.

Employers in North Carolina were scrambling to find help—skilled or unskilled—and thousands of jobs were going unfilled.

That situation still exists. MDC's goal is to develop some way to eliminate both the labor surplus and a job surplus by bringing the two together.

The organization has given itself three years to develop what it calls a "manpower model" on the state level and hopefully to come up with the workings of a national model or at least a national policy.

MDC Director George B. Autry and his staff have completed a three-year plan which attacks the problem broadside.

In North Carolina, as it is elsewhere in the nation, the situation is one of distance.

Unemployment is mostly in rural areas while available jobs are mostly in the cities.

Even when the two exist together in the urban areas there is a gulf between what industry wants and what the labor force can supply.

Sometime within the coming year the corporation will launch several experimental programs intended to put people where the jobs are.

These include an experimental transportation program in the eastern part of the state, possibly a low-cost housing program, and a statewide computer system to identify the jobs and the jobless and match them.

Through the N.C. Mobility project inherited from the N.C. Fund, the corporation also will continue moving whole families out of rural areas into several Piedmont cities.

But the heart of the whole project will be a network of training centers like the one in Greensboro that produced Grover Saunders.

Three additional centers will be established—two in the East and one in the West—and operated initially by the corporation.

But MDC Program Director Bob Smith says the plan is "to work the centers so thoroughly into the fabric of the community that eventually the community will take over from MDC."

MDC also will set up similar training centers for individual industries, and two of the state's largest firms already have contracted for in-plant centers.

The Greensboro center is not a school in the traditional sense of the word, although its trainees do get some basic education and improve their education level an average of about two grades.

"We don't give them a heck of a lot of education," says Al Varn, MDC's training director. "The important thing is to teach them how to use the education they've got. We're there to train people to get a job or a better job, to show them how to make themselves more attractive to an employer."

To do this the center curriculum leans heavily on a course called Human Resources Development which, as one graduate put it, makes the student take a good look at himself.

Trainees are required to deliver impromptu talks to fellow trainees while a video-tape records the performance.

They go through mock job interviews, playing the roles of both applicant and employer, and then criticize their mistakes on a video playback.

The classes include even instructions in personal grooming and medical self-help.

The results have been dramatic in some cases.

Sylvia Dunlap was a high school drop-out who came in the center from the Neighborhood Youth Corp. She now works regularly as a machine operator at $1.60 an hour.

One graduate that Center Director Al Boyles likes to talk about is Mrs. Alease Galloway.

Mrs. Galloway, the mother of four children, formerly worked as a maid. Even with her husband's regular income the family was barely making it.

Mrs. Galloway had more intelligence than her grade-school education indicated and enough ambition to do something about it. Graduating from the center with a perfect attendance record she took a third-shift textile job and worked straight through rest breaks until the company slowed her down.

She now spends part of her spare time recruiting friends into the training center.

Not all of the center's graduates are whopping successes. A few of the recruits do not even stick long enough to complete the 10 weeks of training, and one of the recent star graduates left a high-paying job to return to welfare rolls, and now seems content to stay there.

The center's follow-up study of the 76 graduates in the second training cycle shows a measure of the program's success.

When they came to the center 55 per cent of the trainees were unemployed and 11 percent were employed only part time.

Three months after they graduated 65 per cent of the class was found to be employed full time, almost all of them on the first job taken after graduation.

Eight per cent was employed part-time and seven per cent were working part-time while taking additional training.

Nineteen per cent of the graduates were found to be unemployed.

EDITOR'S LETTER: MANPOWER PROJECT LOOKS AT RESULTS, THEY'RE IMPRESSIVE

DEAR READERS: When Bob Smith was associate editor of The News, he used to plow through long government reports larded with gobbledegook with a patience almost painful to watch. But when enough became too much he would phone through the Washington maze until he found the man who wrote the report and say: "I've read your report, and if you've a minute or so, I'd like to know what you are trying to say."

That kind of intellectual precision made Bob a superb editorial writer. It also prompted the North Carolina Manpower Development Corporation, when it was formed little more than a year ago, to ask him to join the corporation as director of program development.

Out of a deep conviction that an anti-poverty program could be made to work and that MDC had a better-than-average chance to prove it, Bob bid farewell to newspaper work. We talked about the new corporation's joint sponsorship by the Office of Economic Opportunity and the National Association of Manufacturers and the willingness of tough-minded leaders like Luther Hodges Jr. to provide leadership and policy direction. And Bob agreed that "I'll write you when I know something."

He wrote this week and I thought you might be interested in his observations:

"I know, I know," Bob writes. "The last thing you need is something to read. Something that looks complicated and long of wind. Still you might try this one for size.

"SOMETHING EXTRAORDINARY

"We've run three cycles of trainees through our Greensboro center and the first two cycles are far enough off now to make assessment possible. We've bird-dogged graduates, drop-outs, employers—everybody who fits into the puzzle one way or another. The results are here. They are real, not theoretical. There are enough failures to make the modest successes look pretty good . . . You will see (in reports enclosed) our mistakes glaring through, but you will also see that something rather extraordinary has been happening . . . we think a door has been chinked open and a few rays of light let through . . ."

The report tracked 133 persons either totally unemployed or having only part-time jobs below the poverty level, who had received MDC'c ten-week program of basic education and motivational training. Of the 133, 122 were located and of these 85 (or 69.7 percent) were employed full-time. Twenty-three were unemployed.

"These are all people," Bob reports, "with a long and continuous experience of unemployment and underemployment. As you can see almost 70 per cent of them have full-time jobs now, the majority working with the first employer they joined after graduation from the training center . . . Only 20 seem at this point still to be losers . . . I'm personally impressed with the average wage of the full-time workers. It is $1.85 an hour. That's nicely above the federal minimum. It isn't enough money, Lord knows, but it is a start. Many of these people are getting skills training from their new employers and will move on up the wage ladder.

"A MAID IS NOW A WEAVER

"If you can look at nothing else in the reports, please check the summary which shows what the people were doing when they came into the training center and what they are doing now. It makes all the failing worthwhile. . . ."

I saw the reason for Bob's optimism quickly. A domestic earning 75 cents an hour is now making $1.99 as a weaver. Another person, unemployed since 1962, earns $1.60 an hour, in a hosiery operation, and an unemployed domestic whose top salary had been 87 cents an hour is now making $1.32 as a nurse's aide. A part-time laborer has become a production worker at $2.33 an hour. An unemployed truck driver has become a forklift operator at $2.15 an hour.

The MDC's reports are thorough, clear and convincing, and they offer reason to hope that the corporation will be able to find funding for other training centers around the state.

Though still experimental, the development of human skills among those impoverished in spirit, ability and means is the most pressing business confronting North Carolina and the nation. And it is difficult to think of a more sensible approach than that of MDC which weds the resources of government with the problem-solving abilities of business.

Sincerely,

PERRY MORGAN.

AT MDC, SUCCESS STORIES: UNLIKELY ALLIANCE HELPS TRAIN UNEMPLOYED

(By Owen Lewis)

The National Association of Manufacturers, the Office of Economic Opportunity and a private contractor running a poverty program?

This unlikely alliance has produced Manpower Development Center on South Edgeworth Street, an outfit for hard-core unemployed and underemployed persons who go through a stiff 10-week course and come out better motivated and better able to cope with the world of private industry.

The center is a part of the Manpower Development Corp., which has headquarters in Chapel Hill, and has instituted a broad range three-year program of experiments dedicated to breaking the cycle of poverty in the state.

The center began operation in March, and has graduated three cycles of trainees who were given courses in basic education and human-resource development—development of motivation and attitude, how to dress, how to look for employment, how to fill out an application, how to prepare for an interview.

"One of the most basic things the center does is to familiarize the trainees with industry. We are not do-gooders. The trainees are expected to find jobs on their own. But if they have major problems, real excuses, we try to help them again. We try to change their attitudes," said Jim Bobbitt, MDC placement developer.

The basic education is programmed instruction, broken down by levels, in such fundamental areas as reading, mathematics and manual dexterity. In the human-resource development field, closed-circuit television is used to let the trainees see themselves as they go through mock sessions of job-seeking.

"Eighty-nine per cent of the employers say that our trainees are better than the average employee off the street," said Bobbitt. Of the last cycle, 81 of 89 of those who entered graduated. "If they stick it out the first week, you can't run them off," Bobbitt said. "This is security for them, and most of the trainees find they have something in common."

Most of the trainees at MDC have more than one of these criteria: poor economically, a school dropout, a member of a minority, under 22, over 45, or handicapped.

Kay Waddell, 22, was unemployed, and had just moved to town, when she heard an announcement of MDC's program on the radio. She applied and was accepted. "The basic math and English refreshed everything I had learned before. Before I had problems expressing myself, but now I feel I can communicate better with other people, understand them better and hold a job."

Miss Waddell, having completed the MDC cycle, is at Guilford Technical Institute on a Manpower Development Training Act program, studying to be a general office clerk.

Blondie Williams, who describes herself as "a middle-aged woman who didn't have as good a chance as the younger ones of getting a job," was a waitress before, and now has a job finishing cabinets at Burlington Distributors. She makes more money, and has regular daytime hours, Mondays through Fridays.

"The training at the center helped me to know how to go about looking for a job. How you act, your personality and your appearance mean a lot. We were taught these things. I think the center is wonderful for the people who didn't get to go to school, or who had to leave school like I did."

Horace Sturdivant, 24, said, "Before I had a job as a shipping and receiving clerk. Now

I have a position with the city in the building inspection department. My pay has improved, and I like the work better.

"My experience at the center was wonderful with the basic education and the human resources development courses. You learn how to get along better with your coworkers and with your employer. You learn what to expect of your employer in time of problems, in time of need."

Not all of the stories are success stories, but most of them are. One who hasn't succeeded yet is Sally Bledsoe. Mrs. Bledsoe said, "I completed the course, but I haven't got a job. The center is helping me try to find one, but it seems like all the jobs are filled." Mrs. Bledsoe is looking for a factory production job, "but it looks doubtful. I guess my height is my biggest problem. I'm not but five-feet, one-inch tall."

But from the first two cycles, more than 65 percent of the trainees have upgraded their job status, many of them spectacularly. The record of the third cycle, not yet complete, is expected to be even more impressive.

[From the Charlotte (N.C.) News, Feb. 6, 1969]

LABOR POOL GOING DRY, HODGES SAYS

The chairman of the North Carolina Manpower Development Corp. says businesses should recruit manpower in areas they have previously ignored—the Negro colleges, the poor and men with arrest records.

"Business involvement in poverty and unemployment may be a simple matter of survival," Luther H. Hodges Jr. said today at a Johnson C. Smith University forum.

"Here in North Carolina established industries are discovering that the labor pool is drying up," he said. "They must either tap the manpower resources at the poverty level or lose production for lack of workers."

Hodges, son of the former governor, said business should look critically at its personnel tests "to see if they really do what they're supposed to do."

Hodges, whose agency is one of the first to match persons with jobs via computer, said more than a dozen North Carolina industries have approached MDC for help. The agency, he said, will establish in-plant training programs for industrial managers and the unemployed.

"It's all very well to motivate the chronically unemployed to come to work on time," he said, "but what good will that do if they are discriminated against or looked down upon when they get to work?"

Hodges said also business should experiment with new ways of providing "high support" for disadvantaged employees, "By this I mean most of all an attitude of acceptance by the employing company," he said.

"I mean on-the-job training. I mean going the extra mile to help the individual make the difficult transition from rural to urban life, from the society of the street corner to the community of work. And from the world of failure to the world of success."

Hodges said he is hopeful the agency will be able to establish a number of training centers throughout the state this year.

AFFIRMATIVE ACTION

Mr. PERCY. Mr. President, of all the problems facing our inner cities today, none is more crucial than lack of employment opportunity. Although significant progress has been made, the solution to inner city unemployment still looms large ahead of us.

The Federal Government has recognized this problem and responded to it by instituting a variety of manpower programs, vocational training programs, and others too numerous to mention.

Private industry has also recognized the extent and social significance of inner city unemployment, and has responded to it in various ways. Individuals and giant corporations have wedded their efforts for the purpose of finding new possibilities, exploring new alternatives, and providing new hope to the unemployed residents of our inner cities.

One such union was created in 1957 when James F. Oates, Jr., of Chicago, Ill., combined his creative talents with the substantial resources of the Equitable Life Assurance Society of the United States. The achievements born of this union bear witness to the ability of the dedicated, to affect significant improvements in the quality of American life.

James F. Oates, Jr., chairman of the board and chief executive officer of Equitable Life, will retire at the end of this year. I would like to share with my colleagues in the Senate, a record of some of his more important community and human achievements. I ask unanimous consent to have printed in the CONGRESSIONAL RECORD, the following article, which appeared in the March 8, 1969, edition of the Saturday Review.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFFIRMATIVE ACTION

It has often been said that the successful magazine is the lengthened shadow of one man. This certainly was true of Harold Ross's *New Yorker*, Henry Luce's *Time*, *Life*, and *Fortune*, and is still true of De Witt Wallace's *Reader's Digest*. It was also true of American business in the post-Civil War period when the corporation was largely the creature of one man and he alone directed his company, often in a dictatorial fashion. But today, with the stock of corporations so widely held, and with the larger ones working in such complex fields, often in as many as a hundred lands, no individual can make all the decisions that demand such a wide variety of skills and an abundance of diverse knowledge. Corporate decisions of major import are now group decisions and of necessity must be so.

In keeping with these slow processes, it seems to take an interminable time before decisions made at the top are implemented throughout a company. This has been particularly evident in the adjustment of the larger corporation to its new social obligations. Yet despite this ponderous procedure of decision-making, the chief executive of a major company can provide leadership and give impetus to the movement of even the largest empires. Where one finds a corporation moving with urgency in seeking new means of meeting the crisis of the inner cities, for example, one is almost certain to find a chief executive riding herd to make sure that the company's policies are being carried out with utmost speed.

One such case highlights the theory. The Equitable Life Assurance Society of the United States is one of the largest insurance companies in the country. Equitable is in a highly regulated business and must be cautious. All life insurance companies have had a poor history of employment of minorities. Some of them not only refused to hire Negroes or other deprived groups, but often they were even reluctant to sell insurance to blacks. The changes that have come about in all the better-run insurance companies are due not alone to public pressures, but to a realization by management that a tremendous part of their investments is in the cities and unless the cities are healthy the insurance companies will not be. As a result, hiring policies, for example, changed several years ago.

Some have been slow to implement those policies. But not Equitable Life. James F. Oates, Jr., chairman of the board and chief executive officer, has made it his own direct business to see that there is not a letup in the pressure to alter old habits, to hire members of minority groups, to open doors to those previously barred from jobs. Mr. Oates retires from Equitable at the end of this year, and to examine the changes he has wrought, it is worth looking at his record before he came to the company. In 1945, as president of the Chicago YMCA, he decided it was time to end the debates on admission of Negroes to membership. As a result of his pressure, all facilities at the Y were opened to Negroes. There was no falling off in Y membership, and there were no outcries.

In 1946, as president of the Chicago Bar Association, Oates opened another door. Again, there were no Negro members. He brought in Negro lawyers, the first one a judge. In 1948, as head of The Peoples Gas Light and Coke Company, he found that Negroes held only the most menial jobs, and precious few of them. He changed the hiring policies of his company and as a beginning sought out, with the aid of the judge he brought into the Bar Association, twenty well-qualified Negro youngsters. And he did it despite warnings from company executives that white girl employees would leave if black girls used the same washrooms; that it would be the ruination of Peoples Gas if young Negro men were allowed to work in the same offices with white men.

It was with this background that Oates arrived at Equitable in 1957. He found that his new company did not turn away Negroes when they sought jobs, but there was no initiative in hiring minority groups. The result was that there were hardly any Negro, Oriental, American Indian, or Spanish Americans working for Equitable. Oates made it his special province to change that picture.

Oates found that it is not easy to change the thinking of executives. As late as 1960, there were still very few minority group salaried employees at Equitable. Now, nationwide, some 13.5 per cent belong to minority groups. In the New York office, the figure is about 20 per cent and this is certain to rise. Of those being hired now in New York, 60 per cent are Negro and Puerto Rican. Every Equitable office throughout the country is integrated, including the South.

At present more than 200 agents out of a sales force of 7,000 are from a minority group. There are twenty Negro district managers out of some 400. The manager of one of the Philadelphia agencies is a Negro, as are the managers of agencies in Los Angeles and Chicago. And before 1969 is over, there will be more, for the vigorous recruiting campaign is being accelerated.

In addition, Equitable is now in its sixth year of training high school drop-outs, largely Negroes in New York, for jobs. The program is not a complete success, but there have been accomplishments that make the program worth the effort. "On balance," says Oates, "we are more than satisfied that it has been and continues to be a relative success." To Oates, a job "is an essential badge of membership in the larger society and a pay check is a passport to self-respect and self-sufficiency." But jobs alone are not enough. The entire environment of the inner cities must be changed, and that, Oates believes, involves schools, housing, recreational facilities, as it does job opportunities.

But that is not all. Equitable for some time has been one of the leaders among insurance companies in substantial corporate philanthropy, including aid to higher education. In

1954, Equitable's contribution program totaled $375,000. Last year it was $775,000, and it will be roughly the same in 1969. In addition, $200,000 more has been budgeted for urban programs. Equitable's Division of Community Services encourages company employees and agents to become active in civic causes.

The Equitable effort is part of the life insurance industry's pledge to invest $1 billion in urban core areas throughout the country to improve housing conditions and finance enterprises that will create jobs. And while the Federal Housing Administration guarantees the good use of these funds, the companies could invest them in other areas and get a better return of from 1 per cent to 1.5 per cent more. Oates was one of the leaders who proposed this industry wide program, which will in all likelihood be extended as soon as the original $1 billion is invested.

And if one more example is needed to show that a busy chief executive can still find time for what are usually called external responsibilities, there is Oates's activity as general chairman of Princeton University's capital campaign, which from 1959 to 1962 raised $53,000,000.

L. L. L. GOLDEN.

JERRIS LEONARD AND CIVIL RIGHTS: AN AUSPICIOUS BEGINNING

Mr. PROXMIRE. Mr. President, the new administration has been in office a little over 2 months now. Most of the Presidential appointees have just begun to acquaint themselves with their responsibilities, proceeding cautiously and gingerly in their new posts. But in the area of civil rights enforcement I am pleased to see that there has been no hiatus, no waiting. The forceful policy of the Kennedy and Johnson administrations is being carried forward in this administration by the new civil rights chief in the Justice Department, Jerris Leonard.

When he took office last January, Jerry Leonard inherited a docket of some 400 civil rights cases from his predecessor, Stephen Pollack. He has carried them forward, enforcing the civil rights laws enacted during the last decade. Vigorous and impartial enforcement is essential if these laws are to be given real meaning and substance.

This past Tuesday, Jerry Leonard completed oral argument in the case of Daniel against Paul, now pending in the Supreme Court. The case is on appeal from a ruling by the Eighth Circuit Court of Appeals, and involves the question whether discrimination by a private club violates the public accommodations section of the 1964 Civil Rights Act. Although the United States is not directly involved as a party, the Civil Rights Division of the Justice Department intervened to insure that the Civil Rights Act would be properly applied by the Court. Jerry Leonard briefed and argued the case—a case which may result in a far-reaching interpretation of the civil rights laws.

But Leonard's functions have by no means been limited to carrying out existing cases, or intervening in disputes between private litigants. He has recently filed a motion in a Texas Federal district court challenging the Houston school system's method of complying with the school desegregation guidelines. Last May, the Supreme Court had ruled that the free choice plans adopted by Houston and other communities in the South are not an effective means of desegregating the schools; Leonard's motion seeks to implement that decision.

Finally, Jerry Leonard has been active in the area of open housing. In a recent speech to the Wisconsin Department of Industry, Labor, and Human Relations, he indicated that the Justice Department intends to enforce vigorously the congressional mandate on open housing. Local housing and urban development agencies will be encouraged to bring legal action against persons who discriminate against Negroes in real estate dealings. Chicago is to be one of the targets of his drive.

These achievements in so brief a period of time are impressive. They augur well for civil rights.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The VICE PRESIDENT. Is there further morning business? If not, morning business is closed.

COMMODITY CREDIT CORPORATION SUPPLEMENTAL APPROPRIATION, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of House Joint Resolution 584.

The VICE PRESIDENT. The clerk will state the joint resolution by title.

The LEGISLATIVE CLERK. A joint resolution (H.J. Res. 584) making a supplemental appropriation for the Commodity Credit Corporation for the fiscal year ending June 30, 1969, and for other purposes.

The VICE PRESIDENT. The question is on proceeding to the consideration of the joint resolution.

There being no objection, the Senate proceeded to consider the joint resolution, which had been reported from the Committee on Appropriations without amendment.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, we now have under consideration House Joint Resolution 584, making supplemental appropriations to restore the capital impairment of the Commodity Credit Corporation. House Document 91–76, transmitted to the Congress on February 20, 1969, proposed supplemental appropriations of $1 billion for this purpose for fiscal year 1969, and a corresponding reduction of $1 billion from the fiscal year 1970 budget. The House of Representatives has approved the full budget estimate. House Joint Resolution 584 was reported from the House Appropriations Committee on March 24, 1969, and passed the House of Representatives on March 25, 1969. The Senate Appropriations Committee reported the resolution without amendment on March 26.

Mr. President, when the Congress processed the regular agricultural appropriations bill for fiscal year 1969 last year, the budget request for this item was $3,648,506,000. The House reduced this amount by $460,393,500, and the Department did not appeal the House reduction. The Senate concurred in the House action inasmuch as the Department stated at that time that it felt this amount was sufficient to meet the financing requirements for all of the various CCC programs—which are mandatory and uncontrollable—and still have remaining an operating margin of approximately $1 billion.

Since that time, however, there have been large and unexpected demands upon the Corporation's borrowing authority totaling $1,686 million.

These unanticipated increases have been caused by extremely large increases in crop production—particularly feed grains, wheat, and soybeans—and decreases in exports. These increased supplies of commodities, coupled with lower prices and decreased exports, have resulted in higher quantities of commodities going under loan, and also loan repayments.

The dock strike, which has not been settled in the gulf ports from New Orleans westward, has further aggravated the situation by slackening the demand for agricultural commodities.

These factors have caused producers who have commodities under loan with the CCC to postpone repaying these loans and reclaiming the commodities until a future date when the prices will be firmer.

All of these developments have combined to cause this total program increase of $1,686 million above what was estimated in the fiscal year 1969 budget. Of this amount, $973 million occurred prior to the submission of the 1970 budget and $713 million occurred since that time. I ask to have inserted in the RECORD a table which shows when these increases occurred.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1

Commodity	1969 Budget to 1970 budget	Since 1970 budget	Total
Feed grains	$76	$405	$481
Wheat	246	141	387
Cotton	135	80	215
Soybeans	238	137	375
All other	278	−50	228
Total	973	713	1,686

Mr. BYRD of West Virginia. Mr. President, last fall it became necessary to exempt the CCC from the effects of Public Law 90–364, the Revenue and Expenditure Control Act of 1968. This action, while exempting the CCC from the overall ceiling established under that act, did not increase the Corporation's borrowing authority.

At this point, Mr. President, I ask to have inserted in the RECORD a table which also appears in the printed hearings on page 7. This table details all of the changes which have occurred since the fiscal year 1969 budget was formulated.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 2.—*Commodity Credit Corporation—Analysis of Changes in Borrowing Authority Available*

[Millions of dollars; fiscal year 1969]

Estimated borrowing authority available June 30, 1969, included in 1969 budget	$1,963.4
PRICE SUPPORT AND RELATED EXPENDITURES	
Increases from 1969 budget to 1970 budget:	
Feed grains (increased production)	$76.1
Wheat (more production and less exports)	246.5
Cotton (lower exports and domestic use)	134.6
Soybeans (more production and less use)	237.9
Storage facility loans (more space needed)	58.0
Rice (more production and less exports)	43.1
Tobacco (shift from "free" stocks to CCC)	75.1
Oils, edible (less exports)	20.0
Interest and all other	112.4
Total increases	1,003.7
Decreases from 1969 budget to 1970 budget:	
Peanuts (less production)	−13.3
Dairy products (less production)	−3.2
All other (dry beans, tung oil, long-staple cotton, etc.)	−14.1
Total decreases	−30.6
Net increases from 1969 budget, reducing availability of funds	−973.1
Increases since 1970 budget:	
Feed grains (less exports and $168 million more advance payment)	404.7
Wheat (less exports)	141.1
Cotton (more production and less total use)	80.0
Soybeans (trade holding off purchases in anticipation of lower prices)	137.5
Storage facility loans (more space needed)	40.0
Tobacco (shift from "free" stocks to CCC)	34.8
Rice (export payments)	5.0
Interest (higher rates)	38.9
Total increases since 1970 budget	882.0
Decreases since 1970 budget:	
Dairy products (less production and sales to section 32)	−163.9
Cottonseed meal (more use)	−5.3
Total increases since 1970 budget	−169.2
1969 appropriation (included in 1969 budget $918.1 million) (enacted $300 million)	618.1
Net increases since 1970 budget, decreasing availability of funds	−$712.8
Total net increases since 1969 budget	−1,685.9
Net available	277.5
1969 appropriation for realized losses:	
Included in 1969 budget $3,648.5 million; enacted $3,188.1 million	−460.4
Net deficit in borrowing authority after price support and related	−182.9
PUBLIC LAW 480 AND OTHER	
Public Law 480:	
1969 appropriation (included in 1969 budget $918.1 million) (enacted $300 million)	618.1
Decrease in expenditures (from $1,444.4 to $1,036.7 million)	407.7
Difference, financed by borrowing authority	−210.4
Advance to Farmers Home Administration (Public Law 90–328)—Not in 1969 budget	−30.0
Other net changes in special activities (mostly less short-term export credit sales)	+42.3
Total, Public Law 480 and other	−198.1
Revised estimate of borrowing authority available June 30, 1969 (deficit)	−381.0

Mr. BYRD of West Virginia. Mr. President, I should like to summarize the major factors which have caused this increase of $1,696 million:

First. The production of feed grains, wheat, and soybeans has increased substantially above the levels anticipated in both the 1969 budget and the 1970 budget. As an example, feed grains have increased 1.1 million tons, while exports are down 3.1 million tons, resulting in an additional investment of $481 million by the CCC.

Second. Moreover, wheat is 60 million bushels over the expectation, while exports are expected to be down 190 million bushels, resulting in an increased investment of $387 million.

Third. Additionally, soybeans are 30 million bushels over the amount estimated earlier, while domestic use and exports are expected to be down 59 million bushels, which has resulted in an additional investment of $375 million by the CCC.

Fourth. Other programs account for increased funds; mainly, tobacco, which is up $110 million; rice, $48 million more; oils up $20 million.

Then, too, repayments have been much lower than anticipated when the 1969 budget was prepared. Repayments last year, through January 31, 1968, totaled $477 million, or 47 percent of the year's total of $1,021 million. However, this year, based on preliminary data, the $465 million collected through January 31, 1969, amounts to only 37 percent of the projected total of $1,246 million.

In the case of cotton, production is down 2.1 million bales from that which was earlier predicted. However, both domestic and foreign demands have decreased and no price increase is expected for cotton. This has resulted in placing an additional 2.3 million bales of cotton under loan at an additional cost of $215 million.

These large crop productions are also causing farmers to take greater advantage of the storage facilities loan program. This accounts for an additional $98 million in CCC loans.

Also, additional interest charges have amounted to $62 million.

When the 1969 budget was formulated, it was proposed that the advance payments to the participants in the feed grains program be reduced from 50 to 25 percent. However, the Department, after considering this proposal, concluded that the participants had not been given adequate notice of this proposed action, and decided to continue the 50-percent rate as in the past several years. This adds $168 million to CCC expenditures for fiscal year 1969. This increase will, of course, show a proportionate decrease in the fiscal year 1970 budget.

Mr. President, I have tried to detail some of the major items comprising this total increase of $1,686 million which was not anticipated when the fiscal year 1969 budget was formulated.

As I stated on March 24, during the hearings on this item, I am pleased to note that the Department is requesting, in its 1970 budget, restoration of all prior year losses except for $250 million, which applies to fiscal year 1968. Had this course been followed in the past—as has been recommended by the Senate Committee on Appropriations—the Department would not now be asking for this supplemental appropriation of $1 billion. Previous years' hearings have brought out that both the agency and the Department officials have requested full restoration of the prior year losses of the Corporation.

Mr. President, I ask unanimous consent to have printed in the RECORD a table showing the budget request, the appropriation, and the remaining unrestored losses from fiscal year 1961 to the present.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 3.—COMMODITY CREDIT CORPORATION NET REALIZED LOSSES AND APPROPRIATIONS TO RESTORE SUCH LOSSES, FISCAL YEARS 1961-68

[All amounts in millions]

Year incurred	Losses	Restoration	Act or estimate	Unrestored after appropriation: Year	Unrestored after appropriation: Cumulative
1961:					
Regular	$2,067.0	$2,067.0			
Inventory revaluation	1,268.5	211.5	1963 Appropriation Act, $2,278.5	$1,057.0	$1,057.0
1962	2,799.4	2,699.4	1964 Appropriation Act, $2,699.4	100.0	1,157.0
	2,654.9	1,574.0	1965 Appropriation Act, $1,574		1,137.9
1963		100.0			1,057.0
		1,000.0	1965 supplemental, $1,100	1,080.9	2,237.9
		80.9			1,057.0
1964	3,226.9	2,719.1	1966 Appropriation Act, $2,800	507.8	1,564.8
		507.8			1,057.0
1965	3,048.0	3,048.0	1967 Appropriation Act, $3,555.8		1,057.0
1966	2,984.9	1,399.7	1968 Appropriation Act, $1,400 [1]	1,585.2	2,642.2
		1,585.2			1,057.0
1967	3,813.6	1,602.9	1969 Appropriation Act, $3,188.1	2,210.7	3,267.7
1968	3,198.2			3,198.2	6,465.9
		1,000.0	1969 supplemental request, $1,000		5,465.9
		[2] 5,215.9	1970 budget amendment, $5,215.9		250.0
1969 through Dec. 31, 1968	[2] 2,567.2				

[1] $275,000 was transferred to ARS for cotton research.

[2] Consists of:

1961	$1,057.0
1967	2,210.7
1968	2,948.2
Subtotal	6,215.9
1969 supplemental	−1,000.0
1970 Budget	5,215.9

[3] Law authorizes appropriations for actual amounts recorded in the accounts only as of June 30, of each fiscal year.

Mr. BYRD of West Virginia. Mr. President, there is one other item I wish to mention; the borrowing capacity of the Commodity Credit Corporation has reached such a precariously low level that $219 million has been advanced to the Corporation from section 32 funds. I was assured, however, in the hearings by officials of the Department that sufficient amounts would be repaid to this fund to enable it to carry forward $300 million into fiscal year 1970, as authorized by law. The Senate report also includes language to this effect. Section 32 funds are used to remove surpluses of perishable agricultural commodities from the market when necessary. It is the only source of relief to which the producers of these non-price-supported commodities may turn when they have large surpluses. Therefore, it is imperative that sufficient funds be kept in the account for these surplus removal operations.

As I pointed out earlier in my statement, expenditures for the CCC are mandatory and uncontrollable. They administer and fund the various programs which have been authorized by law. A list of all of the programs administered by the CCC can be found on page 15 of the hearings.

Mr. President, let me turn for a moment to enumerate some of the effects on farmers and others if CCC should have to cease operations; and in this connection I have prepared mimeographed memorandums, which have been distributed in the Chamber, a copy of which is on the desk of each Senator. This memorandum indicates the effect of our not providing this supplemental appropriation.

Public Law 480 shipments would have to stop, thus aggravating the adverse effect on international trade already felt as a result of the dock strike, and commitments to foreign governments could not be met. This would be detrimental to our international image and good will to the extent that importers would make purchases elsewhere, and those sales would likely be lost permanently because importing countries would look to our competition to meet their needs.

The Commodity Credit Corporation would have to stop making price support loans to farmers.

Advance payments would have to be stopped for feed grain producers who may still enroll in this year's program in the 11 States where the sign-up was extended for 2 weeks. The 11 States are: Washington, Oregon, Idaho, Montana, North Dakota, South Dakota, Minnesota, Iowa, Colorado, Kansas, and Nebraska.

The corporation would not be able to pay bills that normally come due between now and July 1. Examples are wool payments normally due farmers and ranchers in early April; payments to warehousemen and others for storing CCC-owned grain or grain under extended loans; payments to railroads for freight costs due.

Additionally, the CCC could not make firm storage facility loans and drying equipment loans, an exceedingly popular and necessary program for farmers who must improve their marketing practices.

With the current tight money situation, farmers and others who are due payments or loans from CCC would be forced to borrow elsewhere at increased interest rates to replace this source of funds.

In other words, Mr. President, the consequence of failure to pass the appropriation requested by the administration would be serious, not only for agriculture but also for our entire economy.

Mr. President, I have tried to briefly summarize the urgent need and necessity for approving this supplemental request of $1 billion, none of which, by the way, will be used for administrative costs.

I shall now be happy to respond to questions from Senators, and I yield first to the distinguished Senator from Delaware (Mr. WILLIAMS).

Mr. WILLIAMS of Delaware. Mr. President, as I understand it, this appropriation of $1 billion is to reimburse the Commodity Credit Corporation for previously incurred losses?

Mr. BYRD of West Virginia. That is correct.

Mr. WILLIAMS of Delaware. These are losses which, in earlier years, several years back, should have been recognized as such by Congress but were not recognized as losses for the purpose of reimbursement in appropriation form?

Mr. BYRD of West Virginia. The Senator is correct in stating that. These losses go back to 1961, in the amount of $1,057,000,000; to 1967, in the amount of $2,002,000,000; and to 1968, in the amount of $3,002,000,000 and they have not been reimbursed.

Mr. WILLIAMS of Delaware. That is correct; to a total extent of about $6.5 billion?

Mr. BYRD of West Virginia. $6.5 billion is the total for those 3 years.

Mr. WILLIAMS of Delaware. Yes. The Senator from Florida on numerous occasions, and I have supported him, in earlier years has tried to get Congress to recognize these losses as they were being incurred over the years in order that the taxpayers, the American people, could realize and have called forcibly to their attention the true extent of the cost of this agricultural program.

As a result of that belated recognition of the losses and under this new bookkeeping system, which I mentioned yesterday, the Government can in effect report a surplus when we are actually running at a deficit of several billion a year.

To further emphasize the point, I ask this question: Is it not a fact that under this new system of reporting, while this bill calls for $1 billion, an amendment could be offered raising that amount to $2 billion, $3 billion, $4 billion, $5 billion, or $6 billion, and if Congress were to adopt it it would never change by one iota the final figures as to the surplus or deficit reported at the end of this year?

Mr. BYRD of West Virginia. Mr. President, I should like to yield to the Senator from Florida (Mr. HOLLAND) on this point.

Mr. WILLIAMS of Delaware. I think the Senator will find I am correct in saying that whether we appropriate $1 billion, $2 billion, $5 billion, or the entire $6.5 billion, it would not change the final figure one iota. What we are doing is recognizing this year and seeking to restore losses incurred between 1961 and 1968. Furthermore; these are losses which were not recorded at the time.

The point I am making is that the actual cost of these programs will never show up to the taxpayers.

Mr. BYRD of West Virginia. Mr. President, before I yield to the Senator from Florida, I do want to make two points.

First, I should like to emphasize what I said earlier, that the Senate Appropriations Committee, under the leadership of the Senator from Florida (Mr. HOLLAND), the Senator from Louisiana (Mr. ELLENDER), and others, have endeavored in prior years to have these reimbursements requested and appropriated for on a current basis. Second, the fact that they were not made on a current basis was not the fault of the Congress, nor of the Department of Agriculture but was the fault of the Bureau of the Budget of the previous administration. The Bureau of the Budget, in those years, as I understand it, insisted upon a reduction of the requests of the former Secretary of Agriculture for complete reimbursement of these losses, to the CCC.

Mr. WILLIAMS of Delaware. The Senator is correct.

Mr. BYRD of West Virginia. The fault lies in the previous actions of the Bureau of the Budget; and I think the Senator is exactly right when he says that this procedure was just a juggling of the books. If they had acted in accordance with the recommendations of the Senate Appropriations Committee, we would not be confronted with this problem today.

Mr. WILLIAMS of Delaware. I appreciate that. I made a statement to that effect earlier, and I wish to reemphasize it. I am not criticizing the Senate Appropriations Committee, because its chairman, the Senator from Florida, has consistently pointed out this false method of accounting. I have supported him in that contention.

But the net effect was that in prior years the Congress and the administration would claim that it was reducing the appropriation of the Department of Agriculture by x billion dollars, which made it look good to the taxpayers; when in reality it was not reducing expenditures at all. Now we are asked to belatedly restore these funds, and under this new accounting system it will still not show up as a loss.

It is comparable to a situation where a private taxpayer, reporting to the Government, can very properly report on a cash basis the income from his year-to-year operation, or he can report it and pay his income taxes to the Government on an accrual basis. Either method is acceptable and proper for reporting his income to the Federal Government.

But if a taxpayer wants to change from the accrual reporting system to the cash reporting system or from the cash system to the accrual system he has to make a request to the Bureau of Internal Revenue, obtain its permission, and then be subject to an audit to make sure that he eliminates the so-called notch so that the Government would not lose any revenue as the result of this changeover.

What I am pointing out here is that the Government, in changing over from the old administrative budget to this new unified budget, is dropping about $6.5 billion that will never be reported to the American taxpayers as a cost of the agricultural program. I think we are giving them an unrealistic appraisal of the cost of administering the agricultural program.

I think there is something wrong with any operating system wherein the appropriating of $1 billion, $2 billion, or $5 billion does not change the answer at the end of the year. I think it requires an explanation on the part of the administration that this notch exists and that we are not actually saving money for the American taxpayers as we claim. These represent previously incurred losses which can only be made up by direct payments from the taxpayers.

I say again, the Government is practicing a system of bookkeeping which it would not approve for any private individual to use in reporting his income to the Federal Government.

I support the committee today, and I am not criticizing it because we do have to restore this loss. We are going to have to restore all of the $6.5 billion eventually because at some point we are going to have to reckon these losses that have been sustained.

I only wish Congress had followed the advice of the Senator from Florida and the committee in earlier years, but now that we are making this changeover we should make this clear to the American taxpayers. It should be emphasized so that they may really understand the delicate financial picture with which we are confronted.

Under this new system we raised the debt ceiling $12 billion yesterday for what purpose? To finance some imaginary surpluses. That is ridiculous.

Who ever heard of a proposal of going to the bank to negotiate a larger line of credit in order to borrow money with which to finance a surplus? We do not have a surplus. We are operating the Government at a deficit today and at a projected deficit for the next 18 months that will average $500 million a month.

That should be admitted and brought home to the American taxpayers.

The only way that we can bring the deficit under control and check the inflationary spiral is by making bona fide reductions in expenditures. I think the sooner we realize that, the better off we will be. We cannot check the inflationary spiral by any fancy manipulation of the books to make them look good.

I again emphasize that my remarks are not meant in any way as criticism of the committee.

The Senator from Florida has been pointing this out for years, but for years the Congress and the administration has not followed the recommendations of the committee. This manipulation gave the previous administration a chance to spend $6.5 billion and to cover up the expenditure so that the American taxpayers would not know what was going on.

Mr. BYRD of West Virginia. Mr. President, I yield to the senior Senator from Florida.

Mr. HOLLAND. Mr. President, I thank the Senator for yielding. I also thank the Senator from Delaware for his insistence throughout the years that these matters should be handled honestly so as to give accurate and current information to the people of this Nation from year to year regarding the operations of the Commodity Credit Corporation.

If the Senator from Delaware will listen to me for a moment, I want to recite what I understand the facts to be.

First, in previous years the notes of the Commodity Credit Corporation to the Treasury of the United States representing what was advanced by the Treasury to the Commodity Credit Corporation from year to year and what was expended in carrying out the functions of the CCC were canceled at the end of each year without any real recognition of the fact that a certain amount of money had been spent.

I have no complaint with the operations of the Commodity Credit Corporation, because those operating it were merely carrying out the mandates of Congress and the laws passed by Congress. I have no complaint to make of the Department of Agriculture, because from year to year, both under the previous administration and under the present administration, the Department of Agriculture has been requesting full restoration of prior year losses of the Commodity Credit Corporation.

The Senator from Delaware some years ago asked Congress to pass—and it did pass and it had the strong support of the Senator from Florida and many other Senators—legislation requiring reimbursement of these losses by appropriations. This procedure shows affirmatively what had been spent by the CCC in its operations and what is needed for reimbursement to restore their total borrowing capacity to $14.5 billion, which is their authorized amount.

Unfortunately, the Bureau of the Budget has always felt that if it just asked for enough restoration to carry out what in its opinion would be required to carry out the next year's operation, everything would be all right.

The Senator from Florida has stoutly insisted for 5 years prior to last year—or perhaps it was 6 years prior to last year—that the mandate of the legislation offered by the Senator from Delaware and passed by Congress should be carried out and that there should be restoration yearly through the appropriations process of all prior year losses of the Commodity Credit Corporation. Unfortunately, that has not been done.

Year after year the Senate has stood by the Senator from Florida in his attempt to have this done. However, with the Bureau of the Budget—and, unfortunately, the Bureau of the Budget was backed up by the administration during that time—insisting that all they needed was a partial restoration, that was all we have been able to get.

So, last year for the first time, the Senator from Florida decided to abandon that effort. These facts have been stated ably by the Senator from West Virginia. I predicted at that time on the floor—and the RECORD will show it—that the Commodity Credit Corporation was going to come to a day of reckoning by reason of the following of that very improper practice.

That day has come. We are now at the point where, in order to get through this year's operations, the Commodity Credit Corporation has to have restored to it $1 billion.

As a matter of fact, the CCC has not only exhausted its own resources, but it has also borrowed $219 million, as stated so ably and properly by the Senator from West Virginia, from section 32 funds.

Section 32 funds are derived from 30 percent of the tariff receipts. Their primary purpose is to assure that producers of perishable commodities, who comprise much more than half of the agricultural producers in the Nation who do not have price supports, will be protected. These perishables include beef, pork, poultry, fruit, vegetables, and other crops—none of which have price supports.

When there is a surplus today—which destroys the value of the full production—the Commodity Credit Corporation through the use of section 32 funds can remove that surplus from the market and use it for the school lunch program, the direct distribution program, and other institutional programs, in connection with feeding our poor people. This creates a situation under which the rest of that commodity can be sold at least for some small profit.

Officials of the Department testified during the supplemental hearings that if this supplemental request is granted sufficient amounts will be repaid to section 32 to enable the section 32 permanent appropriation to carry forward $300 million into fiscal year 1970, as provided by law. The Senate report states that the committee expects this action to be carried out. Since this is the only relief afforded these producers of perishable commodities, it is vitally important that necessary funds be carried forward to provide an adequate amount for these surplus removal operations.

The Senator from West Virginia has fully covered this matter in his statement.

I pay tribute to the distinguished Senator from West Virginia for so sympathetically handling the problem. I also pay tribute to the distinguished Senator from Delaware for stating his understanding of the problem and his understanding of the facts—that this crisis exists because we have not followed the law and made full reimbursement from year to year of the loss of the Commodity Credit Corporation.

Those losses are sure to occur because of the storage costs and other cost associated with acquiring these commodities.

There has to be paid the transportation, including a large part of the ocean transportation under our Public Law 480 operations, the cost of the food-for-peace program and many other items which I do not need to mention because they have been so well covered by the Senator from West Virginia.

I am glad that this crisis has developed because it has shown the utter folly of continuing to operate as we have operated now for so many years.

As a result of this crisis, there has finally been brought to bear the proof of the soundness of the position taken by the Senator from Delaware heretofore and by the entire Committee on Appropriations of the Senate year after year. I have had the privilege of leading the debate on the floor when we have taken this position for a good many years.

Finally comes the proof of the pudding. Finally there has come a payday when we have to pay for these improper and incorrect practices which have been followed in contravention of existing law. We are arriving at the point of partially meeting that payday now. We will have to meet it in much greater measure when the annual appropriations bill comes up.

Mr. President, I strongly support the position of the Senator from West Virginia (Mr. BYRD), chairman of the Deficiencies and Supplemental Subcommittee, regarding the urgency of this request and the necessity for passing House Joint Resolution 584, which will restore the capital impairment of the Commodity Credit Corporation in the amount of $1 billion.

On March 18, 1969, when the Secretary of Agriculture was before the Agriculture Subcommittee of Appropriations, of which I am chairman, the Secretary and other officials testified as to the reasons and the necessity for early passage of this supplemental request. On March 24, 1969, Senator BYRD held full and complete hearings on this subject with officials of the Department. These printed hearings are available on the desk of each Senator.

I shall not detail the factors which have caused these extraordinary large borrowing demands upon the Corporation since the Senator from West Virginia has already covered these in his statement.

At the present time these unreimbursed losses for previous years are as follows: for fiscal year 1961, $1,057 million; for fiscal year 1967, $2,210.7 million; and, for fiscal year 1968, $3,198.2 million—totaling $6,465.9 million. The fiscal year 1970 budget proposed $6,215,934,000 for restoration of these losses. This was to restore all prior year losses except for $250 million of those losses which occurred in fiscal year 1968. House Document 91–76, in which the supplemental estimate of $1 billion was transmitted to the Congress on February 20, 1969, also proposed a $1 billion reduction in the fiscal year 1970 estimate. Officials of the Department stated on page 30 of the hearings that if this supplemental was granted they would apply these funds toward the earliest unreimbursed losses; namely, the $1,057 million which goes back to fiscal year 1961. This will leave a balance of only $57 million remaining of the deficit for that fiscal year. The Senate report states that the supplemental funds will be so applied.

Mr. President, I again state that I fully support this resolution.

I thank the Senators for their cooperation, and I again thank the Senator from West Virginia for his understanding of the need for protecting section 32 funds.

I support this bill, and I am glad that at last the emergency which now exists has brought out how unsound, unsafe—and I think not completely forthright—have been the methods that have prevailed for too many years, beginning with 1961.

I thank the Senator for yielding.

Mr. WILLIAMS of Delaware. Mr. President, I thank the Senator from Florida for his remarks. He is correct.

I pay tribute to the Senator from Florida, the Senator from West Virginia, and their committee for having tried to correct this in earlier years.

They are now placed in a position in which they have to recognize this belatedly, but in recognizing it and in correcting this mistake. I did not want it to go by unnoticed. We will ultimately be reimbursing $6.5 billion of losses that have previously been incurred, and the taxpayers have never been told.

We are operating under a type of bookkeeping system today in which the Government can report surpluses when it actually is operating under a deficit. There is something wrong with that system. We should change it and tell the American people where their money is going.

Mr. BYRD of West Virginia. I thank the Senator for his comments. He has made a great contribution to this subject.

The day of reckoning is at hand. We are making a reimbursement in this bill of $1 billion, and when the fiscal year 1970 bill comes before the Senate, we will make further reimbursements in the amount of approximately $5.2 billion. This will leave only about $250 million of the 1968 losses that are unreimbursed.

Mr. COOK. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. COOK. Would the Senator refer to the memorandum that was placed on each Senator's desk?

Mr. BYRD of West Virginia. Yes.

Mr. COOK. Item 6 reads:

The decision to continue the advance payments at 50 percent has also increased the expenditures of the Corporation by $168 million.

Mr. BYRD of West Virginia. May I explain that?

Mr. COOK. May I ask the Senator if it is not true that in the executive budget that was presented to us, the advance payments were arbitrarily cut to 25 percent, and this really does not constitute an increased expenditure, but, really, last year the expenditure was somewhere in the vicinity of $330 million, and this is merely raising it to the 50 percent figure?

Mr. BYRD of West Virginia. The Senator is correct in that no advance notice was given to farmers that these advance payments, which for a period of approximately 8 years, have been at the rate of 50 percent, would be reduced. The first intimation of that reduction came when the President's budget was submitted on January 15, at which time it was indicated that the advance payments would no longer amount to 50 percent, but would be reduced to 25 percent.

Mr. COOK. But is this not in essence

also part of the $168 million that could be considered as part of the surplus of this fiscal year's budget?

Mr. BYRD of West Virginia. If the Senator will permit me to finish, I indicated how this came about. The difference in the 25 percent and the 50 percent is $168 million. So we are paying it now because the department felt that it had a moral obligation to the farmers to give them notice in ample time before such reductions should be made, and, consequently, it is going to continue—at this point, at least—the making of 50 percent of the payments at the time the agreements are entered into. The $168 million will have to be paid now, but it will be deducted from the 1970 budget.

Mr. COOK. It will come off totally in the 1970 budget, will it not?

Mr. BYRD of West Virginia. Yes, the additional amount we are paying in this fiscal year will be taken off the fiscal year 1970 budget.

Mr. COOK. As a matter of fact, in the next fiscal year no funds are available in the budget for advance payments.

Mr. BYRD of West Virginia. Are you referring to the 1970 budget?

Mr. COOK. Yes. In other words, it was cut to 25 percent this year, and it was cut to zero for next year.

Mr. BYRD of West Virginia. No. The Department has not reached any decision on payments for next year's program yet.

Mr. COOK. I am talking about the executive budget. I believe the Senator will find that it was cut from 50 percent to 25 percent in this fiscal year and that in the next fiscal year it was cut from 25 percent to zero.

Mr. BYRD of West Virginia. We are dealing here with advance payments for the current year's program.

Mr. COOK. And in the 1970 budget, it is cut from 25 percent to zero.

Mr. BYRD of West Virginia. We have not reached that point yet.

In the 1970 budget, it is cut from 50 percent to 25 percent under the Johnson budget. The Department intends, however, to leave it at 50 percent, which means we will have to come up with an additional $168 million.

Mr. COOK. This is not an increase. This is merely keeping it at the same level as the previous year.

Mr. BYRD of West Virginia. It is an increase over what would have been allocated had the Department gone along with the Johnson administration's proposal that these advance payments be cut from 50 percent to 25 percent. The Department is not going to do that, and that means we will have to spend $168 million more now, and this amount will be deducted from the fiscal year 1970 budget.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. HOLLAND. I think there may be some misunderstanding.

As a matter of fact, these advance payments do not increase obligations at all. It means we are merely prepaying our obligations to the participants in this program. This bill does not change the picture of what will happen under the 1965 authorization act, which we extended last year, to the end of 1970.

I just want to make it clear that under that act, CCC is authorized to make these payments. Whether they are advanced as 50 percent in the beginning or 25 percent in the beginning. CCC's duties are mandatorily put upon them by the 1965 act, as extended, and there will be no difference in the final expenditure of CCC funds.

I say to my distinguished friend that the operation of CCC always calls for reimbursement of their losses. We will reach the time later when, whatever they pay out and whenever they pay it out, in the course of this year, we will have to reimburse any losses they sustain.

I do not believe any change in the program is accomplished by this, except that instead of paying off only 25 percent in advance, as was proposed by the Johnson budget for this year, CCC will be able to do—if this bill is passed—what it has done for years and what, in my opinion, it should continue to do until Congress itself has the chance to review the 1965 act, as extended.

We will have to review this act either this year or next, because it expires at the end of next year.

I see the Senator from South Dakota on his feet. He has been a stanch supporter of the 1965 act and of its extension. The Senator from Florida has not been a supporter of that act, but he believes it should be honestly administered after it is enacted and that the funds must be provided for its honest administration. The Senator from Florida will continue to take that position, and he sees no fault at all in the present Department of Agriculture or the present CCC in wishing to continue what has been the practice since the 1965 act was passed. We will have to either extend that act or supplant it, and I hope we will supplant it, by different legislation, but that will be something for the entire Congress to pass upon.

I see no reason why the practice as initiated when the act was passed should not be continued into this year.

Mr. COOK. Yes, sir. The only point I wanted to make was that this shifted $168 million out of the budget for this fiscal year into the next fiscal year.

Mr. BYRD of West Virginia. We will deduct the $168 million while we are currently paying for the fiscal year 1970 budget.

Mr. HOLLAND. Shifting it out of the operation of the CCC from the fall of this calendar year, which would be within fiscal year 1970, to the first part of this year, which would be within fiscal 1969. But there is no change in the total amount. There is no change in the mandate of this Congress. We are not asked to change the legislation. We are asked simply to allow CCC and the Department of Agriculture to continue without interruption the program that has been carried on under the 1965 act into this year, just as it has been in earlier years.

Mr. BYRD of West Virginia. Mr. President, I yield to the Senator from South Dakota.

Mr. MUNDT. Mr. President, I think this colloquy has clarified the problem which bothered some Senators. Perhaps if the Senator had added in item 6 on this sheet two more words the situation would have been made more clear for those who have not followed the act carefully. I think item No. 6 should read:

6. The decision to continue the advance payments at 50 percent has also increased "the immediate" expenditures of the corporation by $168 million.

It would not be total expenditures.

Mr. BYRD of West Virginia. I accept that suggestion.

Mr. MUNDT. It is a reason why we have to have this before us; and one of many reasons for emergency action now.

Mr. President, I wish to take this occasion to salute our new chairman of the Subcommittee on Deficiencies and Supplementals. This is his first bill in that capacity. He has handled it with his customary efficiency. As one interested in the constructive service CCC has rendered through the years, I wish to congratulate him for expediting the hearings and action on the floor of the Senate because time is rapidly running out. We have until tomorrow to meet this obligation. I hope the Senate will ratify the action of our subcommittee, on which I serve as the ranking Republican member.

I believe the colloquy which we have had and the explanations which have taken place are factual and proper because the public should be fully informed of the operation of the Commodity Credit Corporation.

Mr. BYRD of West Virginia. I thank the able Senator from South Dakota for his comments. I also express appreciation to the Senator from Kentucky for raising the question with regard to the ambiguity which appears in item 6 on the memorandum which I had prepared.

Mr. President, I wish to insert the words "the immediate" between the words "increased" and "expenditures" so as to clarify the meaning of this item. I ask unanimous consent that the memorandum be printed in the RECORD at this point.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM BY SENATOR BYRD OF WEST VIRGINIA, MARCH 27, 1969

There is an urgent need for this supplemental of $1 billion for restoration of losses of the Commodity Credit Corporation. The expenditures for the CCC are mandatory and largely uncontrollable. *The borrowing capital of the Corporation will be exhausted by March 28.* Since the fiscal year 1969 bill was enacted, and even since the 1970 budget was formulated and presented, there have been large unprecedented borrowing demands on the Corporation and net program increases of $1,686 million. Briefly, the major factors causing these increases are:

1. *Large unanticipated increases in crop production,* particularly wheat, feed grains, and soybeans, and *decreases in exports.*

2. The *nationwide dock strike,* which has

not yet been settled on the Gulf Coast, further adds uncertainty to the commodity market and has *slackened the demand for agricultural commodities.*

3. *Repayments* on loans are far behind those of last year. The uncertainty in the commodity markets is causing producers to leave their commodities under loan until prices are firmer.

4. Farmers have taken further advantage of *storage facility loans* due to increased crop production.

5. There are *additional interest charges* on CCC borrowings.

6. The decision to continue the *advance payments at 50 percent* has also increased the immediate expenditures of the Corporation by $168 million.

EFFECTS OF NOT PROVIDING SUPPLEMENTAL

1. CCC will be forced to suspend operations.

2. All price support loans to producers will be halted.

3. Advance payments for feed grains program will be suspended.

4. Public Law 480 shipments will be suspended and this would:

(a) have a further weakening effect on the market, and

(b) force foreign buyers to seek new sources for their commodities.

5. Wool payments will be suspended.

6. Warehouse storage, transportation, freight, and other necessary costs of the Corporation could not be paid.

7. Farmers will be forced to borrow funds in the open market at the prevailing higher interest rates.

Mr. PEARSON and Mr. YARBOROUGH addressed the Chair.

Mr. BYRD of West Virginia. Mr. President, I yield first to the Senator from Kansas, and then I shall yield to the Senator from Texas.

Mr. PEARSON. Mr. President, I wish to associate myself with the very laudatory comments made by the Senator from South Dakota to the Senator from West Virginia for his leadership and most able presentation of this supplemental appropriation which means so much to Kansas.

I wish to emphasize one point, and I am sure the Senator has covered this matter in his prepared statement. Unfortunately, I came to the Chamber a little late today. I wish to emphasize the real reasons for taking up this matter today. I thank the Senator for inserting the memorandum in the RECORD because not only is it useful to Senators but I think it will prove very useful for the public understanding of this particular measure.

I recall that in committee hearings the Senator from Florida quite properly indicated he hoped the additional interest charge on CCC would apply to the oldest loans, going back to about 1961.

At that time I had some question about interest rates that would be applied. I understand this is borrowing from the Government itself and as the Senator has pointed out it is merely taking money from one pocket and putting it in another pocket. The qualms I had at that time no longer prevail. I wanted to make that statement a part of the RECORD.

Mr. BYRD of West Virginia. I thank the Senator. Do I understand he wishes the $1 billion to be applied to the earliest losses; namely, 1961.

Mr. PEARSON. I think that was the suggestion of the Senator from Florida in committee hearings.

Mr. BYRD of West Virginia. Yes, I believe that was his suggestion.

Mr. PEARSON. That is part of the report rather than the bill.

Mr. BYRD of West Virginia. Officials of the Department stated in the hearings that the $1 billion would be applied against the earliest losses, namely those going back to 1961. I questioned these officials regarding interest charges and they stated that interest does not run against losses incurred in prior years but only against current losses.

Mr. PEARSON. I thank the Senator.

Mr. BYRD of West Virginia. I now yield to the Senator from Texas.

Mr. YARBOROUGH. Mr. President, I congratulate the distinguished Senator from West Virginia for his handling of this matter as the chairman of the Subcommittee on Deficiencies and Supplementals of the Committee on Appropriations, and for his handling of the matter on the floor of the Senate. I congratulate him on the clarity of the memorandum he prepared containing the six points that have been referred to. A seventh point should be added setting forth the inestimable benefit to the Senate and the country.

Mr. President, I ask unanimous consent to have printed in the RECORD the communication from the President to the Speaker of the House of Representatives requesting this item and the accompanying statement by Robert Mayo, Director of the Budget, as to reason for it.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, February 20, 1969.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I transmit for the consideration of the Congress proposed changes in appropriations for the Department of Agriculture for the fiscal years 1969 and 1970. These changes would involve a supplemental appropriation of $1,000,000,000 for fiscal year 1969 and a reduction of the same amount in the request for appropriation for the Department for fiscal year 1970.

The reasons for proposing these changes at this time are discussed in detail in the attached letter from the Director of the Bureau of the Budget. I concur with his recommendations.

Respectfully yours,

RICHARD NIXON.

EXECUTIVE OFFICE OF THE PRESIDENT, BUREAU OF THE BUDGET,
Washington, D.C., February 20, 1969.

The PRESIDENT,
The White House.

SIR: I have the honor to submit for your consideration a proposed supplemental appropriation for the fiscal year 1969 in the amount of $1,000,000,000, and an amendment to the request for appropriations transmitted in the budget for the fiscal year 1970 involving a decrease of a like amount for the Department of Agriculture.

The proposed supplemental appropriation for the fiscal year 1969 is as follows:

"DEPARTMENT OF AGRICULTURE

"Commodity Credit Corporation

"Reimbursement for Net Realized Losses

"For an additional amount for 'Reimbursement for net realized losses', to partially reimburse the Commodity Credit Corporation for net realized losses sustained but not previously reimbursed, pursuant to the Act of August 17, 1961 (15 U.S.C. 713a–11, 713a–12), $1,000,000,000."

The amendment to the request for appropriations transmitted in the budget for the fiscal year 1970 is as follows:

"DEPARTMENT OF AGRICULTURE

"Commodity Credit Corporation

"Budget appendix page	Heading	Request pending	Proposed amendment	Revised request
150	Reimbursement for net realized losses	$6,215,934,000	—$1,000,000,000	$5,215,934,000"

The additional amount proposed for the fiscal year 1969 is needed to enable the Commodity Credit Corporation to carry out its mandatory price-support and related program operations. Large unanticipated increases in crop production, particularly in feed grains, wheat, and soybeans, and decreases in exports have resulted in substantially greater present demands for Commodity Credit Corporation loan funds. Without the additional funds, the Corporation will be unable to make the price-support loans necessary for the orderly marketing of farm commodities.

Since the total of the amounts appropriated to date and requested in the 1970 budget will provide sufficient funds, the amount requested for 1970 is being reduced by the amount of the 1969 supplemental request. The combined effect for the 2 fiscal years will be the same as contemplated in the 1970 budget document.

I recommend that the foregoing be transmitted to the Congress.

Respectfully yours,

ROBERT P. MAYO,
Director of the Bureau of the Budget.

Mr. YARBOROUGH. Mr. President, I call particular attention to the following paragraph:

Since the total of the amounts appropriated to date and requested in the 1970 budget will provide sufficient funds, the amount requested for 1970 is being reduced by the amount of the 1969 supplemental request. The combined effect for the 2 fiscal years will be the same as contemplated in the 1970 budget document.

While the position of the administration is that without this supplemental appropriation these payments will stop—they are the executive and they can stop them—I point out that it seems to me to take $1 billion off of next year's budget, add it to the deficit of the outgoing administration, and thus leave this administration $1 billion better off budgetarilly. I thank the Senator for yielding. I am for the bill.

Mr. BYRD of West Virginia. I thank the Senator for his comments.

Mr. President, with respect to the expression of concern by the Senator from Florida with respect to the repayment of section 32 funds, I indicated earlier it was at his insistence that the committee wrote into its report words which would exert great pressure and influence upon the Department of Agriculture to proceed in that direction. I think it would be well to include in the RECORD also at this point excerpts from the colloquy which occurred during committee hearings. The excerpts are brief and they should be in the RECORD as legislative history.

During the hearings conducted by the Senator from Florida (Mr. HOLLAND) on Department of Agriculture and related agency appropriations for fiscal year 1970, Mr. Charles L. Grant, who is Director of Finance for the Department of Agriculture, had this to say:

TRANSFER OF SECTION 32 FUNDS TO CCC

Mr. GRANT. To alleviate the situation, Mr. Chairman, we have taken steps to transfer $219 million of section 32 funds to the CCC primarily for the purchase of dairy products. This is an interim measure and we anticipate that before the year is over at least $108 million of that will be returned to section 32 in order that we can carry over the full $300 million of section 32 funds at the end of this fiscal year.

Then in the hearings which I conducted as chairman of the Subcommittee on Deficiencies and Supplementals, Mr. Clarence D. Palmby, Assistant Secretary of Agriculture, had this to say in regard to the question of repayment to section 32 for the funds which have been advanced in this crisis:

Mr. PALMBY. It is our intention to repay or to make complete the section 32 fund account to the extent the funds are not expended for the purchase of dairy products.

Then Mr. Grant went on to say:

We would take steps to repay section 32 in the amount that has not been used for dairy products, to be sure to carry over at the end of the year $300 million. Section 32 funds would be available for section 32 purposes next year.

When he was asked whether the repayment would amount to $111 million plus $108 million, he answered in this way:

It will probably be 108 million or more. It will be at least $108 million. $108 million is the amount necessary to protect the $300 million carry-over.

Mr. HOLLAND. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I yield.

Mr. HOLLAND. I want to make it clear that those primarily interested in section 32 funds—and I admit that I am one of them—have no right as to the use of such funds above $300 million at the end of the fiscal year, except to have the carryover of $300 million, because section 32 legislation itself provides that any excess above $300 million at the end of the fiscal year in section 32 shall be transferred to the general fund of the Treasury. Of course, we would expect that to be done this year, as it is any year. All we want to be sure of is that, notwithstanding the heavy draft which they have made upon section 32 funds for this emergency use by the CCC, we want $300 million to be carried over into the next fiscal year. We are perfectly willing to help out in the general problems of CCC, to the degree that we can, and still carry over the $300 million.

We thank the Senator for having stated the matter in the report of the committee, as he has. It has been brought out now effectively on the floor, and I am sure that that objective will be honored by the CCC and by the Department of Agriculture.

Mr. YOUNG of North Dakota. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I promised to yield to the Senator from Arkansas (Mr. FULBRIGHT) much earlier. Then I shall be glad to yield to the distinguished Senator from North Dakota.

Mr. FULBRIGHT. Will the Senator from West Virginia yield to me for the purpose of submitting an amendment?

Mr. BYRD of West Virginia. I am happy to yield to the Senator from Arkansas for that purpose.

Mr. FULBRIGHT. Mr. President, I send an amendment to the desk, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

On page 1, after line 11, insert the following:

"EMERGENCY CREDIT REVOLVING FUND

"For an additional amount for the 'Emergency Credit Revolving Fund', $30,000,000.

"OPERATING LOANS

"For an additional amount from funds available in the 'Direct Loan Account' of the Farmers Home Administration, for operating loans, $100,000,000."

Mr. FULBRIGHT. Mr. President, the purpose of my amendment is to provide the Farmers Home Administration $100 million for regular operating loans and $30 million for emergency loans. These funds are urgently needed.

Emergency loans are made to established farmers and ranchers in areas designated for this purpose by the Secretary of Agriculture upon his finding that a natural disaster has caused a general need for agricultural credit which cannot be met by local sources. There are 1,108 designated counties in 38 States in which farmers are eligible for emergency loans.

These loans are not made from annually appropriated funds. Instead, they are made out of the emergency credit revolving fund in amounts apportioned for this purpose annually by the Bureau of the Budget. Loans are made out of this fund and collections go back into it for making additional loans. Apportionments for this fiscal year total $104 million and this amount has already been loaned.

After apportioned funds were exhausted, it was necessary for the agency to return without loan checks, the approved loan applications of about 3,000 farmers totaling $17 million—100 of these farmers are in my State of Arkansas.

Let me say that during this past year, Arkansas has experienced very bad weather, about the worst rains and local flooding, especially in the northern and eastern parts, that I can remember. The large rivers, such as the Arkansas River, were not affected in the way that the local areas were. It was disastrous.

Counties in the following States have been designated for emergency loans:

Designated Emergency Loan Areas, March 25, 1969

	Number of counties
Alabama	60
Arkansas	36
California	15
Colorado	9
Delaware	3
Georgia	80
Idaho	8
Illinois	60
Indiana	79
Iowa	43
Kansas	36
Kentucky	8
Louisiana	20
Maine	1
Maryland	9
Michigan	16
Minnesota	9
Mississippi	31
Missouri	9
Montana	1
Nebraska	85
Nevada	4
New Jersey	13
New York	30
North Carolina	60
North Dakota	10
Ohio	67
Oklahoma	24
Oregon	6
South Carolina	46
South Dakota	18
Tennessee	32
Texas	101
Utah	2
Virginia	63
Washington	8
Wisconsin	2
Wyoming	4
Counties in 38 States	1,108

Mr. President, let me say also that the Senator from Mississippi (Mr. STENNIS) has sent me word and asked that I express for him his concurrence in this matter, that he is unable to be in the Chamber because of his committee meeting now going on, but that the relief which will be brought by adoption of my amendment would mean a great deal to his State and he wishes to be associated with me in this matter.

Mr. President, the apportioned funds for emergency loans are exhausted and $17 million is needed for loans already approved. It is estimated that at least $13 million will be needed for approvable emergency loans over the next 3 months. Consequently, my amendment would increase the fund by $30 million.

Mr. President, earlier this week officials of the Department of Agriculture testified before the Appropriations Committee concerning the need for additional operating loan funds. I will quote pertinent portions of this testimony, which excerpts, Mr. President, give a very good description of the operation of the amendment and its justification:

Operating loans are used to purchase needed livestock, machinery, feed, seed, fertilizer and other farm and home needs. These are crucial needs which farm families cannot postpone to some future time when credit may be more readily available. These needs must be met in the appropriate season every year in order to continue farming.

Without necessary credit inputs, needy and underfinanced farm families cannot obtain the production and income essential to support their families, meet other expenses, pay their rent, taxes and the installments falling due on their debts.

In our opinion, operating credit should not be severely rationed to needy and underfinanced farm families. The availability or lack of operating credit is far too often the final deciding factor in determining whether farm families continue to live and work in rural areas where they desire to remain, or whether they become economic and welfare casualties in the slums.

In addition to providing the inputs essential for the continuance of families in farming, operating loans provide other significant benefits in rural areas. Purchases made with such loan funds and the increased income of borrower families contribute significantly to rural business and employment opportunities in rural areas.

Without adequate operating credit, established operators of small farms and young farm families who desire to take over the operations of retiring farmers are unable to compete with large-scale commercial operators. Some of the large operators desire to purchase additional family farms which become available into their holdings. This results in further reduction in the (1) number of family farms, (2) number of people remaining in rural areas, and (3) need for rural businesses to serve them. This in turn is reflected in deterioration in small towns, local schools, churches, other rural facilities and community organizations.

Operating loan borrowers repay their loans. Between November 1, 1946, when the Farmers Home Administration Act became operative and June 30, 1968, needy and underfinanced farm families received over $4.0 billion in operating loans. Principal repayments totaled over $3.2 billion which represents approximately 96 percent of the amount which had fallen due on these loans. The outstanding balance of approximately $728 million represented for the most part, loans which were not yet due. In addition to principal repayments, operating loan borrowers had repaid $333 million in interest which is more than six times the amount of principal charged off.

Families receiving operating loans repay those loans on the average in approximately 6 years and graduate to other credit sources. They are self-supporting, pay taxes and are not a continuing burden upon the taxpayer.

This repayable investment by the Government is in vivid contrast to the high continuing monetary and moral costs incurred when needy and underfinanced farm families are not helped in rural areas, are forced off the land, and congregate in slum sections of the cities.

The following excerpt from the 1969 Agricultural Finance Outlook published by the Economic Research Service and released on February 3, 1969, reflects an increasing need for operating loans:

"Reporters agreed that certain groups of operators were having increasing difficulty obtaining adequate loans. Many young or beginning farmers with low capital reserves or equities, operators of small farm units, and farmers who were marginal in one or more respects were being caught in tight financial situations. With demand for relatively low-risk loans continuing strong, many lenders are not interested in putting a lot of money in what they consider to be comparatively high-risk loans."

For a number of years the amount of funds available to new applicants for operating loans has been exhausted well in advance of the end of each fiscal year. In each of the last two fiscal years allocations for initial operating loans were exhausted in a substantial number of states in February. This has been true even though maximum efforts have been made each year to participate with, and supplement, other credit sources in order to reach as many needy farm families as possible with the limited funds available.

Mr. President, the fund for operating loans is now exhausted. I have obtained estimates that over $100 million will be required to satisfy legitimate needs between now and June 30, 1969. These estimates are as follows:

Applications for initial loans on hand (Dec. 31, 1968)	7,107
New applications to be received, estimated Dec. 31, 1968, to June 30, 1969	15,000
Total	22,107
Based on previous experience 70% of these applications would be expected to result in loans if funds are available	15,475
The average initial operating loan is now	$8,100
Total initial operating loan needs for the remainder of 1969 fiscal year	$125,347,500
Estimated amount required for subsequent loans, remainder of fiscal year 1969, to keep present borrowers in business	$93,000,000
Total requirements	$218,347,500
Amount OL funds remaining on hand (Dec. 31, 1968)	$118,294,695
Total need Dec. 31, 1968 to June 30, 1969	$100,052,805

Mr. President, the people who need these loans are farm families who desire to remain in farming and have the ability to succeed if properly financed. They are generally unskilled in occupations other than farming and will be unable to successfully move into industrial employment. Without credit assistance from FHA, most of them may be forced from their farms.

The record shows that borrowers have paid about 96 percent of the principal maturities on their operating loans. In addition, they have paid interest which is more than six times the amount of writeoffs and judgments on such loans.

This need for loan funds is urgent in every State of the Union, and $100 million should be made available as soon as possible.

Mr. President, I have received many letters, telegrams, and telephone calls from Arkansas farmers urging that these funds be made available. I will not burden the RECORD by inserting these communications, but I ask unanimous consent to have printed in the RECORD copies of letters which I have written to the Senate Appropriations Committee and to the Bureau of the Budget.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., March 24, 1969.

HON. SPESSARD L. HOLLAND,
Chairman, Subcommittee on Department of Agriculture and Related Agencies, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As you may know, rainfall of disastrous proportions has made many counties in Arkansas eligible for emergency loans through the Farmers Home Administration. This eligibility is meaningless, however, because the revolving fund for FHA emergency loans is exhausted and approved loans cannot be disbursed. Moreover, regular operating loans also are being denied for the same reason.

I am advised that over 100 emergency loans, aggregating over $1 million, are being withheld from Arkansas farmers at the present time. Nationwide, I understand that there may be more than 3,000 such loans totaling about $17 million. I am obtaining more detailed information from the Farmers Home Administration and when it is received, I will furnish it to the Committee.

During your hearings on appropriations for the FHA, I hope you will explore this situation with agency officials and take whatever action may be necessary to provide as soon as possible more adequate funds for both emergency and operating loans.

With best wishes, I am,
Sincerely yours,

J. W. FULBRIGHT.

U.S. SENATE,
Washington, D.C., March 26, 1969.

HON. ROBERT P. MAYO,
Director, Bureau of the Budget, Executive Office Building, Washington, D.C.

DEAR MR. MAYO: Enclosed for your information is a copy of my letter to Senator Holland, Chairman of the Subcommittee on Department of Agriculture and Related Agencies of the Committee on Appropriations. This letter concerns the urgent need for additional funds to permit disbursement of approved emergency and operating loans by the Farmers Home Administration. I understand that as much as $25 million for operating loans and $6 million for emergency loans could be released to the agency to meet these urgent needs. I hope that you may act promptly to provide these funds, and I would appreciate a report upon the matter at your convenience.

With best wishes, I am
Sincerely yours,

J. W. FULBRIGHT.

Mr. FULBRIGHT. Mr. President, I believe that the amendment has a most worthy purpose, especially when I read in the press that an increase of several million dollars in funds has already been agreed to for Apollo 10, and how much the missiles cost. To me, it is absurd and utterly indefensible that the farmers of this country, who need this money and who will repay the loans, cannot get this kind of financial assistance at the present time, even when the loans are already approved. I repeat, it is utterly indefensible for this country not to give some priority to this kind of need for our farmers.

Several Senators addressed the Chair.

Mr. HOLLAND. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. HOLLAND. I am glad the Sena-

tor has yielded to me because I have some information which I should like to place in the RECORD and which I hope will persuade my distinguished friends to withdraw the amendment.

I am as much interested in meeting emergency loans now as any Senator in this Chamber. I am also as much interested as any Senator in this Chamber, including my good friend from North Dakota, whom I see in his seat, who is always interested in the subject of meeting the operating loan needs of the Farmers Home Administration. I have some information on these two subjects which I should like to communicate at this time, if I may.

Mr. FULBRIGHT. Yes, indeed.

Mr. HOLLAND. In the first place, the Senator from Arkansas (Mr. FULBRIGHT) supplied to the subcommittee now engaged in hearings on the annual bill a communication, several days ago, which was placed in the RECORD, which showed the facts which he has stated here upon the record today as to the need in his own State—and it exists in some other States—for emergency loans.

He also stated in that letter the need for an increase in the operating loan funds.

Following that time, the Senator from Florida, as chairman of the Subcommittee on Agricultural Appropriations which handles these matters, communicated this need of the State of Arkansas, and other States, for emergency loans and communicated the general exhaustion of operating loan funds in several States to the Bureau of the Budget and to the Department of Agriculture.

The Department has replied and I ask unanimous consent that the first four paragraphs of their reply be incorporated in my remarks at this point.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

EMERGENCY LOANS

1. Status of emergency credit revolving fund:

Through March 20, 1969, the Bureau of the Budget had apportioned $104 million from the Emergency Credit Revolving Fund for use in fiscal year 1969. Virtually all of these funds have been spent. Also as of March 20, 1969, the Fund had $5,495,308 which could be apportioned for use in this fiscal year. An additional $7.5 million in receipts to the Fund is anticipated during the remainder of the year. These could also be made available for emergency loans, if apportioned by the Bureau of the Budget.

2. Number emergency loans which cannot be funded:

After apportioned funds were exhausted it was necessary for the Farmers Home Administration Finance Office to return approximately 3,000 approved emergency loan applications for which checks could not be issued. Counties are no longer accepting applications for emergency loans.

3. Where are the designated emergency loan areas?

Attached is a schedule by states showing 1,108 designated emergency loan counties in 38 states.

4. Efforts to increase the emergency credit revolving fund:

The Bureau of the Budget originally approved the apportionment of $64 million for Emergency Credit Revolving Fund for fiscal year 1969. On January 21, the Department requested that an additional $36 million be apportioned for use in this Fund. The Bureau of the Budget did not act on this request. On February 3, the Department requested the release of $15 million (from $64 million to $79 million). This was approved on February 6. On February 12, the Department requested an increase of $12 million. No action was taken on this request. On February 24, the Department requested an increase of $41 million (from $79 million to $120 million). At that time it was expected that receipts would be sufficient to carry out an emergency program at the $120 million level. On March 4, the Bureau of the Budget released $25 million of the $41 million requested.

Mr. HOLLAND. Mr. President, the first thing I would like to deal with is the emergency loans. The information transmitted to me by the Department of Agriculture states that, as of March 20, 1969, the fund now has $5,495,308 in funds which can be apportioned for use in this fiscal year for the emergency program.

Mr. FULBRIGHT. How much was it?

Mr. HOLLAND. $5,495,308. At the same time they stated that, by the end of this fiscal year, unless there is a complete failure of the practices heretofore followed, there will be an additional $7.5 million, or more, of collections from emergency loans heretofore made.

The Senator knows—in fact, I think he has already stated—that this fund is a revolving fund, which will thereby, by the receipt of this $7.5 million or more, come to approximately $13 million which will be available during the remainder of this year.

The Department stated that it has not made a request because of this fact, and because it believes $13 million will cover its needs. Attention is called to the fact, however, that we will hold hearings on the large second supplemental appropriation bill, very shortly.

I want to assure the Senator that, having been through these emergencies when I was Governor, and later, I have very great sympathy for the filling immediately of emergency needs. I do not believe the handling of those emergency needs in the Department was understated in that statement furnished to me, and according to that information, there will be $13 million, or perhaps more, in funds for use during the remainder of this fiscal year.

Mr. FULBRIGHT. Has it been apportioned? I was told it was not apportioned and not available by the Budget Bureau. Is that correct?

Mr. HOLLAND. The Department has not yet requested it, but it will do so at once. We have told them it is needed and they must request it at once.

Mr. FULBRIGHT. Why do they turn down an approved loan? Several men have called me on the phone and said they were turned down and had been told the agency had no money.

Mr. HOLLAND. I must say we must have some charity toward a new administration and the head of the new administration's agency handling the fund. I have no reason at all, after having discussed it, to believe that there will be any further delay in requesting this fund.

Mr. FULBRIGHT. I am pleased to hear that.

Mr. HOLLAND. I think they both will be handled at once. The Senator from Florida has already requested the apportionment of the $25 million for the operating funds which was withheld out of the total appropriation of $275 million which we made last year. The budget at that time was only $250 million. Our committee stepped it up to $300 million. I think the Senator from North Dakota (Mr. YOUNG) was one of those most interested in that increase. In conference it had to be stepped down to $275 million. Of that amount the Bureau of the Budget withheld $25 million under Public Law 90–364, the act which we passed—calling for budgetary reductions and reductions in expenditures.

I was sorry that $25 million was withheld from the $275 million. I have already requested that it be reinstated.

I want to make it clear that this request is not in any way political. The members of my subcommittee who are members of the Republican Party, which is now in power so far as the executive is concerned, but not so far as the legislative is concerned, are joining in this effort with just as much zeal in this respect as are members of the Democratic Party, which happens to be in the majority in the legislative body but not in control of the executive.

I think this will be accomplished very shortly. If it is not, I want to say to my distinguished friend that I shall be in favor of putting new funds in the second supplemental appropriation bill; but I much prefer to have the appropriation of the Congress already made and outstanding to be made immediately available. I am doing everything I can toward that end.

I invite my distinguished friend and his able colleague, and others who are adversely affected locally right now by the fact that the emergency loan funds are impaired or exhausted temporarily, to join me and to join other members of our subcommittee who are requesting immediate action on this matter. I think immediate action will be taken.

I would hope that my distinguished friend would either withdraw or withhold his amendment, because these funds for the CCC are so badly needed. These funds affect his State vastly more than they affect mine, because it has to do with the operation of the CCC in the field of staples, of which we produce very few in my State. I would hope he would withhold his amendment, because we need this measure to go in effect at once. Not only are the assets of the CCC exhausted, but they have had to reach over into section 32 and borrow $219 million. As I understand it, they are practically exhausted. If we do not pass the measure, various operations so ably described in the memorandum of the Senator from West Virginia (Mr. BYRD), which has been placed in the RECORD, will all have to stop. They are operations which will adversely affect not only the agriculture of this country, but our relations with other, poor countries whom we are helping under the Food for Freedom Act. I

know of my friend's interest in that worthy objective throughout the years.

So I hope he will not press his amendment. It will just hold up this bill in conference. We are coming to the Easter vacation. I do not know whether we could dispose of this measure before that time, and I do not want to see stopped the very important operations of the Commodity Credit Corporation.

Mr. FULBRIGHT. I thank the Senator. Now I yield to my senior colleague.

Mr. McCLELLAN. Mr. President, I want to emphasize that the word "emergency," with respect to these emergency funds, has great significance. It describes the situation which is confronting many farmers in Arkansas, today. Also speaking of being charitable toward this administration, I certainly want to be, and have been; but the delay in the releasing of these funds is not charitable toward the farmers of this country who are suffering. If these funds can be released and made available, that should be done now—not next week or 2 weeks from now. This is the 27th of March. It is the planting season. The farmers cannot proceed with their plans for making a crop this year without these funds and without knowing whether they can get them or not. At this moment the farmers are completely at a standstill.

Perhaps the amendment would delay the releasing of the funds. I do not know. But the administration must act on whatever power it has and give the farmers some relief. If the administration does so, it will indicate an intent to meet the responsibility of the Government in this area and relieve the distressed condition which now prevails. Much of it is not due to the farmer. Much of it has been aggravated by the longshoremen's strike which the Government has tolerated and to which it has taken no positive action to terminate. The farmers in my State have suffered by reason of conditions over which they have no control.

As my distinguished colleague points out, these loans have been approved, and upon approval of them, the farmers have the right to make their plans accordingly, and to anticipate that the funds will be available to make their crop this year.

I thank my distinguished colleague, and I commend him for offering the amendment. I realize there is a problem; but how can we make the administration understand that an emergency is an emergency, and get them to act accordingly?

I can see no reason for delay. The administration has already procrastinated entirely too long. These funds should have been released and as much of them as possible put into the hands of our farmers long before now.

I again thank my distinguished colleague and commend him for offering the amendment.

Mr. FULBRIGHT. I thank the Senator.

Mr. HOLLAND. Mr. President, will the Senator yield for one further comment?

Mr. FULBRIGHT. I yield.

Mr. HOLLAND. I may have stated, and if I did not I wish to state it now, because I want to be completely fair to the Department of Agriculture. The Department has already requested the release of the $25 million, and in fact has requested it three different times; this slowdown or holdup is in the Bureau of the Budget.

My own feeling is that the Bureau of the Budget has not yet really understood what its responsibility is in the handling of all of the fund requests pending in this Government. I am bringing to their attention as urgently as I can the fact that this $25 million should be released. I am asking the Department to make the same request as to the emergency fund, and I know that it is going to be made.

What I am asking here is that my fellow Senators bring their influence, much greater than mine, to bear upon the Bureau of the Budget in this matter, because I do not think that anyone is so inhuman as to wish to hold up the availability of emergency funds for people who have been drowned out, and that is what has happened in the great State so ably represented by my two friends from Arkansas.

Mr. FULBRIGHT. I thank the Senator. I have already written a letter, and expect to follow that up. We may be able to persuade the Bureau of the Budget. I did not realize exactly what the situation was that the Senator mentioned.

I yield now to the Senator from Texas, who has been standing on his feet for a good while.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from Arkansas for yielding to me, because I wish to be associated with his remarks on this matter.

I approve whatever course he takes, whether he withdraws or wishes to push his amendment, because he has had the benefit of long study.

This is, I suggest, an emergency situation. Out of the 254 counties in my State, 101 have been declared eligible for emergency loans, mainly because of weather conditions. The disparate nature of the weather in the different parts of my State, stretching from the cold area of the northwest to the subtropical area of the southwest, makes it an area of conflicting air currents, which sometimes cause great damage.

Many approved loans are unfunded. We have called down to the Department of Agriculture today, and the Acting Assistant Administrator for Operating Loans says there is no money for this purpose available this fiscal year. That is what they told us today: No money available for this purpose this fiscal year. That means the 30th of June. That means ruination for these farmers.

I am glad that the senior Senator from Arkansas has come into the Chamber, because I have just reported here that we called the Department of Agriculture today, and the Acting Assistant Administrator for these operating loans told us that there is no money available for this purpose for this fiscal year. There are many approved loans in my State: 101 counties of the 254 have been declared eligible counties.

The modest amendment of the Senator from Arkansas is for $130 million. We spend about $3 billion a month on the war in South Vietnam, with 17 million people there. There are about that many farmers in the United States; I think we ought to be willing to spend $130 million on those who are potentially in a disaster status.

Mr. FULBRIGHT. We are not even spending it, just lending it to them, and they have a very good record of repayment.

Mr. YARBOROUGH. Mr. President, I am glad the Senator mentioned that. This is not giving away anything; this is a loan program, there has been a profit of $330 million on these FHA loans—six times the losses on that kind of loan.

Mr. FULBRIGHT. There is about 95 percent repayment.

Mr. YARBOROUGH. We are only asking the Government to loan some money to the farmers in areas that have been declared disaster areas. I think the freezing of this money is wholly inexcusable—this modest amount of money, with its importance to the whole farm economy of America.

Mr. HOLLAND. Mr. President, will the Senator yield for one brief insertion?

Mr. FULBRIGHT. May I ask the Senator, how does he explain this? The Senator from Texas says this morning the Department of Agriculture said there are no funds available this fiscal year.

Mr. HOLLAND. They have not been approved for that use by the Bureau of the Budget.

Mr. FULBRIGHT. Why did they not tell the Senator from Texas the expenditure has not been approved, but the money is available, instead of just leaving the impression there is not any?

Mr. YARBOROUGH. Of course, Mr. President, I did not know all the technical considerations. They just told us there was no more money for this fiscal year.

Mr. HOLLAND. Mr. President, the Senator misunderstood them, because I have already placed in the RECORD their statement to me, that as of March 20 they had between $5 and $6 million available, and that other receipts were coming in—in the amount of $7.5 million or more before the end of the year.

May I, at this time, place in the RECORD a list——

Mr. YARBOROUGH. Mr. President, I did not misunderstand what they told me. They may have told the Senator something else.

Mr. HOLLAND. I have placed in the RECORD the written statement furnished by them to me, which I know they would not make in writing unless that was the fact.

I ask unanimous consent to have printed in the RECORD at this point the complete list of counties, by States, where emergencies exist, as furnished to me by the Department of Agriculture. It shows there are 101 such counties in Texas.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Designated emergency loan areas, Mar. 25, 1969

Alabama	60
Arkansas	36
California	15
Colorado	9
Delaware	3
Georgia	80
Idaho	8
Illinois	60
Indiana	79
Iowa	43
Kansas	36
Kentucky	8
Louisiana	20
Maine	1
Maryland	9
Michigan	16
Minnesota	9
Mississippi	31
Missouri	9
Montana	1
Nebraska	85
Nevada	4
New Jersey	13
New York	30
North Carolina	60
North Dakota	10
Ohio	67
Oklahoma	24
Oregon	6
South Carolina	46
South Dakota	18
Tennessee	32
Texas	101
Utah	2
Virginia	63
Washington	8
Wisconsin	2
Wyoming	4
Counties in 38 States	1,108

Mr. FULBRIGHT. May I ask the Senator from Florida, with these repayments in the emergency fund, is it the Department's view, even though they are repaid, that they are frozen and not available until the Budget Bureau takes further action?

Mr. HOLLAND. Unfortunately, the law which we all voted for makes that provision. The Bureau of the Budget has to approve the expenditure of funds that come in.

Mr. FULBRIGHT. But it is discretionary with them; they do not have to freeze it?

Mr. HOLLAND. It is discretionary with them, and that is why I want my distinguished friends and others to bear down upon the Bureau of the Budget, so they can make it immediately available. I am sure this is the quickest way to get relief; I would not suggest it if I did not think it would get results.

I do not think the Senator would be justified in bringing about a possible impasse, on the pending bill in conference, or the possible absence of a conference until after Easter. Let us try this out, and use our very best efforts. I do not believe the Director of the Budget is an inhuman man. This is the first test we have to discover just how far he will go in meeting human needs of this kind. I am satisfied that he will act, and act favorably, and I want to give him that opportunity.

Mr. YARBOROUGH. Mr. President, will the Senator yield me one moment, to clarify a point?

Mr. FULBRIGHT. I yield.

Mr. YARBOROUGH. I think the statement the distinguished Senator from Florida just made verifies the accuracy of what the Department of Agriculture told me this morning, that this money was not available for this fiscal year, because the Senator has now said it would take action by the Bureau of the Budget to unfreeze this money.

That is all I have been contending. I think that the prior intimation that my information was wrong is now shown by the statement of the Senator from Florida to be false. These loans have been frozen; they have been approved, but they are unfunded. Hundreds of unfunded loans are approved right now.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of counties in Texas which are eligible for FHA emergency loans.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

COUNTIES IN TEXAS ELIGIBLE FOR FHA EMERGENCY LOANS

Aransas	Haskell
Armstrong	Hays
Austin	Hidalgo
Bastrop	Howard
Baylor	Hunt
Brazoria	Hutchinson
Brazos	Jackson
Brooks	Jefferson
Burleson	Jim Wells
Caldwell	Karnes
Calhoun	Kaufman
Cameron	Kleberg
Carson	Knox
Castro	Lamar
Chambers	Lamb
Childress	Lavaca
Cochran	Lee
Collin	Liberty
Collingsworth	Lipscomb
Colorado	Live Oak
Comanche	Lubbock
Coryell	Lynn
Crosby	McLennan
Dallam	Madison
Dawson	Matagorda
Deaf Smith	Mitchell
Delta	Montgomery
Dickens	Moore

Duval	Nacogdoches
Ellis	Navarro
Falls	Nueces
Fannin	Ochiltree
Fayette	Oldham
Floyd	Orange
Foard	Parmer
Fort Bend	Red River
Gaines	Refugio
Galveston	San Patricio
Garza	Sherman
Goliad	Swisher
Gonzales	Terry
Gray	Throckmorton
Grimes	Victoria
Hale	Waller
Hall	Washington
Hansford	Wharton
Hardeman	Wilbarger
Hardin	Willacy
Harris	Wilson
Hartley	

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from North Dakota.

Mr. YOUNG of North Dakota. I commend the Senator from Arkansas for the fight he is making for funds for farmers under the emergency loan program of the Farmers Home Administration. These loans can only be made, in the first place, to farmers who cannot obtain credit elsewhere. There is a greater need for funds for this program now than at any other time in the past 10 or 15 years. Operating costs are high—the highest ever—and people are leaving the farms at a rate of 500,000 a year.

This is the equivalent of establishing five new cities of 100,000 population each. The best way and the surest way to keep the farmers on the farm, where they want to be, is to make them loans of 30 percent so that they can stay there and continue to operate their farms.

The record reflects a remarkable record of repayment. It is approximately 96 percent.

I do share the feelings of my friend, the Senator from Florida, however, that we should put this provision in a later supplemental bill and in the meantime we should work with the Bureau of the Budget to release the funds for this purpose which they are holding up now. A supplemental bill for the Commodity Credit Corporation is being considered now. This amendment would delay this important measure.

This restoration of Commodity Credit Corporation funds is needed for the food-for-peace program and to permit loans to be made to farmers under commodity programs, or these loans and payments should be made and are very necessary.

I would hope that my friend, the Senator from Arkansas, would withdraw the amendment.

Mr. SPARKMAN. Mr. President, I support the amendment introduced by the Senator from Arkansas to provide $30 million in additional funds for the emergency credit revolving fund of the Farmers Home Administration.

For years the emergency loan program of the Farmers Home Administration has been hampered by the inadequacy of its loan fund. The situation has grown worse and it now is, in fact, desperate.

The very name of the program—"emergency loan"—underscores its importance. A farmer is not eligible for a loan under this program unless, because of crop failure or disaster, he is in dire and immediate need of assistance. The program is designed to save farmers who are in real and great need. Yet, there are farmers in Alabama and throughout America for whom emergency loans have been approved, but the Farmers Home Administration tells them there is no money to lend. This situation makes a mockery of the program. It is indefensible and intolerable.

The needed $30 million should be voted for this program. Unless we act now, more of our farmers will be forced out of farming.

Mr. BYRD of West Virginia. Mr. President, for operating loans, under the Farmers Home Administration, the authorization for fiscal year 1969 is in the amount of $275 million. This amount was authorized in the Department of Agriculture Appropriation Act, signed into law August 8, 1968.

The budget estimate for fiscal year 1969 was in the amount of $250 million

and the House bill last summer recommended this amount. However, in the Senate Committee on Appropriations the sum was increased to $300 million, and the compromise in conference authorized the sum of $275 million.

The committee has been advised that under the mandate to the administration ordered last summer by the Congress, $25 million of this sum of $275 million has been placed in reserve by the Bureau of the Budget and is not available for the purpose for which Congress authorized this sum.

These loans are made to farmers and ranchers for costs incident to reorganizing a farming system for more profitable operations and for a variety of essential farm expenses.

For many years, the Congress has provided sums in excess of the amount made available for the current fiscal year. In 1968, $300 million was available. In 1967, $350 million was made available. In 1966, 1965, and 1964, $300 million was made available.

In view of the case which has been made for this additional sum, I would hope that the administration would release the $25 million which has been placed in reserve. I can see nothing to be gained by placing additional funds in this emergency resolution since the administration already has funds if it will only release them.

With reference to the emergency credit revolving funds, the budget contains an estimate of $31,918,000 for fiscal year 1970. This sum is to be used to reimburse the Commodit Credit Corporation for a $30 million loan from that Corporation to the revolving fund, which was authorized by Congress last year, plus the interest charges on the loan. There is no request pending before the Congress for additional funds for revolving fund for fiscal year 1969. Through March 20, 1969, the Bureau of the Budget has apportioned $104 million from the emergency credit revolving fund for use in fiscal year 1969. The Department of Agriculture has advised the committee that virtually all of these funds have been expended. As of March 20, the fund had a balance of $5,495,308, which could be apportioned for use in this fiscal year plus receipts of some estimated $7½ million.

Again, I would express the hope that the administration would release this approximate $13 million so that it can be utilized for these worthy emergency cases—and, to repeat, I can see nothing to be gained by placing additional funds in this emergency resolution since there are funds available now if the administration will only release them.

Mr. HARRIS. Mr. President, I wish to associate myself with the efforts of the distinguished Senator from Arkansas (Mr. FULBRIGHT). I feel that the emergency loan program and the operating loans program administered by the Farmers Home Administration are vital, and that it is important that these programs be adequately funded to meet the needs of farmers. Indications are that emergency loans are going to be in great demand this spring due to the increased snowfall in the northern States, and the operating loan program is already short of funds and is unable to meet the present demands. It is my understanding that the Bureau of the Budget is withholding some $38 million which could be expended in these two programs if funds were released by the Bureau of the Budget. I feel that in view of the fact that these funds have been frozen, the amendment offered by the Senator from Arkansas should be adopted. In my own State of Oklahoma, farmers must have operating loans and emergency loans through the Farmers Home Administration in order to meet year-to-year operating expenses, as well as to overcome economic pressures of natural disasters such as rain, floods, tornadoes, and the like. I therefore hope that the amendment will be adopted by the Senate.

Mr. FULBRIGHT. Mr. President, I thank the Senators from North Dakota, Florida, Texas, Alabama, Oklahoma, and Mississippi for joining in this matter.

I believe that in view of what has been said, especially by the Senator from Florida—who is the best authority I know really on this subject—that it might be wiser to follow the course he suggests.

I am reluctant to withdraw the amendment. However, I shall pursue the matter with the Bureau of the Budget. As the Senator said, this would be a quicker method than if we were to go to conference on the bill because of the inclusion of the amendment.

With that understanding and that explanation which I am very pleased to have this morning, I will not formally offer and press the amendment.

Mr. HOLLAND. Mr. President, I thank the Senator. I will continue my efforts and will see to it that the other Senators do the same to get the two funds released.

Mr. BYRD of West Virginia. Mr. President, I express appreciation to the distinguished junior Senator from Arkansas for not pressing the amendment.

The Senator has made a fine case, and I hope that the administration will release the $25 million which has been placed in reserve by the Bureau of the Budget. As I stated earlier, I see nothing to be gained by placing the additional funds in the emergency resolution. The administration has the funds already, if they will release them.

The bill will not have to go to conference if there is no amendment.

I join the Senator from Florida and the other Senators in urging that the Bureau of the Budget release those funds.

Mr. HRUSKA. Mr. President, I support the administration's request for a supplemental appropriation for the Commodity Credit Corporation. The appropriation is necessary simply because the price support programs are mandatory. CCC expenditures are fixed charges, and funds are so low, they will be depleted by the middle of April.

I applaud Secretary Hardin's decision to maintain advance payments to farmers at the customary 50-percent level which prevailed for the past 8 years. That decision accounts, in part, for the need for a supplemental request at this time.

During consideration of this bill, we should recognize the importance to the farmer of the attitude of the new administration toward agriculture.

President Johnson's budget, submitted in January, proposed to slash advance payments to farmers to 25 percent instead of the 50 percent which was customary and which had been expected. There had been no advance notice of this decision, not even during the announcement of the 1969 feed grains program in December.

President Nixon and Secretary Hardin quickly concluded the obvious: the farmer had not been given sufficient notice and the Government had a moral obligation to continue the rate without abrupt change. Therefore, Secretary Hardin restored the 50-percent advance payment.

It must be recognized, Mr. President, that this supplemental appropriation will not increase expenditures. By advancing 1969 crop payments in this fiscal year, the 1970 budget will be reduced by a similar amount. This was a necessary and wise step.

I commend President Nixon and Secretary Hardin for taking a commonsense look at the problems of the farmer. It indicates that this administration truly is concerned with assisting our agricultural industry.

The PRESIDING OFFICER. The joint resolution is open to amendment. If there be no amendment to be offered, the question is on the third reading and passage of the joint resolution.

The joint resolution (H.J. Res. 584) was ordered to a third reading, was read the third time, and passed.

Mr. HOLLAND. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BYRD of West Virginia. Mr. President, I move to lay the motion on the table.

The motion to lay on the table was agreed to.

AUTHORITY FOR THE VICE PRESIDENT, PRESIDENT PRO TEMPORE, OR ACTING PRESIDENT PROTEMPORE TO SIGN DULY ENROLLED BILLS OR JOINT RESOLUTION DURING THE ADJOURNMENT OF THE SENATE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Vice President, President pro tempore, or Acting President pro tempore be authorized to sign any duly enrolled bill or joint resolution during the adjournment of the Senate until March 31, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 1715—INTRODUCTION OF A BILL FOR THE RELIEF OF KONG WING SIK

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I be permitted to introduce on behalf of the Senator from New Mexico (Mr. MON-

TOYA) a bill for the relief of Kong Wing Sik.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (S. 1715) for the relief of Kong Wing Sik, introduced by Mr. BYRD of West Virginia (for Mr. MONTOYA), was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 1717—INTRODUCTION OF A BILL TO INCREASE THE PERSONAL EXEMPTION FROM $600 TO $1,200

Mr. YARBOROUGH. Mr. President, I introduce, for proper reference, a bill to amend the Internal Revenue Code of 1954 to increase the personal exemption from $600 to $1,200. The present $600 exemption was provided by the Revenue Act of 1948. In the 21 years that have passed since its adoption, the cost of living has increased 48.1 percent—based on the level of consumer price indexes in 1948, average, and in January 1969—so that the $600 would have to be raised to $889 merely to equal the purchasing power of the $600 exemption 21 years ago.

Our standard of living has changed substantially over this period of time, also. Life in the 1960's is quite different from that in the 1940's. The Bureau of Labor Statistics has just published a study which attempts to answer the question: How much does it cost to live for an urban family of four in the spring of 1967 for three standards of living? The resulting three budgets share the basic assumption that maintenance of health and social well-being, the nurture of children, and participation in community activities are desirable and necessary social goals.

For the moderate budget, the U.S. urban average family cost was $9,076 in spring of 1967. The cost for the lower budget was $5,915, and the higher budget amounted to $13,050. The personal exemptions for a family of four today total $2,400 which does not even approach the total of the lower budget. Certainly exemptions totaling $4,800, which my bill will provide, would be far more equitable.

A study by the Social Security Administration in 1966 showed the "poverty line" for a nonfarm family of four was $3,335. Anyone who falls below the poverty line will have less than a minimum diet for health or will have to choose between necessities. Under present tax law a family of four with an adjusted gross income of $3,335 has to pay $46 in Federal income taxes. My proposal would exempt a family of four from Federal income taxation until their adjusted gross income exceeded $4,800.

The most frequently heard argument against increasing the personal exemption is the revenue that would be lost to the Government. But we can regain this revenue by enacting measures of tax reform to close at least some of the loopholes through which billions of dollars escape the Treasury each year. In addition, the tax savings to individuals resulting from an increase in the personal exemption to $1,200 will come back to the Government in the form of higher taxes because of higher profits of those in the food processing industries who will sell more goods if the poor have money to buy it. Personal expenditures represent over 60 percent of the gross national product. These additional funds in the hands of consumers will increase the incomes and the profits of grocery stores, appliance dealers, clothing manufacturers, and others, which will result in a correspondingly larger tax base for the Federal Government, and increased revenues.

We cannot continue to ignore the plight of the low- and middle-income taxpayer. In addition to the burden of Federal income taxes and inflation that I have outlined above, he is also being subjected to rapidly increasing State and local taxes and the recently effected increase in social security taxes.

We must remove the glaring inequity of the present personal exemption from our tax structure. Since February 18, the House Ways and Means Committee has been conducting extensive tax reform hearings. It is to be hoped that resulting legislation will assure greater equity and fairness in the tax system so that some wealthy tax-dodging individuals and special-interest groups will no longer be able to avoid their fair share of taxation. But we cannot wait for this time-consuming process to be concluded. We must give the low- and middle-income taxpayer relief now. And immediate increase in the personal exemption to $1,200, in my opinion, is the best way to accomplish this objective.

Mr. President, I ask unanimous consent that the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1717) to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness) introduced by Mr. YARBOROUGH, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 1717

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the following provisions of the Internal Revenue Code of 1954 are amended by striking out "$600" wherever appearing therein and inserting in lieu thereof "$1,200":

(1) Section 151 (relating to allowance of deductions for personal exemptions);

(2) Section 642(b) (relating to allowance of deductions for estates);

(3) Section 6012(a) (relating to persons required to make returns of income); and

(4) Section 6013(b)(3)(A) (relating to assessment and collection in the case of certain returns of husband and wife).

(b) The following provisions of such Code are amended by striking out "$1,200" wherever appearing therein and inserting in lieu thereof "$2,400":

(1) Section 6012(a)(1) (relating to persons required to make returns of income); and

(2) Section 6013(b)(3)(A) (relating to assessment and collection in the case of certain returns of husband and wife).

SEC. 2. (a) Section 3(b) of the Internal Revenue Code of 1954 (relating to optional tax if adjusted gross income is less than $5,000, in the case of taxable years beginning after December 31, 1964) is amended—

(1) by inserting after "After December 31, 1964" in the heading and inserting in lieu thereof "In 1967, 1968, and 1969";

(2) by striking out "beginning after December 31, 1964," and inserting in lieu thereof "beginning on or after January 1, 1967, and before January 1, 1970,"; and

(3) by striking out "After December 31, 1964" each place it appears in the tables and inserting in lieu thereof "In 1967, 1968, and 1969".

(b) Section 3 of such Code is further amended by adding at the end thereof the following new subsection:

"(c) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1969.—In lieu of the tax imposed by section 1, there is hereby imposed for each taxable year beginning after December 31, 1969, on the taxable income of every individual whose adjusted gross income for such year is less than $5,000 and who has elected for such year to pay the tax imposed by this section, a tax determined under tables which shall be prescribed by the Secretary or his delegate. The tables prescribed under this subsection shall correspond in form to the tables in subsection (b) and shall provide for amounts of tax in the various adjusted gross income brackets approximately equal to the amounts which would be determined under section 1 if the taxable income were computed by taking either the 10-percent standard deduction or the minimum standard deduction."

(c) Section 4(a) of such Code (relating to number of exemptions) is amended by striking out "the tables in section 3" and inserting in lieu thereof "the tables in sections 3(a) and 3(b) and the tables prescribed under section 3(c)".

(d) Paragraphs (2) and (3) of section 4(c) of such Code (relating to husband or wife filing separate return) are amended to read as follows:

"(2) Except as otherwise provided in this subsection, in the case of a husband or wife filing a separate return the tax imposed by section 3 shall be—

"(A) for taxable years beginning in 1964, the lesser of the tax shown in table IV or table V of section 3(a),

"(B) for taxable years beginning in 1965, the lesser of the tax shown in table IV or table V of section 3(b), and

"(C) for taxable years beginning after December 31, 1969, the lesser of the taxes shown in the corresponding tables prescribed under section 3(c).

"(3) Neither table V of section 3(a) nor table V of section 3(b), nor the corresponding table prescribed under section 3(c), shall apply in the case of a husband or wife filing a separate return if the tax of the other spouse is determined with regard to the 10-percent standard deduction; except that an individual described in section 141(d)(2) may elect (under regulations prescribed by the Secretary or his delegate) to pay the tax shown in table V of section 3(a), table V of section 3(b), or the corresponding table prescribed under section 3(c) in lieu of the tax shown in table IV of section 3(a), table IV of section 3(b), or the corresponding table prescribed under section 3(c), as the case may be. For purposes of this title, an election made under the preceding sentence shall be treated as an election made under section 141(d)(2)."

(e) Section 4(f)(4) of such Code (cross references) is amended by striking out "and table V in section 3(b)" and inserting in lieu thereof "table V in section 3(b), and the corresponding table prescribed under section 3(c)".

(f) The last sentence of section 6014(a) of such Code (relating to election by taxpayer) is amended by inserting after "nor table V in section 3(b)" the following: ", nor the corresponding table prescribed under section 3(c),".

SEC. 3. (a) Section 4302(b)(1) of the Internal Revenue Code of 1954 (relating to percentage method of withholding income tax at source) is amended by striking out the table and inserting in lieu thereof the following:

"Percentage method withholding table

"Payroll period	*Amount of one withholding exemption*
Weekly	$27.00
Biweekly	55.80
Semimonthly	58.60
Monthly	116.00
Quarterly	350.00
Semiannual	700.00
Annual	1,400.00
Daily or miscellaneous (per day of such period)	3.80"

(b) So much of paragraph (1) of section 3402(c) of such Code (relating to wage bracket withholding) as precedes the first table in such paragraph is amended to read as follows:

"(1)(A) At the election of the employer and with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee after December 31, 1969, a tax determined in accordance with tables prescribed by the Secretary or his delegate, which shall be in lieu of the tax required to be deducted and withheld under subsection (a). The tables prescribed under this subparagraph shall correspond in form to the wage bracket withholding tables in subparagraph (B) and shall provide for amounts of tax in the various wage brackets approximately equal to the amounts which would be determined if the deductions were made under subsection (a).

"(B) At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee before January 1, 1970, a tax determined in accordance with the following tables, which shall be in lieu of the tax required to be deducted and withheld under subsection (a):".

(c) Section 3402(m)(1) (relating to withholding allowances based on itemized deductions) is amended by striking out "$700" and inserting in lieu thereof "$1,400".

SEC. 4. The amendments made by the first two sections of this Act shall apply only with respect to taxable years beginning after December 31, 1969. The amendments made by section 3 of this Act shall apply only with respect to remuneration paid on and after January 1, 1970.

AUTHORITY FOR THE COMMITTEE ON COMMERCE TO FILE REPORTS DURING THE EASTER RECESS

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the Committee on Commerce be authorized to file during the Easter recess reports on various bills that have been pending and on which action will culminate during the Easter recess.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ELLENDER ON MONDAY NEXT

Mr. ELLENDER. Mr. President, on yesterday the Senate agreed to Senate Resolution 170 to have printed as a Senate document, a report entitled "Review of the United States Foreign Policy and Operation."

I ask unanimous consent that, when the Senate meets on Monday next, I be recognized at the conclusion of morning business for a period of 1 hour so that I may make my report to the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SPONG in the chair). Without objection, it is so ordered.

ADDRESS DELIVERED BY THE PRESIDENT OF THE NATIONAL ASSOCIATION OF HOMEBUILDERS

Mr. YARBOROUGH. Mr. President, largely as a result of the civil disorders in the cities, the Congress and administration last year set as a new national housing goal the construction or rehabilitation of 26 million homes in the next 10 years. This is an average of 2.6 million a year, and it compares with the 1.6 million or so we have been building and rehabilitating annually.

It was a great regret to many of us to hear the new Secretary of Housing and Urban Development, Mr. Romney, describe this goal as "unrealistic." I enthusiastically supported the Housing Act of 1968 and its intent to increase greatly the construction of low-income housing. I think what happened in our cities, and what will happen in the future if we do not correct widespread slum conditions, is a lot more "unrealistic" than this Housing Act objective.

We all know we cannot build all the homes we did in 1968 plus 63 percent more each year unless we assure the availability of materials, labor, and other elements that go into their construction. Doing this should be a primary activity of the Secretary of Housing and Urban Development. Apparently it will have to be taken up by Congress, and I welcome the hearings that will be held this month in the House and Senate Banking and Currency Committees on one of the bottlenecks: lumber and plywood supplies and prices.

A few days ago, the President of the National Association of Homebuilders addressed the annual meeting of the Western Wood Products Association on this very subject. He is Mr. Eugene Gulledge of Greensboro, N.C. His remarks outline the picture very clearly. They also remind us that Congress is joint manager, along with the Department of Agriculture, of over half the Nation's supply of wood for housing.

His speech should be read by all Members of Congress. Those of us on the Appropriations Committees have a special responsibility to make sure the investment is made in the national forests to produce the wood the Nation needs.

I also call this speech to the attention of the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Urban Affairs Council in the White House. The country is waiting to see what leadership these agencies will offer for the realization of a decent home for the 6 million households that do not have one.

I ask unanimous consent that Mr. Gulledge's speech of March 6, in San Francisco, Calif., be printed at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF SPEECH GIVEN BY EUGENE A. GULLEDGE, OF GREENSBORO, N.C., PRESIDENT, NATIONAL ASSOCIATION OF HOME BUILDERS, MARCH 6, ANNUAL MEETING OF THE WESTERN WOOD PRODUCTS ASSOCIATION, SAN FRANCISCO, CALIF.

It is a great pleasure to me to be with you, *my fellow members of the home building industry.* If we didn't have lumber, I can assure you in this country we wouldn't have any homes. The National Association of Home Builders intends to do its part to see to it that there is available enough timber in this country to build the homes of this nation. Our objectives are parallel with yours in all respects in this quest. We have, as an organization, the responsibility of trying to make certain that the people of this nation of ours are properly housed.

In 1949 the Congress enacted a Housing Act. In the preamble to that it established the concept that every American family should be housed in a decent home in a decent environment. That was a concept. There was no implementation of that concept, however, in legislation until the 1968 Housing Act which translated that concept to some tangible goals. Those tangible goals have caused a lot of concern in the minds of a lot of people.

Statistically speaking, this nation produced its greatest number of living units in 1950 when we reached a production of approximately 1,950,000 living units. At that time, less than 10 per cent of that production was multi-family and 90 per cent was single family. At that time, we used approximately 4.9 per cent of our Gross National Product in producing those living units.

Our country has grown since then. Our demand for housing has grown. It is anticipated that by the end of this century, another 31 years, our population will have grown from 200 million to about 335 million people, a 67.5% increase. In order to satisfy the housing demands of those people and all the other demands which housing requires, the housing and construction industry in effect will have to rebuild America.

We have the responsibility to do it—to rebuild America—to duplicate again every existing thing we've got—all the homes and all the churches, and all the shopping centers and all the hotels, and all the sewage treatment facilities and all the schools, and all the water plants. Not only do we face a near-doubling of our population, but continuing obsolescence is taking away thousands of housing units from the market. The attrition rate is two-thirds of a million units a year—

some 665,000 living units a year disappear by reason of hurricanes, flood and fire, and by reason of bulldozer and the termite, and a change in use. We then have a challenge given to this industry to rebuild America. We are going to have to do it *not* by technological break-throughs, so hoped-for and so highly touted by people who are *not* knowledgeable in the field. We are going to do it by methods which the industry has the capability of using right now today.

HOUSING TASTES CHANGE LITTLE

We are going to house the traditional American family in the traditional American house in the year 2000 as well as we are doing it in the year 1969. There's a very simple reason why. People are quite willing to come to a "modern" hotel. They are quite willing to live in a "modern" apartment. They couldn't care less whether it is made of stone, or whether it is made of fiberglass, or whether it is made of plastic or wood. But when it comes round to building their house in which they are going to raise their families and in which they are going to put their money—*without fail,* and I emphasize *without fail,* every market survey going shows that people want a house quite similar to the house in which they grew up. As a consequence, you and I were raised in traditional homes and we, today, in the main want traditional homes for ourselves. Our children are being raised in traditional homes and they are going to be the people who will be buying the homes and living in those homes at the end of this century.

There have been numerous efforts made by interested entrepreneurs, homebuilders if you will, to try to create a new concept of living, a new way in which people can live, a new type of house. Unfortunately, this has been done by too many people who could not learn from the other fellow's mistakes. Industry and individuals literally have dropped millions of dollars in the failure of these efforts.

All surveys which are aimed at trying to find out what people want to live in, what they'll pay their money for—and there's a vast difference—inevitably come to the conclusion that they want a house pretty much like the one Mom and Dad had, assuming it was a decent house. So I say to you, as we rebuild America, we are going to be doing it with traditional materials. To you, of course, that means wood and to us, as home builders, it means wood. To the nation, we hope it means wood.

Let's be realistic about it. We in the industry have been going through a rather traumatic experience since 1966. At that time we were suffering from what is known as "tight money". The money was not there. Because it wasn't there, a lot of homes weren't built and the rate of production of housing in this country in October of 1966 got down to 848,000 units, about half the normal rate which we had expected. As a result, we had a terrible housing shortage.

In trying to recover from that housing shortage, we produced in 1967 some 1.3 million units. In 1968 we produced 1.54 million units. In 1968 a Housing Bill was enacted that said the national objective and goal shall be to build 2.6 million units per year for each of the next 10 years. And that's what will be needed in order to get our people to the point where most of them are living in decent homes. Because that goal is so much higher than we have been doing, (and we should produce about 1.55 million units this year) a lot of sensible people say it is impossible to achieve.

LUMBER BOTTLENECK IN ACHIEVING HOUSING GOALS

A lot of people say that under generally normal conditions we could have been producing 1,750,000 housing units this year. But because of the scarcity of lumber and plywood and its price, and because of the scarcity of money and its price, plans are being scaled down. The American public will be denied the opportunity of having some 200,000 units of housing produced that should have been produced. This throws us that much farther behind in national objectives.

Now, if in this period of time, 1968 and 1969, when we are producing 1.5 million units in round figures we are having lumber scarcities, how are we going to get the lumber and plywood to build another 1 million units more?

SOCIAL NECESSITY FOR MORE HOUSING

It is not enough to say to the home builder, "You've got all the housing produced that you can possibly produce so don't worry if you can't produce enough". If we fail to produce enough, there are people out there who will not have a decent home because we didn't produce it, and they'll get mighty disturbed.

Otto Kerner, a former Governor of Illinois, was appointed by President Johnson in 1967 to head the National Advisory Commission on Civil Disorders. It became known as the Kerner Riot Commission. Among the three principal reasons which the Kerner Commission determined were the causes of riots in 1967 was the inadequate supply of housing. It has been estimated by the experts that there are somewhere between 6 to 7 million substandard occupied living units in this country today. More are being created every day.

People living in substandard homes do not have the opportunity of feeling that they, in many cases, are participating in the economic progress of this country. Social progress is held back, and this country simply cannot afford to have a sizable segment of its population so dissatisfied with the neighborhoods in which they live that they are willing to burn them down.

That is what has been happening. They're so disgusted with the situation in which they find themselves they are simply willing to burn it down. We've got to do something about that. This nation cannot afford the riots; it cannot afford the civil disorders and all that spring from it.

We must find solutions to these problems, and it will not be sufficient for you and me to have a comfortable level of business. We cannot be fat cats, we cannot be satisfied people. We've got to be people who are concerned, who are involved, and who are committed to the idea of producing enough housing for the people of this nation so that that national goal will be realized—that every American family will have the opportunity of being housed in a decent home in a decent environment. We've got to become really seriously concerned about how we solve it.

The home builders were greatly concerned last year, as they are this year, with lumber from the standpoint of supply and price. It is a legitimate concern. You cannot expect them not to be disturbed over the price situation. Many of you who may be distributors, as well as the producers, are getting it from both ends. Customers are complaining, boiling, and crying. Of course, the mills are, too, and you are probably in a position where you can satisfy nobody, and everybody is wanting to blame everybody else—and that's the name of the game, too. Nobody really wants to say, "It's our fault." I can tell you this, it is not sufficient for anybody to blame anybody.

COMMON EFFORT REQUIRED

Home builders are not satisfied with trying to pin the donkey's tail on any part of the industry. Home builders, and I'm sure you, too, are interested in solving the problem. How do we make certain that the housing needs of this nation may be met in order that the nation may be spared the trials which accompanied the riots and disorders in the past?

Let me assure you that if we fail, we are going to reap a far greater harvest of terror and destruction than we have ever had in the past. It's a challenging proposition, it's a sobering thing which makes us get in and dig and commit ourselves through our Association activities, yours and mine, to start finding some solution to these things. That's our overall concern.

You'll recall astronaut Anders who went around the moon with two companions last Christmas season. He said, "Whatever the mind of man can conceive, man can achieve." It is purely a question of dedication.

When President Kennedy was approached in 1960 with the concept that in this decade we would put a man on the moon, he became convinced that we could. He convinced the Congress that we could. Subsequent Congresses appropriated the funds. I don't believe there is a person in this room today who doesn't think that we will have a man on the moon before the end of this decade. Yet, how many people thought we really could in 1960. Very few. The goal will be achieved because there is dedication to achieving that goal. Simply that!

You and I as citizens first and all of this country, and as businessmen, can make certain that there is enough dedication on the part of public officials at all levels of government—City Hall, State Legislatures, and Federal Legislative circles—that we achieve our objective. But we've got to show them how.

Representatives of the forest products industry and the home building industry met with HUD Secretary Romney on Monday, February 24. We spent 2½ hours with the Secretary. We discussed fully with him the problems of lumber supply and price, indicated to him the areas in which we thought the Administration could be effective, areas in which we thought the bureaus could be effective, and areas in which we thought legislative actions were needed. There was no differences of opinion between the home builders and the forest products people on those points. As far as I can tell, there will be no variance between the opinions of home builders and the opinions of the forest products people on achieving those points. But we home builders happen to be a little more restless than are the lumber people. We are the ones who are not being helped, if you will, (I am trying to choose the words carefully and I see some smiles)—we are the ones who are not being helped by the current price situation. As a consequence we would like to see something done about it, and we are going to do our "doggonedest" to see that something is done about it.

We're not going to try to tell you or your industry what sort of profits you ought to have or what the price of lumber really ought to be. Some smarter people than we are, have got to figure that out. But I think that we have a vast experience in dealing with the Congress and dealing with the Administration to try to help interpret to them the consequence and the results of certain actions and what they mean.

We had a meeting with President Johnson in July, 1967. I was present in his office, along with my fellow officers of NAHB. We were dealing at that time with the Congress on a very, very important matter to us. The President told us then, in effect: "Remember one thing, gentlemen, the duty of every member of Congress on the Hill is to serve his people. So, he is first looking at everything in the light of how it is going to affect the people back home. The people back home are going to pass judgment on him." That was very sage, basic advice.

Therefore, we, meaning the home builders and you jointly, will have to make certain that the Congress understands that we do have a legitimate interest—that's for sure—because we are in this business to house those who are going to be the voters for those Congressmen.

NEED TO INCREASE FEDERAL TIMBER SUPPLY

Now, at the beginning I addressed you as "Fellow Members of the Housing Industry" because we are in this business to house those to present the case to the Congress and to the Administration for achieving a number of objectives. We are going to have to persuade the Congress that the amount of timber which is harvested from Federal timberlands should be increased sufficiently to be able to meet the demand for timber in this country. There appears to be currently something on the order of a 10 per cent shortage between the amount of timber being produced and the amount of timber needed. This demand will increase and the objective is to reduce the shortage, hopefully to nil—a balance between supply and demand.

In order to increase the supply of timber, you can only get timber from two places. You can either grow it or import it—one of the two. Our imports show little hope of being dramatically improved. Our growing then becomes our principal way of increasing our supply of timber. The timber which we use for residential construction is roughly balanced about half between what comes off Federal lands and half of what comes off of so-called private lands. The figures are not exact but close enough for the point. The acreage involved on private lands is considerably less than the average involved on the public lands.

Therefore, it is a matter of fact, not opinion, that the public lands are being rather mismanaged in comparison with the private lands. Private holders of forests are doing a good job of professional management. Public managers of public lands, by comparison, are doing worse.

We have got to convince the Congress that the supply of lumber can be most effectively increased in this country by increasing the amount of managerial skill and talent they are willing to allow the Forest Service to use in managing that business enterprise.

FINANCIAL INVESTMENT REQUIRED

Some Forest Service policies will need a close examination. Frankly, I think we need a method of funding the Forest Services business endeavors in order that they, too, might be working on long-range plans. We need a different concept, if you will, really of what a perpetual yield amounts to, what an allowable cut amounts to, and what all the other terms that are germane to the subject amount to in order that we might reach a level of sophistication of forest management in our public lands that is commensurate with the management of our private lands. It can be done—it must be done because it is only through these sources that we can expect to be able to increase effectively the supply of lumber. It is the intention of the National Association of Home Builders to assist in each and every way to achieve these objectives.

We see no way in which the American people will be housed, according to the established goals of the Congress, except through the continued and ever-increasing use of wood products. The timber supply for these products, to a large degree, is in the hands of the Federal government. It is administered under policies which currently preclude those policies from giving a yield from those lands commensurate with what private management does. As a consequence, you will find no departure between our objectives and yours in that respect.

PUBLICLY OWNED RESOURCES BELONG TO ALL THE PEOPLE

There are, however, a few public policy questions to which the lumber industry and the forest products industry must address themselves. I want to tell you some of the areas in which you are going to have to furnish satisfactory answers. You are going to have to recognize first of all that the American public owns those lands. I am not going to talk about the Sierra Club, and I am not going to talk about recreation. I am not going to talk about the conservationists for conservation's sake. I am going to talk about the fact that the American public wants to make sure that it gets the best value for the dollar received and expended etc. in seeing that our trees—mine and yours—that are sold to lumber producers which produce lumber and forest products—are used wisely.

PRICE RISE FUELS INFLATION

Let me emphasize one thing—the gravest, I repeat—the gravest threat to America today is not Vietnam, the threat of riots in the cities, or unrest on the campuses. It is not the so-called decaying moral attitude of people in college—it is none of those; the gravest threat to America today is the threat of inflation—the psychology which says that if we don't build it today or buy it today it'll cost us more tomorrow; so we had better buy it today. It is the concept that no matter what price I pay for it today, it will be less than I'll have to pay tomorrow.

That threat of inflation becomes the greatest danger to you and me—to all of the nation. It becomes evident, therefore, that those are the factors which are working to produce the most harm in this nation today. It is because of this that you and I have got to address ourselves to the whole problem—what is it that can create within the lumber and forest products industry a situation where a 10 per cent shortage of supply can result in such a drastic increase in price?

I'm not arguing with you whether the price you are selling at is right or wrong. I'm saying that the rapid increase in price is in, and of its own very nature, regardless of merit, inflationary. It has vastly fueled the demand for commensurate increases in the prices of other materials. The brick people want more money for their product, the cement people want more money for their product, and the asphalt shingle people want more money for their product. Labor wants more money for its product, and the labor negotiators are quite aware what's happened to the price of forest products. Whenever you go into negotiations on renewal of your labor contracts don't you think that those people aren't aware of what has happened to the industry prices and the industry profits.

Regardless of your position that they are fair and right, the inflationary aspect of it is what is the most dangerous thing. So you and I—we've got a problem. How are we going to use effectively the national forests which belong to the people and channel the harvest through a private enterprise distribution system without allowing that system to become a principal factor in stimulating inflation? In turn, such a system works against the best interest of the people who own that product. It is an involved statement but this is our problem.

Frankly, neither home builders nor the lumber interests have been successful in addressing ourselves to an appropriate solution but we must work on it. If my good friend, Masud Mehran of Livermore and Diablo, California, will forgive me for telling a story twice, I'd like to close with this: We have a tremendous job ahead of us. It is not short range only; it is not long range only. I'm concerned with how I'm going to get the lumber to build my houses this year, as well as in 1975.

A retired French Marshal was walking through his garden with his gardener and discussing what they could be doing to improve it. The Marshal suggested he'd like to see such and such a tree planted over in a corner, and the gardener replied, "Sir, the tree that you mentioned will take fully 100 years to mature and do the job you want it to do."

The Marshal replied, "In that case, let's plant it this afternoon."

You and I have a big job to do—let's get started this afternoon.

THE PRESIDENT'S STUDY OF THE OIL IMPORT PROGRAM

Mr. McINTYRE. Mr. President, yesterday, President Nixon announced the establishment of a so-called task force to review the Nation's oil import policies. The need for critical review of this program is obvious in light of the inequities of the program and the growing public demand for substantial reform. No region of the country bears the hardship and high price of the oil import program more than New England and there are no more vigorous proponents of reform than the representatives of that region. It is interesting to note, however, that the President's decision to review this program comes at a time when there is pending before the Federal Government a proposal for an oil refinery at Machiasport, Maine, which would give New England, for the first time, its fair share of imports under the present mandatory oil import program. The proposal for a Maine refinery is vigorously opposed by the oil companies who are advocates of the oil import quota system. The direct result of the President's announcement of a study is the indefinite delay of the refinery project. For the moment, the only interests served by the review are those in conflict with the consumer interests of New England.

I am seriously concerned that the only interests served in the long run by President Nixon's study will be those in conflict with the consumer interests of the Nation. My concern stems from the nature of President Nixon's announcement.

The "appointment" of this study group is a repetition of the process which bequeathed the oil import program to the Nation in the first place. In 1957 a Special Committee To Investigate Crude Oil Imports was appointed by President Eisenhower. This Committee was composed of the same Cabinet-level posts which have been named by President Nixon. The 1957 group held no public hearings, took no public testimony, issued no public report justifying their recommendations. Their study resulted in the present mandatory oil import program which has cost the American economy and the consumer over $40 billion in 10 years.

In light of this result it is no surprise that the President of the American Petroleum Institute in a letter to Arthur Burns on February 5, 1969, stated:

> It would be highly desirable to establish another Cabinet-level committee to conduct a study.

The original Cabinet-level group arrived at its recommendations by negotiating with the industry. No consumer groups were consulted. No representatives of consumer interests were included.

What is required at this time is a fresh look at the oil import program.

The Cabinet officers and the Director of Emergency Planning named by Mr. Nixon to a so-called task force already have the specific responsibility for constant surveilliance of this program as well as the responsibility to recommend action to the President. This is their responsibility under section 6(a) of Presidential Proclamation No. 3279, as

amended. This responsibility has existed in the Office of Emergency Planning, the Departments of State, Defense, Treasury, the Interior, Commerce, and Labor for a decade, yet no recommendations for change have been forthcoming. In fact, the Oil Import Administration of the Department of the Interior is a strong defender of the present system.

I do not question the capability and integrity of our new Cabinet officials, but they are busy men and the oil import program is a minor part of their responsibilities and it is complex. It is simple commonsense to assume that Secretary Rogers, Secretary Laird, Secretary Kennedy, Secretary Hickel, Secretary Stans, and Secretary Shultz cannot personally devote a great amount of time to this review. It is simple commonsense to assume that unnamed individuals within their departments will carry out this study, perhaps some of the same people who have seen no need for action in a decade.

The concerns of the departments represented in Mr. Nixon's study group legitimately relate to the oil import program and should be represented on a panel charged with reviewing the program. But they are not the only concerns and they certainly have not been vigorously voiced in the past as part of the constant surveillance these departments were supposed to have maintained.

The push for reform has come from Congress and the public. It comes belatedly from the oil industry only because of the threat they see posed to the program by projects such as Machiasport. The industry should not be permitted to huddle behind closed doors with Government to decide the public fate.

What is essential to the public interest at this time is an effective and objective review of the oil import program undertaken, not by anonymous staff members, but by a publicly identifiable group which will have the time to study this program, to take public testimony and include representatives of consumer interests. The questions being raised about the oil import program are not minor. They go to the wisdom of the program's very existence. A program which costs the American consumer $4 billion a year should be publicly debated and scrutinized, not shunted off for an in-house review. We are at a point in the life of American Government where an educated citizenry is laying claim to its right to know, its right to be included in the decisions which touch its life and its pocketbook. If we are willing to publicly debate the national need for an anti-ballistic-missile system, we should be willing to provide a public forum for debate of the oil import program which has already proved more costly than that military proposal.

Under the law, the President has complete authority for deciding upon an oil import control program. There will be no opportunity for his decisions to be considered and voted upon by Congress. The very least the President can provide is the opportunity for all views about this program to be considered before he reaches his decision. I hope the President will reconsider the composition of his study group, provide for open hearings and public reports, and by doing so take the public into his confidence.

ADJOURNMENT UNTIL MONDAY, MARCH 31, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 2 o'clock and 9 minutes p.m.) the Senate adjourned until Monday, March 31, 1969, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 27, 1969:

DEPARTMENT OF JUSTICE

Thomas F. Turley, Jr., of Tennessee, to be U.S. attorney for the western district of Tennessee for the term of 4 years vice Thomas L. Robinson.

Brian P. Gettings, of Virginia, to be U.S. attorney for the eastern district of Virginia for the term of 4 years vice Claude V. Spratley, Jr.

Bill Carnes Murray, of Georgia, to be U.S. marshal for the northern district of Georgia for the term of 4 years vice Elmer J. Hardegree.

Harold M. Grindle, of Iowa, to be U.S. marshal for the southern district of Iowa for the term of 4 years vice Charles B. Bendlage, Jr.

Royal K. Buttars, of Utah, to be U.S. marshal for the district of Utah for the term of 4 years vice Ellis Maylett.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 27, 1969:

EXPORT-IMPORT BANK OF THE UNITED STATES

Walter C. Sauer, of the District of Columbia, to be First Vice President of the Export-Import Bank of the United States.

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

John A. Nevius to be a member of the Board of Directors of the District of Columbia Redevelopment Land Agency for a term of 5 years, effective on and after March 4, 1969, pursuant to the provisions of section 4(a) of Public Law 592, 79th Congress, approved August 2, 1946, as amended.

OFFICE OF EMERGENCY PREPAREDNESS

Nils A. Boe, of South Dakota, to be an Assistant Director of the Office of Emergency Preparedness.

IN THE ARMY

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in the grade of lieutenant general:

Maj. Gen. Oren Eugene Hurlbut, O19077.

IN THE NAVY

The following-named Reserve officers of the U.S. Navy for permanent promotion to the grade of rear admiral:

LINE

Don C. Bowman, Jr.
Robert P. Owens
William H. Longley
Edwin J. Zimmermann, Jr.

MEDICAL CORPS

George H. Reifenstein

SUPPLY CORPS

George F. Baughman
Heinz H. Loeffler

CIVIL ENGINEER CORPS

Arthur H. Padula

DENTAL CORPS

Harry G. Ewart

The following-named officers of the Navy for permanent promotion to the grade of rear admiral:

LINE

Harvey P. Lanham
Lawrence G. Bernard
Lester E. Hubbell
Eugene G. Fairfax
Means Johnston, Jr.
Alexander S. Goodfellow, Jr.
Horace H. Epes, Jr.

Randolph W. Thrower, of Georgia, to be Commissioner of Internal Revenue.

DEPARTMENT OF STATE

Nathaniel Samuels, of New York, to be a Deputy Under Secretary of State.

Charles A. Meyer, of Pennsylvania, to be an Assistant Secretary of State.

AGENCY FOR INTERNATIONAL DEVELOPMENT

John A. Hannah, of Michigan, to be Administrator of the Agency for International Development.

UNITED NATIONS REPRESENTATIVES

William B. Buffum, of New York, a Foreign Service officer of class 1, to be the deputy representative of the United States of America to the United Nations with the rank and status of Ambassador Extraordinary and Plenipotentiary.

Christopher H. Phillips, of New York, to be deputy representative of the United States of America in the Security Council of the United Nations.

IN THE MARINE CORPS

The nominations beginning Bennett W. Alford, to be colonel, and ending James A. Zahn, to be chief warrant officer (W-2), which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 6, 1969.

EXTENSIONS OF REMARKS

ROSS LEFFLER SCHOOL OF CONSERVATION

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. SAYLOR. Mr. Speaker, last month graduation exercises were held for the 13th class to complete study and training at the Ross Leffler School of Conservation near Brockway in Jefferson County, Pa.

The ceremony marked the start of a most difficult but highly satisfying career for 25 young men who, as Pennsylvania game protectors, will become a part of the forces responsible for keeping the Commonwealth the outstanding outdoor recreation area of the East. Having survived the rigid 10-month course, each of the new alumni will, for the next 9 months, work under the direct supervision and guidance of an experienced game protector and a field division supervisor to round out what is considered the Nation's most thorough and effective training program in this rugged profession.

The Punxsutawney Spirit has presented an excellent description of the Ross Leffler School and its requirements. Because this unique institution contributes so substantially to Pennsylvania's established conservation program, I include the article in the RECORD.

My colleagues may want to make this information available to those agencies in their own States which are designed to serve in the same capacity as the Pennsylvania Game Commission.

The article follows:

GAME PROTECTORS GRADUATE SOON: JEFFERSON COUNTY HAS STATE'S BIGGEST CAMPUS

What school has the largest campus in Pennsylvania?

The surprising answer to that question is found nestled in the northeastern corner of Jefferson County, approximately seven miles from Brockway.

The Ross Leffler School of Conservation, the training grounds for Pennsylvania's Game Protectors since 1936, has the largest campus of any school in the commonwealth, boasting 45,000 acres in Jefferson and Elk counties.

"We may not have many buildings but we have a heck of a big campus," admitted Donald Miller, supervisor of the school.

The thirteenth class to graduate from the school will receive diplomas this month, following ten months of gruelling training—training that has been called the toughest in the nation for conservation personnel and game protectors.

The members of the class follow a rigorous schedule of classroom and field work, beginning each day at 6 a.m. and going nonstop until 10:15 in the evening.

A typical day at the Ross Leffler School begins with physical exercises (including running a mile) at 6:10 a.m. followed by breakfast at 7. Four 50-minute class periods are scheduled for the morning and, after lunch, three more classes are held. Dinner is served at 5:30 and still another class is held at night. All students live at the school while training.

The 25 men who have been selected from more than 250 applicants are exposed to many areas of instruction to prepare them as game protectors in the commonwealth. Included in the course of study are: law enforcement, land management, game management, predator control, public relations, public administration, firearms instruction, first aid, water safety and numerous others.

Two resident instructors—Mr. Miller and Charles Laird—handle much of the teaching at the school but specialists are brought in to enrich the training program.

Members of the Game Commission research division lecture the candidates about new developments in the fields of biology, forestry and other areas while state police, fish commission personnel, Federal Bureau of Investigation agents and others add specialized instruction to the game school program.

Classroom instruction is only a part of the education received by the members of the class. Field work, given under actual outdoor conditions, is perhaps the most important segment of instruction for the candidates.

"We may have a member of the class who has done well in the classroom and scored high on all exams," said Mr. Miller. "But it is in the field work that his true potential as a successful game protector comes out."

Each class member spends almost three months in training throughout the state learning how to conduct himself in the field. Each game school member spends two or three weeks with each of four different game protectors to learn the difficulties of the job and the approach taken by different men in the performances of their duties.

Such field training is extremely valuable because every graduate of the game school is assured a job—and a big one. Following graduation each new game protector is given his own territory, often as large as 350 square miles, to enforce the laws, inform the public of Game Commission activities and perform the one hundred and one tasks expected of game protectors—from conducting gun safety clinics to capturing squirrels in attics.

Mr. Miller, who was a member of the second class to graduate from the game school, thinks the extensive training program is highly effective.

"This training is twice as long as most states and is much more thorough. Anyone who graduates from the school has to be dedicated. That's one reason the Game Commission retains 85 percent of all officers who graduate until they retire."

Before the inception of the game school, a game protector was selected by a competitive exam conducted for applicants from the county where the vacancy existed, then given a badge and game law book and expected to enforce the law and carry out public relations.

Although excellent, hard-working game protectors developed through this system, it took many years for the average officer to become familiar with the laws and know his many duties.

The Ross Leffler School has solved that problem. By matriculating a new class every two or three years as the need arises, the Game Commission is assured adequate replacements for retiring game protectors.

When replacements are needed, the Game Commission announces the formation of a new class and usually receives approximately 250 applications for each class.

All applicants must meet certain physical requirements. They must be between 23 and 35 years of age, not less than 5'8" or 140 pounds in weight and must be able to pass a 20/30 vision and color test without corrective lenses and a normal hearing test without the aid of a hearing device.

In addition, the applicants must be residents of Pennsylvania and high school graduates.

All applicants meeting physical and residential requirements are required to take Civil Service tests and the 50 students scoring highest are given oral examinations and interviews to select the final class.

Graduates of the school will look forward to one of the toughest jobs in the commonwealth. Game protectors do not work a fixed schedule and often work 70-or-80-hour weeks. The training at the Ross Leffler School is tailored to get them used to such a schedule and weeds out any students who are not prepared for such a life.

Dedication to duty and love of the job is a tradition in the Game Commission with three members of the present class having relatives in the Commission program, including one who is the third brother to attend the school.

The members of the 13th class who will graduate this month include: D. A. Bernhardy, Schuylkill County; W. A. Bower, Dauphin County; L. L. Everett, Carbon County; J. P. Filkosky, Chester County; E. W. Gallew, Bradford County; G. E. Gibson, Elk County; L. L. Harshbarger, Mifflin County; D. W. Jenkins, Allegheny County; J. M. Kazakavage, Schuylkill County; C. L. Keller, Lebanon County; F. D. King, Centre County; J. A. Lukas, Lawrence County; D. A. McDowell, Cambria County; R. W. Oliver, Butler County; A. N. Pedder, Westmoreland County; P. G. Piechoski, Philadelphia County; J. E. Rankin, Allegheny County; B. K. Ray, Westmoreland County; J. F. Serfass, Carbon County; J. P. Shook, Lycoming County; G. B. Thomas, Venango County; J. K. Weaver, Clinton County; H. D. Wetzel. Bradford County; L. C. Yahner, Cambria County, and G. J. Zeidler, Philadelphia County.

Anyone who would like to visit the game school is welcome—if he can find the school in the middle of the 45,000-acre game land campus.

A DREAM

HON. RICHARD FULTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. FULTON of Tennessee. Mr. Speaker, several days ago the United Cerebral Palsy conducted its annual telethon in Nashville, Tenn.

It has been my privilege during the past 10 years to serve as president of the middle Tennessee affiliate and president of United Cerebral Palsy of Tennessee. The chairman for this year's event was my wife who has also been most active in our community effort to provide care, services, and education to those unfortunate individuals afflicted with cerebral palsy.

Each year the telethon viewers in middle Tennessee, northern Alabama, and southern Kentucky have responded with great generosity—gifts this year exceeded $210,000. Some of our most active participants are the parents of cerebral palsy children and during the telethon I had the opportunity to recite a poem written by one of these dedicated parents, Mr. Lawrence Halliburton, the father of one of the sweetest young ladies I have had the privilege to meet, Terri Lynn.

Mr. Speaker, I now insert into the

CONGRESSIONAL RECORD this poem and direct the attention of every Member of the House of Representatives to this. Certainly those that have witnessed friends and loved ones who have, with courage, fought almost overwhelming handicaps will appreciate this message:

A DREAM

(By Mr. Lawrence Halliburton, Terri Lynn's father)

A dream I'll remember forever,
That opened thoughts this mind can't sever.

I saw the hands of God displayed,
I saw my child get down and play.
A miracle that can't be explained,
I saw one walk who was born lame.

I saw her run a child across the floor,
A view I may never see any more
I saw her play as others do,
I saw her bend over to tie her shoe.

She looks so happy and clever
I wish that dream could have lasted forever.

The dream was short but gave me a view.
Of my little girl whom I never knew.

A word of thanks to whom guides the mind
Of this little girl who is mine.

AMARILLO GLOBE-TIMES PAYS TRIBUTE TO DR. EVELYN POWERS

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 27, 1969

Mr. YARBOROUGH. Mr. President, the medical profession in America is looked upon as a difficult profession for which to qualify and a difficult profession in which to practice with its many years of educational requirements, its high code of ethics, and the great good judgment required with human life hanging on instantaneous decisions. For some reason few American women have entered the profession of medicine, while some European countries have more women doctors than men.

That American women are capable of being outstanding doctors, physicians, and surgeons is shown by the record of Dr. Evelyn Powers of Amarillo, Tex., who decided at the age of 3 that she would become a doctor and she made good by graduating from the Baylor College of Medicine in 1925, the only woman in her class. While she has been a very active practitioner of medicine in Amarillo, Tex., Dr. Powers has not forgotten her obligations as a citizen and she mixed with this practice a dedicated work for better government in our time to all levels of government: local, State, and national.

The Amarillo Globe-Times, of March 20, 1969, paid tribute to her learning, her ability, her dedication, her success, and, above all, her service to people, in an article entitled "World of Medicine Wide Open: Longtime Woman Doctor Practices What She Preaches." I ask consent that the tribute, ably written by Anna Catherine Day, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Amarillo (Tex.) Globe-Times, Mar. 20, 1969]

WORLD OF MEDICINE WIDE OPEN: LONGTIME WOMAN DOCTOR HERE PREACHES WHAT SHE PRACTICED

(By Anna Catherine Day)

America is wasting its woman power.

"There is no reason why we can't have as many women doctors as men doctors," said Dr. Evelyn Powers of 3208 S. Hayden.

Dr. Powers is one of six women among the 150 physicians in the Potter-Randall County Medical Society.

The women's association of the American Medical Association says only 6.5 per cent of the nation's physicians are women.

In comparison, 75 per cent of the physicians in Russia are women.

At the age of 3, Dr. Powers decided she would become a doctor.

"My hand was badly cut. Of course, I kicked and screamed like any other child each time it was dressed, but it fascinated me that it would get well."

She graduated from the Baylor College of Medicine in 1925, the only woman in her class.

During her 43 years of medical practice, Dr. Powers encountered only one doctor who resented her because she was woman.

"He said he would quit the case if I were called in for consultation," she said.

The family did not insist, but the patient and many of her relatives later switched to Dr. Powers for treatment.

Dr. Powers retired from medical practice five years ago after 40 years in Amarillo and almost three years in Chillicothe.

"I was the senior partner in our firm," she said. "I received my diploma one minute before my husband."

Dr. Powers, the former Miss Evelyn Gass, and her husband, George Powers, married during their freshman year in medical school. They graduated in the same class, and practiced medicine in the same firm for more than four decades. She specialized in obstetrics and gynecology. He was a general practitioner.

Dr. Powers was born in Tulia, a daughter of Charles L. and Beulah Yeary Gass. Her grandfather, D. L. Gass, was the first merchant in Hereford just before the turn of the century.

"I wasn't very old when I decided I wasn't going to stay around the house and wash dishes. I couldn't see anything so glamorous about that," Dr. Powers said.

She never had any qualms about entering the field of medicine "because the doctor image was male."

"I want to tell you that in my child life the doctor image was female—my mother was our physician except on rare occasions," she said.

Dr. Powers' mother was interested in medicine, and her older brother, a physician, encouraged that interest.

Dr. Powers, the middle child in a family of three children, was usually the accident victim who had occasion to visit the doctor across the street more often than her brother and sister.

"I was more active and was always experimenting with new things," Dr. Powers said.

She remembers that her mother often treated the children's illnesses herself rather than call the family physician who always gave calomel, the most popular drug of that day.

When Dr. Powers entered medical school, the dean called her into his office.

"He told me that they wanted women in the school and that if anything offended me I should come and tell him," Dr. Powers said.

She had only one occasion to visit the dean in regard to those instructions.

"The offender was a lawyer who taught us medical jurisprudence. He had told a very vulgar joke which had nothing to do with medicine. The lawyer was not a member of the faculty the next year," Dr. Powers said.

During her freshman year, one of her male classmates said to Dr. Powers:

"You girls are such fools. You could stay home and play the piano and no one would think anything about it."

He dropped out the first year, Dr. Powers said.

"And I've always hoped he played the piano."

Dr. Powers feels that women are often advised, for one reason or another, not to enter the medical field.

"It is a downright sin that certain occupations have become set aside for men and others for women," she said.

"Once a high school girl told me that she wanted to study medicine but her teacher adviser told her no one had confidence in a woman doctor. I told the girl if any more women had confidence in me they would kill me," she said.

Dr. Powers has delivered two boys and a girl who are now doctors.

"Years ago," she said, "I delivered a girl and a boy to an Amarillo couple. The girl was older. She graduated from Oklahoma University and told me that she was going to become a medical technican."

"Why sell yourself short?" Dr. Powers inquired and advised the girl to study medicine.

She is Dr. Audrey Fern Posey McIntyre of Houston, who graduated from Baylor College of Medicine in 1960. Her brother, Dr. Randall Posey, a graduate of Texas University Medical School, is now in public health work in Philadelphia. They are the children of Mr. and Mrs. R. E. Posey, now of Houston.

Mrs. McIntyre is an anesthesiologist in Houston.

Dr. Hugh Bob Currie of Amarillo was also graduated from Baylor College of Medicine. He is the son of Mr. and Mrs. Hugh Currie of 2204 S. Lipscomb.

Dr. Powers had been in every kind of home in Amarillo on house calls.

She has delivered many babies at home, and has traveled in below-zero weather to treat the ill.

Back in 1926 in Chillicothe, she and her husband did a tracheotomy by the light of a kerosene lamp with a trunk as the operating table.

The patient, a 5-year-old boy, recovered.

Dr. George Powers delivered a baby in a covered wagon during their early days of practice. The Drs. Powers opened their practice here in the Fisk Building in November, 1928, after almost three years in Chillicothe.

"She built her practice a little faster than I did," said her husband.

Dr. Evelyn's memories of her medical practice are many, but some stand out above the others.

One expectant mother visited Dr. Powers to retain her services.

"And Dr. Powers, I want twins," the expectant mother said.

"I'm sorry, you've come to the wrong doctor. I don't have many twins. My patients are too stingy to have twins," the doctor replied.

"Why, do you charge more for twins?" the patient inquired.

Dr. Powers interned at Baylor Hospital in Dallas, and is a Founding Fellow of the American College of Obstetricians and Gynecologists. She is also a fifth generation Texan.

The five other women physicians in the Potter-Randall County Medical Society are Dr. Leta Boswell of Canyon, Dr. Ernestine Smith, Dr. Betty Cooper, Dr. Frances Davis and Dr. Margaret Davis, all of Amarillo.

FOCUS ON FEDERAL CITY COLLEGE—PART III

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HAWKINS. Mr. Speaker, it is regrettable that the attempt of the students at Federal City College to communicate their views to the community should have been distorted in the newspapers. Headlines such as "Student Leaders Defend Black Studies" are attention-grabbing, but fail to express the real educational goals and aspirations of the students.

In an effort to provide a more complete delineation of student desires, and to clarify a number of questions that have arisen as a result of recent publicity concerning Federal City College, I urge my colleagues to read the following statement by the Student Government Association of the College:

STATEMENT FROM THE STUDENT GOVERNMENT ASSOCIATION OF FEDERAL CITY COLLEGE

One of the principal responsibilities of the Student Government is to take those actions that will result in benefits for the students and that will enable the College and community to act in accordance with the needs and aspiration of the students.

This statement is issued to announce a student position on the state of the College and to respond to the number of questions that have been directed to the Student Government.

There are three basic statements that the Student Government Association wishes to make: (1) the students attend Federal City College to obtain a high quality education; this is our basic and primary purpose, (2) the students accept the need for several different types of educational programs to coexist as part of the urban higher educational experiment, with the qualification that all such programs must be academically sound in content, philosophy, and instructional method, and (3) the students remain dedicated to the growth and development of the College and consider as irresponsible any discussion of the need to terminate or restrict the growth of the College.

The students have indicated and demonstrated their responsible participation in the affairs of the College. While students on other campuses have been engaged in various types of action projects, some helpful and some destructive, the students at FCC have maintained a focus on those actions which contribute to the success and development of FCC.

We recognize a need for this educational opportunity and for the employment and life opportunities that success in college affords; however, we insist that the education given at FCC be relevant to the needs of the students, their families, their communities and the total District population. An educational program that meets these requirements, urban higher education, does not exist; it must be developed. The students at FCC are part of this developmental project and seek to participate in responsible and effective ways.

There are several alleged issues that deserve comment. Do the students believe in the College and feel that they are receiving a meaningful education? This question assumes that education anywhere in the nation has met some standard that precludes further investigation. At FCC the students admit that we are in the process of finding answers and view participation in this process as a meaningful and rewarding form of education.

How are the students affected by the disagreements among and between administration and faculty? In a developing program consensus not disagreement is to be avoided. The disagreement as stated in the press (the outsiders), is vastly different from the disagreements as experienced within the College. There are different programs being advocated by different faculty members; different programs are being supported and enrolled in by various students; some of these differences are related to sharply different premises about what is a relevant education. The debate can be solved by permitting various programs, as long as they are academically sound and within the province of a public institution, to demonstrate their effectiveness. What one student needs to learn is always different from what another student may need. In order to meet individual needs, different types of programs and learning experiences are desirable.

Do the students support a Black Studies Program? The answer to this question depends upon which of the Black Studies Programs is being discussed. The one that is available within the College already has the support of a large number of students; the one that is reflected in the news accounts has little or no support, except from those who wish to use this inaccurate view as a means of causing additional confusion and to achieve some objective other than support of the institutions. A Black Studies Program that meets the needs of students, that is academically sound, and that does not violate Title VI of the Civil Rights Act is an important and necessary part of higher education. This type of Black Studies Program exists and has support at the College. It deserves the total support of the Washington Community.

Do the students want a change in organizational and administrative procedures? Yes, and when those changes are instituted there will be additional changes desired and required. The question is not whether or not change is needed but the reaction to this need and the means by which changes can be obtained quickly and effective. Students at FCC participate in bringing about these changes. Sometimes we cooperate and sometimes we take actions that intensify the debate; at all times we have the best interest of the College and the students as our principal objective.

Most of the students at FCC work full or part time jobs and attend College because they know the importance of a good education. This objective is number one on their list of priorities. The opportunities provided by FCC are important to the thousands of other District residents who need the opportunities made available by FCC.

The Student Government Association, recognizing that there are many differences and that participation in the development of an institution is not an easy task, pledges its support to the following:

1. The continued growth and development of Federal City College as an institution that is academically and philosophically relevant to the needs of an urban community.

2. The use of student resources in responsible, if not always cooperative, ways to achieve improved opportunities for student learning and achievement.

3. The continued participation on committees, commissions, and council of the College to insure that students are effective participants on the decision-making process.

4. The use of this educational opportunity to better prepare themselves for positions of leadership with government, both District and Federal.

5. The use of this educational opportunity to better prepare themselves for effective performance as both employers and employees within the private sector.

6. The use of this educational opportunity to enable the students, now and in the future, to serve as a community resource.

7. The unity of students in support of the College and against those whose interests and activities are not in the best interest of FCC. This includes persons within and outside the College community.

8. The use of student resources to enable other residents of the District, especially poverty families, an opportunity to benefit from our knowledge and the College's capabilities.

The Student Government Association views the present state of affairs at the College as one of challenge, finding new answers to old problems, finding ways to deal with educational and social problems, and finding ways to use individual resources to solve community problems.

The College has difficulties and disagreements and differences—this should be—it is part of the challenge. Our problems are not a cause for despair and our commitment is to solve them on the one hand while educating those who question the integrity of the College on the other.

FCC is our opportunity, our vehicle, our resource. We hold it in the public trust for ourselves and our brothers and will pass on to our fellow students an institution of high standing.

In cooperation with the College administration, faculty, staff, District Government, D.C. residents, and Congress, we intend to insure that a one hundred year late opportunity does in fact have an immediate payoff.

SALUTE TO HIGH SCHOOL STUDENT LEADERS

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, March 27, 1969

Mr. JACKSON. Mr. President, I feel certain that the distinguished Senator from Massachusetts (Mr. BROOKE), my cochairman for the seventh annual Senate youth program, will join me in a salute to the high school student leaders who were recently our guests. There were 102 representing all of the States and the District of Columbia.

These young delegates who visited us in early February exemplified the highest qualities of American youth today.

While here, they visited with their Senators, questioning us on the key issues of the day. Their questions were bright—and direct.

Such were the delegates to the 1969 Senate youth program brought to Washington by the Hearst Foundation. They were winners not only of the week-long trip but also of $1,000 scholarships. We, of the Senate Advisory Committee, were able to derive great satisfaction from being able to assist them during their stay.

During their stay in Washington, the students were greeted by a number of dignitaries of Government agencies and departments, highlighted by a visit with the President of the United States. He met them at the White House and made a point of shaking every hand. Also welcoming the visitors were Vice President SPIRO AGNEW, Secretary of State William Rogers, Speaker of the House JOHN MCCORMACK, Supreme Court Justice Byron White, Army Chief of Staff William Westmoreland, and FBI Director J. Edgar

Hoover, as well as numerous distinguished men and women in Government.

Members of the Hearst family personally supervised the stay in Washington. Mr. and Mrs. George Hearst have never missed being on hand for the program since its start in 1961. Mr. Randolph A. Hearst similarly takes a great interest in the overall effort which is under the direction of Ira P. Walsh whose original idea it was to make such an opportunity available to qualified contenders. Others responsible for the overall success of the indoctrination were Lt. Col. Robert E. Keener, of OSA–PA, who supervised the military escort officers, planned the Defense Department briefing and arranged for participation of musical groups from the various services which played at official functions; Mr. Stephen King, briefings officer of the Department of State, who arranged a top-level briefing by high Department officials, followed by a buffet luncheon in the Ben Franklin Room of the State Department, and many more representatives of governmental agencies and departments who lent their talents to the success of the program. We thank them all.

On behalf of the Senate, we are grateful to the Hearst Foundation for their generous contribution to education and encouragement to learning. We deeply appreciate the cooperation of our colleagues in the Senate and their staffs who made the delegates welcome.

I ask unanimous consent that the lists of students who participated, and their escort officers, be printed in the Extensions of Remarks.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

U.S. SENATE YOUTH PROGRAM, 1969—WILLIAM RANDOLPH HEARST FOUNDATION

ALABAMA

Judy Joy Hester, Russellville.
Stephen Turner Hardin, Helena.

ALASKA

Phillip Robert Wyman, Sitka.
Gerritt James VanKommer, Spenard.

ARIZONA

Nicholas John Sakis, Phoenix.
Barry Becker, Phoenix.

ARKANSAS

Robert Mitman Mason, Jr., Little Rock.
Russell B. Chitwood, Lake Village.

CALIFORNIA

Michael P. Woodard, Costa Mesa.
Esther L. Valadez, Baldwin Park.

COLORADO

Pamela Fitting, Denver.
James T. Burghardt, Littleton.

CONNECTICUT

John S. Carusone, Glastonbury.
Stephen L. Nightingale, Darien.

DELAWARE

Angelo J. Accetta, Dover.
Brenda Lynn Higdon, Townsend.

DISTRICT OF COLUMBIA

Patrica Marian Eanet, Washington.
William M. McNeil, Washington.

FLORIDA

Bernard Cheeseman, Tampa.
Jose Perez, Miami.

GEORGIA

Kenneth Lowell Shigley, Douglasville.
Melanie Thompson, Atlanta.

HAWAII

Bruce Seaman, Aiea.
Yvonne Yarber, Waianae.

IDAHO

John Sage, Naples.
Claudia Williams, Midvale.

ILLINOIS

Shelby Jean Hoover, Hettick.
Stanley Palder, Chicago.

INDIANA

Patricia Jane Purser, Jeffersonville.
Dean H. Robb, Hobart.

IOWA

Steven Dale Adams, Bettendorf.
Daniel Bookin, Ottumwa.

KANSAS

Gwen E. Adams, Osage City.
Jere LeRoy Totten, Jewell.

KENTUCKY

Benjamin Jones, Campbellsville.
Chris Horvay, Louisville.

LOUISIANA

Peter K. Allain, Jeanerette.
Robert Daigle, Paincourtville.

MAINE

Lisbeth E. Shurman, Dexter.
Estelle R. Beauchesne, Biddeford.

MARYLAND

David Hankin, Baltimore.
Donna Hogans, Rock Hall.

ESCORT OFFICERS—1969 SENATE YOUTH PROGRAM

U.S. NAVY

Senior escort officers

Lieutenant Commander Beverly F. Sheppard, USN, Office of the Chief of Information, Navy Department, Washington, D.C.

Lieutenant Raymond J. Kukulski, USN, Defense Atomic Support Agency, Washington, D.C.

Escort officers

Lieutenant (jg) Gunnar A. Askeland, USN, Bureau of Naval Personnel, Room 2716, Navy Department, Washington, D.C.

Ensign Donald L. Bach, USN, Bureau of Naval Personnel, Room 2735, Navy Department, Washington, D.C.

Ensign Nathan K. Harimoto, USN, Bureau of Naval Personnel, Room 1836, Navy Department, Washington, D.C.

Ensign Wilfred P. Van Loben Sels, USN, Bureau of Naval Personnel, Room 2721, Navy Department, Washington, D.C.

Ensign Cecilia M. Brown, USNR, Naval Security Station, 3801 Nebraska Avenue, Washington, D.C.

Ensign Rosemary L. Berner, USNR, Naval Air Systems Command Headquarters, Washington, D.C.

U.S. MARINE CORPS

Escort officers

First Lieutenant James P. Dusenbury, USMCR, H&S Company, H&S Battalion, TBS, MCB, Quantico, Va.

First Lieutenant Richard J. Muller, USMC, H&S Company, H&S Battalion, TBS, MCB, Quantico, Va.

First Lieutenant Robert W. Riordan, USMCR, H&S Company, H&S Battalion, TBS, MCB, Quantico, Va.

First Lieutenant William B. Zimmerman, USMCR, H&S Company, H&S Battalion, TBS, MCB, Quantico, Va.

First Lieutenant Lorraine M. Garcia, USMCR, Education Center (Language Branch), MCB, Quantico, Va.

Second Lieutenant Sandra Mahoney, USMCR, Marine Corps Exchange, MCB, Quantico, Va.

U.S. ARMY

Escort officers

First Lieutenant Charles W. Bowens, USA, Executive Officer, D Company, 1st Battalion, 3rd Infantry, Fort Myer, Va.

Second Lieutenant James F. Flint, USA, Assistant S–1, 1st Battalion, 3rd Infantry, Fort Myer, Va.

Second Lieutenant Ronald W. Frost, USA, Community Relations Officer, Headquarters, MDW, IO, Tempo B, 3800 Newark, NW., Washington, D.C.

Second Lieutenant David R. Holdridge, USA, Public Information Office, 1st Battalion, 3rd Infantry, Fort Myer, Va.

First Lieutenant Charlene C. Haas, USA, US Women's Army Corps Detachment, US Army Garrison, Fort George G. Meade, Md.

Second Lieutenant Sybil J. Lawless, USA, Headquarters Company, US Army WAC, Fort Myer, Va.

U.S. AIR FORCE

Escort officers

First Lieutenant Malkon C. Baboyian, USAF, 1001 Field Maintenance Squadron, Andrews AFB, Md.

Second Lieutenant Berry T. Cox, USAF, 1100 Support Group, Bolling AFB, Washington, D.C.

First Lieutenant Robert J. Hertler, USAF, 1001 Composite Wing, Andrews AFB, Md.

Second Lieutenant Michael F. Nealis, USAF, HQ COMD USAF (ODC), Bolling AFB, Washington, D.C.

First Lieutenant Cyrena M. Gilman, USAF, Malcolm Grow USAF Hospital, Andrews AFB, Md.

First Lieutenant Karen L. Miller, USAF, 1100 AB Wing, Bolling AFB, Washington, D.C.

THE CAMPUS DISORDERS SHOULD BRING SUSPENSION OF FEDERAL FUNDS

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HARSHA. Mr. Speaker, I share the mounting concern of those who see the current force of anarchy and violence on America's campuses as a possible prelude to anarchy and violence in America's streets where, already, there is too much.

I share the mounting concern of those who see the current campus actions in the name of "freedom," "rights," and "progress" as an abuse of "freedom" and "rights" via the crude, rude, violent tactics of the savage.

I share the mounting concern of those who see the campus agitators and revolutionaries leading their minority followers in a massive, grotesque transgression of the "freedom," "rights," and "progress" of the majority.

In recent years, we have heard a lot of high-sounding oratory about how every American has the "right" to a college education. Personally, I have felt that every American had the right to the opportunity to gain a college education, if he wanted it, if he qualified with the prerequisites, and if he continued to qualify after gaining admission to an institution of higher education.

Ever since the current rash of nationwide campus disruption, violence, anarchy, and revolution began in 1963, I have found increasingly greater cause to ponder whether those whose "major" subject seems to be protest, have not confused their claimed "right" to education with "license" through which education must be achieved.

I have found increasingly greater cause to ponder whether these individuals who hop from claim to claim, charge to charge, cause to cause, complaint to complaint, protest and demonstration to protest and demonstration, disruption and violence to disruption and violence, have not foreclosed upon their claim to certain "rights," whether real or imagined.

Again and again, we see those who cry the loudest for "understanding," "liberality," and "respect" demonstrating little "understanding" of the subject against which they complain, illiberality toward anyone who seeks to rebut their argumentation, and a conduct which strongly suggests little respect for anyone, themselves included.

Again and again, we hear them cry for more and more financial aid from State and Federal Governments, even as they continue to reflect a conduct which suggests loyalty to neither echelon of government.

Again and again, we hear them cry for peace and love and unity even as they deliver warfare and hatred and division.

Again and again, we hear their shouts of abuse and obscenities against law and order and anything and everything representing and reflecting law and order; and, though their cries are raised in the name of a new order, we see within their ranks little semblance of anything but old disarray.

This, I believe, may strike at the heart of the problem which these young people, both malcontent and revolutionary, have foisted upon our society; for order is the essence of national and social establishment, survival, growth, and progress. Without order, there is no freedom, only anarchy. Without order, there is no tranquillity, only confusion. Without order, there is no progress, only retrogression. Yet, in this much proclaimed age of space and era of progress, we have seen, again and again, the components of our educational community delivering their institutions, their community, and this Nation back toward the age of stone and the era of the primative.

Some students have demonstrated greater interest in delivering their own personally opinionated undergraduate lectures and harangues on socio-political-ideological matters than in attending classes in accordance with their ostensible purpose: gaining an education in the field of their proclaimed choice. Worse, some students have demonstrated greater interest in substituting violence for academic reason in trying to impose their minority views, ultimata, and threats upon the institution and the majority of their fellow students.

Educational administrators have failed in their responsibility to protect the majority, and to protect law, order, and the academic process. By this failure, such administrators have betrayed the hundreds of thousands of earnest, law-abiding students whose right and desire to exist in the essential atmosphere of peace, and to gain their education, have been frustrated and violated by that rebel minority which has ordered strikes, seized classrooms and buildings, interrupted and closed classes, and intimidated, threatened and attacked those students who have chosen to dissent from their violent version of dissent.

By failing to invoke the most expeditious legitimate and legal remedy required for restoration of order and punishment of the guilty, such academic administrators have, in effect, cooperated in the coercion of serious students by the minority-led mob. In so doing, they have intensified the threat and damage suffered by the majority which, as an innocent third-party victim, has, in fact, been denied their right and means of prompt recourse.

It is time that, if those immediately responsible for infusing some old-fashioned American horse sense into this psychedelic nonsense continue unwilling or unable to do so, the Congress must have little choice but to do so. Congress has the responsibility to protect the Federal interest, represented by the gigantic investment of taxpayers' dollars in programs, grants and moneys which Congress, itself, has poured into such institutions. Congress also has the responsibility to protect the rights of the majority of students who are sincere in their efforts to obtain an education and abide by the lawful established processes within this Nation.

The young rebels make great pretense to demands that spokesmen for what they so derisively call, "the establishment," speak with candor, "tell it like it is."

Well, this is "like it is" as far as this Member of the Congress is concerned; let the young rebels, student and teacher alike, get it straight:

Congress has no responsibility to appropriate Federal funds for even the indirect subsidization of a student nor a teacher who demonstrates disloyalty to this Nation, disobedience to its laws, violation of its order, contempt and animosity to the source of the subsidy, and transgression against the rights of the majority of the students.

In short, Congress has no responsibility to appropriate Federal funds for even the indirect subsidization of a student or a teacher whose conduct, activities, demands, and threats default upon the very rights, freedoms, and opportunities to which they lay claim.

Congress has no responsibility to appropriate Federal funds for academic institutions which permit such conduct and which, in doing so, foreclose upon their claimed objectives and upon their claims to congressional monetary consideration, support, and subsidization. These colleges and universities are chartered and accredited—as academic institutions; not as institutions which function

to tolerate, encourage, and reward revolutionary and/or criminal conduct.

These colleges and universities are institutions of academic nature, character, interest, and pursuit; not institutions for political and criminal misconduct and asylum. Academic freedom does not extend to license to violate a specific nor implicit contract with the source of Federal funds. Academic freedom does not extend to license to violate and deny the rights of peaceful students or faculty.

Academic freedom does not extend to license to destroy the academy and, therefore, academic freedom.

I, for one, have no desire to infringe upon any freedom, including that seemingly ever-expanding condition known, a bit too loosely, as academic freedom. But I do believe, in light of what this Nation is now reaping from institution after institution into which multibillions of public moneys have been poured that, however reluctantly, the Congress of the United States is compelled to take a long look at what, precisely, its established procedure of "funding but not questioning" has really wrought.

The release of the text of the letter on the campus disorder problem which, on instructions of President Nixon, Health, Education, and Welfare Secretary Finch has dispatched to college and university administrators has only punctuated this fact; so has the release of President Nixon's own commentary thereon.

Clearly, the message of the Finch letter and the Nixon commentary is that, between the Government and the school administrators, neither the 1968 law nor the 1969 law which Congress passed in an extremely mild and highly restrictive effort to protect Federal interests has ever been invoked.

The 1968 law—section 504 of the Higher Education Amendments of 1968—specifies that if any student is convicted of a crime in a court, or if he has committed what his college or university regards as a "serious" violation of its own regulations, he is to be declared ineligible for 2 years to receive Federal scholarships or loans.

The 1969 law—section 411 of the Department of Health, Education, and Welfare Appropriations Act for fiscal year 1969—specifies that any student convicted of a crime related to a campus disorder becomes ineligible to receive Federal loans and scholarships.

The 1968 law puts the burden of enforcement on the colleges and the universities; the initiative for enforcement of the 1969 law is thought to lie with the Federal Government—principally, the Department of Health, Education, and Welfare.

We are told that the Department's failure to enforce this rather simple, basic 1969 law is principally because the Department finds it difficult to know which students receive the funds it doles out for student loans and scholarships. The alibi for this is that, as a rule, these Federal funds for students are distributed to colleges and universities in lump sums, and the colleges and universities take command of the selection of the recipients.

This alibi is either a sorry admission of a woeful inadequacy, ineptitude, indolence, and incompetency on the part of academic administrators and the Department of Health, Education, and Welfare or it is a monumental insult to the intelligence of the Congress and the people.

It certainly suggests if nothing more, that, even though the Government people may be willing to enforce the law, the academic people are unwilling and, therefore, frustratingly uncooperative. For now, I shall pass the logical question: Why has the Government permitted this? To raise the more basic question: What else should we expect but this apparent unwillingness, if not refusal, of academic administrators to punish students convicted of lawbreaking as set forth in the 1969 law, when they have proved unwillingness, if not refusal, to punish students who break their own regulations as set forth by the 1968 law?

This failure, by the Department of Health, Education, and Welfare, and by the academic administrators to invoke these two simple, modest efforts to end, at least for a time, the Federal subsidization of no more than 1 percent of the students actually involved in campus disorders is, in reality, the most revealing and shocking aspect of the Finch letter and the Nixon commentary. It could be made no clearer if it were handed down in a special message to Congress. Certainly, the point is clear: Something even more basic, more simplistic, is required—not just to get the Department of Health, Education, and Welfare moving, but to relieve the academic administrators of what, to them, quite obviously, is the unhappy, perhaps impossible, burden of helping the Federal Government enforce the law. Furthermore, it is now admitted that, even if this pair of mild, bland laws had been enforced, the real problem of campus disorder would not have been ended, for they would have punished all too few of those responsible, and would have done so all too late, even without consideration of the time required for the modern appellate process.

I suggest, therefore, that the Congress give serious consideration to conducting something of an audit of its expenditures in the name of education and of the gains therefrom. There would be no better, more natural, opportunity for such an audit than any condition on any campus wherein the educational process to which the Congress has contributed taxpayers' moneys is disrupted and interrupted by disorder, building seizure, student and faculty strike and, certainly, violence.

As soon as such condition develops, I suggest that, within 5 days, all Federal funds already appropriated for that institution or any program therein be frozen, and remain frozen until that institution's administration restores law and order to that campus, if necessary, with the assistance of the full impact of whatever agency or agents of law and order are required; and, that accomplished, that said funds remain frozen until that administration prosecutes all violations of law, and submits to the satisfaction of the Secretary of Health, Education, and Welfare a program which would fully assure that repetition will not occur.

I suggest further that any teacher or instructor or lecturer found guilty of violating any law in connection therewith shall forfeit all Federal subsidy, stipend, or payment of any kind from Federal sources.

Toward that end of establishment of commonsense, propriety and balance in taxpayer-supported educational institutions; toward that end of restoration of law and order; toward the end of protecting the rights of the majority of the students, and toward the end of putting some needed backbone into academic administrations, I will introduce legislation to provide such remedies.

DR. EDWIN MITCHELL, A LEADING RESIDENT OF NASHVILLE, TENN.

HON. HOWARD H. BAKER, JR.

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 27, 1969

Mr. BAKER. Mr. President, the March issue of the Nashville magazine contains an excellent article about Dr. Edwin Mitchell, a leading resident of the city of Nashville. I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. EDWIN MITCHELL: GENTLEMAN FROM THE GHETTO

(By Pat Harris)

On October 12, 1967—just a few weeks after North Nashville erupted into a riot—a slim, bespectacled doctor stood before some 400 people at a Chamber of Commerce breakfast meeting and called them "brave and unthinking men!" Dr. Edwin H. Mitchell, who walked the riot area in an attempt to avert the violence brewing along Jefferson Street and who was struck down by a hurled rock, had been asked by David K. Wilson, then president of the Nashville Area Chamber of Commerce, to address the group.

His talk stunned an audience which included U.S. Rep. Richard Fulton and Metro's Mayor Beverly Briley, both seated at the speaker's table.

"Tall buildings," Dr. Mitchell told them, "which allow you to gaze out upon the green grass of suburbia cannot long shelter you from the desperate frustration and pettiness that continues to build around you."

Then he added:

"There is something wrong with a community that unites its government but divides its people."

Warning of "a giant step backward," he charged that their plans for a "forward Nashville" were a mockery in the midst of poverty that rings the city.

The Nashville Tennessean called Dr. Mitchell's talk "a broad indictment of both the private and public sector of local community leadership and thoughtless planning, wholesale job discrimination and inferior segregated housing patterns."

What manner of man stands up for his beliefs where it counts when he could so easily look the other way and enjoy his own personal success in life without becoming involved? In this instance, an almost self-effacing individual who sees nothing at all unusual about himself.

In his small office at Meharry Medical College is a sign:

"Before you ask, the answer is No!"

Actually, Dr. Mitchell finds it difficult to turn anyone down. His home phone, as well

as his office phone, rings with requests from people needing help, which keeps him a thoroughly busy man. In addition to his fulltime job as associate professor of radiology at Meharry, he is president of the Davidson County Independent Political Council and chairman of the Metropolitan Human Relations Commission.

Established by Metro Council in December of 1965, the Commission replaced Mayor Briley's bi-racial advisory committee on human relations launched in the spring of 1963. It was set up under an ordinance introduced by Councilman Z. Alexander Looby to investigate complaints of discrimination, recommend legislation and promote fair treatment of citizens. In 1966, Dr. Mitchell was elected the first chairman of the Commission. Its members are appointed by the mayor subject to council confirmation.

Dr. Mitchell's main interest, however, appears to be the Davidson County Independent Political Council, a group formed in 1962 to advance the rights of the Negro through political means. Within a short time, he was elected president succeeding State Senator Avon Williams.

"We formed the Council," he explains, "because the NAACP could not engage in political activity. A similar group in Shelby County approached us and asked us to become affiliated on a statewide basis with the Tennessee Voters Council. Then we enlarged to include eastern Tennessee."

During the political campaign of 1962, Attorney Looby ran for the State Supreme Court, was endorsed by the Council and polled well over 100,000 votes although he was defeated. "This really got us off the ground, however," says Dr. Mitchell. "And by the way, we don't zero in on race. We're an integrated effort addressing ourselves to the problem of poverty—and the problem of the Negro is inseparable from the poor of any group except that the black man has the additional problem of being black."

Specifically, what does Dr. Mitchell's Council want?

"We want to see minority representation in government at policymaking levels," he responds, "as well as in jobs throughout government. We want to be able to make our case before government and have some reasonable assurance that we're going to get an equitable hearing."

And he adds:

"I think we're making progress. I think people follow us because they trust our board. We ran an appeal to them. I believe that we have kept the faith with them."

Dr. Mitchell's background dictates no particular reason for becoming embroiled in civil rights. He had a middle class upbringing, he has utilized his intelligence to take advantage of opportunities available and, in the parlance of our age, he has "made it."

In short, he had nothing to gain in a material sense and a lot to lose two years ago when he went into the heart of the impending riot and tried to mediate the conflict. He still bears a scar on his back from the rock that struck him.

Born in Norfolk, Virginia, on December 21, 1921, he and his family moved to Yonkers, New York when he was five years old. His father had been working as a laborer at the Norfolk naval base and his mother was a teacher. In Yonkers, his father joined a brother in a small business which went bankrupt during the depression of the 'thirties, and then became a Pullman porter whose main run was to Buffalo and Sarasota. The elder Mitchell died in January of this year. Dr. Mitchell's mother has retired and now lives in Cambridge, Massachusetts.

Mitchell grew up in what he describes as a "lower middle class neighborhood," attended public high school there, was a member of the National Honor Society and did a little daydreaming about becoming a doctor.

"I just didn't see how it would be possible financially for me to study medicine," he says.

Winning a scholarship to Brockport State Normal, Mitchell won his varsity letter in basketball his first year, then transferred to Albany State Teachers College in 1941. Once more he considered studying medicine—this time at the suggestions of both his coach and the school physician. And once more he decided he couldn't swing it financially.

"The draft was pending," he says, "so I went into the Army in August of 1942 in Chemical Warfare Service."

Mitchell was assigned to a replacement training depot at Camp Sibert in Gadsden, Alabama, where he taught illiterates and trained recruits. Rising to the rank of sergeant in 1943, he took exams for the Army Specialized Training Program and was transferred to basic engineering at Prairie View State College in Texas (near Houston) for three months. While there he took the army exams for pre-med training and in December entered Meharry Medical College.

During his sophomore year at Meharry, Dr. Mitchell received his honorable discharge from the Army, and in April of 1947 he was married to Noella Pajaud, a pretty young medical student from New Orleans. She was the only child of parents who had hoped she would continue in a small family business they operated and who were disappointed that she chose medicine instead. She had her choice of entering medical school at Howard University in Washington ("for some reason, my parents opposed the idea of my living in Washington"), Women's Medical School in Chicago ("I hated the idea of an all-woman school"), and Meharry.

Upon graduation in 1948, the couple interned together at Harlem Hospital in New York City where some of the grimmer facts of life among the poverty-stricken confronted them.

"At the time," he says, "we looked on it as real 'scut' work, but one of the most rewarding assignments we had was to ride ambulances. The things we saw were unbelievable. We went into Puerto Rican neighborhoods, for example, where coal bins and basements with no lights were rented to the poor. Bedrooms were partitioned off with sheets. There was hardly breathing space to be found."

In addition, the Mitchells had arrived in New York during one of the city's perennial garbage strikes and "my wife wasn't too impressed with garbage strewn all over."

After his interneship, Dr. Mitchell became director of out patient clinics at Sydenham Hospital and his wife joined the pediatrics clinical staff, where the two worked from July of 1949 until February of 1951.

Re-entering the Army (this time as a first lieutenant), Dr. Mitchell was sent to Fort Sam Houston in San Antonio, Texas, for medical officer training. When he was transferred to Fort Jackson in Columbia, South Carolina, his wife joined him along with their two small daughters, Tresa, who was born December 27, 1947, and Cheryl, born December 20, 1950. After six months there, he was sent to Japan. His wife elected to remain in Columbia where she almost casually managed to combine the rigorous duties of motherhood with those of physician.

"One of the doctors went on a three-month fellowship," she says, "and I handled his medical practice. After he returned, I opened my own office. It was great! I enjoyed it!"

Mrs. Mitchell's subsequent retirement from the practice of medicine was not just because of the demands of her growing family.

"There was a sort of personal disillusionment involved," she says. "I have never been impressed with the growing isolation of the doctor from the patient."

After his Army stint, Dr. Mitchell and his wife opened a joint medical practice in Camden, South Carolina, until 1956 when they returned to Nashville where he took specialty training in radiology at Meharry. By that time, the family numbered two more children—Edwin, Jr., born April 22, 1954 (the only member of the family whose birthday does not fall in December), and Kathryn, born December 7, 1958. Mrs. Mitchell's birthday is December 25.

Upon completion of his course, during which he was a National Institutes of Health trainee, Dr. Mitchell became a Commonwealth Fellow in radiology at Columbia Presbyterian Medical Center in New York in 1959. Returning to Nashville in July of 1960, Dr. Mitchell joined the staff of Meharry as assistant professor of radiology.

He teaches a formal course in radiology, reads X-rays and treats patients. The school has a training program for residents and a school of X-ray technology plus year-round student electives. Add to this the inter-departmental conferences and the obligations of staff membership committees and administrative functions, and Dr. Mitchell has little free time. What he has is often spent reading books and articles on sociology and politics.

He gives the impression of being a thoughtful person who is not only attempting to define the problems of his race but is also seeking practical solutions—without too much hope of success in his lifetime. Expressing his view of "black power," he asks:

"Black or white—why does the adjective make it different? I think that it implies the inconvenience of not having all that cheap labor, which is frightening to some people."

He also thinks that black power is "an effort to express the realization that the black man has a heritage of which he can be proud and to try to create out of this a positive force for correcting the inequities which the black man has suffered."

Hardly a week goes by, he says, that he does not get a phone call from somebody with job problems or difficulties relocating because of urban renewal or highway projects. He says he gets frequent calls, also, alleging abuse by the police. Such calls he refers to the Human Relations Commission for follow through.

The Mitchell family is pretty firmly settled down now after all their moving around. Tresa, a senior at Fisk University, is interested in entomology. Cheryl is a freshman there and her interests are divided between psychiatric social work and writing. Edwin is a ninth grader at Father Ryan and Kathryn is in the fifth grade at St. Vincent de Paul.

They live at 2403 Underwood in North Nashville. Mrs. Mitchell, who is as outgoing and impulsive as her husband is quiet, directs an Opportunities Industrialization Center office on Jefferson Street not far from Meharry. Almost every day the Doctors Mitchell meet for lunch at their home.

On one such day, he was forced to interrupt his lunch to confer with a plumber in the front yard investigating a large leak in a water pipe. Several blocks away, the sounds of construction work on Interstate 40 punctuated the air.

"He's generally rather shy," she said while he was gone.

"But one thing about that type—when they do get mad, you really listen!"

Although different in personality, Dr. Mitchell and his wife are much alike in intellect, humor and sensitivity. And they are both firm in their commitment to justice and equality of opportunity for all, no matter what the personal cost. Flight to the more affluent suburbs does not interest them.

They have added two bedrooms to their original three-bedroom house and have acquired a couple of collie dogs. And in Dr. Mitchell's words, "It looks like we've added a swimming pool, too."

Standing in the front yard surveying the gaping hole in which muddy water was bubbling up from the broken pipe, he explained that the plumber had told him the damage was caused by the blasting on Interstate 40. Then he added succinctly:

"Progress!"

As his wife described Dr. Mitchell, he is "a

very quiet and gentle person, and sometimes people mistake his gentleness for no firm conviction . . . and they couldn't be more wrong."

TRIBUTE TO DOUGLAS ROWE

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HANSEN of Idaho. Mr. Speaker, we recently received the sad news that another of Idaho's finest young men, Douglas Rowe, of Blackfoot, Idaho, has lost his life in Vietnam. This is another grim reminder of the tragedy of the war and of the urgent necessity to give the highest national priority to our efforts to bring the war to an end and to build an enduring world peace.

In an eloquent tribute to Pfc. Douglas Rowe, one of Idaho's most distinguished editors, Mr. Drury Brown, of the Blackfoot News, has raised some questions that are deserving of answers. I include Mr. Brown's editorial as a part of my remarks:

PRIVATE DOUGLAS ROWE DIES

(By Drury Brown)

Word was received by his parents yesterday that on March 9, 1969, Private First Class Douglas Noel Rowe died in battle in Vietnam. The notification did not reveal the place of his death. Neither was it revealed when his body may be returned to Idaho.

Private Rowe was born Nov. 13, 1946 in Rupert, Idaho. He was the son of Mr. and Mrs. Noel F. Rowe, 706 South Fourth Avenue, Pocatello, Idaho. He is survived by his parents; by two brothers; Alvin Rowe, Washington, D.C., and Airman First Class Steven Rowe, now stationed in Thailand, and by a sister, Elaine, Pocatello.

Private Rowe attended school in Blackfoot, graduating from Blackfoot High School with the Class of 1965, and thereafter attended Idaho State University, Pocatello, for two years.

He was a member of The First Baptist Church of Blackfoot. Time of funeral services cannot be established until the family has been notified by the Army when his body will be returned. But it is announced by his parents that the funeral will be held in The First Baptist Church of Pocatello and burial in the Blackfoot City Cemetery.

This is the sort of simple war statistic that has appeared thousands of times in American newspapers since the beginning of our involvement in the undeclared war in Vietnam.

But Doug Rowe is much more than a war statistic. Doug is the little boy grown to man. He is the son and brother who, through his entire lifetime, was a source of extreme pride to his family. He was intelligent and fun-loving yet always unassuming. He was clean-cut and fastidious. He was the thoughtful and dependable boy that carried a newspaper route. In so doing, he won the affection and esteem of the people to whom he delivered the newspaper. He was the young man who for four years worked part time in the office of the Blackfoot News and who was mature and competent enough in his last summer of employment to act as its circulation manager.

He was the talented guitar player who with Nancy Edison, Julie Hutchings and Joe Evans, made up one of the most entertaining and delightful singing groups ever formed in Blackfoot High School.

Doug Rowe became one of the group of young American men who were unable to plan their careers because conscription to military service was hanging over their heads. Doug thought the war in Vietnam was wrong—that it was a waste of the nation's energy and resources—he believed that most of the people in the little nation of Vietnam wished that we had not come there and that we would leave—that it was immoral for us to be fighting there.

With such thoughts in mind, perhaps it was natural that Doug found it impossible to finish his college work while waiting for the draft to reach him. He dropped out of school and, while waiting, he took a job selling encyclopedias in Torrance, Calif. He reported to his family that he had met with startling success in the field of selling—that such would be the career he would pursue when his service to his country was completed.

He received his draft call in August, 1968.

In one of the last letters received by his family from Doug in Vietnam, he wrote that he had just returned from a 10-day military operation in the jungle. During that period there had been no time to bathe, shave nor change clothing.

Doug's family had every reason to be proud of him in life. They may find little solace in the assurance of military authorities that their son and brother died in Vietnam as a hero, nor in the flying of the flag over Blackfoot High School at halfmast the day that he will be buried. We can grieve with them as we remember there was every reason to think he could have made a very real contribution to his world.

There are many of us who knew Doug Rowe who believe, as he did, that the war in Vietnam is a tragic mistake into which the nation was dragged by an ill-conceived foreign policy.

Perhaps the greatest tribute such of us could pay to his memory is to demand without ceasing that the old men who make wars in which young men fight and die shall cease dragging their feet in the pursuit of the peace to which they say they are committed, and that saving the lives of both American and Asian boys has a much higher priority than saving the faces of political and military leaders.

THE DRUG PROBLEM

HON. EDWIN D. ESHLEMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. ESHLEMAN. Mr. Speaker, the shocking testimony before the Senate District Committee concerning the use of narcotics in Washington, D.C., should be thoroughly examined for the variety of implications to be found within the contentions of the witnesses. The growth of dope traffic and addiction in the Nation's Capital is one example of an escalating trend across the United States. If the pattern in Washington is an indication of what is happening in other areas of the country, our young people are the foremost victims of the fast spread of drug abuse.

Of particular importance, I think, is the identification of the ultimate source of the narcotics traffic in Washington. Supplies are shipped into the metropolitan area by organized crime wholesalers in New York. We know that past evidence shows that organized crime is trafficking drugs into all other sections of the country. The crime syndicates take substantial profit from the narcotics trade that conservative estimates indicate amounts to more than $350 million annually.

While the thought of vast sums of illicit money going into the pockets of racketeers as a result of dope distribution, is disturbing the effects on society wrought by criminal promotion of addiction are appalling. The Washington situation points out that ghetto youths are becoming addicts in junior high school. These children are being pushed into a habit that ranges in cost from $50 to $200 a day. Since they come from the most economically deprived families imaginable, it is obvious that they must turn to crime for the money to support their use of drugs.

Dope pushing, prostitution, armed robbery, shoplifting and any other criminal means of obtaining dollars for drugs are resorted to by young people who have fallen into the narcotics habit. They therefore become pawns for racketeers who use young addicts to service many aspects of big crime operations.

While we must not ignore the tragedy of the drug problem among middle- and upper-class youths and must resolve to combat the narcotics traffic on all fronts, the indications that great numbers of ghetto youths are turning to drugs should be particularly alarming to the Congress. We have established as a national priority aid to disadvantaged people within our inner cities. Yet, no financial help we could possibly afford to appropriate could meet the needs of a generation hooked on hard drugs. Perhaps, our priority has been aimed in the wrong direction. The Washington example convinces me that we have not done nearly enough to stem the ravages of criminal activity which prey daily on our citizens in the ghetto.

INQUIRY WELCOMED

HON. JOHN R. DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. DELLENBACK. Mr. Speaker, at a time when Congress is looking into the rising costs of lumber and plywood and the effect of high prices on the Nation's housing program, it is gratifying to see a newspaper give its wholehearted support to this important investigation. The Eugene, Oreg., Register-Guard recently outlined some of the problems and suggested possible solutions which might be considered by the Congress.

I commend this responsible editorial to my colleagues as a fair and definitive explanation of the problems of the forest products industry:

INQUIRY WELCOMED

Leaders in most industries cringe and complain when the government launches investigations to determine why product prices are going up. But lumber and plywood industry manufacturers are responding most enthusiastically to the inquiry President Nixon has ordered to identify reasons their prices are zooming.

This is no put-on. Lumber and plywood mill operators are delighted to have this chance to prove long-ignored contentions that government actions have caused imbalance between their raw material supplies and their market opportunities. They want the nation, and especially the Congress, to know why plywood prices have skyrocketed 92 per

cent in the past year and why Douglas fir lumber items have been marked up some 30 per cent.

These manufacturers are anxious to have President Nixon's Cabinet Committee on Economic Policy prying into their cost-price affairs. They hope a committee task force will recommend that executive and legislative branches of the federal government act to: 1. facilitate harvesting of more ripe timber from federally owned forests, thus dampening mills' raw material costs, and; 2. promote more even year-to-year building construction rates, thus reducing wild fluctuations in demand for lumber and plywood and permitting more efficient operation of their mills.

Forest product industry leaders see possibilities of profit opportunities that, in the long run, will be better than they've enjoyed in alternating periods of light and heavy demand for their products. They are quite aware that high prices on lumber and plywood will induce the construction industry to use less expensive substitute materials wherever possible.

So there's really no mystery about the lumber and plywood manufacturers' response to the investigation being made of their prices. They figure this can only lead to full disclosure of log supply cost problems and of the effects of feast-or-famine demand cycles in marketing their finished wares. As they see it, Uncle Sam should understand that he can promote lower lumber and plywood prices by permitting more realistic utilization of the tremendous tree farms he controls and by fostering greater steadiness in national building rates.

FIFTY YEARS FOR GOD AND COUNTRY

REMARKS
OF

HON. JAMES R. GROVER, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. GROVER. Mr. Speaker, this year, 1969, will be marked nationwide by observances of the golden anniversary of the American Legion.

In my home county of Suffolk in New York State the golden anniversary will be celebrated by a series of events.

Outstanding Legionnaires of our county, led by Committee Chairman James Heneghan and county Commander Joseph J. Stinsman, will organize the golden anniversary celebrations.

A convention parade will be held in Patchogue, N.Y., on June 13–14, with gaily decorated floats depicting all phases of American Legion programs and activities.

The golden anniversary observances will culminate in a memorial presentation to Suffolk County on Veterans Day—November 11, 1969.

The memorial will consist of 10 trees to be planted on the site of the county seat. Each tree will be in tribute to the memory of those citizens of our 10 towns who have given their lives for our great country in her military service.

The Legionnaires of Suffolk are to be complimented for their observance of the golden anniversary in this memorable manner, and they are to be congratulated and honored for their great and lasting contributions to our community, State, and Nation.

AMERICAN MARITIME INDUSTRY: NEW HOPE

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. MAILLIARD. Mr. Speaker, on January 31, Mr. Edward M. Hood, president of the Shipbuilders Council of America, spoke before the annual meeting of the Western Shipbuilding Association in San Francisco. On that occasion, Mr. Hood took particular note of the change in the administration, and based upon earlier statements of the President concerning the deterioration in our maritime posture—a factor well known and appreciated by most Members of Congress—he expressed an optimism or new hope for the future of the American maritime industry.

I join with Mr. Hood in looking to the future somewhat optimistically with the view that we in the Congress may be able to act in greater consonance with the current administration than has been the case in the past. I would only point out, however, that the monumental task of bringing about a resurgence in our maritime posture cannot be accomplished by the Government alone.

On October 11, 1968, I addressed the 42d annual convention of the Propeller Club in St. Louis, Mo. Like Mr. Hood, I, too, referred to the statements concerning our maritime posture made by now President Nixon, and specifically the following comment that "the time has come for new departures, new solutions, and a new vitality for American ships and American crews on the high seas of the world."

A similar note was struck by the President in the issuance of his recently executed proclamation setting aside May 22d as National Maritime Day 1969, when he observed the following:

> Through the cooperation of business, labor and Government, and with prudent use of advancing technology, the American Merchant Marine must become capable of providing modern, productive service to the Nation's commerce as an integral part of transportation.

It is in this spirit of recognition of necessary action to restore the preeminence of the United States upon the high seas that I insert the following remarks made by Mr. Hood on January 31 for the benefit of my colleagues:

SPEECH BY EDWIN M. HOOD, PRESIDENT, SHIPBUILDERS COUNCIL OF AMERICA

Let me begin by expressing again the appreciation of the Shipbuilders Council of America for the endeavors of the Western Shipbuilding Association, in 1968 and earlier years, to improve the environment for shipbuilding and ship repairing not only on the Pacific Coast but in other sections of the country. On problems and issues of common interest a special spirit of harmony has developed between us, and I look forward to a continuance of this cooperation as a new era in American history unfolds.

As a change in political administration takes place in Washington, D.C., there is inevitably much conjecture as to the tone of government that will evolve. There is considerable speculation as to the direction Federal policies and programs will from henceforth take. The establishment of priorities, the extent to which emphasis is applied to areas of critical need, and the structure of the policy-making processes will thus be followed with more than casual interest by most citizens, including those of us in this audience and elsewhere who derive their livelihoods, either directly or indirectly, from shipyard activities.

Few Presidents of the United States have entered The White House with a detailed exposition of their thinking with regard to shipbuilding already contained on the public record. But President Nixon has! His positions on maritime and naval affairs were rather extensively defined in statements released during the 1968 campaign on September 24 and October 25 respectively.

In these appeals to the American people, President Nixon pledged his efforts to these two important objectives, among others: the constant availability of a United States Navy second to none and the prompt restoration of the United States as a first-rate maritime power.

He also called for: a higher level of coordination between naval and merchant shipbuilding to create a climate in which shipyards cans attract investment capital and retain stable labor forces . . . better use of credit facilities, amortization procedures and long-term government cargo commitments to stimulate U.S. shipbuilding . . . and tax incentives and cargo assistance for domestic shipping operations. In addition, he promised support for a domestic shipbuilding program to produce a fleet of American-flag merchant ships capable of carrying 30 percent of the nation's trade and commerce instead of the present 5 percent. And, he urged vigorous research and development programs to harness the latest technology to the needs of the maritime fleet.

Throughout history, unusual circumstances have often frustrated good intentions, but more frequently lofty aspirations have been fruitful. If our new President can achieve the goals I have just summarized, he will have succeeded in an area where his immediate predecessors have been eminently unsuccessful. Though there is much optimism favoring full achievement, even partial accomplishment will result in a greater magnitude of naval and merchant shipbuilding than has been the case during the past eight years.

The optimism to which I have referred is not the hand-rubbing, gleeful variety; it stems from the solemn hope that the priorities and policies of the new Administration will, at long last, take into account a very grave condition. The ships in our naval fleet . . . the ships in our oceangoing merchant fleet have grown older and older; our fishing fleet, our Great Lakes fleet and our domestic shipping fleet are plagued with antiquity; in short, our shipbuilding effort has not been equal to overcoming the reality of galloping obsolescence.

While successive national Administrations, over the last decade, have dealt with this obsolescence problem only minimally, it is generally believed that the point of further expediency has long since passed and that further procrastination in the reconstruction of U.S. sea power resources could endanger the national security. Many pages of Congressional testimony and several authoritative reports put this danger in the context of the Soviet Union's growing strength on the oceans and sound the alarm "loud and clear."

The emergence of communist sea power has graphically defined—and demonstrated—the role and importance of ships as functions of domestic and international policy. Since the end of World War II, however, the Soviet Union and the United States have viewed the role and importance in spectacularly different ways. A national purpose of fixed determination to move ahead has pre-

vailed in Russia. Conversely, to this point, the United States has had schizophrenia as to what our overall posture on the oceans should be.

In the last decade, the Russians have advanced to a position of sea power strength from which the interests of the United States and the entire Free World can now very definitely be challenged. As Russia has moved ahead, the United States has dropped from first to fifth position as a maritime power; as a shipbuilding power we have dropped from first to ninth position; and the Soviet Navy is presently second only to that of the United States. In the vacuum created by American lethargy and the retreat of the British Navy on all fronts, the Kremlin obviously hopes to use the oceans for exploitation of Soviet geopolitical objectives.

The Russians have been building many more merchant ships than we have. At mid-1968, they were constructing 448 ships compared to our 58. There are other startling statistics; for the past several years new ship deliveries to the Russian merchant fleet have outpaced U.S. deliveries by a ratio of nearly 8 to 1 . . . about 80 percent of the Soviet shipping fleet today is less than 10 years of age, while approximately 80 percent of the American merchant marine is 20 years of age or older . . . in the past 20 years, more than 1,000 ships have been added to the Russian merchant marine, while in the same period our shipping fleet has contracted by about 1,000 vessels . . . 58 percent of the ships in the U.S. Navy are at least 20 years of age and less than one percent of the Soviet Navy's surface combatant ships and submarines are 20 years old or older.

While the Russians have been putting together a formidable merchant marine and naval force, which in the words of the Chief of Naval Operations, Admiral Thomas H. Moorer, represents a "threat to the United States' supremacy at sea," those responsible for our maritime policy have seemingly been oblivious to all that has been taking place.

There have, in the past four years, been those in high Government posts who have regularly downgraded the aggressive, steadily expanding, buildup of Russian strength on the oceans. There have been those, in high places, who have invoked the hallucination that the United States—and the Free World—have nothing to fear from the Russians on the high seas. They have derided the supposition that the Soviets have any ulterior motives of using sea power to enhance foreign policy objectives or to support psychological, political and economic warfare.

Last September, here on the West Coast, in Seattle, President Nixon deplored, in his words, this "shocking de-emphasis on our national maritime efforts" and added "if we permit this decay to continue we will find that we have abdicated our maritime position to none other than the Soviet Union." In that same statement, he also had this to say:

"To overcome the present maritime crises, I recognize that we have an opportunity and an obligation to reverse the gross deficiencies that have marked the present (Johnson) administration's performance in this field.

". . . the leadership for national policy can and will come from a new Administration."

Compared with the litany of the Johnson years, these are refreshing words. They would seem to constitute a more favorable prospect for a more constructive and comprehensive approach to the nation's maritime and naval shipbuilding needs than has heretofore prevailed.

These needs, I have emphasized from the standpoint of programs coming within the purview of the Nixon Administration. But, there are other non-government requirements for ships which could quickly multiply. For example, the discovery of oil on the North Slope of Alaska will require a means of waterborne transportation not only to move equipment and supplies to Alaska but to haul crude oil from Alaska to West Coast or East Coast refineries. This could involve barges as well as tankers. Estimates range to as many as 50 large size oceangoing tankers to service this new oil field. Some of these could no doubt be built on the West Coast, and many, once in operation, would surely be repaired and overhauled by shipyards represented in the membership of the Western Shipbuilding Association. And, this activity could portend a revival of many coastal and intercoastal trades and a restructuring of traditional patterns in the movement of oil.

By any scale of measurement, the prospective work volume from governmental as well as commercial sources could well place U.S. shipbuilding on the brink of unprecedented growth. Translation of President Nixon's objectives into action programs could result in the greatest peacetime shipbuilding effort under Federal auspices the nation has ever seen, presenting vast new challenges for our shipyards. It could shape an entirely new environment for the procurement of ships in which manpower, facilities and productivity will be crucial in the cost equation.

Fortunately, every major shipyard in the United States is "gearing up" for this prospect. Through management skills, capital improvements, new techniques and cost reductions, a significant renaissance in U.S. shipbuilding is taking place. It holds great promise for the future in terms of work stability, employment for craftsmen and shipyard profits, and more dramatically, as an expression of declared national intention that the aspirations of free men and women everywhere will not be subjugated de facto through Soviet expansionism on the seas.

THE ABOLITION OF SLAVERY IN PUERTO RICO

HON. JORGE L. CÓRDOVA

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. CÓRDOVA. Mr. Speaker, the 22d day of March 1873, was one of jubilant celebration in Puerto Rico, then a colony of Spain. On that day—after decades of tireless efforts on the part of Puerto Rican patriots such as Dr. Ramón Emeterio Betances, lawyer Segundo Ruiz Belvis, and newspaperman Julio Vizcarrondo Coronado, who had the valuable cooperation of his American wife Harriet Brewster—the abolition of slavery was proclaimed, and some 29,000 human beings were freed from their pitiful condition of servitude. In San Juan, the capital city, and other island towns, people rejoiced in parks, streets, market places, and churches, with since demonstrations that lasted well into the evening.

There was good reason to be happy. The institution of slavery, which dated back to July 22, 1513, when it was made legal by royal decree of King Ferdinand, was only adopted as an urgent measure to provide a working force in a rapidly sinking economy, but along the years it had become truly repugnant to the Puerto Ricans.

By the middle of the 19th century there was already a general feeling against the inhuman practice which made some men the property of others, and a secret abolitionist society was organized to buy and liberate the newly born children of slaves at $25 each. This was followed by proposals submitted to the Spanish Cortes for the elimination of slavery, with or without any idemnity.

In a rapidly changing society, Puerto Rico was anxious to follow the liberal currents born of the French Revolution a few decades before; but what really triggered some positive action was the Emancipation Proclamation, signed January 1, 1863, by the martyred President of the United States, Abraham Lincoln.

Puerto Rican leaders met in Madrid and talked to ministers, legislators, newspapermen, lectured in literary clubs, moved public opinion in every possible way to no avail. They were praised for their efforts, but officialdom was slow to move.

It took the military coup which dethroned Queen Isabella in 1869, and the proclamation of the Spanish Republic in February 11, 1873, to change apathy into action, and turn indifference into sympathy. The new National Assembly of Spain finally passed, by an almost unanimous vote, the Abolition Act of which all Puerto Ricans are justly proud.

On March 30, 1873, a solemn high Mass was held at the San Juan Cathedral, and in a balcony speech delivered to the crowd in front of the Fortaleza—Governor's mansion—Governor Martinez Plowes said:

This date will be engraved on our hearts with love and gratitude . . . to celebrate the moment when . . . Puerto Rico entered fully into Christian civilization.

BIG SKY VISTA REFLECTS "CAVEAT EMPTOR"

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. OLSEN. Mr. Speaker—

We must make sure that every family in America lives in a home of dignity and a neighborhood of pride and a community of opportunity and a city of promise and hope.

These words of President Johnson should instill hope, should foster confidence, and should encourage determination in the people across this land seeking to own or at least rent suitable and adequate living quarters. But there is a small community in my State of Montana where hope, confidence, and determination have all but dwindled. These people have run headlong into the quicksand of bureaucratic ineptness. It is time that their story is told so that others may not follow this bleak trail. Especially must it be told to my colleagues so that when I ask your help, you will be aware of the magnitude of this tragedy.

Some six families purchased homes in a subdivision called Big Sky Vista near Vaughn, Mont., in the spring of 1965. This was subsequent to the great Sun River floods of 1964, when this area was

inundated. Because of the emergency prevailing then they were eligible for Small Business Administration loans. The Federal Housing Administration inspected the houses. The FHA reported that the houses and the "life-systems" of the homes were adequate. Subsequently, the sewers, foundations, and the house structures have deteriorated to such an extent that it is questionable whether the occupants should remain in the development.

Where do these people go for help? First they approached the FHA and the SBA people. Both agencies absolved themselves of responsibility and extended their regrets. For the past several months, I have worked with Senators MANSFIELD and METCALF in an attempt to help these people. We, too, have been rebuffed by a bureaucratic brick wall. But we are determined to achieve justice, and I do not admit defeat in presenting this expose, as I mentioned previously this story must be told so that others will not walk into the same pitfalls.

Unless one of these two agencies—the Federal Housing Administration or the Small Business Administration—assumes responsibility, it is my intention to direct these homeowners to legal recourse. The demon of "Caveat Emptor"—"Buyer Beware" does not belong in this day. It cannot be tolerated, particularly not in a transaction involving a citizen and his government. The commercial codes of most States have placed the burden on the seller who is more knowledgeable about his product. Tht seller's "puffing" cannot be the buyer's deflation. I sincerely hope that the FHA, especially, will exercise more discretion in the future when evaluating housing projects, and that it will accept its responsibility when tragedies like Big Sky Vista happen.

A POLITICAL ERA DIES

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HÉBERT. Mr. Speaker, last week in New Orleans a political era died. Judge Leander H. Perez, Sr., long recognized as one of the most brilliant political leaders in this Nation, passed to his eternal rewards. At the time of his death I issued the following statement:

STATEMENT BY HÉBERT

U.S. Representative F. Edw. Hébert, who is recuperating from eye surgery at Hotel Dieu, issued the following statement upon learning of the death of Judge Leander Perez:

"Another great American now belongs to the ages. For over 30 years Judge Perez has been my political and personal friend. It has been an association of which I have been proud and never hesitated to boast. He was a man in whom there was unlimited determination and a fiery tenacity for the things in which he believed. He asked no quarter and gave no quarter. Even those who did not understand him were compelled to respect him. I was one of those privileged to have known his many sides and facets. No matter by what name he was called or how he was described by either enemy or friend, he loved the people who loved him and they did love him. He brought into a community a loyalty and a devotion, a duty and a service that is seldom found anywhere.

He leaves many monuments and he leaves a memory of a man who contributed to his community and built it up into a great family. He hands the torch to two sons in whom he was justly proud. The memory of Judge Perez must be a fuel that keeps that torch lighted and I am sure his people will renew their determination to continue his work which he outlined for them and to carry out his plans which he had for Plaquemines Parish.

He was the most model family man I have ever known, a devoted husband, a tender father and an enthusiastic grandfather. There is no doubt that the death of Mrs. Perez left a void in his life which has never and could never be filled.

There were those who did not agree with him but there were none who denied his capacity and ability. There were those who fought him but there were none who did not respect the valor of his shield. There were those who attempted to thwart him in what he believed to be right but there were none to whom he ever surrendered.

I consider his loss indeed a most personal loss for I have lost one of the dearest and best friends I ever had.

Not only I, but everyone, friend and foe, will miss him. As I so often said in his lifetime and again say on his death, he was the "noblest Roman of them all."

For a more graphic and vivid description of Judge Perez and his eventful life, I urge you to read the following article written by Clarence Doucet, one of the New Orleans Times-Picayune's promising young writers who, in this piece, has done a serviceable job and has captured the tone of the moment:

LEANDER PEREZ RETURNS TO WIFE'S SIDE AT IDLEWILD: CASKET BROUGHT TO FINAL RESTING PLACE

(By Clarence Doucet)

Leander H. Perez Sr. returned to Idlewild Friday to the side of his wife.

There, amid surroundings reminiscent of the gracious plantation life of the Old South, his rose-covered casket was brought to its final resting place in the family mausoleum.

Several hundred friends and associates lined the 150-foot stone walk leading from the Perez home to the mausoleum as the final prayers for the dead were recited by a Catholic priest, and as holy water and incense were sprinkled on the casket.

A fiery advocate of segregation and states rights and the political chieftain of Plaquemines Parish for nearly half a century, the 77-year-old Perez died of a heart attack Wednesday night, a few days after having been released from a hospital after suffering another heart attack earlier this year.

RELIGIOUS RITES

The services at Idlewild, the Perez family ranch located about three miles below Belle Chasse, were preceded by religious services in the Holy Name of Jesus Church on the Loyola University campus.

Although he was excommunicated from the Catholic Church in the early 1960s because of his vocal opposition to the integration of Catholic schools, it was disclosed Thursday that some 18 months ago Mr. Perez had reached a reconciliation with the church and that he had been receiving the sacraments since that reconciliation.

Holy Name of Jesus Church, with a seating capacity of nearly 1,000, was packed to overflowing with family, friends, political dignitaries, and a handful of curious.

Among the dignitaries paying their last respects were former Gov. George C. Wallace of Alabama; Gov. John Bell Williams of Mississippi; Gov. John J. McKeithen of Louisiana, U.S. Sen. James O. Eastland, D-Miss.; Louisiana Lt. Gov. C. C. "Taddy" Aycock; Associate Justice Tom Brady of the Mississippi Supreme Court; Louisiana Appeals Court Judge Louis Yarrut; former Louisiana adjutant general Raymond F. Hufft; scores of state representatives and senators and virtually every public official from both Plaquemines and St. Bernard parishes.

Gov. McKeithen was not at the funeral home, the House of Bultman, or at the church, but he did attend the services at Idlewild.

OTHERS PRESENT

But it was not dignitaries alone who filled the church. College students, many carrying books, could be seen among the hundreds of persons paying their last respects, and one taxicab driver, after dropping off his fare (who was attending the funeral Mass) said that he, too, was going to church. He locked the doors of the taxicab and made his way inside.

The funeral procession from the House of Bultman to the church was composed of more than 200 automobiles that followed the black hearse which carried the silver casket along St. Charles Ave.

At the funeral home, a group of children from the Prytania Private School entered in procession carrying a heart-shaped flower display of red and white carnations.

A short set of prayers was recited there before the casket was closed and the covering of roses placed over it.

St. Bernard Parish motorcycles led the police escort from the House of Bultman to the church. They were followed by motorcycles from the city and state police.

The casket was rolled to the steps of the church, and there the grandchildren of Mr. Perez took their places on each side to serve as pallbearers.

WALKING BEHIND CASKET

Walking directly behind the casket were Mr. Perez' two sons, Leander H. Perez Jr., the district attorney of Plaquemines and St. Bernard parishes, and Chalin O. Perez, who took over as president of the Plaquemines Commission Council when his father stepped down, and his two daughters, Mrs. J. Douglas Eustis and Mrs. Richard J. Carrere.

Former Gov. Wallace, for whom Mr. Perez had campaigned in his race for the presidency last year, followed them into church with a contingent of other Alabamians.

Celebrant of the Mass was the Rev. Peter Boerding of St. Thomas Church in Pointe a la Hache. He was assisted by the Rev. Stanley Goote of Our Lady of Perpetual Help Church in Belle Chasse. Both priests also officiated at the services at Idlewild.

The casket was carried to the front of the church with three lighted candles on each side and a crucifix on a stand behind it.

"We humbly pray," said Father Boerding as the services began, "You . . . do not hand him over to the powers of evil but command his soul to be taken up by the Holy Angels."

Preceding the Mass Father Boerding recited the traditional prayers before the casket.

READS FROM JOHN

During the Gospel, he read from John who tells of Martha's conversation with Jesus, whom Jesus told: "He who believes in Me, even if he die, will come to Me."

Frequently during the Mass, Father Boerding intoned: "Hear us, Oh Lord . . . answer our prayers for Leander," and "O, Lord, listen to our prayers for Leander."

At the Offertory, he asked God to "deliver the souls of the departed from the pains of hell," and later added, "O Lord, be merciful and grant them eternal rest."

The funeral Mass was concluded at approximately 11 a.m., and by 11:05 a.m. the church bells were rung, signifying that the body was leaving the church.

The procession arrived at Idlewild shortly before 11:30 a.m., and again the casket was removed from the hearse and carried to the brick mausoleum.

VIRTUAL SILENCE

Except for the rustle of leaves, caused as the hundreds of friends followed the procession to the mausoleum, walking alongside the stone path, there was virtual silence.

Father Boerding, sprinkling the casket with holy water, said of Mr. Perez: "God has taken him to Himself from the trials of this world," and he again prayed that God would not punish the deceased for his deeds, but, rather, "make him a companion of Your saints," and "grant to him everlasting rest and happiness."

He then led the mourners in the Lord's Prayer and the Hail Mary for Mr. Perez, and these prayers were then recited again for those persons who will die in the future.

The simple ceremony concluded, the casket was then moved into the brick mausoleum and placed in the open crypt alongside the crypt in which rests the body of Mrs. Perez.

BUILT MAUSOLEUM

Mr. Perez built the mausoleum only a few months after the death of his wife in 1967. He confided to friends that her burial place was "too far away from home."

It sits amid a grove of giant live oak trees draped with Spanish moss. Two magnolias grace the front of the mausoleum, and four white columns adorn the facility built in an architectural style that complements the rambling red brick Perez home.

A close friend of the late Mr. Perez said a day seldom passed after the body of Mrs. Perez was placed in the mausoleum that "The Judge," as he was known to his many associates, did not visit the serene resting place of his wife, and upon leaving show visible signs of his bereavement.

Near the mausoleum is the white frame building in which Mr. and Mrs. Perez spent their weekends over several years prior to the construction of the Greater New Orleans Mississippi River Bridge. It was after the bridge was constructed that Mr. Perez built the impressive home he called Idlewild.

His close friend said the serenity of the spacious Perez ranch was a great joy to both Mr. Perez and his wife.

And it is there, in the land they both loved so well, that they are again by each other's side.

In life Mr. Perez had many admirers and many detractors, but in death, as the priest reminded, it is God alone who passes judgment on man regarding his eternal life.

"OF MINING, AND RUGGED INDIVIDUALS"

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. BARING. Mr. Speaker, being the Representative from Nevada, my colleagues quickly can associate with the Nevada names of Reno, Las Vegas, and Lake Tahoe and a few other cities where citizens of our country have visited to vacation, hunt, gamble, ski, or soak up some good old Western sunshine.

But there are other names in Nevada that are not known perhaps as well to Americans and those are the old cattle and mining towns that formed the basis for the State of Nevada and first put her on the Union map.

The names of those towns are included, for the most part, in a book that a very good friend of mine sent me a few days ago. My friend, Don Emigh, of St. Louis, Mo., must have known how much I would enjoy the book, "Mining Camp Days," by Emil W. Billeb, who lived and participated in our Western life as it was known back in the mining days of Nevada and parts of eastern California. One very real reason I have enjoyed the book is that I am from one of the mining camps that Mr. Billeb writes about, Goldfield, Nev., where I was born and lived until I was 5.

Mr. Billeb's yarns and collection of photos perfectly portray life and the ruggedness required by the men and women of those days to exist and succeed.

Mr. Billeb narrates the book and stories he lived and heard. One such story depicts that our early days miners had time for a bit of "horseplay" too. Mr. Billeb writes "An Unhappy 'Corpse' ":

There was one old character who had developed a great liking for hard liquor and in his later years was under the weather quite a bit of the time. Once after a spree he was found lying in the sagebrush and some of the town's gentlemen decided to try to teach him a lesson and perhaps get him on the water wagon.

From a dry goods store they obtained a large packing box and took it over to the drunk's resting place. As the box was too short to cover him, they knocked out one end and placed it over him with his feet sticking out.

When he started to move and mumble in the box, the group gathered around and conducted a funeral service. Some commented how sad they were at the passing of the deceased. They all ignored the fact that by now the victim was pounding on the box and shouting, I ain't dead! I ain't dead! The services concluded with dropping earth on the box and intoning, Ashes to ashes, dust to dust. . . . Then the mourners departed and adjourned to a nearby store.

It was some time before the deceased came sufficiently to life to crawl out of the open end of the box. Excited and sobered, he came to the store wanting to know who was responsible. He was referred to a paper posted in the store window announcing his demise and the sale of his possessions at public auction the following day. He assured everyone that he was very much alive and that there would be no sale of his belongings. He remained on the water wagon for some time after this experience.

SOCIAL SECURITY AMENDMENTS FOR MINERS AFFLICTED WITH BLACK LUNG DISEASE

HON. JAMES KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. KEE. Mr. Speaker, during recent weeks, considerable publicity has been given to an occupational disease of coal miners which has become a substantially increasing problem, resulting from the development of new and more efficient mining machinery. This dread disease, which is known technically as pneumoconiosis, or more popularly known as black lung disease, is afflicting more and more coal miners as more powerful and efficient mechanized equipment is being used in the operation of the Nation's coal mines. The fact is that this new and improved type of equipment, in addition to producing more coal per man-hour, also produces coal dust for our coal miners to breathe. This coal dust is inhaled by our underground coal miners and develops within their bodies a lifelong and fatal infliction.

Many of our patriotic underground coal miners who have come down with black lung disease have been determined to be disabled under the social security disability insurance program. The cash benefits that they receive help them to some extent in meeting their living expenses. However, these cash benefits are entirely inadequate for those afflicted to meet their medical care needs which, in so many cases, include the use of a continuing supply of oxygen at costs ranging up to $200 or more per afflicted individual each month.

The legislature of my home State of West Virginia recently enacted an amendment to its Workmen's Compensation Act, providing for compensation for persons afflicted with this disease for the first time. This legislation, so I understand, does not apply to the many hundreds of coal miners who have come down with this disease in the past years and have been no longer able to work and obtain coverage under the State workmen's compensation system. To me, I strongly believe that the most logical place to turn to provide these coal miners with the medical care they so urgently and desperately need is the presently existing medicare program. I am in the process of drafting a logical and workable bill which would extend the existing medicare program to persons, regardless of age, who are eligible for a disability insurance benefit under present law. The purpose of this proposed legislation is to extend medicare benefits to most of the disabled miners who are presently afflicted with black lung disease who are ineligible for any type of medical care under present law and would also supplement the medical care received by miners who will be found qualified under the recently enacted amendments to the West Virginia Workmen's Compensation Act.

In addition to providing medicare benefits to those who qualify for social security disability benefits, another purpose of my proposed bill would also make it easier for persons who are afflicted with black lung disease to receive a social security disability cash benefit regardless of age.

It is proposed to do this by having the provision written into the Social Security Act which will extend the same treatment to victims, regardless of age, of pneumoconiosis, as blind persons now receive under the law. Under this amendment, these persons would benefit in two ways in receiving a disability determination, just as the blind are now eligible under present law.

First, the physical tests of disability would be met without the need for any additional medical evidence once a per-

son is determined to have pneumoconiosis, which would be defined in the legislation.

Second, my legislative proposal would provide that any person, age 55 and over, afflicted with pneumoconiosis, shall be entitled to a disability insurance benefit if he is unable to engage in his usual occupation—that is, if he is unable to work as a coal miner—regardless of his ability to engage in some other occupation.

It is my firm belief that these amendments, as a whole, will be a tremendous help in providing more of our coal miners who are afflicted with this dreaded black lung disease with financial and medical assistance that they so rightfully and desperately deserve and are not now receiving. These amendments will not take care of all of the problems facing these miners and their families and because of this fact, I am in the process of drafting additional legislation to complement these social security amendments.

With favorable approval by the Congress, these proposed amendments will provide significant and substantial support which is so richly deserved by our coal miners who are now denied these justly due benefits.

As a nation, we have an obligation to these dedicated workers and, as such, we can do no less than to provide these essential benefits.

In conclusion, I would like to point out that much of the philosophy behind my proposed legislation emanates from W. A. Boyle, president of the United Mine Workers of America, who has long urged that legislative action be taken to aid these forgotten and neglected victims of black lung disease.

AMENDING RAILROAD RETIREMENT ACT

HON. RICHARD FULTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. FULTON of Tennessee. Mr. Speaker, major steps are being taken by the Congress and the administration to help curb inflation.

Last year a 10-percent surcharge on personal and corporate income taxes was made in an effort to halt inflation. The Congress has now been asked to extend that surcharge.

Vital programs are being held to a minimum in funds—again in an effort to fight inflation.

While we are seeking ways to curb inflation, we must also be concerned about those who must live on fixed salaries or fixed retirement incomes.

They have watched their dollars shrink in purchasing power.

For those who are retired, their earning years are all but over.

One group of retired persons who have been consistently overlooked are those receiving benefits under the Railroad Retirement Act, and particularly the widows of retired railroad workers.

Under present law a widow receives approximately 80 percent of her husband's annuity and loses her spouse's benefits. This amount is but a few dollars more than one-half of the joint amount they received prior to his death. This amount fails to meet the needs of the widow.

The loss of one person does not cut living expenses in half. Many overhead costs, such as property taxes, remain the same regardless of the number of persons.

It has been my feeling that the man and wife were partners and jointly earned the family income, and jointly contributed to the family retirement plan.

In far too many cases the widow, trying to survive on the reduced railroad retirement benefits must seek public welfare assistance to have the bare necessities of life.

In 1967 a 7-percent increase was granted to those under the Railroad Retirement Act. This was the first increase since 1959. Some of the widows received this increase a year ago under the social security increase, and as a result in some States, the public welfare was reduced by the same amount. As a result, they received no increase in benefits at all. Others, who tried to supplement their income by working under social security, likewise had their benefits reduced.

Because of this inequity, I have introduced legislation which would change the Railroad Retirement Act, Under this legislation, provisions would be made so that the surviving spouse of a deceased principal beneficiary under the Railroad Retirement Act would receive the same amount of basic retirement benefits that he or she would draw at the time of the spouse's death, but in no case less than $104 a month. In addition, the surviving sponse would also be granted any increase in benefits under the Railroad Retirement Act which may be made effective at any time following the death of the principal beneficiary.

My concern is not only for retired railroad employees, but also for those who are currently employed on our Nation's railways.

I have reintroduced legislation designed to promote employee and traveler safety on our railroads.

This legislation is designed to promote railway safety through the reduction of consecutive hours which certain operating employees may remain on duty. That maximum is now 16 hours and this legislation would make the maximum 12 hours.

Essentially this legislation would lower the hours of continuous service which certain operating railway personnel would be permitted or required to undertake.

It makes it unlawful for any common carrier, its agents, or officers subject to the act to require or permit an employee to continue on duty or go on duty when he has not had at least 8 consecutive hours off duty during the preceding 24 hours.

Other provisions of the bill deal with computation of rest periods, intrastate crews working on interstate carrier tracks, crews of wreck and/or relief trains and for violations.

COMMUNICATION ON CAMPUS DISORDERS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. SAYLOR. Mr. Speaker, I have recently received from a constituent, who has a daughter attending the Pennsylvania State University, a letter that President Eric A. Walker sent to all parents concerning the "almost" disorders at the university. The letter is a good example of a university meeting its responsibilities to the public, the parents, and the students, in this age when irresponsibility seems to be on the upswing. We have heard a good deal about the "lack of communication"; I think President Walker's approach is the kind of communication all college presidents should be engaged in.

President Walker's letter establishes the proper response to those who would attempt to disrupt the education of students at Pennsylvania State. The president was not bullied, nor did he panic, when a so-called "reform group" attempted to tell the university how to run an educational institution. Instead, he responded with dignity, firmness, fairness, and with dispatch, and a potentially explosive situation was averted.

President Walker obtained an injunction against an illegal use of the university. That action, followed up with the establishment of a "special judiciary board to hear staff charges and evidence against students who destroy university property, unreasonably disturb or interfere with the orderly conduct of the university, or advocate active disruption or violence," put those who would tamper with the educational processes at Pennsylvania State University on notice that such tampering would not be tolerated.

President Walker, in writing to the parents, included the text of the statement made by the Honorable A. H. Lipez, judge of the Centre County court, upon the issuance of the injunction. The judge's remarks bear close reading and I would like to have both President Walker's letter and Judge Lipez' statements appear in the RECORD following my comments:

THE PENNSYLVANIA STATE UNIVERSITY,
University Park, Pa., March 14, 1969.

To Parents of Penn State Undergraduate Students: I am sure you, as parents of a Penn State student, are concerned over reports of potentially disruptive activities at the University Park campus of the University. I share your concern, and through this letter I would like to comment on the situation.

Since the beginning of Winter Term, the University Park campus has been faced with many difficult problems in relating with and communicating with some of the students. I will not detail each situation, but will state simply that the problems have been related to three occurrences—a list of demands presented to me by the black Frederick Douglass Association; the publication of an "underground" newspaper, known as the *Water Tunnel;* and a list of nine "non-negotiable" demands presented to me by a non-chartered group calling itself the "Steer-

ing Committee to Reform the University." It was over these latter nine demands that a sit-in resulted in Old Main on February 24, 1969.

On February 17, a letter containing the aforementioned list of nine demands was delivered to my secretary while I was out of the office. The letter stated that the demands were "non-negotiable" and that I had until Monday, February 24 to respond. Since the letter did not contain student names, and since the Steering Committee to Reform the University is not a chartered student organization with known officers, I responded to the demands by a general press release. That release was printed in the *Centre Daily Times* on Saturday, February 22, 1969. The *Daily Collegian* reports my statement was read at a Students for a Democratic Society rally in the Student Union, Saturday, February 22. I stated that to respond to demands which were termed "non-negotiable" would be in direct conflict with the very spirit of the academic community.

At approximately 3 p.m. Monday, February 24, a group of several hundred students entered the main lobby and balcony area of Old Main and determined they would remain there after the normal closing hours for the building and until such time that police came to request them to leave. Members of the administrative staff read the press release described above, and told the students that the building closed at 5:15 p.m. They were advised to leave the building by 5:15 p.m. and that if they did not, legal action would be taken. None of these warnings were heeded and the University sought a court injunction prohibiting occupation of the building.

At approximately 9:45 p.m. a temporary injunction from the Centre County Court was served by the County Sheriff. However, before the injunction was served, a larger group of students, estimated in excess of 1,000, gathered outside Old Main threatening to remove those inside. Concerned student leaders, staff members, and faculty talked to and calmed both groups and physical injury and violence was avoided, except that one student reporter was struck by a thrown object and injured on the cheek. The students inside Old Main left the building peacefully by 10 p.m. after the injunction was served and the students outside opened a path for them to leave.

I am most concerned that a situation similar to this, which has the potential for severe disruption and violence, does not again occur on this campus. To help assure this, the University obtained a continuance of the injunction at a hearing held on Friday, February 28, in Centre County Court. I think you should be aware of the continuance, and I am including a copy of the remarks of Judge A. H. Lipez, when he announced the decision of the Court.

I am convinced that the overwhelming majority of our students and you, their parents, support the University administration in its determination that no class shall be interrupted, nor action tolerated that threatens others, or interferes with the educational programs of the University. I can assure you, too, that a majority of the University faculty feels a similar obligation. This is reflected in the action of the University Faculty Senate which adopted the following temporary resolution at its meeting March 3, 1969:

"Recognizing that some changes in university procedures and policies are necessary, the senate endorses the constructive resolution of problems through free discussion among all groups in the academic community, and rejects the ideas of ultimata or arbitrary action as a solution to campus problems.

"The senate supports maintenance of the inviolability of the educational process and the right of students to continue their access to class and to academic instruction unimpeded.

"Further, the senate supports the exercise of legal action to prevent personal injury or the destruction of private or public property by any groups or individuals."

Many others have expressed their support for our efforts. Letters from parents, faculty, alumni, and others carry similar messages.

I am confident that The Pennsylvania State University, through the joint efforts of responsible students, faculty, administrators, parents, and other interested and concerned parties, will continue to meet its educational responsibilities to your sons and daughters. However, we must face the real possibility that there are some within the University who would disrupt its normal functions. To assure that we are able to continue to fulfill our responsibilities, I have established a Special Judiciary Board to hear staff charges and evidence against students who destroy University property, unreasonably disturb or interfere with the orderly conduct of the University, or advocate active disruption or violence. This is a temporary Board which will make disciplinary recommendations to me regarding individuals found guilty or responsible for such acts. Disruptive activity is regarded as a serious matter which can result in dismissal of a student.

I hope that all parents accept this letter in the spirit in which it was written—a communication to parents to keep them informed.

Sincerely yours,

ERIC A. WALKER,
President.

STATEMENT OF JUDGE A. H. LIPEZ IN CENTRE COUNTY COURT, FEBRUARY 28, 1969

The evidence here indicates that more than 250 students entered Old Main on the afternoon of February 24 and refused all requests to leave until after the service of the injunction around 10:00 p.m. The requests were met with jeers, obscenity, as well as threats. It is apparent also that had not the injunction been issued, the defendants would have continued to occupy this administration building which would have materially interfered with the proper administration of this large University having some 7,000 employees and approximately 25,000 resident students.

We have no doubt that some of you, at least, in so occupying Old Main, were carried away by the belief in your cause. Some of you may even have believed you had the right to take possession of Old Main in this manner and in effect hold it as hostage to enforce your demands. Let me tell you at the outset that no matter how pure your motives, or laudable your objectives, your actions were unlawful and the law does not countenance illegal acts.

Perhaps what was done here was inspired by similar actions at other universities and colleges, and perhaps some of these institutions felt compelled to make some accommodation notwithstanding the coercive methods used. The plaintiff here, The Pennsylvania State University, properly under the evidence, decided not to submit to what amounted to a seizure of its property and hence brought this action before us.

The law is clear. No one—students or others—has the right, forcibly or otherwise, to take possession of the property of an educational institution and thereby interfere—actually or potentially—with its right to carry on its activities. Anyone doing so is subject to the injunctive process of the equity court.

You—the defendants—have rights. You have the right to meet peaceably in mass meetings on the campus in proper places—you have the right to organized demonstrations and protest meetings—you have the right to petition the University officials to redress your grievances. All these are recognized under the First Amendment of the Constitution and there is nothing to indicate that the University sought to deny these to you. But the University—its officials—and all the other students—have rights too, and you cannot act in a manner as to interfere with their rights. The moment large numbers of you went into Old Main for the purpose of remaining there until your demands were met, and certainly after you were requested to leave—from that moment, you were trampling on the rights of the University—your actions then became illegal.

We have long prided ourselves on having a government under a rule of law—a system that has made possible human achievement unmatched by any other nation. Implicit therein is the belief and the understanding that there is a duty to obey the law. Only by doing so are we able to have an ordered society and a government which protects the rights of all of us. Where we believe government is wrong, our Bill of Rights allows dissent and disagreement, but in peaceable and orderly ways. Experience has shown that lawless protests breed lawless counter protests as in fact happened here. The power of a mob today for noble and constructive ends may tomorrow be for ignoble and destructive purposes. No government can submit to mob rule and survive. Nor can any educational institution.

EARTHQUAKES

HON. HOWARD W. POLLOCK

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. POLLOCK. Mr. Speaker, 5 years ago today a catastrophic earthquake shattered southcentral Alaska.

As the earth twisted and rolled, huge landslides sheared away. Tidal waves, generated by undersea slides, sent walls of water smashing into coastal communities, carrying away people, boats, and buildings.

What later came to be known as Alaska's "Good Friday Earthquake" registered 8.5 on the Richter scale.

One hundred and fourteen persons lost their lives, $300 million in property was destroyed, and the State's economy suffered a crippling blow.

Hundreds of homes and other buildings were shattered. Water mains and sewerlines burst. Great cracks in the earth slashed across highways and railroad lines and bridges collapsed. Airfields, so important in Alaska with its limited system of roads, were temporarily rendered useless. Telephone and powerlines snapped as the earth rocked.

Considering the massive destruction, it was surprising that the death toll was not higher. This was due to a number of fortuitous circumstances. Southcentral Alaska is relatively sparsely populated. The earthquake took place in the early evening of a holiday when schools and most offices were empty. The weather was mild for that time of year and the sea was at low tide.

Geologists tell us that should an earthquake of such magnitude and duration as the 1964 Alaskan earthquake take place in a densely populated region, it might easily cause thousands of deaths and billions of dollars in damage.

Help was not long in coming to Alaska. While the earth still rocked, the military—itself badly hurt—moved magnificently to aid the stunned civilian population. The President speedily declared southcentral Alaska a disaster area opening the door to massive Federal assistance. Messages of encouragement and offers of aid came to us from across the Nation.

In Alaska, the people rose to the crisis with indomitable spirit and fighting courage. They showed a considerable unity of purpose in facing the major problems and a willingness to assist others and a determination to overcome crushing misfortune to start over again.

Although economic patterns have changed in southcentral Alaska because of the earthquake, we have almost recovered from the blow of 5 years ago. Almost. At least one community—the city of Seward—was so badly hurt that it still is fighting for its life. Valdez, which was entirely relocated, looks forward to a bright economic future. In Whittier, Anchorage, Kodiak, Cordova, Seldovia the scars still show but their edges are becoming blurred.

Alaska's earthquake and following tidal waves spurred a series of coordinated Federal-State plans to cope with such hazards in the future.

Tidal wave warning systems have been improved. Possible geological hazards to building and settlement are assuming increasing importance in planning. Earthquakes and crustal movements are being monitored and a variety of techniques are being used to probe deep into the earth to learn its structure and the forces that effect it.

With increased knowledge, techniques may be developed that will prove the basis for an earthquake prediction system that could benefit all earthquake-prone areas of the country, geologists tell us.

TIMBER SUPPLY CAN BE INCREASED IMMEDIATELY

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. JOHNSON of California. Mr. Speaker, public concern about the impact of lumber and plywood prices on the availability of new homes is being reflected in the Congress. The Banking and Currency Committee is reviewing this vital issue this week. There is reason to believe that this review can lead to immediate improvement in the situation.

The key problem appears to be the supply of standing timber that is available for processing in our western mills. Most of that timber is on the national forests under the careful stewardship of the Forest Service.

The chief of the Forest Service has testified that "in all forest regions supplies of timber could be substantially increased by such measures as planting, thinning, stand improvement, increased protection against destructive agents, and access road construction."

I am hopeful that the Congress will soon provide the Forest Service with the funds and personnel necessary to accomplish this intensification of management. We should. Besides helping to meet our housing needs, such an investment will result in substantial returns to the Treasury in the form of timber-sale receipts.

While very important, these practices are not the most promising possibility that has come to our attention for increasing availability of Federal timber for home construction. Among other things, the University of California at Berkeley is noted for its outstanding school of forestry and conservation. John A. Zivnuska, the dean of that school, told the Senate last week that there can be an immediate increase in the cut on the Federal forests. This can come with recognition of present wood utilization practices, the use of appropriate units of measurement and the recognition of the increases in timber growth that are achieved under improved forest management.

This increase in the availability of timber would come because of what is technically known as a shortening in rotations—a reduction in the planned time needed to grow a new crop of timber. Dean Zivnuska explained this opportunity in his testimony last week to the Senate Committee on Banking and Currency. A copy of his explanation is offered herewith for the RECORD.

Mr. Speaker, I bring this matter to the attention of this body at this time because Dean Zivnuska is scheduled to appear before our Committee on Banking and Currency tomorrow, Friday, March 28. Dean Zivnuska's well-qualified technical answers to our timber shortage deserves our careful attention. They offer a real hope for meeting this Nation's needs for construction materials and homes at reasonable prices.

The above-mentioned material follows:

PRESENTATION TO THE SUBCOMMITTEE ON HOUSING AND URBAN AFFAIRS OF THE SENATE COMMITTEE ON BANKING AND CURRENCY, MARCH 21, 1969

My name is John A. Zivnuska. I am Dean of the School of Forestry and Conservation, University of California, Berkeley, but I do not speak for the University in this matter. I appear simply as an individual citizen with 25 years of experience in teaching and research in the economics of forestry. Much of my work has been devoted to the interactions between forest conditions and the forest products industries.

The very sharp rise in lumber and plywood prices which has occurred in the last year is in many respects simply a repetition in accentuated form of an event which has taken place frequently in the past. Essentially this price rise reflects the inability of the lumber and plywood industries to achieve large increases in output over a short period of time in response to sharp increases in demand. This in turn is related to the availability of timber for the mills. Since the industries are highly competitive among both buyers and sellers, the demand increase combined with the inelastic supply response results in a rapid rise in prices with very little increase in the quantity supplied.

HISTORICAL ORIGINS OF THE PRESENT PROBLEM

This kind of relationship can be traced back for more than a century. From 1860 to 1947, the wholesale price index for lumber increased nearly threefold relative to wholesale prices generally. This price increase did not occur as a steady upward trend. Instead, it took place through a series of sharp rises over short periods, typically followed by longer periods of stable or declining prices.

A very pronounced instance of such a period of sharply rising prices with only limited increase in volume supplied took place after the removal of price controls following World War II. The pattern was of serious concern at the time, which was also a period of high demand for housing. In an analysis of supply and demand trends in the lumber industry from 1921 through 1953 which was published in 1955 (John A. Zivnuska, "Supply, Demand and the Lumber Market," Journal of Forestry 53(8):547–553), I pointed out that lumber production shows "an inelastic response to price in expansion at high levels of prosperity" and that over the years "the supply schedule is becoming more inelastic." The current price experience reflects this pattern.

The bottleneck explaining the persistent pattern of inelastic supply response to high demand levels does not rest in the mills, which typically have had capacity well in excess of actual production. Instead, the limiting factor is the availability of timber adapted to processing under established technology within the operating radius of the established mills.

Historically the production of lumber and plywood has been based on the availability of old-growth timber. Even today, these industries are predominantly based on old-growth, although the utilization of the young-growth stands which have followed the initial cutting has increased rapidly. For three centuries the lumber industry of North America was a migratory industry, following a retreating frontier of virgin forests. Exhaustion of timber in current operating areas led to higher prices, which in turn enabled shifting to new production areas, typically more distant from the main consuming centers.

By World War II, this historical process had largely run its course. In recent years, the forest products industries have been settling down and becoming permanent. Production has been greatly diversified, with lumber and plywood production being increasingly integrated with pulp and paper, wood chemicals, and other products. Some major segments of the forest products industries such as pulp and paper are now based dominantly on young-growth forests, with the geographic center of such production being in the South rather than the West. Lumber and plywood, however, continue in their traditional dependence on old-growth. Thus, as the nation now moves into the final stage of its use of old-growth forests, such production faces major difficulties.

A comparison of the periods just before and shortly after World War II is illustrative of the nature of the problem. In 1940–42, U.S. lumber production averaged 34.6 billion board feet annually. In 1949–51, the index of wholesale lumber prices in constant dollar terms was 53 percent higher than in the earlier period, yet production averaged only 35.8 billion board feet—an increase of only 4 percent in quantity. Even more striking, with the exception of the six southwestern counties of Oregon and the three northwestern counties of California, lumber production in the balance of the nation actually declined by nearly 10 percent in the face of this 53 percent price increase. It was only the very rapid increase of production in this nine county area that enabled the nation to maintain and slightly increase the quantity of

lumber production under conditions of rapidly increasing lumber prices. These nine counties represented the last major block of old-growth timber remaining in private ownership in small- and medium-sized holdings.

IMMEDIATE CAUSES OF THE PROBLEM

The current situation of sharply rising prices in lumber and plywood must be interpreted in the light of this historical perspective.

Following the post-World War II building boom and the pronounced rise in prices, lumber prices moved into a prolonged period of relative stability, while plywood prices showed a remarkable downward trend. From 1951 to 1967 the wholesale price index of lumber in constant dollar terms showed a slight decline, averaging 5 or 6 percent lower in the later years than in the earlier years of the period. Softwood plywood prices were cut nearly in half over this period, with the softwood plywood price index in constant dollar terms (1957–59=100) dropping from 134 in 1951 to a low of 75 in June, 1967. Lumber production fluctuated modestly over this period, with a very minor downward trend. In contrast, softwood plywood production in 1967 was three times as high as in 1951. Through the combined effect of these two patterns, the total volume of logs consumed for lumber and plywood consumption was about 8 percent higher in 1967 than in 1951.

By 1967 signs of pressure on the available timber were beginning to appear. This was most evident in the Pacific Northwest, with the immediate cause being the rapidly growing Japanese demand for export logs. This upward trend in the export demand on U.S. timber became evident in 1963, when the volume of log exports to Japan doubled from the level of the preceding years. By 1967 the export volume from the three Pacific Coast states had reached 1.5 billion board feet. While this represents only about 4 percent of the log volume used in lumber production in the same year, two-thirds of the export logs came from the State of Washington, with most of the balance coming from Oregon. Within these heavily affected regions, there was increasingly general concern about the impact of this new source of demand on the price of stumpage and on the availability of logs for some domestic mills.

The log export demand continued its rapid rise in 1968, with a down-turn emerging toward the end of the year. In April, 1968, the Secretaries of Agriculture and Interior issued orders restricting the sale of federal timber to the export market from Western Washington and Western Oregon to approximately the 1966 level of exports of logs from federal lands. Last October the Congress acted to make this limitation effective for 1969, 1970, and 1971, extending the area covered by the restriction to the federal lands of the entire Western forest region.

With demand already pressing hard on the upper limits of the range of elastic supply response in lumber and plywood production, 1968 also brought an increase in demand for housing construction. There was also growing recognition that the nation was moving into a new period of high housing demand with promise of greatly expanded levels of home construction—a recognition which was given additional substance by the Housing and Urban Development Act of 1968.

Thus the nation once again moved into a period in which a sharp rise in demand could only bring forth an inelastic supply response in lumber and plywood production, with rapid rises in price and only small increases in quantity of production being the result.

REASONS FOR THE INTENSITY OF THE PRICE REACTION

During the seventeen or eighteen years since the last such experience, a number of changes had taken place in the nation's timber situation, particularly in old-growth timber, most of which have acted to intensify this problem of inelasticity of supply.

The most obvious of these changes in the effect of the additional years of cutting in further reducing the remaining reserves of old-growth timber. By 1963 old-growth sawtimber stands occupied 43 million acres, or approximately 8 percent of the nation's commercial sawtimber area. Two-thirds of this area and a larger proportion of the old-growth volume was concentrated in the Pacific Coast states.

Further, the impact of this cutting has not been uniformly distributed among the various forms of ownership. The cutting was heavily concentrated on small and medium sized private ownerships as long as appreciable volumes of such timber were available. For example, in 1953, approximately 70 percent of the total cut in California came from small and medium private holdings, which represented less than 30 percent of the state's forest area. Such concentrated cutting has largely depleted old-growth in these ownerships, from which the quantity of timber supplied has traditionally been highly responsive to market demand.

Today the federal government is the primary holder of the nation's old-growth timber, with most of the balance being in large industrial ownerships. Such ownerships are characterized by a commitment to sustained-yield forest management. Here it must be recognized that such forest management greatly intensifies the short-run inelasticity of timber supplies. Current cutting decisions are restricted by the need to maintain or develop a distribution of volumes and age-classes of timber such that harvesting can be carried on continuously in the future. "Allowable cut" limits are established on the basis of technical considerations including the nature of the present timber inventory, the length of rotation over which it is planned to grow future crops of timber, the growth potential of the sites, and the intensity of management and degree of reliance on thinnings and other intermediate cuttings considered to be feasible.

With such constraints being established on allowable cutting levels through technical considerations, the responsiveness of current cutting levels to market demands is severely limited. This is particularly the case on the federal forest lands from which the level of cut is determined almost entirely by tightly-enforced allowable cutting limits and the level of appropriations for timber operations. The response in volume of sales offerings to market demand is highly inelastic.

However, the impact of this extreme inelasticity of federal timber supplies has not been felt in full until recent years. Twenty-five years ago, the demand for public timber was relatively limited, since private timber could commonly be obtained under more advantageous conditions. Thus actual cutting levels on the federal forests were far below the allowable cutting limits. As a result, for a number of years following World War II the level of cut from federal lands could be increased in response to rising demands. Today such federal timber sales provide the primary basis for open-market timber operations in the West.

Within recent years, however, the actual cut has reached the allowable cut limits on most operating areas in federal ownership. In short, the situation is now one in which short-run expansion of lumber and plywood production is heavily dependent on federal timber, while established allowable cut standards and operating policies make the short-run supply of such timber almost wholly inelastic. Under such conditions, a price spiral is the inevitable result of any sharp increase in demand. When the quantity offered is essentially fixed, the full response to the demand increase will be in price.

ADDITIONAL FACTORS

Some other aspects of the situation might be noted. In the past small sawmills operating on timber from small holdings have played a significant, though limited, role in the adjustment of production to cyclical shifts in demand. Periods of rising prices have been marked by a rapid increase in the number of such mills, while declining prices have brought an equally rapid closure of such operations. In this regard, the present experience differs from the past. The small mill segment of the industry has not responded to the degree typical in the past. This appears to reflect several factors, including:

(a) Changes in the timber supply, particularly in the availability of timber from small holdings.

(b) Changes in utilization practices in lumber manufacture, with returns from the utilization of mill residues and bark being increasingly essential for profitable operation. Thus the low investment small mill which manufactures only rough-cut lumber is at an increasing disadvantage.

(c) Shortages of low cost labor, which has been basic to such operations in the past. This reflects both good alternate employment opportunities and the effects of minimum wage legislation.

While inelasticity of short-run timber supplies appears to be the primary cause of the inelastic supply response in lumber and plywood which has led to sharply rising prices, there are some short-term factors which intensify the situation. In a basically unstable situation such as the present balance of supply and demand in lumber and plywood, any interruptions or inefficiencies in operations can be expected to have unusually pronounced effects. The repeated problem of freight car shortages which has plagued relationships between the producers and the railroads for many years is one such example. Logging closures because of the severity of the 1967 fire season is another. Severe winter weather has also been adverse to production in some areas, while the timing of full expansion of operations this spring is still to be determined. The recent dock strike has also disrupted supplies at the retail level. However, although such factors can aggravate the situation, they do not appear to be fundamental causes of the problem.

THE ROLE OF FEDERAL TIMBER IN MEETING THE PROBLEM

To the extent that this analysis of the causes of the sudden increases in lumber and plywood prices has been correct, any actions taken to improve the situation must be responsive to the forces which have been reviewed. Thus the balance of my presentation will be devoted to a consideration of actions which might be taken to increase lumber and plywood supplies and thus reduce the pressure on prices.

As the preceding analysis has shown, the basic cause rests in the inelastic supply of timber of suitable characteristics to the lumber and plywood mills in the face of a marked rise in demand. Inevitably, attention must be focused on the supply of sawtimber and veneer logs. The small and medium sized private owners who have provided a major element in the flexibility of timber supplies in the past no longer have significant volumes of old-growth timber. The large private owners have already moved in most instances toward the intensification of their forest management programs and appropriate increases in cutting levels. The main opportunity for increases in timber supplies today clearly rests in the federal forest lands, and primarily in the lands administered by the U.S. Forest Service. These lands are the dominant supply source for open-market timber operations to support lumber and

plywood production and they are the only forest lands which can currently sustain major increases in cut without sacrifice of future yields of timber.

Some excerpts from the statement of Mr. E. P. Cliff, Chief of the U.S. Forest Service, before the Subcommittee on Retailing, Distribution, and Marketing Practices of the Select Committee on Small Business, United States Senate, on November 26, 1968, are highly pertinent here:

"On National Forest lands in the Douglas-fir region, for example, preliminary results of a study now underway indicate that the annual allowable cut could be substantially increased gradually over the years. This might be done through an annual program of investing funds to intensify management practices such as commercial thinning, prelogging, salvage, reforestation, and timber stand improvement. Much of this would depend on an access road system. . .

"Allowable cuts could be increased by shortening rotations. However, much of such increase from shorter rotations would be derived merely from faster liquidation of the residual old-growth timber accompanied by falloff in levels of annual cut at the end of the rotations . . .

"The study to date clearly indicates that there are some measures which are essential to support increases in allowable cut. These include better utilization, more thinning, cultural treatments of young growth, reforestation of nonstocked land, better protection, and more complete salvage. The allowable cut on the national forests should be increased, we feel, *only when we earn the right to do so by performing these forest management activities.* (Italic added.)

". . . Other studies have been made of investment opportunities on national forests throughout the country. They show that allowable cuts could—in time—be increased by about two-thirds by intensifying timber culture on the more productive portions of national forest commercial timberlands . . ."

The U.S. Forest Service has long held the position of leadership in forestry in the United States and it continues to be marked by a high level of professional competence. With its responsibilities for managing forest lands for many purposes in addition to timber and for providing timber for future generations as well as for the present, it is naturally and appropriately conservative in its management philosophies.

In the present instance, however, there is a clear opportunity to increase greatly the contribution of the federal forests to meeting the nation's housing needs over the next few years without any sacrifice of future benefits from these lands. Rather than waiting until intensified management practices have "earned the right" to increase allowable cutting levels, there is an opportunity and need to increase the allowable cut in the immediate future with a *simultaneous* intensification of forest management practices. Indeed, the nature of forest management is such that certain of the intensified management practices can be put into effect only through the medium of expanded timber cutting.

Expanded thinnings, salvage cuttings, and pre-harvest cuttings are examples of this, with any substantial progress in this direction being dependent on expanded support for timber sales administration and with full realization of this potential also being dependent on further development of access roads. There is substantial agreement both within and external to the Forest Service as to the desirability of such a program. It is a logical first step toward expansion of the cut of federal timber and should be implemented immediately. However, it must be recognized that this is essentially the "easy" increase in cut which can be achieved—an increase which involves no re-evaluation of established Forest Service policy and which is more a matter of taking advantage of high prices to cut previously sub-marginal timber than it is a positive program of expanded cutting to meet the nation's critical housing need.

THE POLICY ISSUE OF LENGTH OF ROTATION

The really central question is that of the current policy in establishing rotations—the period of years planned for the establishment and growth to merchantable size of new stands of timber on the lands now being brought under management. These rotations serve as a primary constraint on timber management and allowable cut planning. Any decision involving shortening of the rotations would enable immediate increases in the allowable cut from the predominantly old-growth forests managed by the Forest Service. This immediate increase would be derived from a shortening of the period for liquidation of the remaining old-growth timber, as Mr. Cliff has pointed out. However, even if this were the full story, such a policy decision would deserve careful consideration since such a change would in itself help to meet the current housing need and to protect future markets for building materials based on renewable forest resources from inroads by alternate materials which typically come from nonrenewable resources.

However, this is by no means the full story. Current rotations used in setting allowable cutting limits on federal forests are based on utilization practices of the past. They do not reflect current utilization standards, to say nothing of reflecting the utilization standards which must be expected to prevail at the time several decades in the future when these new stands will be utilized. As a consequence, they involve larger future crop trees, lower growth rates, and substantially longer periods than they should to meet the requirements of the future. Neither present markets nor future markets are well served by the present planning standards.

The extent of the falldown in cut which would occur at the end of this first rotation tends to be greatly exaggerated by the reliance on obsolete units of measurement in making the management calculations and by failure to consider the potential of intensified management practices within the context of shortened rotations. The conventional practice of federal agencies is to base such calculations on board foot volumes above some minimum diameter limit such as eleven inches which the trees must reach before being included in the management calculations. Thus these calculations totally ignore the volume in trees less than this minimum diameter limit; additionally ignore all the wood volume in trees above the diameter limit which is in shapes and sizes not adapted to the manufacture of conventional lumber sizes; and do not even recognize that actual sawmill recovery of lumber typically runs higher than the log scale estimate by an appreciable margin, with this percentage overrun tending to be greater for small trees than for large trees. Thus the system is one of partial and biased measurement which wholly fails to reflect current practices and trends in forest utilization. One result of this is to lead to the establishment of rotations substantially longer than those appropriate to maximize the growth of total wood material. A second result is to show a falldown in future cutting levels from shortened rotations which in fact does not apply to the total wood volume available, but only to a limited and peculiarly-measured portion of it. A third and particularly significant result is to hold current cutting levels below those now feasible and appropriate.

If forest volumes were measured in terms of cubic foot volumes of all trees four inches and above in diameter instead of board foot log scale volumes of trees eleven inches and larger in diameter, the calculations would commonly show little or no falldown in wood availability in the second rotation, and in some instances an actual increase would be shown.

Further, estimates of the cutting level in the second rotation are also dependent on the estimates used of the growth to be achieved by the new stands. Current management planning is commonly based on results actually achieved under the extensive management practices of the past. If allowance is made for the increases in growth which can be achieved by intensified management, shortened rotations would often show little or no falldown in cut even when expressed in the archaic standards of measurement now in use.

While these points may seem excessively technical in nature, they actually reflect broad and fundamental issues in the concepts used in forest management planning. They deserve the most careful analysis and full explanation. The present assumptions, reflecting past practice, clearly constitute the primary block to expanded rates of cutting of federal timber of the sizes and characteristics required for the immediate construction needs of the nation.

A POLICY PROPOSAL

Thus the appropriate responses to the current problems of high prices related to shortage of lumber and plywood as well as to the needs of the nation for such materials for the housing program of the next decade appears to be as follows: The Secretary of Agriculture should be requested to submit promptly an analysis of the possibilities for several alternate levels of increase in the allowable cut from the national forests, ranging from increases possible simply through expanded thinnings and salvage cuttings to increases requiring re-examination and reduction of present rotation requirements. Each level of possible increase should be supported by documentation of the increases in funds and personnel required to achieve this level of cut. The analysis should be presented not only in terms of board foot volumes log scale to reflect past practices but also in terms of cubic foot volumes to reflect future utilization potentials

Immediate increases in cut through intensified thinning and salvage sales obviously need not await this full analysis. With careful study and review of such an analysis, however, appropriate policies could be developed expeditiously so that the federal forests could make their full contribution to the needs of the nation.

Any expansion in the rate of cutting of federal timber will require an increase in funding of Forest Service programs in timber management and timber sales administration. However, the increase in timber sale revenues will more than offset these cost increases. On balance, such a program can represent a contribution to, rather than a net drain on, the Treasury.

In this regard, consideration might well be given to the possibility of funding such an intensification of federal timber management by earmarking a portion of the timber sale receipts for re-appropriation back to the management program. Such a tieing of the financing of intensification of the program to the level of sales should increase the responsiveness of the federal timber management program to national needs.

OTHER POSSIBLE ACTIONS

(a) Another possible area for action to relieve the domestic demand situation might be through control of log exports. The action taken by the Congress last fall in the foreign aid bill placed exports limits solely on logs cut from federal lands. Further, it tended to freeze the level of such exports for 1969, 1970, and 1971 at established levels rather than to impose a major reduction in such exports. While there are provisions in this legislation

to prevent substitution of logs from federal forests for logs exported from private lands, there is no direct control on exports from private lands or on the total volume of exports. Clearly, any such restriction imposed only on federal timber must be expected to concentrate further increases in export demands on the private timber and thus to be only partially effective.

Only the establishment of an overall quota or flat embargo on export of logs, whether from public or private forests, would be effective in reducing or eliminating this source of pressure on timber supplies. However, neither the effectiveness of such restriction in increasing the quantity of timber supplied at lower prices in the domestic market nor the general economic and political desirability of such restrictions is clear.

The initial expansion into this export market was largely in species and sizes of logs for which no domestic market then existed. Rising Japanese prices brought out additional quantities and a wider range of species and sizes. In the current strong domestic market, the major part of the present export volume would probably be marketable in the U.S., although only at lower prices than in the export market. When U.S. demand justifies a price equal to the export demand, there is no problem in diverting the flow to domestic use. The real question is the extent to which the present export volume would be available at reduced prices.

Furthermore, export trade also contributes to national goals through a favorable influence on the balance of payments problem, while arbitrary disruption of such trade must be expected to lead to reprisals in other areas of trade relationships. Any progress toward meeting an internal problem through such a policy of trade restriction would involve an offsetting adverse effect on external relationships of the nation.

Thus any such intensified restrictions on the log export trade would be at best a negative and inherently undesirable approach to the problem, justifiable only under conditions of extreme economic hardship.

(b) Another approach which might be considered is the expansion of wood imports. Such imports are already of substantial importance in the U.S. market. In 1962, for example, net imports of wood products into the U.S. represented about 14 percent of the nation's total forest products consumption. In fact, the U.S. is today the world's largest importer of forest products. In addition, it ranks fourth among the nations as an exporter of forest products. The imports run heavily to softwood lumber and newsprint paper, with wood pulp, pulpwood, and hardwood plywood and veneer providing most of the remainder. Exports are somewhat more diversified, including softwood lumber, softwood logs, wood pulp, and paper and paperboard products.

A highly significant aspect of the imports is that the softwood lumber, newsprint, and other products with the exception of hardwood plywood and veneer come almost entirely from Canada. The other forest regions of the world have little potential for supplying our construction materials needs in forest products, again with the exception of hardwood plywood and veneer.

Canadian exports of softwood lumber to the U.S. are directly responsive to price levels in the U.S. as compared to price levels in other export markets served by Canada. Rises in U.S. demand are typically met by increases in shipments from Canada. Tariffs on softwood lumber shipments from Canada to the U.S. are low and do not appear to be a significant barrier to such trade flow. Thus there is little opportunity here for federal policies to reduce barriers to such imports.

In the case of softwood plywood, there is a mutual 20 percent tariff between the two nations. Little Canadian plywood comes to the U.S., and U.S. plywood shipments to Canada have also been limited. The effect of a mutual reduction in this tariff level on the volume and direction of trade flow is difficult to estimate, since in the past Canadian plywood prices have often been higher than U.S. prices. Canadian plywood capacity is limited and any large flow of Canadian plywood to the U.S. would be dependent upon an increase in Canadian capacity as a result of tariff changes.

(c) As noted in the first half of this presentation, various short term problems such as freight car shortages and interruptions of logging by weather conditions have intensified the price effects resulting from the inelasticity of the timber supply for the sawmills and plywood mills. Action has already been taken to increase the availability of freight cars to the producing regions. Similar actions to improve efficiency in other problem areas involving interruptions in production can be helpful. However, while such actions may help to temper price extremes, they cannot be expected to solve the basic problem since they are not responsive to the basic cause.

CONCLUSION

To summarize, I believe we must recognize that the current problem of sharp increases in lumber and plywood prices is not a new phenomenon. Instead, it is repetition in particularly intense form of an experience which has been repeated a number of times over the last one hundred years. The basic cause in each such instance has been the inelasticity of the supply of timber of characteristics appropriate to the technology of the period within operating radius of established mill capacity. Changes in the nature of the national timber inventory and the concentration of the remaining old-growth timber in federal ownership largely explains the increasing intensity of the price responses to periods of sharp increases in demand.

While various actions can be and are being taken to reduce the extremes of the current price situation, the only far-reaching opportunity appears to be through intensified management and rapidly expanded cutting levels on the federal forests. While the immediate concern is with the price rises which have been experienced since last summer, the problem and its solution must be viewed in broader terms. Realization of the national goals in housing will require a very rapid increase in home construction over the next two or three years, rising to an average rate much greater than that in prospect for the current year. The real issue is that of providing an adequate supply of building materials to meet this need. The policy appropriate to the federal forests must be reviewed and changed in response to this need.

IS THE FCC PUFFING OR BLUFFING?

HON. ROY A. TAYLOR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. TAYLOR. Mr. Speaker, I call to the attention of my colleagues the editorials from the Asheville Citizen and the Asheville Times concerning the threatened ban of radio and television cigarette advertising:

[From the Asheville (N.C.) Citizen, Feb. 8, 1969]

IS THE FCC PUFFING OR BLUFFING?

In threatening a complete ban on radio-television advertising of cigarettes, the Federal Communications Commission is seemingly attempting to ursurp a prerogative it doesn't have—certainly not without the concurrence of Congress.

Harmful or not (and the point has never been established to the satisfaction of many research scientists) cigarettes are a lawful product, sanctioned for sale on the open market. If they "May Be Hazardous To Health" as the wrappers must now proclaim, it is possible they are no more hazardous than automobiles, motorcycles, chain saws, certain types of toothpastes, extra-strength detergents, and various other commercial items that are widely promoted on the air. As long as cigarettes are accepted as safe enough to sell, the advertising of competitive brands, within the limits of truth and decency, should not be restricted.

Congress isn't likely to permit the FCC to carry out its threat, which would amount to bureaucratic suppression. Perhaps the agency realizes that; but the fact that such an edict is contemplated seems to reflect the distorted self-image of power this federal commission has assumed and apparently seeks to exercise.

Not that we advocate the smoking of cigarettes; they *MAY* well be, as the labels maintain, a potential menace. But so, in this instance, is the FCC.

[From the Asheville (N.C.) Times, Feb. 10, 1969]

BANNING CIGARETTE ADS

The Federal Communications Commission, by moving for the prohibition of cigarette advertising on television and radio, is getting into a chancy area. Regulation of the personal habits of the nation by executive decree has little to recommend it and much to look askance at.

In its regulations to date, the FCC has been anything but consistent. There is no advertising of hard liquor on the airwaves, but beer and wine have a free hand and bring in their millions to the networks and the advertising agencies. All are intoxicating, and there is little logic in excluding one form of intoxicant and permitting others.

Further, some medical experts still dispute the claim that cigarettes are a direct cause of lung cancer. Until all controversy has been settled, the FCC is infringing on private rights in seeking to forbid the advertising of cigarettes on the air.

FOCUS ON FEDERAL CITY COLLEGE—PART IV

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HAWKINS. Mr. Speaker, the board of higher education is charged by the Congress with the ultimate responsibility to establish requirements governing programs for Federal City College. The criteria which the board expects the college administration to use, and which the board will apply in determining whether a proposed program of study shall be adopted, are outlined in the following statement by the board of higher education:

STATEMENT BY THE BOARD OF HIGHER EDUCATION

On February 4, 1969 the Board of Higher Education gave its tentative approval to a statement entitled "The Purpose of Federal City College," which had been recommended to it by the Interim College Commission, which is composed of elected representatives from College administration, faculty, staff, and students. That statement sought to make

it clear that it has been, and will be, the policy of the Board of Higher Education and the College administration to create and operate a college of excellence in a manner consistent with the hopes of the community and those in Congress who worked to establish in the District of Columbia a publicly supported institution of higher education.

That statement of purpose, it now appears, has not been adequately understood by persons within the College and within the community. This further statement, it is hoped, will correct misunderstandings, and elaborate some of the policies heretofore stated only in more general terms.

1. At the outset the Board wishes to make clear that the Federal City College is already an institution in which the District of Columbia and the Congress can take justifiable pride. Many hundreds of students who would otherwise have had no opportunity to attend college are receiving from many highly competent teachers the higher education to which they are entitled. Several thousand additional students who will graduate from high school next year, or who have already graduated, have applied for admission next September. The College continues to attract faculty candidates of high quality. The funds made available for community programs through the status of the College as a Land Grant institution are already providing needed and welcome community educational programs. That there should have been a lack of understanding of some of the policies of the College and of its proper procedures is unfortunate, but this should not obscure the solid achievements which have occurred, nor the potential of the College for a much greater contribution to the community as it continues to grow. The goal of the Board, and of the College community as a whole, is to direct the College toward becoming the "institution of excellence" to which its students and the communities which it serves are entitled.

The Board is aware that this excellence must in the last analysis depend on the quality of the College's faculty and professional and other staff. The Board is also aware, as set out in its statement of purpose, that the College will constantly be seeking innovative improvements and that there will and should be diversity of opinion within the College community on academic and other issues. The Board's duty under the law to make all appointments thus imposes on it a heavy responsibility. It therefore proposes, on the recommendation of its Personnel Committee, to establish by resolution a procedure that will enable the Board to make decisions on appointments and reappointments with the fullest consideration and the greatest care to see that it acts fairly and with full information at its disposal.

2. The Board of Higher Education is charged by the Congress with the ultimate responsibility "to establish policies, standards, and requirements governing . . . programs, graduation (including the award of degrees) . . . of the Federal City College." This responsibility the Board has up to now, exercised only to the extent of an approval of the general program for the freshman year. As programs for second and later years, and for degrees are recommended by the Administration, the Board will review each of them with such assistance from the College community and other sources as it may need and find appropriate, to ensure that the programs are consistent with the overall policies of the College.

Among the criteria which the Board expects the Administration to use, and which the Board will apply in determining whether a proposed program of study shall be adopted, are the following:

(a) The program must be academically sound, and based on relevant academic standards appropriate to college work.

(b) The program must be designed to meet the needs of a student body that will be largely composed of residents of the District of Columbia.

(c) The program must, of course, be consistent with legal requirements, both those contained in the law creating the College and those required by the Constitution and other laws of the United States.

(d) The program must have a proper relationship to the remaining programs in the College.

The allocation of faculty among the several programs of the College will be determined, of course, as the programs themselves are approved by the Board and by the extent of student interest and value to the community in the several programs and courses involved.

Because Black Studies at the College has apparently been the subject of much of the misunderstanding as to the purpose and policies of the College, a further word on that matter is appropriate.

First, the Board believes it highly appropriate that in Federal City College there be courses of sufficient academic depth and diversity to warrant designation of Black Studies as an appropriate major field of academic credit. While the whole matter of Black Studies is a relatively new and evolving one, the goal of the Board will be to have the best program of Black Studies that is offered anywhere.

Second, no program for a course of study in this field has been presented to the Board and no program has been approved by the Board, tentatively or otherwise.

Third, the Board will apply to the course of study in this field the criteria already stated above. *The Board will not approve a program which is designed to encourage separation between the black and white races, or which would increase rather than seek to eliminate racial antagonism and conflict, or which would encourage or condone violence as a means of resolving issues.*

Fourth, the course of study leading to a degree with a major in Black Studies will be a program of the College, and neither in form nor in substance a separate school, and will be related to and integrated with the other programs of the College.

Fifth, the allocation of faculty to the program will, as in all other programs of study, be based on the nature of the program and the extent to which there is student interest and value to the community in the particular courses to be offered.

3. Many colleges and universities with long-standing reputations of academic and administrative excellence are finding new patterns of governance. *Federal City College, as a new institution, has sought also to find patterns of administration and governance that are relevant to the present time.* In general, and with the full approval of the Board, the decision-making procedures have followed the tradition of democratic participation that is desirable in an academic institution which seeks to meet the new challenges of the present.

The Board recognizes, however, that due to misunderstandings, to the state of flux in which a newly-organized institution must operate, to a lack of clearly defined processes of decision or recommendation, and in some instances to a disregard of established procedures, the administrative structure of the College has not always functioned either in accordance with normal processes or effectively and properly.

The Board, consequently, directs that the President, with the advice of the College community, prepare and present to the Board a clear statement of the procedures which are to be established to arrive at recommendations or decisions on all matters of College policy. The Board expects the presentation to be made to the Board no later than April 30, 1969.

4. The Board is aware of the charges recently made that some members of the faculty and staff have not accepted their assigned work load, have failed, without good cause, to meet their classes, or have not performed their work in a manner consistent with professional standards and their assigned responsibilities. The Board believes that to the extent this has occurred, it has been confined to a very small number of persons. Nevertheless, no unprofessional conduct can be condoned.

The Board has instructed the President to make an immediate and thorough investigation of these charges, and to include in his report to the Board not later than April 30, 1969, the procedures which are to be established to ensure that unprofessional conduct on the part of any member of the College community will be promptly and effectively eliminated. *The Board will not approve for reappointment faculty or staff who are unable or unwilling to conduct themselves in a professional manner.*

HAWAII BUILDER E. E. BLACK, "A BULLDOZER WITH A HEART," CELEBRATES HIS 80TH BIRTHDAY

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. MATSUNAGA. Mr. Speaker, the saga of Hawaii's Everett Earl Black is one of humility and hard work, and has its beginnings in a log cabin in Vigo County, Ind. It is the saga steeped in the American tradition of the crusty fist-wheeling builder who carved an empire out of the wilderness. To many old-time islanders, E. E. Black has become the symbol of the hard-driving force which slashed a wide swath through the rugged terrain of a half century of Hawaiian history, and with a business empire which today encompasses Guam, the Philippines and the trust territories.

In a recent interview with the Honolulu Star-Bulletin, just prior to his 80th birthday last week, Mr. Black noted one of his favorite bits of advice to youngsters:

> Remember, nobody attains success on a 40-hour week.

It is this driving, almost classic, Eric Hoffer philosophy which has governed Mr. Black's life and business. From the founding in 1930 of the construction company which bears his name to the day he surrendered its presidency to his son in 1962, Mr. Black has always been the first man on the job at 5:30 a.m. and the last to quit.

But his beliefs in community service go far beyond just being a good boss and a good friend. It is best expressed in his "my debt to the community" philosophy:

> This community (Honolulu) made possible what I am and what I have today. The only way I know how to pay back my debt is through community service.

His days and energies are now directed in serving as the chairman of the Honolulu Gas Co.'s board of directors, as a director of the First Hawaiian Bank, Health Facilities Planning Council of Hawaii, and the Junior Achievement, and

as the chairman of the Queen's Medical Center's board of trustees. With the latter Mr. Black served as its president for 20 consecutive years, and was responsible for pulling the hospital out of the red.

Mr. Black, who has five grandchildren, was honored last year as Honolulu's "old fashioned" Father of the Year.

This, then, is the saga of Everett Earl Black, one of the leading builders in the Pacific. Mr. Speaker, Hawaii views with pride the many accomplishments of the dean of its construction industry. In order that others may know of the remarkable story of E. E. Black's success, I submit for inclusion in the CONGRESSIONAL RECORD the informative article by reporter Tomi Knaefler which appeared in the Honolulu Star-Bulletin of March 15, 1969:

BUILDER E. E. BLACK'S 80 YEARS

(By Tomi Knaefler)

I thought he was a tough old so-and-so.

But he isn't. Not a bit.

He is E. E. Black, one of the leading builders in the Pacific, whose very name became a kamaaina symbol of tough-talking, hard-driving success as he slashed a wide swath through the rugged terrain of a half century of Hawaiian history.

The Simon Legree image of Black crumpled—as will any image ill-founded on prejudice—under the weight of truth that revealed itself in an interview with him shortly before his 80th birthday next Friday.

What happened, you might say, was simply a matter of one human being getting to know another human being.

Or, as a long-time associate of Black's put it:

"From a distance, E. E. Black is a bulldozer. See him up close, he's a bulldozer with heart."

ORIGIN OF A NICKNAME

Heart, or is it soul, or is it humility that never goes out of style? Whatever it be, it came through during the interview as the essence of Everett Earl Black, known to his friends as "Johnny."

The nickname goes back to the first date he had with Ruth Ailene Emens, his wife of 56 years who had promptly dubbed him Johnny Jones.

The cigar-smoking (dozen a day) contractor has been called many more colorful names over the years, but they've left no visible scars.

This is, perhaps, because Black has that rare quality of humor that laughs best at himself.

An oldtimer at the Queen's Medical Center, which Black serves as president for the 20th consecutive year, illustrated that quality often obscured from public view:

"He's tough. He gives in hard, but he does give in if it's for the good of the organization, regardless of how strongly he personally feels about an idea.

"When he makes a mistake, he's the first one to admit it and he'll laugh at himself as loudly as the guy next to him."

WIT, COMPASSION, CANDIDNESS

The first hint of the Black humor was in his laugh-splashed response to this reporter's request for a pre-birthday interview.

"You people must be in pretty bad shape to want a story about an old battered-down engineer."

He provoked another round of laughter with a recitation of that old saying: 'Fools' names are like their faces; always seen in public places.' "

Along with his wit, within the essence of Black is a depth of compassion and remarkable candidness.

The crusty contractor, who was born in a log cabin in Vigo County, Ind., formed the company that bears his name in 1930. He served as its president until 1962 when he turned the job over to his son, Robert Emens Black, and has since served as chairman of the board.

At first, Black said, the switch in title didn't keep him from bounding about where the action was, just as always. A classic inner-directed man, he had worked hard since childhood and took pride in the fact that he expected no more of others than he did of himself.

GOOD BOSS AND GOOD FRIEND

One worker who was with Black from the start and has since retired recalled how his boss pitched in whatever the job—from lugging cement, picking and shoveling to operating a crane.

Furthermore, said the worker, Black—"a good boss and a good friend"—was always the first man on the job at 5:30 a.m. and the last to quit.

Black said: "It wasn't easy to step aside from active involvement. It was a hard thing to quit from something that took all that work to build up.

"But I knew it was time for me to stay away that day I stopped at one of the projects and asked the men 'what's going on?'

"They were doing the job completely contrary to our accepted practice.

"The superintendent shook his head. He said that my son Bob, the new president, wanted it done that way.

"This superintendent, who had worked with me for a long time, said: 'I told Bob that if your father ever saw this, I'd be fired.' "

DIFFERENT MEN, DIFFERENT IDEAS

Black blew out a huge puff of cigar smoke before continuing:

"I knew right then that I had to quit coming around. People have different ideas. I have mine. Bob has his. And it was his turn to be in charge, without any meddling from me.

"But it wasn't easy to stay away," Black said.

As he paused, the reporter recalled the E. E. Black, Ltd., signs seen over the years at countless building and construction sites and, too, the Wilson Tunnel site, where five workers were killed in the last of three caveins in 1954.

The tragedy, which occurred during the construction of the first of the two Wilson tunnels, is a "closed subject" for Black.

"I don't want to belittle anyone," he said, noting as he has in the past that the design of the tunnel was blueprinted by the City.

He said, "On the second tunnel, they let us do what we had wanted to do and everything went OK."

While he has apparently steeled himself regarding that remembrance, edges of pain seem still to be there.

TAKES PRIDE IN CHILDREN

His expression picked up again as he spoke about his son's progress with loads of fatherly pride:

"Bob's done exceptionally well. The jobs are bigger today. With the value of the dollar down the way it is, he has to work harder.

"The company's grown and expanded to the forward areas—Guam, the Philippines and now the Trust Territories. That credit belongs to my son.

"I'm very proud of him."

It was also with pride and respect that he spoke of his second son, Everett Emens, and his daughter, Jane Anna, both of whom are also in business for themselves; the former in Honolulu and the latter in San Francisco.

Black, who was chosen as Honolulu's ("old-fashioned") Father of the Year last year, "always tried to spend as much time as I could with my family."

His inward appreciation of his family showed in the facial lines that crept and then creased into the gentlest of smiles.

"Jane," he said, "still calls me every Sunday morning—just about 10 minutes to 8—even when she's traveling," which she does extensively for her epoxy resin formulating business.

SUNDAY CALL MEANS A LOT

The Sunday call "means a good deal to her father," Black said, particularly since his wife has been succumbing gradually to the toll of aging.

Mrs. Black was formerly active in "just about every woman's activity in town." She was a member of the University of Hawaii's Board of Regents.

"It means a good deal to me," he said, "to have a good relationship with my children.

"It's marvelous that Jane does call. Her business is a big responsibility. She needs someone to confide in. So do I."

For his 80th birthday, Jane, who was born on the same day, will return here to host a luau fit for "a very magnificent man" and some 175 friends who "have had a deep influence on his life."

The luau will be held at 6 pm. Friday at the Willows. Among the guests will be a number of his original crew, old-timers he worked in previous jobs as a "cub engineer" and business and civic leaders with whom he has tussled on numerous boards.

At another luau a few years back, Black was honored for his role in founding the General Contractors Association of Hawaii. The dean of the local construction industry rose to the occasion in expected form:

"It's wonderful to get flowers while you can still smell 'em."

Black cherishes that tribute from his colleagues. Another among other honors that tickled him was receiving an honorary doctor of engineering degree from his alma mater, the Rose Polytechnic Institute in Terre Haute, Ind.

WORK IN COMMUNITY CAUSES

Black has probably donated to more causes than there are causes. Right now, his energies are directed to the following:

Chairman of the Honolulu Gas Co.'s board of directors, director of the First Hawaiian Bank, Health Facilities Planning Council of Hawaii and the Junior Achievement and the chairmanship of the Queen's Medical Center's board of trustees.

The last two are his special pets, For JA, which helps youngsters to learn business principles by doing, Black persuaded an impressive group—architects to labor union officials—to put up a new $100,000 building for nothing.

Black's pitch to them as to himself: "We all owe it to our community to help as much as we can."

He has often expressed "my debt to the community. I came here as a young man of 24 on June 10, 1913, with my new bride and $250 in borrowed money. This community made possible what I am and what I have today. The only way I know to pay back my debt is through community service."

Black, who has five grandchildren, strongly supports the Junior Achievement because he believes in the gospel of hard work. He feels youngsters are happier when they know the satisfaction of work well done.

He thinks parents hurt youngsters today by trying to make it too easy by doing "too much" for them.

VALUES OF WORK

He believes higher education would be more meaningful if a youngster had to work for it and if a youngster took advantage of in-service work offered in cooperative education.

That, he notes, would help youngsters find their niche earlier and prevent them from getting stuck with ill-suited careers.

One of his favorite bits of advice to youngsters is: "Remember, nobody attains success on a 40-hour week."

His service to Queen's dates back to a severe heart attack 21 years ago. While confined, he was appalled to learn "what a bad shape the hospital was in financially."

No sooner back on his feet, Black volunteered to be on the hospital's board and won the first of an unbroken chain of 20 elections as board president a year later.

MUCH WORK FOR QUEEN'S

He has poured thousands of dollars and sense into the organization over the years. It was Black who pulled the hospital out of the red, thereby enabling continuing programs to expand and upgrade services.

A long-time Queen's associate remembers this scene: "Our president would walk through the hospital before noon each Wednesday to conduct his board meeting wearing khaki pants, workshirt and workshoes, carrying his lunch in a little brown paper sack."

Alas, sighed the associate, "he wears a suit like the others now."

Black has powerful feelings about Queen's. "It isn't the biggest hospital in the country, but it's just as good as any of 'em.

"Tourists from all over who are unexpectedly hospitalized are constantly flabbergasted at the service and the wonderful job of nursing we offer. This community is very fortunate, too, in having a very competent group of doctors."

While Black has "very little to do with the company's business anymore," he still keeps his 9 a.m. to 4 p.m. hours at his Kakaako office.

GREATEST SATISFACTION

Without business pressures and without active Republican Party demands, Black, who supported Goldwater in 1964, fills his days with community work.

He said: "The most exciting thing for me was forming my own company. But the thing that gives me the greatest satisfaction is my community work."

And then he said:

"It's good of the community to let me do what I can.

"I need the community more than it needs me."

He continued:

"So many people become senile as they grow old. I told Malcolm MacNaughton that he should get me to climb off as president of the hospital board when he has reason to believe that I'm getting senile.

"I am sincere. The hospital is too important to the community. I don't want, and I shouldn't be allowed, to stay on if I'm a detriment."

Then, as a company official stepped into the office for his signature on a wad of business papers, Black laughingly explained the reporter's mission:

"The Star-Bulletin is updating their obituaries."

COLORFUL LANGUAGE

As Black shook hands heartily, the reporter noted the absence throughout the long chat of his well-known command of "old English," such as *!?& *!?& *!?&.

"Guess I'm just mellowing with age," he grinned, picking up a fresh "1886" cigar, which he buys six boxes at a time.

The matter of salty "old English" brought to mind one of Black's funniest stories:

Many years ago, he had hired an electrical subcontractor as a favor to a friend. When he discovered the man's extremely inferior work, Black tossed him off the job with an assortment of choice words.

The man sued for breach of contract and slander.

When Black's lawyer, J. Garner Anthony, read the plaintiff's complaint that the defendant had called him a blankety-blank, he asked:

"Did you say all this, Mr. Black?"

"That wasn't the half of it," was his client's reply.

Black recalls giving Anthony two instructions on the case: 1—"I don't want to pay that blankety-blank a red cent. 2—I don't want to go to court and lose."

Anthony's job in the slander case was to convince the jury that the subcontractor was, indeed, a blankety-blank.

The jury found in Black's favor on both counts.

Black's tribute to Anthony: "He has succeeded in keeping me out of jail all these years."

CURRENT HEAD OF U.S. CHAMBER OF COMMERCE SEES SERIOUS FLAWS IN MAGAZINE SALES INDUSTRY'S SELF-REGULATIONS

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, for the past month I have been discussing the subject of magazine subscription sales fraud and deception. During that period, I have received numerous letters from around the country which support my position that such sales frauds must be wiped out.

Almost without exception, these letters are written by American consumers who have, themselves, fallen victims to the high-pressure sales pitch which often involves offers of prizes, free gifts, free magazines, and so forth, to secure a signature on a contract form.

There is nothing free about "magazine subscription sales," not even when the salesman or telephone solicitor insists that all you have to pay is the "postage and handling charges." The so-called "postage and handling" fee of a small sum weekly, when computed over a 5-year period as most magazine subscription sales are, quickly adds up to a huge debt of $150 or $180, payable in monthly installments over a period of about 2 years.

To receive a supporting letter from someone who has not "been taken," someone who is a national representative of business interests, and who is willing to state that "voluntary self-regulation has not been as effective as it should be" in the magazine sales industry, is a most refreshing experience.

I have received just such a letter from the current acting head of the U.S. Chamber of Commerce, Mr. Arch N. Booth, executive vice president. Mr. Booth has been serving as chief executive of the national chamber since the national president accepted the position of Postmaster General of the United States in the administration of President Nixon.

Mr. Booth and I do not concur on the need for strong Federal legislation to clean up the magazine subscription sales industry and several other direct sales industries like it—encyclopedias as a prime example—which have blatantly used every scheme in the books to deceive consumers. I believe legislation is the only solution which will do the job effectively. Mr. Booth feels self-policing within the direct sales industry can succeed with more teeth and offers some suggestions.

One of his proposals would expand central registry, which now is composed entirely of magazine publisher representatives, to include representation for the chambers of commerce, the Better Business Bureau and consumer groups. Certainly, this is a suggestion which should not be overlooked.

I am pleased, Mr. Speaker, to enter in the RECORD the comments of Mr. Booth, executive vice president of the U.S. Chamber of Commerce, as one more strong argument for broad congressional hearings on the sales practices of magazine subscription sales companies and possible means to clean up the industry:

CHAMBER OF COMMERCE OF THE
UNITED STATES OF AMERICA,
Washington, D.C., March 15, 1969.

Hon. FRED B. ROONEY,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. ROONEY: Thank you for sending me copies of the two recent statements you made in the House of Representatives regarding fraudulent sales practices of magazine subscription sales companies.

There is much merit in what you had to say—I congratulate you. There are some severe abuses by subscription selling organizations.

You are entirely right that voluntary self-regulation has not been as effective as it should be. However, we continue to believe that it's the best remedy. Self-regulation should be strengthened rather than abandoned and replaced with government regulation.

In the magazine field, for example, the Central Registry, set up by the Magazine Publishers Association, should put some teeth into its rules. Publishers who deal with unscrupulous subscription sales companies should be penalized in some fashion. Perhaps this could take the form of some sort of fine or perhaps it could simply be publicizing the fact of their dealings with these people.

Another constructive suggestion would be to include groups other than publishers in Central Registry. These could include perhaps local chambers of commerce, better business bureaus, consumer groups, and the like. They could let Central Registry know about some of the unscrupulous practices and who is perpetrating them.

These and other constructive ideas may help the legitimate door-to-door sales organizations.

I congratulate you on your efforts to be helpful. It's a pleasure to work with you.

Cordially yours,

ARCH N. BOOTH,
Executive Vice President.

ON CIGARETTE ADVERTISING

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. WYATT. Mr. Speaker, much controversy has been generated over the Federal Communications Commission's

recent decision to ban cigarette advertising on television.

The Portland Oregonian recently featured an editorial on this subject which I would like to bring to the attention of my colleagues:

SMOKE AD BAN OFF BASE

The Federal Communications Commission's proposed ban on television and radio advertising of cigarettes is not only unprecedented; it is also beyond the authority of the FCC and is probably unconstitutional.

The FCC has regulatory power over broadcasting because channels are limited and must therefore be assigned by responsible authority. But its commission gives it no power to say what must or must not be broadcast. Moreover, it is clearly out of its field in making a judgment on the dangers in smoking cigarettes. This is the kind of judgment that is entrusted by statute to the Food and Drug Administration. But it is out of place in an agency created for the limited regulation of communication media protected by the First Amendment's provisions of freedom of speech and press.

The majority of the commission bases its action on findings that some 50,000 deaths a year can be traced to lung cancer, which has been linked to heavy smoking of cigarettes. It so happens that about the same number of people die each year as a result of automobile accidents. Does the commission, therefore, have authority to ban automobile advertising, or the advertising of other killers such as sleeping pills and alcohol? It apparently believes it does.

American public opinion recognized the injurious personal and public effects of alcoholic beverages by writing their prohibition into the Constitution, later relenting. A constitutional amendment is the proper course if cigarette smoking is to be controlled.

The FCC might get away with its fiat for a time, if Congress does not act, for broadcasters are beholden to the agency. But surely the enforcement of such a ruling would be attacked in the courts, and the FCC's legal grounds appear to be nonexistent.

The moral grounds of such a federal government edict are certainly null. The government not only sanctions cigarettes by taxation; it actually encourages their manufacture and sale through support of tobacco crop prices.

The issue here is not the morbidity that may be assigned to smoking cigarettes. It is whether a federal agency may, by decree, say what may or may not be advertised to the public when there is no question of fraud or other crime being involved. Such authority cannot be tolerated in a free society.

GREEK DEMOCRACY

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, 148 years ago, on March 25, the Greek people, after a long and fierce struggle won their well deserved independence. On that date in 1821 the brave and long-suffering people of Greece threw off the yoke of the Ottoman Empire and proclaimed liberty throughout their land. Greece, the birthplace of democracy, had suffered under the cruel oppression of the Ottoman Empire. With civil liberties destroyed and with the oppressor's attempts to suppress the magnificent culture of the Greek people, it was surprising to many that the flames of liberty could not be quenched. But the Greeks are a freedom-loving people and often extraordinarily patient. They suffered under foreign domination but never lost the hope nor the determination that they would one day be free.

Under the leadership of and inspired by that great patriot Venizelos, the Greek people achieved their long-sought independence. Many times since 1821 obstacles have fallen in the path of the continued growth and protection of Greek liberty, but each time the determination of the Greek people to be truly free has prevailed. In every generation Greece has faced a threat to her democratic ideals, but as in the case of the Ottoman Empire, the oppressor is vanquished.

I am hopeful that Greek democracy, which has contributed so much to our own system of liberty, will continue to prevail so that that nation, which gave democracy to the world, will share in the fruits of her own contribution.

DR. BRUNO BETTELHEIM

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PUCINSKI. Mr. Speaker, Dr. Bruno Bettelheim, one of the world's noted psychologists, has brought a new dimension into the entire discussion of campus unrest in America.

In his testimony before the Special Subcommittee on Education, chaired by the distinguished lady from Oregon (Mrs. GREEN), Dr. Bettelheim has called our attention to the fact that some of those participating in campus disorders are emotionally disturbed and need professional help in the treatment of their personal problems.

I believe it is extremely important that we recognize this aspect of the unrest phenomena sweeping this country.

I am mindful that some of those participating in such unrest are exercising their constitutional right of dissent. I am also aware that some of the young people are genuinely concerned about the lack of relevency in much of the curricula being offered by American institutions of higher learning and express their concern in these demonstrations.

I am also aware that some of the young people belong to minority groups and feel genuinely left out from the mainstream of university life, both in the curriculum, the social activity, and employment opportunities.

But I believe that Dr. Bettelheim quite properly points out that we ought also to recognize the fact that some of those participating in campus unrest are nothing more than emotionally disturbed young people seriously in need of professional assistance.

It is high time that we recognized that not all of the turmoil on the university campus is directly associated with constitutional rights of dissent.

No one can convince me that a young college student who disrobes on a university campus and cavorts around in the nude is participating in some constitutional right of dissent. Obviously, we are dealing with a sick individual who ought to be identified as such and then given professional help.

It should come as no surprise to us that young people on the university campus should suffer emotional disturbances when we consider the enormous pressures that bear on the young people of today.

I believe that Dr. Bettelheim has performed a notable public service by applying his vast experience in addressing himself to this subject.

I hope that university educators will read his testimony with care and not dismiss it, but rather garner from this testimony some meaningful guidelines for dealing with the problem of campus unrest.

Very shortly I intend to offer legislation which would make funds available to universities for the establishment of psychiatric, outpatient clinics which would be made available to those young people who feel they need professional assistance with their personal problems.

It is not uncommon that people who may be extremely gifted in their intellectual pursuits may suffer to a lesser or greater degree, emotional problems which can be helped by professional assistance.

I believe Dr. Bettelheim's analogy of the situation on our campus today and those events which led to the collapse of freedom in Germany is most timely and offers to us for the first time some professional guidance of dealing with this problem.

In my judgment, we ought to make available on the campus meaningful professional help to those young people, and perhaps those members of the faculty who feel it necessary, some professional help.

I hope no one will read into my remarks a suggestion that everyone who engages in dissent is in need for psychiatric help because this is not the point I am making at all. But I do believe that there are some among the dissenters who could be given more meaningful assistance than venting their emotions in needless destruction as we so often witness now.

Dr. Bettelheim's excellent statement to the committee follows:

STATEMENT OF DR. BRUNO BETTELHEIM BEFORE THE HOUSE SPECIAL SUBCOMMITTEE ON EDUCATION, MARCH 20, 1969

The problems to society which originate in the students' rebellions are so manifold and have such far reaching implications that in a short presentation only a very small selection of them can be alluded to. I shall, therefore, concentrate (1) on the parallels to the German situation before Hitler; (2) on a few of the factors which contribute to the widespread unrest among relatively large numbers of students, black and white; (3) on the small group of leaders who, by making skillful use of the general unrest succeed in doing damage way beyond the importance of this group because of their tactics of intimidation and coercion and due to the publicity they receive; (4) the particular difficulties of some black students which are

exploited by the SDS; (5) the fascination with extreme positions, and (6) what all this does to the universities and higher education.

(1) While history does not repeat itself, and while the present U.S. situation is radically different from that of pre-Hitler Germany, given these vast differences, some of the similarities between the present student rebellion and what happened in the German universities which spearheaded Hitler's rise to power are striking. Of course, the German student rebels embraced politically the extreme right, while here they are of the extreme left, but what is parallel is the determination to bring down the establishment. In Germany the philosophy which gained them a mass following was racist and directed against a discriminated minority (the Jews), while here the radical students intend to help a discriminated minority. While this is an important difference, it does not change the parallel that universities then and now were forced to make decisions in respect to the race of students, rather than on the basis of disregard of racial origin. To use only one example, German universities began to cave in when students coerced faculties to appoint professorships in *Rassenwissenschaft*, that is, professorships devoted to teaching the special aspects, merits, achievements, of one race versus others, rather than concentrating in their teaching on contributions to knowledge, whatever the origin of the person who made the contribution.

Professor Laqueur[2] says, "National Socialism came to power as the party of youth." Its cult of youth was as pronounced as that of Italian facism whose very hymn was called "Youth" (*Giovinezza*). Hitler insisted all along that his movement was a revolt "of the coming generation against all that was senile and rotten with decay in German democratic society." Professor Gay[1] stresses the prevalence in pre-Hitler days of an ideology that pitted the sons against the fathers, an insistence that the generations cannot understand each other, are deadly enemies; in short, in this respect they said exactly the same as do our rebellious students who insist that nobody over thirty is trustworthy.

Thus, then as now, these rebellious students were pictured as the new generation, disgusted with the complacency of their parents, fighting courageously for a better world. And what were then the mass media often depicted them as idealists, as young people concerned with the real issues of society. In short, they were in their time the wave of the future. And leftist student activists in 1968 burned books they did not like in the same manner and at the same place, Berlin, as did Hitler's equally youthful followers in 1933.

After having stressed these parallels, and some others which I shall mention at the end, one must recognize the vast differences between the present student rebelliousness, and that of pre-Hitler Germany. It is these differences which should permit us to work towards an entirely different outcome.

If I read the signs of the time correctly, I do not think that the rebellious students in and by themselves are a serious danger to the country, though they are a real danger to the universities.

The danger I fear is rather an opposite one: that the disgusting behavior of a very small group of students—the overwhelming majority of our students are sound, and wish nothing more than to take advantage of the opportunities higher education offers them—will arouse a severe counter-reaction, so much so that their left radicalism may lead to a fascist type of backlash. This I believe is the greatest danger inherent in their efforts to create chaos. In desperation—and they try to test and exhaust the patience of what they call the establishment and thus do succeed in creating desperation—and to prevent such chaos, repressive measures might be embraced which would be dangerous to our democratic institutions. It is because of this danger that I believe the student rebellions must be dealt with in the best interest of all of society, including that of the rebelling students themselves. But they can be dealt with intelligently and constructively only if the measures taken are designed to do away with the causes of the widespread discontent of college students.

(2) In order to understand this discontent one has to realize that so many more go to college than ever before, and hence many more are much less well prepared for this experience. Taking advantage of college, and being satisfied with this experience rather than being defeated by it, requires a considerable amount of self-discipline, and a high degree of satisfaction with what can be derived from developing one's intellect. Present day education both in home and school teaches very little self-discipline compared to even very recent times. The expectation is that education can hand over knowledge and skills, and this nearly instantly. There is widespread feeling that if students do not do well in school, this is the failing of the educational system, not due to their lack of application. With each year in school, this feeling becomes stronger in those who do not do well academically. And with it, the system becomes the enemy which deliberately withholds from them which they believe could so easily be given to them by it, hence the hatred of the system.

To understand why pressures erupt in adolescence on a growing scale nowadays, and why controls seem to grow weaker, we must recognize that adolescent revolt is not a stage of development that follows automatically from our natural makeup. What makes for adolescent revolt is the fact that a society keeps the next generation too long dependent in terms of mature responsibility and a striving for independence.

Years ago, when schooling ended for the vast majority at fourteen or fifteen, and thereafter one became self-supporting, got married and had children, there was no need for adolescent revolt. Because while puberty is a biological given, adolescent as we know it with its identity crises, is not. All children grow up and become pubertal. By no means do they all become adolescents. To be adolescent means that one has reached and even passed the age of puberty, is at the very height of one's physical development—healthier, stronger, even handsomer than one has been, or will be, for the rest of one's life—but must nevertheless postpone full adulthood till long beyond what any other period in history has considered reasonable. And their educational experiences in the home and school prepare only a small minority well for such a prolonged waiting, for being able to control their angry impatience while engaged in such waiting.

And it is this waiting for things—for the real life to come—which creates a climate in which a sizeable segment of students can, at least temporarily, be seduced into following the lead of the small group of militants. It seems to give them a chance to prove themselves as real men. Thus it is an empty waiting for real life to come, which makes for student rebellions. This can be seen from the fact that most rebellious students, here and abroad, are either undergraduates, or those studying the social sciences and humanities. There are no militants among students of medicine, engineering, the natural sciences. They are busy with doing things that are important to them, they are working in the laboratory and at their studies. It is those students who do not quite know what they are preparing themselves for, and why, the students who sit around waiting for examinations rather than doing active work, which form the cadres of the student rebellion.

One example may stand for many: In a class I am presently teaching, a student was close to the activists. He gave me a very hard time in class at first. Two months later he was one of the most interested, cooperating students. I asked him what happened. He answered: "A few weeks ago I got a job which interests me, and I also began to be interested in my classes; that did it."

In my opinion there are, today, far too many students in the colleges who essentially have no business to be there. Some are there to evade the draft, many others out of a vague idea that it will help them to find better paying jobs, though they do not know what jobs they want. And again many go to college because they do not know what better to do and because it is expected of them. Their deep dissatisfaction with themselves and their inner confusion is projected against the institution of the university first, and against all institutions of society secondarily, which are blamed for their own inner weakness.

To make matters worse, our institutions of higher learning have expanded much too fast, have under public pressure for more education for everybody increased enrollment beyond reason. The result is far too large classes. Many classes in our large universities are taught by teaching assistants some of whom, out of their own inner dissatisfaction and insecurity, tend to side with the rebellion. All this led to the anonymity, the impersonal nature of student faculty contacts about which many students rightly complain. And since many of them are essentially not interested in the intellectual adventure, the knowledge which the faculty can convey to them is not what they want. They want essentially group therapeutic experiences which will help them to become mature, secure, to find themselves. But colleges are not mass therapeutic institutions, and hence disappoint the students where the greatest need lies.

In addition because of such vast expansion in numbers, the old methods to give coherence to the college experience, and to offer students a life geared to the needs of the late adolescent age group have disintegrated. This the fraternities and sororities used to do, which were group homes easing the transition from home to society at large. They no longer can contain the vast number of students. And here the demands of some black students for separate black housing, etc. has to be understood as the consequence of their feeling lost in the anonymous mass of students. Only most of the white students are similarly lost until such time as they find themselves in their work and study experience.

Also, the old rituals which enhanced student life and bound them to each other, and to their college, such as football rallies, homecomings etc., all have lost most of their meaning and have not been replaced by anything but the excitement the sit-ins and rebellions provide. The spirit of intimate comradeship that used to prevail in a fraternity house is now found by all too many students in their sit-ins, where they feel closely bound together, important as at no other time, doing things together which they deep down know they do also for the emotional satisfactions they derive from such being together, whatever high sounding issues they think are motivating their actions.

In this context, the symbolic meaning should not be overlooked of students' invading the dean's or president's office, violently, or by means of sit-ins, big in age and size, who inwardly feel like little boys, and hence need to play big by sitting in papa's

---

[2] Laqueur, Walter Z. *Young Germany*. New York: Basic Books, 1962.

[1] Gay, Peter. *Weimar Culture; the Outsider as Insider*. New York and Evanston: Harper and Row, 1968.

big chair. They want to have a say in how things are run, want to sit in the driver's seat, not because they feel competent to do so, but because they cannot bear to feel incompetent.

I think it is unnatural to keep a young person for some 20 years in dependency, and attending school. This might be a way of life for that small elite which always in the past went to universities. They were those who could go to school for 20 years. But they were never more than a small percentage of the population. In the past, the vast majority of young people were actively meeting life, proving themselves as men or women. And in this way they found themselves as real, strong human beings. Now the tremendous push that everybody should go to college has brought an incredibly large number into the university who do not find their self-realization through study, or through the intellectual adventure. But they still need to find their early manhood. They try to change the university to something where they can find it through engaging in an active, sometimes even violent battle against the existing order or all of society. Only that would change the university so that it would be no longer an institution dedicated to the intellectual virtues, to the frontiers of knowledge, but one dedicated to a belligerent reshaping of society. And this is exactly what the militants want—not to engage in study and research, but in political battles.

The reason we didn't have student revolts before is partly because only those went to college who wanted to be educated, and partly because those students who had to put themselves through school, by the very fact that they could do that, of their own strengths, could prove their early manhood—at least to some degree.

I think many of the rebellious students are essentially guilt-ridden individuals. They feel terribly guilty about all the advantages they had. And there's also the guilt of their exemption from the draft, which is a serious guilt. Only again, they cannot bear to live with their guilt. They try to destroy society or certain institutions rather than deal with their own inner guilt, because they have it so good.

I think, from these remarks, it should be obvious which, I believe, may be some of the remedies. Firstly, all too many who now go to college have little interest, ability, and use for what constitutes a college education. They would be better off with a high level vocational education which is closely linked to a work program which gives scope to their needs for physical activity and visible, tangible achievement. The complaint of many of these students is that nobody needs them. They feel parasites of society, and hence come to hate a society which they think makes them feel this way. Here we should not be beyond learning from the communist countries where studies are combined with work in factories and in the fields. I believe this to be a much better arrangement for all those who do not feel a deep commitment to the intellectual enterprise, that is to study and research, and these will always be only a relatively small segment of this age group.

As a matter of fact, I would suggest a youth service program (civilian peace corps, or such) of a couple of years' duration where young people work on socially significant projects while earning pay for it, and receiving at the same time, higher vocational training. After this period only those would go to universities who really wish to do so, while the rest would feel a much greater stake in a society that they helped rebuild. At the least, because of the training they received, they would be well prepared for permanent jobs.

While a need for an army draft exists, such program should be an alternative to it: only those young men who wish to do so should serve in the armed forces, which then would be a voluntary army. And I am convinced if every able-bodied person would have to serve two years in some such program, there would be no scarcity of those who wish to spend these two years in the armed forces instead, particularly if they would, for example, receive some advantages in pay, or other special advantages such as at the end of armed service. This would also do away with the exemption of college students which, in connection with the war in Vietnam, is behind so much of the student unrest. For example, if I am exempt from service when others are not, I can live in peace with myself only if I am convinced this is a vile war.

(3) I feel I can be shorter about the very small group of leaders of the student rebellion because were it not for the widespread student discontent which I discussed above, they would find scant following, and if they should break the law, without such followers, they could be readily dealt with. It is the mass following they can arouse because of the widespread discontent which alone makes them dangerous. I therefore think we should concentrate in our thinking and planning not on these very few, but on what needs to be done so that they won't find ready followers.

There were always a small percentage of persons bent on destroying society, and on fomenting a revolution. In previous generations they were the Wobblies, later there were the campus communists. The reason why the present brand of campus revolutionaries, who are of anarchist and nihilist persuasion, are so much more dangerous is that they can point to success after success of their disrupting tactics. Here, too, nothing succeeds like success. As early as 200 years ago Immanuel Kant warned that we shall never be able to control violence if it is rewarded. "It is far more convenient," he wrote, "to commit an act of violence, and afterwards excuse it, then laboriously to consider convincing arguments and lose time in listening to objections. This very boldness itself indicates a sort of conviction of the legitimacy of the action, and the God of success is afterwards the best advocate." The greatest danger, then, is presently the readiness with which violence is afterward excused, and the seemingly convincing arguments which are brought forth to justify it before and after the act. Worst and most dangerous of all, there seems to be a tendency in our society to legitimize the results of violence so that, as Kant puts it, the God of success afterwards serves as advocate for the violent action that preceded it and suggests its future use. On our campuses those committed to violence (to quote Kant again), "lose no time on considering arguments, or on listening to objections." They simply refuse to be rational about their grievances and through using violent means insist on having their way, no matter what. And if they get their way, as Kant already knew, their success then legitimizes their disruptive actions.

And they gain their success by arousing a sizeable number of students through the tactics of confrontations, and by universities' fear of such confrontations. Confrontations have one important aim—to use the reaction of those they provoke to generate a feeling of new unity among the demonstrators. This has been used in its most direct form by militants, who stand in front of policemen and denounce them as pigs and wait until the man in uniform hits out. The art of demonstrating then lies in seeing that the blows are directed against the less committed demonstrators and, if possible, against completely uninvolved persons. This then provides the mass following they need for their success. A whole system of provocations has been worked out for this purpose.

Speaking of the small group of leaders of the radical left, it has been observed that most of them come from well educated, very liberal families. From my own observations I would like to add that those whom I got to know might be characterized by having had their intellectual abilities developed very highly at much too early an age, but at the expense of their emotional development. Very bright as they often are, emotionally some of them remained fixated at the age of the temper tantrum. It is this discrepancy between great intellectual maturity and utter emotional immaturity which is so baffling, often even to the universities, where some members of the faculty fail to see behind the obvious intelligence the inability to act rationally, and most of all, the inability to act responsibly. It is one of the weaknesses of university faculties that, as persons committed to value most highly intellectual abilities, they are captivated by the intelligence of these students to the degree as to be ready to excuse, or make little, of their disruptiveness and intellectual arrogance.

As for these students themselves, psychologically I always found them hating themselves as intensely as they hate the establishment, a self-hatred they try to escape by fighting any establishment. Obviously they need help in overcoming their emotional difficulties, and punishing them is hardly the way to do it. If we bring them to the universities, we should provide facilities for helping them. I believe it is their emotional immaturity that explains both their call for immediate action, and the retreat of the dropout and the hippy into utter non-action, because each one masks an inability of these very intelligent young people to take time to think things out first. Essentially these militants must want to destroy the universities because they do not want to be students. Because to be a sudent means to prepare oneself to do something more worthwhile in the future. The militant student's cry is for action now, not preparation for action later. In this real sense he is no longer a student at all, since he clearly rejects knowledge as a precondition of any meaningful activity. Truth, moreover, is no longer sought, but "revealed"; the contempt for free speech and free thought is demonstrated as much in his actions as in his words. Were he ever to capture the university, it would cease to be a university at all.

In their inability to think things out because they cannot delay action for thought, both right and left extremists, the militants of all colors, are brothers under the skin. This is among the reasons why in history it happened that the young followers of the extreme right can very easily become those of the extreme left, or the other way round. Because the mainspring of their action is their wish to prove themselves strong, and less any particular political conviction, which is super-imposed on their self-doubt and a hatred of a society that they feel left them out in the cold. There were reasons why, in Germany, the National Socialists and the Communists voted together, worked together to bring down the democratic Weimar government. There is a reason why former Nazis could easily become active in the Communistic government of Eastern Germany.

But there is also reason why mainly the children of leftist parents become hippies, or student revolutionaries in our society, as in other places or times the children of conservative parents, when the similar emotional conditions prevailed in their families, spearheaded rightwing radicalism. It was the children of conservative German parents, for example, who first embraced the Emperor's War and enthusiastically went to their death, because they felt a need to lay "their bodies on the line," as it were, for ideas their parents had only lukewarmly held. This way they could prove themselves strong, while at the same time proving their parents weak, wishy washy, not worthy of true respect. They felt, too, this was a re-

birth, a way to revitalize an ossified society, to create a new society, one of true authenticity and confrontation. All these were the main tenets of academic Hitler youth, as they are now those of our student left.

Thus, while the emotional constellations which make for very different student revolts are strangely familiar, the specific political content of a student revolt depends to a very large degree on the beliefs of their parents. Because in many ways, it is a desperate wish to do better than the parent, exactly where he seemed weak in his beliefs. In this sense it is also a desparate desire for parental approval. But even more it is a desperate wish that the parent should have been strong in his convictions that motivate many of their actions. This is the reason why so many of our radicals embrace Maoism, why they chant in their demonstrations "Ho Ho Chi Minh" exactly as another generation of students chanted at their football rallies. These are strong fathers, with strong convictions, who powerfully coerce their children to follow their commands. While consciously they demand freedom and participation, unconsciously their commitment to Mao and other dictatorships suggests their desperate need for controls from the outside, since without it they are unable to bring order into their inner chaos.

Thus while these militant students need controls, such controls must not be imposed punitively, nor for the benefit of others. They must be controls that clearly and definitely benefit the person himself, so that he will eventually make them become his own inner controls.

It is this, their inability to wait and work hard for long range goals, which marks these militants as emotionally disturbed, as does their hatred for their parents who failed to give them direction, set them against the world, by exposing their immature minds to criticism of all that could have given meaning to their lives.

It is their hatred of society that makes it so easy for the small group of militant leaders to make common cause with another small group that provides temporary leadership for some of the rebellions: outright paranoid individuals. I do not believe the number of paranoids among students is greater than their number would be in any comparable group of the population. They become dangerous again because of their high intelligence, which permits them to hide more successfully the degree of their disturbance from the nonexperts. Having worked professionally with some of them for years, I know that student revolt permits them to act out their paranoia to a degree that no other position in society would permit them. How understandable, then, that all paranoids who can, do flock into the ranks of these militants. Unfortunately, most nonexperts do not know how persuasive paranoics can be, at least for a time, until they are recognized as such. The persuasiveness of a Hitler or Stalin is now recognized as the consequence of their own paranoia, and their unconscious appeal to the vague paranoid tendencies that can be found among the immature and disgruntled. I have no doubt that the ranks of the militants contain some would-be Hitlers and Stalins, hence again their dangerousness.

(4) Paranoics always make a persuasive appeal to any group of the population who rightly or wrongly feel persecuted, and they seek out such groups because they are most likely to view their paranoia as true understanding of this group's particular predicament. Which brings me to the particular problems of some of the black students who, fortunately, seem to recognize ever more than the SDS is using them, rather than helping them. They are not quite as successfully to see through the motives of some of the paranoid student leaders. Their feeling persecuted because of their emotional disturbance "feels" more congenial because of the black students' experience with discrimination.

Still, the overwhelming majority of the black students desire exactly the same for themselves as does the overwhelming majority of the white students; a rightful place in this society. And only a very small minority of them wishes to destroy it, as do the few rebellious white students. Thus if they could be convinced that there is a good place for them in society, their attitude would change and they all would part ways with the SDS, as many of them have already done. But here the difficulty is that many of the black students, just because of the nature of the commitment of the university, do not feel that being a student is necessarily the best way for them to find their rightful place in society. Here our wish, and theirs, that they should become part of the elite, runs afoul of what for many of them is their reality. Many of the black students who are brought into our colleges are often ill-prepared academically, and lacking in the skills required for making a go in college. At the same time they have been imbued with the notion that it is the fault of the establishment that they are disadvantaged. While this is true to some degree, being aware of such truth is an easy way out if one does not succeed.

All students find the transition from home to college difficult. In past times this was blamed by the student on himself, and most of them therefore tried to do something about themselves and sooner or later succeeded. Today both white and black students tend to blame the faculty for the difficulties they encounter in adjusting to a different way of life and study.

The demand for black study programs originated not only in the justified feeling that one must be familiar, and proud of one's own background, but to a large degree in the feeling that such studies would be easier, that such faculty would have greater understanding for this difficulty.

The fact is that some black students are induced to go to college whose preparation for it is inferior to that of the majority of the college population. While the faculty is ready to make allowances for this, it runs counter to the self-respect of the black student, who rightly does not wish to be made to feel like a second class citizen. But if he cannot compete successfully with those students who had had so many advantages educationally and socially, he is in a terrible conflict. He was brought to college to do as well as the others, but if he fails to do so, his background does not permit him to accept that this is because of his lack of preparation, because this would make him feel second class, while he is in college to get out of such a position. So when because of lack of background and preparation—though intellectually able to make the grade— he has difficulty in adjusting, he feels that the very place that promised to make him equal fails to do so. Disappointed, he rages against the institution that makes him once more feel inferior. And efforts to help him by means of special programs only makes this inferiority even more obvious. The many black students who are well able to hold their own with the best of the rest feel they must not desert their fellow black comrades and hence feel obliged to make their burden their very own.

I believe the answer to this problem does not rest with the colleges and universities. If we want to bring a large number of black students into our universities, as we should, I am convinced we have to start much earlier. I believe from high school age on, it would be necessary to educate a larger number of them, together with white youngsters from culturally deprived background, in true prep schools, so that they will enter college in every respect as well prepared academically and socially as the rest of the college population.

(5) There is a fascination in society at large with sex and violence, with drugs and insanity which both influences the student militants and provides them with a noteworthiness which they exploit to the full. If students protest because of an idea or position and do so in orderly and rational form, they do not receive much public attention. But if they shed all their clothes and walk around naked, this makes news all over the nation, whatever the case they may, or may not have had. It is part of a dangerous fascination with youth and its extreme positions. What passes for modern literature which these youngsters read already in junior high school intoxicates their minds with the appeal of drug induced madness, with sexual acting out and with violence.

The universities, because of their intellectual prestige, give the student activists a prestige for their revolutionary claims which they otherwise could never achieve. For example, for days not more than some 20 to 30 students occupied the administration building of the University of Chicago. They got headlines every day, and were prominently featured on radio and TV. If some 30 people would have demonstrated in any other place, they would have found no attention whatsoever. This the SDS knows, that is why it concentrates on the universities. The contrast between an institution devoted to the highest achievements of reason, and the obscenity and violence perpetrated there, makes it all the more fascinating. It is this fascination on which they try to build their revolutionary success. An idea in itself may be next to nothing, but it becomes news by interfering with something else which is considered, for one reason or another, to be of public importance. In themselves a couple of hundred demonstrators, somewhere in New York or Chicago would mean very little, but if some fifty students march into a large lecture hall, take control of the podium, and broadcast their ideas to people who came to hear something quite different, then they have made news.

Here, too, is where the function of political phraseology becomes operative. If someone advocates urinating on graves as the Fugs did, or if a few girls dress up as witches and put curses on professors, as they did in Chicago, if they would do so without reference to politics, people would rightly wonder about their sanity; but if they do so as a condemnation of the Viet Nam war, or take clothes off while claiming to be demonstrating for some good progressive cause, they have the support of many of the older liberals and enlightened radicals, who will inevitably consider it all to be very socially significant. If you are a teenager wrestling with the police and you say you are doing it because of the moral superiority of a future social order, you cannot fail to get the sympathetic attention of the editors of radio and TV stations rather than psychiatrists. The ritualistic invocation of ideology is thus both an alibi and a defense.

(6) Perhaps it all has made too many headlines, perhaps it has been talked about too much for people to accept the fact: but the truth of the matter is that these rebellions can and do paralyze the universities.

And they do this not only because classes are interrupted and buildings occupied, not only because faculty must devote all their energies to calming things down, but much more so because all the time and energy which should be devoted to more lasting achievements has to be concentrated on preparing for and on forestalling new confrontations. Here at last comparison with pre-Hitler days: Then in Germany, as Professor Mosse [3] puts it "professors tended to

[3] Mose, George L. *The Crisis of German Ideology*. New York: Grosset and Dunlap, 1964.

be either scholars who withdrew into their own speciality, taking scant notice of the world around them, or men who attempted to play the role of prophets. The first kind of academic wanted only to be left in peace . . . The professor as prophet, with very few exceptions indeed, was to be found on the side of the revolting students." Of the students he says, "They had found a basis for action that opposed existing authority yet remained independent of any political movement directed by their elders." And of the faculties that they "failed to provide any opposition, failed to use administrative powers, and failed to organize effective alternative groups of students. At best they displaced a detached passivity . . . at worst they joined in the harassment."

Like in pre-Hitler faculties, so in our universities today we can see efforts of faculty members to remain aloof from it all, while others try to anticipate even the most radical student demands, so as to avoid confrontations. Worse, there are no efforts made to organize effective alternative groups of students. And most of all, many are so intimidated that they cave in even before the students exercise any pressures. It is the continuous worry about what the militant students may do next, the anxious efforts to give them no offense, which saps the universities of their strength so that they become paralyzed. This anxious avoidance of taking a firm stand gives not only these militants, but also many non-committed students the feeling that they have the faculty on the run, because these adults are not sure about their values.

If the colleges and universities would feel sure about themselves, take a determined stand against any coercion and intimidation—though always not only open to, but inviting, reasonable, non-coercive discussion about how things could be improved (and much improvement is needed, as I suggested all along)—then I believe student rebellions could be so reduced as to no longer threaten the universities and, because of the consequences, possibly even all of society.

Thus I believe efforts should be concentrated on strengthening the will of the colleges and universities to resist disruption and coercion. If we succeed in doing so, I believe we shall have little need to take recourse to punitive measures; beyond setting into practice that those who do not wish to have any part of our universities should have their will: they should not be permitted to be, live and work at a place they hate, not as a punishment, but because to remain at a place they hate and despise serves no good purpose, and is detrimental to their emotional well being.

STATEMENT OF REPRESENTATIVE JOEL T. BROYHILL, OF VIRGINIA, IN SUPPORT OF HIS BILL TO AUTHORIZE FILLING OF VACANT POSITIONS IN THE U.S. PARK POLICE IN WASHINGTON, D.C., MARCH 27, 1969

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, I am today introducing a bill to authorize the filling of vacant positions in the National Park Service, which are now vacant as a result of restrictions imposed by section 201 of Public Law 90–364, the Revenue and Expenditure Control Act of 1968. The impact of this act has been to prevent the hiring of U.S. Park Police to fill vacancies that exist and are urgently needed to patrol our parks, where serious crimes have risen sharply over the past year.

In a letter written yesterday, I have informed the President of this situation and have solicited his energy and his office to expedite this bill and to take such other action required in the executive branch to fill these vacancies. My letter reads as follows:

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Since you have taken office, I have had the privilege of bringing several matters of concern to the citizens of Washington and nearby Virginia to your attention. Of primary and continued concern to me, as a Member of the Committee on the District of Columbia in the House of Representatives and as the Representative of the Congressional District in Northern Virginia immediately adjacent to the District of Columbia, is the high crime rate in the Federal city of Washington.

Notwithstanding glowing reports appearing recently in the news media of a slight reduction in crime in the past month, I find an overall increase in crime in the District of 43.9 percent in January 1969 over January a year ago. The specific crimes of criminal homicide increased 100 percent and rape increased 64.3 percent during the same period. Based on the statistics released by the Metropolitan Police Department on March 12, 1969, there are no signs that we are winning this war to make our streets and parks safe for our citizens and visitors. On the contrary, we hardly appear to be holding our own against the criminals, and this is tragic.

For these reasons, I would like to offer another suggestion as to one way in which we might gain quick assistance in our war against the criminals of the Washington area. As you may know, the United States Park Police are still 80 men below their authorized strength, and representatives have stated that due to the large waiting list of applicants they can fill these vacancies in short order if permitted to do so.

In order to fill these vacancies, it will be necessary for you to direct the Bureau of the Budget to remove their economy in government guidelines with respect to the hiring of field operations personnel of the National Park Service. Then it will be necessary to effect early enactment of legislation which I am introducing in Congress to exempt field operations personnel of the National Park Service from the Revenue and Expenditure Control Act of 1968.

While I am aware that the blame for not filling these positions has been laid at the doorstep of the Congress, I am also sure that an announced intent by the Executive Branch to exert its full influence in this matter would be met with enthusiasm from the great majority of the Congress and the people of these United States. This is particularly true since your proposal for increasing the number of metropolitan policemen seems to have become a controversial matter on which the District of Columbia City Council seems afraid to act favorably.

I cannot guarantee that you will not receive a loud clatter of opposition to my proposal from the same militant and left-wing crowd attempting to run the District of Columbia to suit themselves. But I will assure you that there will be fewer rapes in the parks under the jurisdiction of the Park Police if this course is followed. I urge you to seek the full authorization for the United States Park Police from the Congress and the Bureau of the Budget without delay.

With warmest regards, I am,
Sincerely,

JOEL T. BROYHILL,
Member of Congress.

Mr. Speaker, as I explained to the President, the need for more park policemen in the Washington area is urgent. I am confident he will recognize this need and take the necessary action with the Bureau of the Budget. Meantime, however, I believe we in the House must act with great haste to enact this legislation, so that the additional protection we must have can be obtained without delay.

NATIONAL EYE BANK MONTH: "SO OTHERS MAY SEE"

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. CULVER. Mr. Speaker, the month of March has been set aside as National Eye Bank Month, and I would like to take this opportunity to bring to the attention of the Members of the House the vital effort which is going on in every part of the country, "so others may see."

It is this program which has helped make possible over the past 20 years the success of corneal transplants to improve defective vision or restore vision for persons with corneal defects caused by disease or accident.

National attention is currently focussed on the dramatic progress in areas like heart and kidney transplants, but until recently, the cornea was the only part of the human body which could be replaced by tissue from another person.

The first eye bank was established in this country in 1945, as corneal transplants became an established part of ophthalmic surgery. Under the sponsorship of the Lions Club, the Iowa Eye Bank was established in 1955, and since that time 505 corneal transplants have been conducted in our State alone.

In addition, the medical director of the Iowa bank, Dr. Alson E. Braley, has been instrumental in encouraging similar programs in other parts of the country, and in organizing a national eye bank network.

With the development of new methods to preserve eyes, it has been possible to establish an International Eye Bank to make tissues available to surgeons in foreign countries lacking donor eyes, as well as to send teams of ophthalmologists abroad to teach and provide services.

The eye bank program operates through voluntary donation of eyes after death by individuals, who do so by filing a notarized donor card with the eye bank, which in Iowa is located at the University Hospitals in Iowa City. More than 21,159 such donor cards are now on file in our State.

A waiting list of individuals in need of corneal transplants is also maintained at the eye bank. There are presently 13 names on the Iowa waiting list, which is relatively typical, although it sometimes reaches as many as 35 individuals awaiting transplants.

Upon the death of a donor, the eye bank is notified and as soon as practical, the eyes are removed by a local physi-

cian and delivered in specially equipped containers by the Iowa Highway Patrol to wherever the transplant is to take place.

In the meantime, the eye bank locates the recipient from its waiting list, and arrangements are made for transplant surgery.

In addition to its function as a clearinghouse between donor and recipient, the eye bank conducts an extensive public education campaign in conjunction with the local Lions Clubs. The eye bank in Iowa has prepared an excellent brochure explaining the program, "What You Should Know So Others May See," and I include it at this point in the RECORD:

WHAT YOU SHOULD KNOW SO OTHERS MAY SEE: QUESTIONS MOST ASKED ABOUT THE LIONS EYE BANK

1. What is the purpose of an Eye Bank?

Its main purpose is to act as a clearinghouse between the person donating his eyes after death and the person needing a corneal transplant.

2. How can I donate my eyes to the Eye Bank to be used after death?

By writing to the Iowa Lions Eye Bank, University Hospitals, Iowa City, Iowa, and requesting a donor card. This card should be signed and notarized. Section A is returned to the Eye Bank office and an identification card will be sent to you. Section B may be kept by the next of kin or your family physician.

3. Does age make a difference?

Under three years of age eyes are not used, but all other eyes are acceptable.

4. Does the cause of death have any effect on the use of the cornea?

The cause of death is usually of little significance.

5. Does it matter if the donor wears glasses?

No. Previous eye surgery or diseases of the eye do not affect the donation of eyes.

6. How soon should eyes be removed and when must they be used for surgery?

Eyes should be removed as soon as practical, generally within four hours after death. Eyes for corneal transplants are usually used within 36 hours after they are removed.

7. Do eyes donated to the Eye Bank serve other useful purposes than grafts?

The research program is very important and all parts of the eye not used for surgery are used for research and teaching.

8. Are there any charges for the Eye Bank services?

No. Eyes are furnished to surgeons and there is no cost for the eye to the patient. The removal of the eye is done as a service. It is not possible to buy or sell eyes.

9. Is there disfigurement after removal of donor eyes?

There is no disfigurement whatsoever.

10. Can eyes be left to specific individuals?

No. This is not practical. As soon as the physician decides a person is a candidate for a corneal transplant his name is put on the waiting list. It is not necessary for him to wait until an acquaintance dies to receive his transplant.

11. Who can be helped by a corneal graft?

Those people who have defective vision or no vision due to corneal defects caused by disease or accident may be helped by a corneal graft.

12. Can whole eyes be replaced?

No. Only the cornea or surface tissue of the eye can be replaced.

13. Who removes the eyes from deceased donor and where does he get the necessary equipment?

Sixty-eight Eye Bank Kits with all the sterile equipment for removing eyes are placed in strategic places over the state. The eyes are removed by physicians and if the doctor needs the equipment he calls the County Sheriff, who contacts the Highway Patrol. The equipment located nearest the doctor is immediately taken to him and as soon as the eyes are removed they are delivered to the University Hospital or whereever needed, in the ice filled container, by the Highway Patrol.

Mr. Speaker, the success of the eye bank program in Iowa and throughout the country is due to the combined cooperative efforts of dedicated ophthalmologists, service organizations like the Lions Clubs, public officials like the highway patrol, and the thousands of individuals who donate their eyes.

The impact of the program is perhaps most dramatically evidenced in the lives of the individual recipients. An article recently appeared in the Cedar Rapids Gazette describing the experience of one such recipient, and I include it at this point in the RECORD as testimony of the importance of this national effort:

EYE BANK CORNEAS PROVIDE SIGHT FOR YOUNG CEDAR RAPIDS MAN

(By Ken Sullivan)

Robert Rush, Jr., 2201 Birchwood drive NE, is an unusual young man.

Unusual in the sense that, at 22, he contracted an eye disease more common to older persons and more prevalent among women.

Unusual in the sense that he has undergone surgery three times to correct the problem, although such corrective surgery normally is better than 90 percent successful after the first operation.

Bob, a 1962 graduate of Washington high school, was a junior at Northwestern university in Evanston when he first became aware of the eye defect, keratoconus. It's a disease which causes the cornea to protrude—conical fashion—rather than gently rounded as on unaffected eyes.

LITTLE KNOWN

Little is known about the causes of the disease other than it almost always requires surgical corrective procedures. The alternative to corneal transplant is eventual blindness. In Bob's opinion, a transplant was "the only alternative."

Surgical replacement of the cornea from Bob's left eye with one supplied through the Iowa Lions Eye Bank at the University of Iowa hospitals was first conducted last June.

By the time his appointment with surgery rolled around, Bob had overcome his anxiety . . . and "was excited" about the operation and what it would accomplish.

The transplant procedure, he said, lasted about 60 minutes. Bob had been given a local anesthetic and was aware of what was going on around him. His right eye had been covered, but he could hear the doctor's instructions to his assistants and he could feel pressure, but not pain, when the actual transplant was taking place.

LASTED 7 WEEKS

That cornea lasted about seven weeks. Then, apparently because of infection, the transplant failed. Bob underwent an emergency operation to substitute the original transplant with a second.

The second proved to be only a temporary measure. Fewer sutures were used in placement of the cornea and, in Bob's opinion, his body eventually rejected it.

The third cornea, however, has been in place eight weeks. All indications currently are optimistic, Bob relates. He returned early last week from a three-week vacation in Florida. While there, he visited Dr. Alson E. Braley, medical director of the U. of I. eye bank. Braley, too, passed on an optimistic word.

The young man, anticipating a return to his U. of I. law school studies possibly next year, said there is no discomfort in his left eye; although vision remains "fuzzy."

INACTIVITY

His primary discomfort during the entire sequence of transplants has been the inactivity. Doctors cautioned him against any strenuous physical activity for three months after surgery.

A handball enthusiast, he has been kept off the courts since last November. He was permitted to play then only because it had been determined the second transplant was a failure.

He worked last summer in Linn county's newly created legal assistance office and hopes to return there again this year; summer school, "not at Iowa," is a possibility, however.

Bob's semi-invalid state—not permitted to indulge in recreational activities, lift heavy objects, etc.—has been, he said, "harder on my parents than me."

UNOFFICIAL SPOKESMAN

His experiences over the last nine months have turned young Rush into an unofficial spokesman for the eye bank and its program of soliciting eye donations.

During his inactivity he sent off letters to half a dozen newspapers (including The Gazette) relating the need for eye pledges. Additionally, he said, most of his visitors leave with donor registration cards and a small brochure entitled, "What You Should Know So Others May See", distributed by the Iowa Lions Eye Bank.

Bob will continue, he said, "by word of mouth to point up the needs of the eye bank."

Two of the new corneas transplanted to Bob's left eye have been supplied by Iowans who pledged their eyes before death. Those were the first, which became infected and were removed, and the third, which is functioning well after more than eight weeks.

The second cornea was secured through the national eye bank network because it was needed in a hurry for the emergency surgery.

Dr. Braley and T. A. Hunter of Iowa City were instigators of the eye network.

SEVENTY-SIX 1967 TRANSPLANTS

Ruth Fisher, public relations assistant in the department of ophthalmology at University hospitals, and herself a recipient of transplanted corneas, said 76 corneal transplants were conducted in Iowa last year; 66 of them using corneas donated by Iowans, and ten with corneas from the national network. In addition, she said, three corneas were sent to other locations—via the net—from Iowa.

At the time of a donor's death, she said, the eyes are removed . . . usually by the family physician . . . and relayed to Iowa City by the highway patrol.

She was especially complimentary of the patrol's part in the project, citing the dependability of the relay in making sure the vital organ arrives quickly and undamaged.

The eye bank was established in September 1955. Between then and March 1, 1968, Miss Fisher said, 454 corneal transplants have been conducted.

The search for eye donors is a continuing program. The Lions clubs of Iowa are the only perpetual sponsors of the project; although the university, itself, provides assistance, and some eyes are donated independently.

Recipients do not pay for the corneas. They are provided free. The patient must, of course, bear the other expenses, except in charity cases.

THOUGHTFULNESS

For Bob Rush, Jr., the thoughtfulness of some unknown Iowan means continuing

sight; the sight which will be so important to him as he continues his studies toward a career in law.

He has another eye operation in store; his right eye also will need corrective surgery. This, however, will be put off a year or so if Bob has his say. Nine months of inactivity are enough.

POPE PAUL VI ST. CYRIL MASS CELEBRANT IN ROME—BISHOP ANDREW G. GRUTKA, OF GARY, IND., CONCELEBRANT

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. MADDEN. Mr. Speaker, on February 14 of this year in Rome, thousands from Slavonic nations assembled in honor of St. Cyril, apostle of the Slavonic nations. This assembly of the faithful participated in a 3-day celebration from February 14 to February 16.

Bishop Andrew G. Grutka of Gary, Ind., assisted Pope Paul VI as concelebrant in this religious tribute in honor of St. Cyril. Two Slavonic cardinals who visited the diocese of Gary 2 years ago as guests of Bishop Grutka; namely, Jozef Cardinal Beran, of Prague, Czechoslovakia, and Franjo Cardinal Seper, of Yugoslavia, a Croatian prelate, also participated in the mass. Both cardinals occupy important Vatican positions.

Another happy coincident was that while the 3-day celebrations from February 14 to February 16 were in the Vatican, our American astronaut, Colonel Borman, a native of Gary, Ind., and his wife and two sons were received by Pope Paul in special audience in the Vatican.

The students of Andrean High School and the parochial schools in Gary and Whiting were happy that the Reverend Mother M. Bernard, with two sisters of the congregations of SS. Cyril and Methodius who teach in these schools, took part in these historical ceremonies.

The Slovak Catholic Federation of America will meet for its 45th national convention the week of April 20, 1969, in Youngstown, Ohio. I am informed by Editor John C. Sciranka, press director of the federation, that in honor and tribute to St. Cyril, Pope Paul issued an apostolic letter which calls for unity of all Slavonic nations. Considering that they number close to 400 million—of which over 40 million live in the United States—we are indeed happy about this unity as a sign for a better future.

Mr. Speaker, I include with my remarks an editorial from the newspaper Good Shepherd-Dobry Pastier, narrating detailed information regarding the historic gathering of the Slovak faithful in Rome:

ST. CYRIL'S CELEBRATION IN ROME SPELLED UNITY OF SLAVONIC NATIONS

The ancient unity of the Slavic peoples blazed into life in St. Peter's basilica in Vatican at a multilingual Mass concelebrated by Pope Paul VI and 14 Slavic prelates on February 14, 1969.

The Pope, prelates and Slavic pilgrims, including 1,000 from Czecho-Slovakia, were making the 11th centenary of the death of St. Cyril who gave a large part of the Slavic peoples a common alphabet and the Christian faith.

Slavic languages, both ancient and modern, echoed through the Basilica and the colors of sundry national costumes flashed from the pilgrim ranks.

Pope Paul, surrounded by bishops representing almost all the modern nations, reminded the Slavs that fidelity to the Holy See was at the heart of St. Cyril's enduring achievement of the Christianization and culturalization of the Slavic peoples.

"He always professed the primacy of the Roman Pontiff and submitted to the judgment of the Apostolic See his liturgical innovations, his literacy, work, and the problems of his missionary activity," the Pope said. Here as elsewhere in his sermon and his address later that day to an audience of Czech and Slovak pilgrims, his historical references had overtones of present-day problems.

He told a pilgrimage audience: "Today as in all your history, you have known how to bear witness, often by hard suffering borne with dignity, to your deep conviction, your Cyrillian and Methodian faith, that is a faith that is authentically Catholic." The word "Methodian" was a reference to St. Cyril's brother and fellow apostle to the Slavs, St. Methodius.

The Pope said St. Cyril's greatest merit lies in having "invented an alphabet for the Slavic language and having begun the Slavic version of the Holy Scriptures and of the liturgy."

He pointed out that St. Cyril had put both the Byzantine and Roman Liturgies into Slavic "because he desired the fully aware participation of the people in divine worship."

The Mass he was concelebrating was in the Roman rite but it was sung not only in Latin and Greek but also in Slovak and Czech. Hymns were sung in the latter languages and prayers were by laymen in various modern Slavic languages. The Lord's Prayer was sung in ancient Liturgical Slavonic.

The Pope called love for Christ's universal Church under the Pope's guidance "the fulcrum of the work and teachings of St. Cyril."

He noted that St. Cyril regarded all as equal in Christ and so strove to integrate the Slavs into the universal Church. At that time there was a serious crisis between the Byzantine Church and Rome. "In those difficult upheavals in the Church's history," the Pope said, "St. Cyril, notwithstanding his Byzantine patriotism and his personal friendships followed the right path both in doctrine and practice."

Here, the Pope made his observation that St. Cyril always professed the pope's primacy. In the basilica were representatives of various Orthodox churches not in communion with the Holy See.

The Pope continued: "Only in communion with the Apostolic See will you be able to find the right solution to your religious problems. Closely united to the successor of St. Peter, you will be able to open yourselves always more to a healthy ecclesial ecumenism toward your separated brothers, as you have already done in the past."

Among concelebrants of the Mass were the exiled archbishop of Prague, Czecho-Slovakia Jozef Cardinal Beran; the present apostolic administrator of that see, Bishop Frantisek Tomasek; Franjo Cardinal Seper, Prefect of the Vatican's Doctrinal Congregation, at Croat; and Bishop Andrew Grutka of Gary, Ind., an American of Slovak ancestry. Also among the concelebrants were five Bishops of Czecho-Slovakia, including Bishop Ambroz Lazik and Bishop Robert Pobozny. Also Slovak-Byzantine Bishop Michale Rusnak of Toronto, Canada, and Bishop Ladislaw Rubin, a Pole who is secretary general of the Synod of Bishops.

L'Osservatore Romano, Vatican City daily, reported that an official delegation from the Macedonian Republic of Yugoslavia was present, along with three representatives of the Macedonian Orthodox Church. Also at the Mass, in a place apart, was a representative of Metropolitan Chrysostom of the Orthodox ecumenical patriarchate of Constantinople, Archimandrite Gennadios Zervos.

At the audience for pilgrims from Czecho-Slovakia shortly after noon, Pope Paul observed that they constituted "the first official pilgrimage" from their country for 30 years.

He said Czechs and Slovaks were characterized by love of truth, justice, freedom, and peace. But, he said, "these goods are indivisible. Nobody can be free if there is no religious freedom. Culture is incomplete when transcendental values are denied. There is no genuine justice when it is not applied equally to all."

The Pope said he could read in their eyes that they wanted no privileges but only their natural rights. And here he cited the rights to have a bishop govern each diocese freely, to have seminaries, religious orders and congregations, a Catholic press and religious instruction.

The Ambassador of Czecho-Slovakia in Italy took part in the ceremonies.

JUNIOR ACHIEVEMENT IN WILMINGTON, DEL.

HON. WILLIAM V. ROTH, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. ROTH. Mr. Speaker, Junior Achievement is a most promising, but little publicized, privately sponsored job experience program. Each year it offers thousands of young Americans of all races and backgrounds experience in business and practical economics. When we talk of ways to foster greater economic participation by all segments of our society, the example set by Junior Achievement would be a good one to follow and build upon.

Bill Frank, in a recent edition of the Wilmington, Del., Morning News, wrote an excellent editorial on the fine work being done in Delaware's largest city by Junior Achievers under the guidance of George Freytag, Jr. I would like to place the editorial in the RECORD at this point:

JUNIOR ACHIEVEMENT ACHIEVES QUIETLY

(By Bill Frank)

George A. Freytag Jr. turns out to be so utterly right.

One of the most important non-racial youth programs in Wilmington today is the Junior Achievement.

Freytag, executive director of Junior Achievement in the Wilmington area, says: "We read, hear and watch on television all kinds of reports of young men and women who are ready to tear apart existing organizations and institutions. We hear this kind of thinking and action is filtering down to high school students.

"But what about Junior Achievement?" So, what about it?

Freytag says: "In the past 13 years in Delaware, more than 7,000 young people, blacks and whites, have worked together in complete harmony. We have never had an unpleasant incident. This experience can be multiplied by the hundreds of Junior Achievement programs in operation all over the United States and other parts of the world."

Okay, so what makes Freytag so utterly right?

Simply this. He says:

"Despite the 13 years' existence of Junior Achievement here, it is suspected that many businessmen, educators, parents, community leaders and others don't really appreciate the job Junior Achievement is doing. For some reason, it has been difficult to communicate and motivate enough adults to visit Junior Achievement operations to see what takes place."

According to Freytag, Junior Achievement in Delaware, with a most modest budget, brings together an average of 600 young men and women of both races each year to teach them practical economics and the potentials of the free enterprise system—or capitalism, if you want to call it that.

Unfortunately, Junior Achievement hasn't gotten the headlines it deserves, because it appears to be a positive program. No conflict; no name-calling; no mugging; no "stick 'em up" business.

Junior Achievement in Wilmington is located at 227–A. W. 9th St., right in the heart of downtown Wilmington. Or, hadn't you known about it?

Junior Achievement is a long story. Let me be brief:

It is a nationwide "learn by doing" practical economic education program in which high school students organize and manage their own small-scale businesses under the guidance of adult advisers from business and industry.

Each Junior Achievement company is organized in the fall as a corporate structure. About 20 youngsters are in each company, with a board of directors, working force and sales staff.

They select the product they are going to make or the service they will render. They capitalize their business through public sale of capital stock at $1 a share.

They pay dividends, pay rent, etc., and at the end of each program year, they liquidate their company and issue stockholder reports.

What do the youngsters think of their Junior Achievement experiences? Freytag recently took a poll. As I give some of their experiences, it is important to designate who is white and who is black because therein you get an idea of the compatibility among the youngsters.

I'm selecting the youngsters from a fat file Freytag has shown me:

Mike Chivis, Wilmington High School (black): "Junior Achievement gives me the chance to work with people of different ethnic backgrounds. We are all here for one purpose and that is to work for unity."

Nadine Brainard, Mt. Pleasant High School (white): "J.A. can be described as an ice breaker between different ethnic and racial groups. Teen-agers from different backgrounds meet with each other once a week and work together as a team. No one is judged by his race or creed."

Tom Burns, P.S. du Pont High School (white): "Before I joined J. A. I thought a company just earned money from products it had sold and then it paid its workers with some of that money. Now that I have joined J.A. I have realized that our business system is very complicated. I now have a fairly good idea of how a company operates. I also know that it makes no difference who you are, or what race, nationality or religion you are a member of, as long as you do your job in the company."

Debbie Burke, Howard High School (black): "I signed up for J.A. to learn more about the business world. I have never been involved in the manufacture of any products, so I decided to learn all I could by coming to J.A. To date, it has been a very fulfilling experience."

Henry Brookins, Wilmington High School (black): "One of the main requirements I think that makes a J.A. company a success is brotherhood, each and every member working together in unison and cooperation."

Bernadette Brown, Wilmington High School (black): "I think that being together and forgetting the outside problems of the world brings us all together.. Having fun and learning to work together is one of the J.A. purposes. . . ."

Kathie Ritchie, Padua (white): "I don't feel that there is a color barrier in J.A. It provides an opportunity for teen-agers of all races and creeds to work together in fellowship and harmony—with lots of fun involved."

I don't hear of television panel moderators rushing over to interview Junior Achievement tycoons. Maybe the peaceful constructive life isn't as appealing as the violent restless, turbulent one. Too bad.

This Nation has grown wealthy and powerful, Mr. Speaker, on the enterprise of its people. That some today are denied full opportunity to participate in the economic life of this country is not only wrong, it is wasteful. I have been privileged to visit the Wilmington Junior Achievement Center on several occasions and each time have come away more impressed than ever with the job Junior Achievement is doing and the potential of this program.

Undoubtedly, there are and will continue to be problems in helping undereducated Americans achieve their full potential, but the Junior Achievement program of offering practical training and experience is a sound approach that merits study.

CLEAN WATER NEEDS BIG U.S. AID

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. FEIGHAN. Mr. Speaker, the lack of clear water affects many communities in the United States. Cognizant of this problem, Cleveland citizens have voted to tax themselves in the enormous amount of $100 million toward an effort to provide clear water for their people. Cleveland cannot attain their objective of clear water unless there is Federal financial participation to assist them.

It is fair to assume that some other communities may likewise need Federal assistance. The problem affecting Cleveland as well as other cities is presented in a very sound editorial which appeared in the Cleveland Plain Dealer of March 26, as follows:

CLEAN WATER NEEDS BIG U.S. AID

Massive federal assistance will be required if Cleveland is to achieve the total program of water quality control sought by Dr. Edward J. Martin, chief of the city's Clean Water Task Force.

Clevelanders have agreed to spend $100 million for the program, but it will cost 10 or 15 times more than that.

Industry will help by paying fees for city services in removing industrial pollutants and providing clean water for industrial processes.

The state must help, too: It has $100 million to spend on pollution control.

But the federal government will have to come through with some really big money.

Congress has long recognized—in theory, at least—that the federal government has important responsibilities for halting water pollution.

In its Clean Water Act, Congress authorized ever-increasing expenditures for water pollution control (they were supposed to reach $1 billion for the year 1970). But Congress reneged when the time came for appropriations, which were small in relation to the need.

This is a serious default on the congressional commitment to help the pollution battle. It is shameful guardianship of the nation's water resources.

What is really needed to achieve a total program of water quality control, here and throughout the nation, is a federal aid program of the magnitude suggested by former Mayor Ralph S. Locher.

He proposed that the federal government help cities build treatment works as it helps states build highways, by providing 90% of the construction costs.

Under such a program, Cleveland would already have in hand the local money required for Dr. Martin's grand design.

Is it hopeless to expect the federal funds will be available for such a program?

Not at all. The March issue of Fortune magazine points out that federal tax revenues in the years ahead will rise with the steady climb of the gross national product.

This will provide a "fiscal dividend" that can be used for stepped-up spending on domestic problems: pollution control, better medical care and education, rebuilding the inner city, and welfare reforms. Plugging tax loopholes and ending boondoggles could enlarge the dividend.

The nation has the wealth. It is high time that a decent share of it is applied to making life more livable.

REPRESSION IN GREECE: AN ARTIST ON THE SPIRITUAL RACK

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. FRASER. Mr. Speaker, this is the week that Greece observes the 148th anniversary of its War of Independence, which began on March 25, 1821.

Greece's experiment in parliamentary democracy began in the 1820's. Despite many setbacks, including the imposition of a king upon them by the great powers in 1842, and a number of brief dictatorships, the fact remains that Greece is one of the oldest democracies in the world.

This is preface to the melancholy observation that a repressive dictatorship exists in Athens today. Freedom of the press, freedom of speech, freedom of assembly, political parties, and due process of law are all prohibited.

Postwar Greece benefiting from the fruit of Greek individualism and increased educational opportunities, had begun to produce a brilliant array of musical composers, actors and actresses, film directors, poets, designers, and city planners. Some Hellenophiles even began to talk hopefully of a "Second Golden Age."

Now the lights are going out for this new wave of creative people. Isolation inside Greece or exile is their lot, for the military junta, emphasizing characteristics of dictatorships, made the creative arts one of the first targets of repression.

As we know, one of the most popular films of recent years was "Zorba," starring Anthony Quinn, based on a novel written by the late Nikos Kazantzakis.

Three Greeks played prominent roles in "Zorba." They were Irene Papas, the accomplished actress, Michael Cacoyannis, the brilliant young director, and Mikis Theodorakis, who composed the music.

Today, Irene Papas and Michael Cacoyannis, critics of the regime, remain abroad. Mikis Theodorakis is in bitter exile within Greece, assigned by the junta to the remote village of Zatouna, located in the highest reaches of the mountains of central Pelloponnesos.

Theodorakis was a parliamentary deputy for EDA, a party dominated by Communists and fellow travelers and representing perhaps 12 percent of the vote. In Greek political circles he was regarded as more of a decorative figure than a serious tactician. Politically, he was more naive than sinister.

In any event, Theodorakis the composer represents an enormous natural resource for Greece. He is one of the greatest composers in the world, and it would be a tragedy if his career ended in mispassage.

The measure of the man is suggested in a tribute written by Michael Cacoyannis in the LP album, "Irene Papas Sings Theodorakis." He writes:

Mikis Theodorakis is best-known outside Greece as the composer of "Zorba the Greek." What is more important, if less widely known, is that in the last ten years Theodorakis has reshaped and dominated the musical life of his country in a way that has no parallel in the world today. His songs which number well over a hundred, have sprung from the enormously rich soil of Greek traditional music with a fresh, individual and often very sophisticated vigour. Many of them are extremely difficult to sing and their complex tempi rule out any possibility of orchestral dance arrangements. And yet, one after another, they have risen to the top of the popularity lists, invading everyday life with the obsessive appeal of hit tunes, though clearly stamped with a quality that transcends fashion.

A new Theodorakis song does not replace an old one. It becomes part of an ever-growing cycle, a vibrant tradition that has taken firm root in the country's cultural life. There is no doubt that this is due, in no small measure, to the quality of the lyrics, which express the problems and passions of the Greek people through the vision of our best living poets, among them Nobel-prize winner Seferis, Elytis, Ritsos, Gatsos, Christodoulou, and others. It is a startling and stirring experience to see poetry break loose from the printed page and become a living voice in the street, the way it was in ancient times when people sang the verses of Homer.

The Washington Post Outlook section of Sunday, March 23, 1969, carried a powerful story, written by John Barry, of the London Sunday Times. Datelined Zatouna, Greece, it tells of the fate which has befallen Theodorakis. Under leave to extend my remarks in the RECORD, the article follows:

GREEK MAN OF MUSIC FACES DEATH BY EXILE

(By John Barry)

ZATOUNA, GREECE.—The coffee house at Zatouna doubles as the village barbershop. Here, most afternoons between 3 and 5, Mikis Theodorakis comes to while away a little more of his exile in this desolate place. And it was here that a smuggled message had arranged for me to meet him.

I had walked for two days to reach this coffee house.

Just out of sight of the window, round the bend in front of the church was Mikis Theodorakis's home. For seven months, all thru the last bitter winter, Theodorakis, the greatest composer in Greece, has been confined to this mountain village with his wife and two young children.

The regime in Athens says this is necessary because he is a dangerous Communist (he was a Marxist deputy in the last freely elected assembly). But the more potent reason for his banishment is that above and beyond politics, Theodorakis and his music have become a symbol of resistance to the military rule.

The symbol is fading. Theodorakis is dying in Zatouna. In the inclement climate of this village, the tuberculosis he contracted in his previous exile during the civil war 20 years ago has returned worse than ever. Now he is coughing blood.

He finds movement increasingly painful, too; a weak heart has given him poor circulation, and in the mountain cold his hands and feet swell. There is no doctor in Zatouna and Theodorakis refused to be taken to a prison hospital, defiantly demanding the right to go to an ordinary hospital in Athens. But those who see him are convinced that unless he is brought down from Zatouna soon, he will die.

I learned this from the villagers of Zatouna and its neighbors. Theodorakis himself was too ill, or too well guarded, or perhaps just too despairing, to meet me.

All I saw was his white, ill face—much thinner than in the photographs I knew—looking down from an upstairs window of his house. But Zatouna, the journey to it and my brief encounter with the village itself revealed perhaps more than Theodorakis could have about the everyday life of a dictatorship and the nature of exile and repression.

I got to this desolate spot by the relatively simple expedient of avoiding the Greek police for a week. No journalist has been allowed here officially, and the guards in the village have orders to turn away all outsiders. So I decided to go by a devious route.

To enter the country, I took the Orient Express from Belgrade. (Security police concentrate on airports.) A local train took me on from Athens to Tripolis, the railhead for the central Peloponnese. And at dusk in Tripolis, I boarded a village bus carrying peasants home from a day at market.

Zatouna is approachable only from the south, east and west; to the north, the way is barred by almost impassable mountains. But from the south and east, it would be obvious to police that a traveler could be heading only for Zatouna.

Thus I resigned myself to a long march to Zatouna from the west. A dirt track leads into the village from that direction, then—turning into the only road out of Zatouna—heads east to the village of Dimitsana.

Once I had hit the dirt track, I had a valid reason for passing through Zatouna. I could say I was heading for Dimitsana on my way back to Tripolis.

I got off the bus at Langadia, the nearest village to the start of this makeshift route. Next morning, after a night's sleep above a butcher's shop, I set out on my two-day hike.

I stuck to the rocky paths winding along the mountain contours. At each little hamlet along the way, while the pot of Turkish coffee brewed on the shallow charcoal brazier, I was politely interrogated.

WELL SUITED FOR EXILE

New posters glared down from the coffeehouse walls. They showed a blue arrow winding its way through a maze, the evils of decay, the old politics and communism lying in wait. But the arrow emerged triumphant, pointing to a new start for Greece. I wondered how much the regime was spending on propaganda.

Too much, the peasants seemed to think. No peasant has ever admitted to good times, of course, but the woes of the Peloponnese were consistent enough. Everything was going up in price—shoes, tools, even the bus fare to Tripolis.

Over large glasses of ouzo, a village headman estimated that the cost of staples like flour had gone up by one-fourth. The rest of the room nodded in agreement.

Shortly before 3 p.m. on the second day, I swung around the final bend in the track and Zatouna lay below me. It was siesta time; nothing stirred. I headed down toward the village square.

What I learned in Zatouna was disquieting. It is widely believed—even in Athens, by those personally acquainted with the regime's less amusing aspects—that Theodorakis, within the boundaries of his exile, is allowed to live a normal life. The regime has encouraged this belief. Exile, the colonels have said, is more merciful than prison.

But the truth is less happy. To his banishment, Theodorakis's captors have added refinements of unpleasantness.

A FLOODLIT HOUSE

Thedorakis himself has virtually no freedom. He may not travel beyond the bounds of Zatouna, and his guards have decided that these lie 300 yards either way along the village road.

Even within these, he is accompanied wherever he goes. His one luxury is a small upright piano, and his neighbors say he plays almost incessantly.

His wife Myrto does have more freedom: she may travel to Dimitsana to shop. But to discourage this, and to search for hidden messages, the police undress her twice on each occasion—once before she leaves and again when she returns.

The village schoolmistress actually inspects her, while a policeman examines her pants, brassiere and garter belt. When Myrto has dressed again, the policeman accompanies her to Dimitsana and back.

Nor are their two children, Margaret and George, spared the smaller humiliations. They are 8 and 10, respectively, and they go to the village school just by the church. But to prevent them from smuggling messages, they are segregated from the other children most of the time.

The family has no visitors. Contact with the outside world is reduced to a telephone call once a week from relatives in Athens. Mikis also used to be allowed to consult his lawyer every Friday, but this is now forbidden.

Day and night, a guard stands by the door of the Theodorakis house. At night the guards floodlight the house from all four corners.

Theodorakis remained a face at the window. But in spite of all the precautions the ten guards in Zatouna could take, he still found it possible to give me what he wanted to say. I left bearing letters as well as a tape of Theodorakis playing and singing the last nine songs he has composed in Zatouna.

TESTIMONY TO DESPAIR

There are two letters—an appeal to U Thant at the United Nations and a plea to the Council of Europe, whose subcommission on human rights is now taking evidence in Athens on allegations of torture and the suspension of civil liberties in Greece.

"I ask to be examined as a witness by the commission," Theodorakis says, "so that I may produce evidence documenting my denunciation of the regime."

"From the isolated village where I am detained," he tells U Thant, "I have been following your attempts toward the consolidation of world peace and respect for human rights . . . I should like to submit to

your consideration my own case as an example of how a man's dignity can be humiliated in Greece today . . .

"But despite all this," he says, "I do want to hope that all those 20 or more centuries of civilized life have convinced at least a large part of mankind that the assassination of the intellect of a regime's political opponent is as hideous and intolerable a crime as the physical liquidation of that opponent."

Nine songs in seven months is a pitiful fraction of his former output (more than 200 popular songs, ten symphonic pieces and other works, including ballets and film scores). But even the little music he can write is still banned in Greece.

The ending of the last song he has written in Zatouna expresses his mood:

The laws have taken our dreams away,
And our songs have turned to smoke.
The roads have taken our lives away,
And the joy of us all.

They search among the trees and in the soil.
They search in my heart.
But they still find my wound in my eyes
And in my tears.

COASTAL WATERS AND THE NATION

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to call to the attention of the Congress and the American people an excellent address by Edward Wenk, Jr., executive secretary of the National Council on Marine Resources Engineering Development, given at the National Meeting on Water Resources Engineering of the American Society of Civil Engineers in New Orleans, La., on February 3, 1969.

Mr. Wenk sets forth in his address a few principles which could provide a basis for achieving more rational use of coastal resources and meet the problems and the conflicts involved. The address follows:

COASTAL WATERS AND THE NATION

(Address by Edward Wenk, Jr., for the national meeting on Water Resources Engineering of the American Society of Civil Engineers in New Orleans, La., February 3, 1969)

Although it is a high compliment for any speaker to be invited to address the American Society of Civil Engineers, it is a special privilege for me because this is the second time in recent years that I have been asked to discuss the questions:

"What stake does this nation have in the oceans?" and "What is the role of our engineering profession in transforming that promise into reality?"

In the first paper delivered in 1964, I pointed out how maritime and exploration development contribute to our country's security, to its economic development and to benefits for an increasingly urbanized society.

Today, I want to go beyond generalities. For one thing, since 1964, our understanding of the marine environment has sharply improved. There have been advances by the scientific and engineering communities, key developments in the Congress, and further involvement of industry and State Governments. Finally, there have been new steps toward Federal policy planning. We have begun to set goals and priorities, and we have begun to mobilize the necessary knowledge, capital, talent, and institutions to translate aspirations into reality.

Secondly, I feel we must differentiate between sectors of marine environment that differ markedly in physical characteristics and in use: the deep ocean, the deep seabed, the continental shelf and the coastal zone.

This paper is concerned with the coastal zone—that sector of our marine environment where the sea and the land meet, and where the sea and the people meet. It is that part of our marine environment that is most familiar, and which unfortunately we tend to take for granted. I speak here neither as an ecologist nor as a coastal engineer. Rather, I want to share views as one responsible for helping identify the ways and means by which our coastal zone may more effectively serve a people. That will be the theme of this paper.

I shall try to:

Define the challenge presented to the nation to use its coastal resources wisely;

Highlight the issues which should be brought into the forum of public consensus and; finally,

Suggest the engineering content of our future decisions that should engage the attention and the leadership of your profession.

It is especially appropriate to discuss these issues in this gracious city. Nature endowed New Orleans and our Gulf Coast with a beautiful and prolific maritime geography which in the last two decades has been intensively utilized—for transport and trade, for fishing, for oil and gas production and for recreation. As our population mounts, the same waters become used for disposal of liquid and solid wastes, the inevitable products of a technological society. New Orleans and the Gulf have discovered the benefits of the Coastal Zone. And they are fast discovering the problems created by conflicts among these uses.

THE COASTAL ZONE—DEFINITION BY USE

What do we mean by the Coastal Zone? Much of our nation's history, and indeed much of its future, is derived from the narrow, irregular band of shallow ocean and coastal land that comprise some 17,000 miles of our country's boundary. The 30 coastal and Great Lakes States contain more than 75 percent of our population. A preponderance of this country's investment by heavy industry is located there. The proximity of land and ocean makes this zone a gateway for a maritime trade of 500 million tons annually, valued at $40 billion; a staging area for harvesting $500 million of fish and crustaceans; a locus for shipbuilding, a base for our naval strength and for our seaward thrust for offshore oil and gas that today involve over 6000 wells producing fuel valued at over a billion dollars.

The concentration of population along the coast translates to a growing concentration of markets and of labor. These in turn attract other non-maritime industries, and in turn, more people. All the megalopoli projected for the year 2000 lie in this band. And with the increasing utilization pressure on the coastal zone in its natural form, we also seek to modify it to suit new purposes: offshore airports, offshore oil terminals; offshore nuclear power generation plants.

Beyond economic significance, the coastal zone is a refuge for a busy people—a mecca for the vacationer: 30 million people turn annually to the sea to swim; 11 million to fish; 8 million to sail. The salubrious climate and aesthetic pleasures of our shores are the targets for the fast growing leisure time and money in an affluent society. Tens of millions patronize coastal resorts, and an increasing number select this region for retirement homes.

We could define limits of this zone in terms of ecology, or of geology, or in terms of legal boundaries. But with this diversity of uses, we first require a definition that is meaningful operationally.

In terms of physical geography, the area is punctuated by estuaries and lagoons, wetlands and beaches, peninsulas and coastal lands. It is characterized by a dynamic interaction of wind, tides, currents, waves, storms and the land. It supports a rich variety of flora and fauna; provides a wintering habitat for most North American waterfowl and nursery grounds for most coastal fisheries.

Conceptually, the coastal zone is a band of water and land surrounding the continent in which the sea exerts a measurable influence on uses of the land and on its ecology; and the land exerts a measurable influence on the uses of the sea and on its ecology. It extends offshore at least to the outer edge of the continental shelf and onshore at least to the upper reaches of lunar tide and adjacent shore areas. Although the characteristics and problems of the Great Lakes may differ considerably from those of a seacoast, they may be appropriately included in our definition.

While united by ecology and use, this region is almost hopefully fragmented by political subdivisions. Coastal lands involve a mix of municipal, county, State and multistate legal jurisdictions.

At the sea-land interface, there is a complex legal involvement of the Federal Government and the States. Seaward, jurisdiction is largely Federal but much of the coastal zone lies even beyond boundaries of national sovereignty.

Superimposed on the legal boundaries of public jurisdiction is a further tapestry of private ownership, ranging from individual homes to industrial plants, from marinas to shipyards, from resort hotels to private clubs.

THE PROBLEM

To complicate this maze of functions and jurisdictions, we deliberately encourage private uses of waters and submerged lands that are themselves in the public domain, while endeavoring to balance and protect both public and private interests. On top of this, we know that certain uses of the water may so alter its natural state as to potentially degrade the resource or deny its use to others having equal rights to access. Moreover, fish and wildlife held in trust by States freely cross State boundaries. So does pollution.

The competition for such resources inevitably stimulates conflict. But to make matters worse, the resource itself is shrinking and subject to natural and man-induced degradation. Coastal waters have often become convenient sinks into which waste products are ultimately deposited. We have filled wetlands; exhausted sites for dredging spoil; lost 10 percent of our coastal waters for shellfish culture because of pollution; wiped out breeding grounds for shad and other anadromous species. We have seen the catastrophe of an oil tanker wreck and a runaway underwater oil well. And coastal regions are visted by some of the nation's most fearsome ravages; hurricane's over the past 15 years have wrought $5 billion damage to our economy.

Simply stated, the problem we face is an increasing pressure for more intense, more rational and more variegated use of a scarce resource—a resource that is itself perishable.

PLANNING FOR MULTIPLE VERSUS SINGLE USE

In this confusion, we have neglected one essential function—planning. Thoreau once admonished "What is the use of a house if you haven't got a tolerable planet to put it on." Unless we consider rational alternatives among competing uses, we will continue to move toward single purpose use, motivated by short-term advantages to individuals, industry or local governments. Such short term or single use orientation—apart from

inhibiting the greater advantage of multiple uses—may actually dissipate the resource itself: Private beach development restricts public access; dredging and filling may downgrade commercial fishing: offshore drilling rigs may limit freedom of navigation. Each single-purpose use may be justified on its own, but the complete effect of piecemeal development can be chaos.

In this technological age, man can do many more of the things he wished to do. What then, should be our goal? *I would suggest that we begin to plan for a harmony of compatible multiple uses, for only by this means can we maintain options for the future.*

Science and technology become tools to accomplish this goal.

Basic scientific information enables us to define the ecological base from which we operate; to understand the natural forces at work, to predict the consequence of man's insults to his environment. From this comprehension, we can then employ better engineering to maintain water quality, inhibit beach erosion; create modern ports and harbors. An entirely new field of biological engineering is emerging—to stabilize beaches with grass; move anadromous fish over dams, utilize offshore platforms as fish havens; employ estuaries for intensive aquaculture. With such information, we can generate criteria to illuminate choices and bolster political courage. Finally, we can offer remedial measures to correct problems triggered long ago in the absence of information or occuring in the future from inadvertence or accident.

But science and engineering are only tools. Their wise and prudent use involves planning and management of bays, estuaries and coastal lands—shaped by an administrative and legal framework to promote an optimal balance among uses and conservation.

Here lie major decisions of public policy.

FEDERAL CONCERN FOR MARINE AFFAIRS

The Federal Government has long been concerned about the Coastal Zone. A number of laws have been passed to deal with individual problems, and missions assigned to numerous different agencies.

Heavily involved are ESSA, U.S. Coast Guard, Maritime Administration, U.S. Navy, FWPCA, Geological Survey, Bureau of Sport Fisheries, Bureau of Commercial Fisheries, Corps of Engineers, Public Health Service, Atomic Energy Commission, and the National Science Foundation. Functions (not listed in any priority order) include provision of nautical charts and sea and storm prediction, conservation, acquisition and development of recreational lands and waters, enforcement of maritime safety, control of beach erosion, improvement of ports, harbors and waterways, water quality planning and enforcement, waste management, shellfish culture, sanitation, assisting commercial and sport fishing, development of scientific understanding of the coastal ecology, etc.

To meet the obvious problem of developing coherent policy and direction with so many different entities involved, a major step was taken at the Federal level with passage of the Marine Resources and Engineering Development Act of 1966. The Act did three things:

1. It enunciated a national determination to mobilize science, engineering, capital, public and private institutions for a long-term, systematic and coordinated effort to utilize the seas for man's needs;

2. It vested responsibility directly in the President for providing momentum, direction and leadership to this program spread among 23 Federal bureaus;

3. It called for an annual report by the President on policies, programs and funding requirements, and

4. It provided the President with two temporary instrumentalities of assistance—a cabinet-level, policy planning Council chaired by the Vice President, and a public advisory Commission to recommend major next steps and a national plan for their achievement, including consideration of Federal organization.

Both the Marine Sciences Council and the Commission have been hard at work.

MARINE SCIENCES COUNCIL

The Council has endeavored to identify unmet national needs to which marine sciences can be more fruitfully directed to: set goals and priorities of Federal actions; clarify agency responsibilities; and improve communication with State and local interests. The Council has met 15 times since it was activated, and dealt with some 60 issues for the President, including such policies and programs as extracting marine protein to meet worldwide malnutrition, expanding ocean exploration, and developing initial steps toward international legal regimes to guide future deep seabed exploitation.

From its very inception, however, the Council has placed strong emphasis on the importance of the Coastal Zone.

It began pilot studies of the Chesapeake Bay, Seattle Harbor and the Great Lakes to provide guidance to broader policies;

It prepared government-wide plans to meet coastal disasters resulting from spillage of oil or hazardous cargo;

It supported the Sea Grant Program to strengthen the base of manpower, engineering research and information services with particular emphasis on local or regional problems;

It initiated plans for a cooperative study of regional port and harbor systems, taking note of new patterns and technologies of cargo transfer;

It appointed an interagency committee to begin drafting guidelines for all the participating agencies to work together on common problems; and

It sponsored a seminar with non-Federal participants from State governments and private interests to examine these problems and reach solutions—recognizing that State and local governments will have a major role to play in resolving the coastal margin conflicts.

An analysis of Federal budgets proposed for Fiscal Year 1970, just released in the President's Third Annual Report, shows $30.6 million for marine exploration, science and engineering for coastal estauarine problems, $11.6 million for the Great Lakes, and $56.8 million for the Continental Shelves.

MARINE SCIENCES COMMISSION

The Marine Sciences Commission transmitted its comprehensive report on "The Nation and the Sea" to the President and to the Congress on January 9. The Coastal Zone was also one of the primary areas of their concern, with recommendations that—

Management of the Coastal Zone should continue to be vested in the States; but as backup to State initiatives, Federal legislation should be enacted to encourage and support creation of State Coastal Zone authorities to carry out national objectives. These authorities would have powers to plan and regulate land and water use, and to acquire and develop land in the coastal zone for public purposes;

University affiliated Coastal Zone laboratories should be designated and supported, functioning similar to agricultural research stations and extension services;

Representative coastal and estuarine sites should be set aside as natural preserves to establish a base for studies necessary to assess effects of man's activities on the environment;

Monitoring and research on coastal pollution should be intensified; and

A national research project focused on Great Lakes restoration should be initiated.

The Commission also recommended that these functions be lodged in a new, independent National Oceanic and Atmospheric Agency—created by consolidation of a number of marine science oriented activities, now parts of the Departments of Transportation, Interior, Commerce and the National Science Foundation.

In addition, the Commission urged that—

State procedures be developed for leasing of submerged lands for such new uses as aquaculture—an industry quite new to this country but having significant potential;

U.S. Corps of Engineers authority be expanded to deny permits for coastal engineering projects if recreational opportunities were jeopardized or other uses degraded;

AEC be authorized to consider environmental effects of projects under its licensing authority.

Their report, submitted in the final days of the Johnson Administration, is now under study, although it is too soon for the new Administration to develop a position as to their findings.

ROLE OF STATES

The Council and Commission agree on the key role of the States in dealing with coastal zone problems.

Under existing law, individual States have jurisdiction over most coastal resources: they decide how mineral resources beneath coastal lands and waters are to be exploited; and how coastal fisheries resources are to be harvested. They decide how coastal land and waters may be altered and which uses should receive preference in tradeoffs.

Nevertheless, present State authority over Coastal Zone activities frequently lags behind the problems—

In most States, there is no single focus for guiding rational development, because conservation, economic promotion, pollution control, tourism, highways and community planning are considered separately.

Funds for land acquisition are hard to come by.

Legal control over land use is complex and ineffectual.

Ambiguous and overlapping jurisdiction between local State and the Federal Governments create serious problems because the marine environment is a continuum.

The answer to these problems, in my view, is not to turn to increased Federal regulation, except as a last resort. Rather, it is necessary to buttress the State role and strengthen coordination so as to protect the public interest.

Zoning of land and water, permits for explicit projects, and coastal planning all have a place, but none will be effective unless States are prepared to enforce decisions.

Local government also must be involved—in zoning, advising on water quality, land use, taxation, and compatibility between future and existing coastal uses.

THE ISSUE

Let us be sure we understand the goal mentioned earlier;

The issue is *not* how to preserve our coastal resources in pristine purity, nor how to exploit them for greatest, fastest, economic return. Either of these objectives would be easy to achieve if acceptable to the people (which they are not). Rather, *the issue is how to provide for many diverse and often conflicting coastal demands, public and private, and still obtain the greatest long-term social and economic benefits.*

Similar conflicts occur on land. We know they have never been simple to resolve. Along the coasts, the challenge is all the greater because we have an ecologically sensitive environment of limited size; a complex mixture of public and private ownership; a confusion of legal jurisdictions. And to top it off, we are dealing with an area in which fish, water, ships and people freely cross political boundaries, yet few, if any people reside there.

The users are transients with other regional loyalties. We thus encounter a special question as to who will represent their interests in the normal political process?

Let us consider some of the objectives—

To attract industry and foster real estate development while maintaining wetlands, fisheries, and natural beauty of the seashore for all to enjoy;

To extract oil and gas, or mine seabed minerals from the shelf without suffocating marine life, and endangering trawler operations and safe ship navigation;

To provide deeper channels for the next generation of ships without covering the estuaries with spoil;

To protect our beaches and harbors from accidental oil pollution and still profit by economies of scale offered by larger ships.

If I am accused of sustaining a "have your cake and eat it too," attitude, I plead guilty, for I think these goals are attainable—but only (1) if we actively pursue more and broader scientific and engineering solutions to these problems and make the information available to those responsible for policy and decision-making; and (2) if we engage the cooperation and interest of all levels of government involved—local, State and Federal—the private sector and the citizen so as to provide an effective institutional articulation between social goals and engineering opportunities.

ROLE OF THE ENGINEER

This discussion of coastal zone affairs may be a disappointment to those who expected a shopping list of potential engineering projects. The civil engineer has distinguished himself in dealing with natural forces to meet requirements of service to human needs. But the engineers should be a partner as well in *setting those requirements:*

In articulating their vision as to ways and means to satisfy our national goals;

In understanding the economic-social-legal institutional framework in which action takes place for public or private investment;

In seeking knowledge to foster better decisions—knowledge as to our environment and consequences of our tampering with it; knowledge of our society and its processes;

In breaking down narrow technical specialization or parochial self-interests, to see the forest rather than the trees, to couple together better the producers of technical knowledge and the consumers.

In dealing with these issues, every skill of your profession will be needed. But so will its leadership.

C. P. Snow has written that the engineer "the people who made the hardware, who used existing knowledge to make things go, were—interested in making their machine work but indifferent to long-term social consequences." James Killian, President Eisenhower's science advisor, has written, "The engineer's concern for social problems must grow steadily as his work affects society more profoundly." And Whitlock and Edington before the ASEE have said the problems are those whose answers are not found in engineering courses but concern people, sociological needs, aesthetic judgments, political decision—"The complexity of our society today makes an engineer who cannot handle such problems not only limited but dangerous." Our society does not seem to appreciate that its affluence now permits collective political decisions in applying science and technology to our major social problems, but that we don't have a way yet of doing it. For a long time, for example, we used engineering to protect man against his environment. Now we must also consider how to protect the environment against man. Engineers must increasingly become a partner in making national decisions—decision making formerly dominated by men of commerce, law and finance.

I ask that every member of this audience and in the Society begin to consider the possibilities available to make effective and intelligent use of our marine environment; review the recommendations of the Marine Sciences Commission and articulate their views to this Administration. The Nation needs your help.

LOOKING AHEAD

Fortunately, initiatives for recognizing our opportunities as a coastal nation have been free of political partisanship. Both parties supported this enterprise in their platform.

President Nixon has stated that he would make full use of the Marine Sciences Act; that the new Administration would consider an integrated program in oceanography a first priority and would give immediate attention to the Commission Report; and that Vice President Agnew, statutory Chairman of the Council, will take an active part in defining our national interests in the many uses of the sea.

The Coastal Zone evokes a challenge to the nation.

This profession has an opportunity to assist in responding to that challenge.

RECORD OF PLEDGE OF ALLEGIANCE STIMULATES PATRIOTISM

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. GARMATZ. Mr. Speaker, a recording of Red Skelton's interpretation of the Pledge of Allegiance is being played by local radio stations in Baltimore, and I understand it is also extremely popular in many other cities. This response is gratifying proof that good, old-fashioned patriotism is far from being dead or passe.

Red Skelton has combined the deft touch of the superb showman with the deep feelings of the patriot to produce a masterpiece with his recitation of the pledge. As Americans, we should be grateful to him for having the eloquence to so aptly express what so many of us feel, but which so few are capable of translating effectively into words.

I hope other successful people—not only those in show business, but leaders from all walks of life—will follow this inspiring example and find the courage and pride to publicly voice their patriotism at every opportunity. It is time for the millions of silent, flag-loving Americans to stand up and let the rest of the world know that the dissenters, the extremists and the malcontents are truly an insignificant minority.

Americans everywhere have been touched and impressed by the Red Skelton recording, and I think a national campaign should be launched to carry the words and the spirit of that recording into every home in our great Nation. To help achieve that goal, Mr. Speaker, I submit the following transcript for insertion into the RECORD:

[From the Red Skelton Show, Jan. 14, 1969]

THE PLEDGE OF ALLEGIANCE

I remember this one teacher. To me, he was the greatest teacher, a real sage in my time. He had wisdom.

We were all reciting the Pledge of Allegiance, and he walked over. Mr. Lasswell was his name. He said:

"I've been listening to you boys and girls recite the Pledge of Allegiance all semester and it seems as though it is becoming monotonous to you. If I may, may I recite it and try to explain to you the meaning of each word?" This is what he said:

"I—me, an individual, a committee of one.

"Pledge—dedicate all my worldly goods to give without self-pity.

"Allegiance—my love and my devotion.

"To the flag—our standard, Old Glory, a symbol of freedom. Wherever she waves, there is respect because your loyalty has given her a dignity that shouts freedom is everybody's job.

"Of the United—that means we have all come together.

"States—individual communities that have united into 48 great states, 48 individual communities with pride and dignity and purpose, all divided with imaginary boundaries, yet united to a common purpose, all that's love of country.

"Of America—

"And to the Republic—A state in which sovereign power is invested in representatives chosen by the people to govern. And government is the people and it's from the people to the leaders, not from the leaders to the people.

"For which it stands—

"One nation—meaning, so blessed by God.

"Indivisible—incapable of being divided.

"With liberty—which is freedom and the right of power to live one's own life without threats or fear or some sort of retaliation.

"And justice—the principle or quality of dealing fairly with others.

"For all—which means it's as much your country as mine."

Since I was a small boy, two states have been added to our country and two words have been added to the Pledge of Allegiance—"Under God."

Wouldn't it be a pity if some one said, "That's a prayer," and that would be eliminated from schools, too?

FEDERAL LOAN TO A FIRM IN AN INDUSTRY SUBJECT TO OVERCAPACITY

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HALPERN. Mr. Speaker, in a time of general prosperity, it is more important than ever to take vigorous action to eliminate the pockets of poverty that are a disgrace to the Nation and a blight in our economy. I applaud many of the actions that government at all levels has taken to get at the root causes of such poverty, particularly the efforts of help—help that communities all over this Nation have taken. That a Federal agency, such as the Economic Development Administration, exists to assist these communities is commendable. What is not commendable, indeed what is most reprehensible, however, is a situation in which such an agency uses its authority to take an action that has no economic justification, one which gives every indication of both costing the Federal Government a substantial sum, and of failing to help the area where it has agreed to make a loan. Let me be specific. On January 28 of this year, the Economic Development Administration announced that it was making a 20-year

loan of nearly $1.5 million at 5¼ percent interest—quite a bargain at a time when the prime rate was 7 percent; it is now 7½ percent—to Television Electronics, Inc., of Newport, Tenn., to help it set up a color television tube manufacturing plant. The loan was granted, reportedly, because that part of Tennessee suffers from chronic high unemployment. But less than 3 weeks later, one of the leading manufacturers of color tubes, National Video Corp., filed for reorganization under chapter X of the Federal Bankruptcy Act because of, as it claimed, "continuing excess tube-manufacturing capacity in the industry and the resulting competitive pressure."

It seems highly questionable to me that by any stretch of the imagination the EDA can be excused for lending money to a firm for the purpose of producing a product which, as repeated observers in the trade have pointed out, is in oversupply. The president of the Television Manufacturers of America, for example, noted last month that tube manufacturers of the Nation now have a capacity of around 10 million tubes a year while current production lags at the level of 6 million tubes a year. Leading business advisory services reflect the same opinion. Under these circumstances it seems uncalled for for the Government to encourage production in this already glutted field. I do not wish to suggest that I am opposed to programs that are designed to help areas with high chronic unemployment help themselves. But the least that we can expect is that such help will be intelligent and economically sound in the long run. It may well be that eastern Tennessee needs and can make a go of certain new industries. But it is unwise in the extreme to foster production in an overcrowded field. This is an action that both Newport, Tenn., and the Federal Government, not to mention the overburdened U.S. taxpayer, may have grave cause to regret. I would urge that all lending programs of the Federal Government be scrutinized with added care and expert economic counsel so that this kind of fiasco will not be repeated.

HANDLOADER DENIED CHANCE TO BE HEARD

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. DINGELL. Mr. Speaker, having received permission I insert into the CONGRESSIONAL RECORD an excellent article appearing recently in the Handloader of January–February 1969 discussing not only the evils of the recent firearms control legislation, but some of the heavy-handed and unfair administration which has accompanied that regrettable piece of legislation.

The article follows:

HANDLOADER DENIED CHANCE TO BE HEARD

During the Senate hearings on the less-restrictive Administration firearms bill that preceded the one which became law, someone (Franklin Orth of the NRA as we recall) noted with approval that the Administration had eliminated ammunition controls. Sen. Thomas Dodd acidly replied that he was glad there was *something* in the bill of which gun owner organizations approved.

But other advocates of maximum firearms restrictions were quite displeased that ammunition had not been included. Treasury Department officials explained to them that ammunition had not been included in the bill for the simple reason that controls upon ammunition were impractical and unenforceable, as proven by their experience with the old Federal Firearms Act, which included certain controls upon ammunition. The Treasury officials pointed out that ammunition bears no serial number or other identifying mark, making it impossible to trace.

Nevertheless, when the Administration introduced the new law in the aftermath of the assassination of Sen. Robert Kennedy, its earlier position had been reversed. And how! Dealers were required by the proposed regulations under the law to inventory all ammunition in their business on the effective date of the law and to record all future acquisitions, showing "the serial number or other identifying marks of the ammunition."

Ammunition, as defined in the law, includes "ammunition or cartridge cases, primers, bullets, or propellant powder designed for use in any firearm." "Bullets," we have been told, is a generic term which includes lead shot.

How is a dealer to record the "serial number or other identifying marks" of a bag of shot? We've seen plenty of ammunition and components, but we've never seen a cartridge, bullet, primer or can of powder with a serial number. The lot number found on some ammo and component boxes is for quality control purposes only and is useless for identification, since thousands of cans or boxes may bear the identical number.

With each sale of "ammunition," including a box of bullets, can of powder or box of primers, the dealer must record the name, address and date of birth of the handloader buying it. Because "ammunition" can no longer be sold by mail order, handloaders no longer may buy bullets by mail from small manufacturers whose products are too specialized to be economically stocked by dealers. Handloaders won't even be able to buy once-fired rifle or shotgun cases from out-of-state suppliers!

The effect of all this will be to reduce the number of dealers handling components, and to increase the cost of those who do continue, thus increasing the costs to individual handloaders. The result could be fewer handloaders.

Although the stated purpose of the law was to reduce crime, does anyone envision some hardened criminal learning the intricacies of handloading ammunition in order to pursue his "trade"? We doubt it.

The Treasury Department, by its own testimony, is aware that the requirement to record sales of ammunition and components can serve no useful purpose. So are the sponsors of the bill. But most of Congress was not even aware that these punitive provisions existed in the law.

Although there were a series of hearings on various firearms bills, there was never a hearing on the bill which became law. And there were no hearings of *any* bill which included provisions for controls upon ammunition and components.

It may seem incredible, but we know for a fact that 16 members of the House Judiciary Committee voted for this law the same morning copies were distributed—without the committee even having read it!

Another 16 members who voted to delay consideration for a week so the bill could be read were subjected to a furious tirade from the press and the Administration. As one of the members of the committee told us privately, "I'm an old country lawyer and I wouldn't let one of my farmer-clients sign a five-acre land lease without at least reading it. But they blistered us because we felt the nation's business should be conducted with the same common sense."

It is astonishing to think that any law could be rammed through with such disregard for sensible deliberation. But that's the way our new gun law came into being—and the reason it contains such travesties as the reloading component restrictions.

Every handloader and shooter is entirely within his rights to insist that the new Congress hold hearings on a bill to remove reloading components from the law. Unless some relationship can be shown between reloading and crime—and we defy anyone to produce evidence of such a relationship—there is no legitimate reason for Congress to refuse to repeal the reloading components section.

Admittedly we would prefer to see the entire bill substituted by a law which would cure the defects of the old Federal Firearms Act without pointlessly penalizing law-abiding citizens. But we see little hope of making substantive changes in the law at the present time.

However, although the new law was passed in a state of near hysteria, all of its major provisions had at least been discussed in open hearings concerning other bills. All, that is, except one—the ridiculous reloading components restrictions. And we handloaders should at least be given the right to object to those provisions in a formal hearing.—Neal Knox

THE NEW VIETNAM POLICY?

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. RARICK. Mr. Speaker, can this be the new U.S. policy in Vietnam to appease the Communists or a surrender-type peace at the cost of additional millions of unfortunate victims? Can any thinking human being feel for 1 minute that if all the troops are removed and the National Liberation Front terrorists allowed to remain, that South Vietnam will be anything but a slaughterhouse for their people?

The report yesterday that the Saigon Government of free Vietnam would confer with the Communist liberation front causes many Americans to raise their eyebrows to question—is this the new administration's new Vietnam policy?

I place the reported Kissinger plan, contained in a report by David Hoffman, Washington Post Foreign Service, on March 26 and headline from this afternoon's lead story from the Evening Star at this point in the RECORD.

[From the Washington (D.C.) Post, Mar. 26, 1969]

KISSINGER PLAN RECALLED

This kind of talk, plus Thieu's proposal, reinforces the view that President Nixon has fully subscribed to the proposals of Henry A. Kissinger, which called for the United States and North Vietnam to settle the military problems, centered on the mutual withdrawal of forces, while leaving the political future of the South to be settled by the rival Vietnamese groups.

American officials here, in attempting to place Thieu's move in line with previous

South Vietnamese statements, pointed to Vice President Ky's remarks last Dec. 22. On a television program in Paris, Ky then advocated direct talks with the Front.

But at that time Ky drew a distinction between the Front as a "reality" with which his government would have to deal and as an "entity" which he said he would never accept.

Thieu's proposal has the effect of accepting the Front as an entity at least for the purposes of the Paris peace talks.

[From the Washington (D.C.) Evening Star, Mar. 27, 1969]

SAYS PRESIDENT DOES NOT SEEK MILITARY WIN—STRESSES PEACE BY PRIVATE TALKS, TROOP WITHDRAWAL

LEAGUE OF WOMEN VOTERS

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. DORN. Mr. Speaker, this week the League of Women Voters is celebrating its 50th anniversary. This outstanding and great organization has my congratulations for 50 years of dedicated and devoted service to our country.

A splendid article appeared in the South Carolina State and Columbia Record about a beloved constituent of Aiken, and a dear friend, Mrs. Eulalie Chafee Salley.

Mrs. Salley worked tirelessly for woman suffrage and for the League of Women Voters. She was a national leader in organizing both great movements. I commend these excellent articles about a great lady and the League of Women Voters to the attention of my colleagues in the Congress and to the people of the entire Nation:

LEAGUE OF WOMEN VOTERS TO CELEBRATE 50TH YEAR

Beginning this week, 150,000 members of the League of Women Voters will celebrate the organization's 50th anniversary.

It was on March 24, 1919, that Mrs. Carrie Chapman Catt, president of the National American Woman Suffrage Association, proposed the formation of the League of Women Voters.

Once the women who had worked so hard for suffrage had their goal in sight, they wanted a means of educating feminine voters about government.

The 19th amendment giving women the right to vote was passed in 1919 and ratified in 1920.

All over South Carolina, the 700 state members are celebrating the anniversary. The Columbia-Richland County group will kick off its 50th anniversary campaign drive Thursday with a 12:45 p.m. luncheon at Shandon United Methodist Church.

On a national level, the league hopes to raise $11 million during the anniversary year for its varied programs.

The league's interests through the years have changed but the organization has consistently supported those policies which the majority of members felt were for the good of the country.

In the 1920s members were working for the Child Labor Amendment and campaigning on disarmament.

In the 1930s they were behind the Lame Duck amendment and the TVA Act.

Support of the UN charter and the Marshall Plan were projects in the 1940s.

Members in the 1950s were behind the extension of Reciprocal Trade Agreements and beginning their work on the conservation of water resources.

Among the national league's programs today is the support of equality of opportunity in education, employment and housing.

The state league, which is celebrating its 20th anniversary this year, was recently commended by Gov. Robert E. McNair for its work on compulsory education, constitutional revision, election and registration laws, jury service for women and water pollution control.

Organized in 1947, the Columbia league has worked for county-wide equitable tax assessment, minimal housing standards, fluoridation of water and a new Columbia Hospital.

Local members are currently supporting the consolidation of the county-city governments and increased personnel and adequate financing of the Juvenile Domestic Relations Court of Richland County.

Mrs. Sherrod L. Bumgardner is president of the state league and Mrs. Robert K. Moxon is the 50th Anniversary chairman. Mrs. Nelson Jensen is the Columbia league president.

Mrs. Jensen notes that women are attracted to the league today for the same reason they organized it in 1920—the desire to actively participate in the governments around them and to do so as informed citizens.

"Our purpose, though, goes beyond simply educating ourselves," said Mrs. Jensen. "On the one hand we select timely governmental issues for concentrated study with the objective of finding solutions members agree on. We then work to accomplish these solutions by convincing the electorate and public officials of the validity of our position.

"The other phase of league purpose we call 'voters' service.' We supply unbiased information on candidates' qualifications and views on issues, registrations and voting, and explanations of constitutional amendments."

FRIEND'S PLIGHT PROMPTED WOMEN'S RIGHTS INTEREST

(By Betty Sadler)

At 85, Eulalie Chafee Salley would like to live to see two things—South Carolina ratify the 19th amendment and a woman elected president.

An ardent feminist all her adult life, Mrs. Salley is, as far as she knows, the only living member of the League of Women Voters' first national board.

Though she's worked for women's rights for over half a century, and has seen many accomplishments, she thinks her sex still has a long way to go.

One thing that rankles her is that South Carolina women have never been able to get the state legislature to ratify the amendment giving women the right to vote.

"It's been brought before the legislature time and time again—the last time was 1963—and it gets voted down every time," she said.

(As of 1968, South Carolina was one of only seven states—according to the U.S. Code Annotated—which have never ratified the amendment.)

She doesn't expect to be around when a woman runs the United States but does think it will eventually happen.

NEVER RAN FOR OFFICE

As for herself, Mrs. Salley never got around to running for office.

"I had a husband (the late Julian B. Salley) who was very much opposed to publicity and I hurt him enough with all the fool things I did for women's suffrage," she said.

"I told him if he'd just let me alone with my suffrage work, I'd never run for office," she remembered fondly.

"The worst thing I ever did was in a play we were putting on to raise some money," she reminisced.

"One of the acts was a prize fight and this cousin and I agreed to do it. We wore black tights and were billed as the 'Gold Dust Twins.'

"I didn't tell my family about it, but when we came out on stage my son, who was 9 at the time, shouted, 'Hey, mother, mother' and gave me away.

"I almost got a divorce. My husband didn't speak to me for days.

"But I did it all for suffrage," she said philosophically.

Eventually, Mr. Salley discovered the suffrage work was taking more money than she "could get out of my husband's pocket before daylight."

So she decided to go into business for herself. Mr. Salley told her she "couldn't make $6 in six months" and bet her $100 she wouldn't show a profit the first month.

She went to city hall, got the clerk to read her a list of the licenses available and chose the real estate license.

She paid $25 for the license (this was 1916) and sold one house that month for a profit of $1,000. She was the first woman in real estate in the state and still runs her own business. Through the years she's handled many sales for Aiken's wealthy winter colony.

FRIEND'S PLIGHT

Mrs. Salley got involved in the woman's suffrage movement because of the plight of a friend.

Lucy Tillman, the granddaughter of Gov. Francis W. Pickens, was divorced from B. R. Tillman Jr., the son of Sen. Ben Tillman.

Under South Carolina law of that time, a man had a right to deed away his children without his wife's consent. Mr. Tillman gave his children to his parents.

"I thought that if there were such laws in my state, I should work for women to have the right to vote," she said.

"There was also a law that allowed a man to beat his wife with a stick, provided the stick was no bigger in diameter than his thumb," she recalled.

One woman was beaten almost to death by her husband for joining the suffrage movement. Fellow members felt, however, that she probably had her revenge.

One day the man inexplicably dropped dead after his wife brought him a glass of buttermilk. She left town shortly thereafter and was never seen again.

Members of the movement had to make their own arrangements and pay their own way as they traveled around. Mrs. Salley traveled a great deal of the time—once arriving in a hearse.

"I went as far as I could on the trolley and got off at the closest station where people from the place I was going to speak in were supposed to meet me," she said.

"When they didn't appear, I hired the only conveyance in town—the hearse—for the last eight miles.

"They listened to me when I got there," she remembered.

One of the unhappiest aspects of suffrage work was the opposition of many women.

"There were more women in the anti-suffrage league than in the suffrage league," said Mrs. Salley. "Many women thought we were some kind of wild animals until they got used to the idea."

The amendment was passed by the U.S. House of Representatives in May, 1919, by the Senate in June, 1919, and finally on Aug. 26, 1920, was proclaimed law.

BIG PARADE

"That was a day," said Mrs. Salley. "We had a big parade and the officers of the Aiken County Suffrage League (she was president) led on big black horses.

"There were autos and buggies and we rang all the church bells and fire bells in town."

Once they got the right to vote, members of the suffrage leagues went to work for the

newly formed League of Women Voters to educate women in the use of the ballot.

Mrs. Salley spoke in 41 states in 18 months encouraging women to join. She was regional director of the seventh district in charge of organizing the league in seven states and the District of Columbia.

She's still active on a local level but believes it's time for younger women to carry on. "I go to their meetings sometimes and tell them what to do—but they never do it," she smiled.

Mrs. Salley still thinks the league made a mistake in choosing to be nonpartisan.

"At our first three national meetings there were big fights between those who wanted to be nonpartisan and those who wanted to be partisan. The nonpartisans won and I think this has been a weakness of the league ever since.

"I'm not nonpartisan. I want to say whether I want to vote Republican or Democrat—I don't want to be bound to one party, though I was born a Democrat and I guess I'll always be one. But I want to be able to vote independently."

Mrs. Salley thinks all women should do more than just keep house, though she readily admits she had an ideal situation with both her mother and her childhood nurse at home to raise her son and daughter. (Her son, Julian B. Salley, is a lawyer in Aiken; her daughter, Eulalie Rutledge, runs her own real estate office.)

"Just housework and children isn't enough," Mrs. Salley said emphatically. "It's dreadful to waste that much on house work.

"My husband used to say, 'Why don't you stay home and just take care of the children and the house.' I would tell him that giving me that job was like plowing a race horse . . . you can get any old mule to plow."

FISCAL ENLIGHTENMENT: MODERN REPUBLICAN WONDER

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PODELL. Mr. Speaker, last week this House raised the national debt limit, after vast heavings and profound soul searching. I was much moved by these spasms of patriotism and expressions of altruism. The tornadic blasts of rhetoric made a hurricane seem like a playful zephyr.

Suddenly, honorable Members who had manned frontline trenches in wars against Government spending emerged as shining knights-errant of a higher national debt limit. I would have sooner expected to see the Joint Chiefs put on hair shirts and open a cooperative pants pressing parlor than to observe what transpired here.

What was a national crime under the Democrats has suddenly received a Republican imprimatur. Previously, whenever a Democratic administration asked for permission to raise the national debt, our brethren across the aisle acted as if we were proposing to throw the Constitution, Declaration of Independence, and Revised Statutes into the fire. This is why I was so amazed last week that I next expected to hear the second coming was imminent, and had caused this change of heart.

Even Mr. Nixon asked for our poor Democratic assistance in putting this raise into effect. Enlightment rages through Republican congressional and executive halls like a veritable pestilence these days. Refreshing change.

Has light dawned? Will the leopard change his spots? Was Bluebeard really a tambourine player for the Salvation Army? Will the Republican Party stay in this state of enlightened stupefaction? I would sooner hope that an alcoholic in a distillery would take the pledge.

Yet in humble hope but scant expectation, I await the next entertaining episode.

HISTORY OF HOSPITALS AT FORT DEVENS, MASS.

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include herein the text of a very interesting, informative press release on the history of hospitals at Fort Devens, Mass., a famous Army installation in my district, prepared by the information office of that great post.

This splendid, very well-done recital of the long, illustrious history of hospitals at Fort Devens is all the more timely because of the recent groundbreaking there for a new, ultramodern hospital facility at the post, filling a real need in providing the best possible treatment for the members of the armed services and their dependents.

I want to compliment the information office of the post for its fine piece of work, which I regard as so important that I will forward the text of the release, together with these remarks, to the Library of Congress and the State library at Boston.

The press release follows:

HISTORY OF HOSPITALS AT FORT DEVENS

FORT DEVENS, MASS.—When the War Department decided to erect a cantonment in the Northeastern part of the United States for training conscripted soldiers to fight in Europe in World War I, the town of Ayer was selected for the site, because of the contour of the land, the abundance of good water, the accessibility of modern railroad facilities, and the proximity of the coast in the event of an enemy attack.

The contractor (Fred T. Ley Company, Springfield, Mass.) began clearing the scrub oak and pine from the cantonment site on June 19, 1917.

One week later, there were 1489 workmen at the site ready to erect living quarters for the men who were to be assigned to the cantonment for training as soldiers.

On June 25, 1917, the first medical officer arrived at the camp site to work with the contractor. His name was Captain Glen I. Jones, and he had the title of "Sanitation Officer".

On Tuesday, Aug. 28, 1917, the first large group of medical personnel arrived at the site from Fort Benjamin Harrison, Ind. They were members of a sanitary corps detachment and there were 38 officers and 240 enlisted men in the unit. The commanding officer was Captain George Waters.

On Sunday July 15, 1917, the cantonment site was named Camp Devens, after a native son, Major General Charles Devens, a hero of the Civil War, Attorney General of the United States in President Rutherford B. Hayes' cabinet.

The first permanent Army hospital at Camp Devens opened on Sept. 1, 1917 with 46 of its 59 ward buildings completed. It was designated Camp Base Hospital and was commanded by Major Glen I. Jones. (The first medical officer assigned to the camp in June.)

It was originally planned as a 1600 bed hospital, but by December 1917, it had grown to a 2740 bed hospital making it the 7th largest of the 35 camp hospitals then in existence in the United States, and the 12th largest of all the U.S. Army hospitals throughout the country.

The first patient admitted to the hospital with the dreaded "flu", occurred on Tuesday, Aug. 27, 1918. By the end of the day, six more men were admitted with the same symptoms.

By Sept. 14, there were 1765 cases of flu in the hospital and four days later the number had climbed to 7400 with 68 deaths.

The hospital was staffed with 210 nurses at the start of the flu epidemic, but as the number of patients increased, the Army rushed nurses and doctors to Devens from Army posts all over the country.

12,707 cases were reported by Sept. 30, with 593 deaths attributed to the flu.

The disease had disabled 14,280 servicemen by Oct. 8 and the death toll had risen to 775, including two doctors and five nurses. Camp Devens was the hardest hit of all the military installations in the United States.

The flu started to wane on Oct. 8, and two days later, the post lifted all quarantines and restrictions.

Wounded soldiers from the fighting in France began arriving at Devens on Dec. 1 for treatment and rehabilitation.

The Camp Base Hospital at Devens was staffed with 940 medical corpsmen making it 5th in numbers of enlisted personnel assigned of all 35 camp base hospitals in the United States. With 146 officers on the hospital staff, Devens hospital rated number 2 in the country in the number of medical officers assigned.

On Jan. 2, 1927, the House Committee on Military Affairs authorized expenditures of $300,000 for a permanent hospital at Camp Devens.

The hospital was to have 105 beds and its total cost would have been over $400,000, with the extra money to be appropriated before the hospital was completed. Nothing came of the above proposal.

In July 1930, 10 bids were received for the construction of a new hospital. The lowest bidder was the Shawmut Construction Company of Boston who submitted a bid of $115,284. The bids were forwarded to the War Department for final action.

In October 1930, construction began on the new hospital. It was completed May 10, 1931 at a cost of $118,708. The hospital contained 35 beds, a dental lab; an operating room; a narcotics vault; an x-ray room, and a diet kitchen. The commanding officer of the hospital was Major William T. Fisher. He had 18 corpsmen assigned to the hospital to care for the patients' needs.

Contracts were drawn up between the U.S. Army and civilian doctors from the immediate area, who would come to the hospital at specified times to assist in medical diagnosis and/or operations that may be required.

On Oct. 7, 1931 Devens was designated a permanent post and referred to as Fort Devens.

When the first peace time draft in our nation's history was instituted in 1940, Fort Devens was given an A–1 priority for new construction.

One of the projects in the construction program was the erection of two hospitals—both to contain 1,000 beds. In the fall of

1940, construction of the two hospitals began, and both were completed in early 1941.

On Feb. 16, 1941, the first of these two hospitals was dedicated and designated Lovell General Hospital, in honor of Surgeon General Joseph Lovell, a native of Mass., who served as an Army Surgeon with the 9th U.S. Infantry during the War of 1812. He was appointed the first Surgeon General of the U.S. Army on April 18, 1818, a post he held until his death on Oct. 17, 1836.

The first commanding officer of Lovell General Hospital was Brigadier General Henry G. Pillsbury, a native of Lowell, Mass. The hospital consisted of 83 buildings housing 32 wards. The first patient was admitted to the hospital on June 15, 1941.

Lovell General served the needs of all the Army posts throughout New England (except Fort Devens), and New York state.

The other 1,000 bed hospital was designated New Station Hospital and was for the care of military personnel and their dependents stationed at Fort Devens. Lieutenant Colonel Miner F. Felch was the first commanding officer of the New Station Hospital.

Both hospitals at Devens were merged in July 1944, and Lovell General Hospital became Lovell General South and the former New Station Hospital became Lovell General North.

On June 24, 1946 both hospitals were inactivated when Fort Devens was slated to be closed. The patients still in the hospitals at the time, were transferred to Murphy General Hospital, Waltham.

The Fort was officially inactivated June 30, 1946.

After the closing of the post, Lovell General North (formerly New Station Hospital) was converted into 400 family units by the Federal Public Housing Authority for use of married veterans who were attending Harvard University, and who were unable to acquire housing facilities near the university due to the heavy influx of veterans returning to college.

As the veterans who lived in the old Lovell General North area were all attending Harvard University, the housing area itself became known as Harvard-Devens.

On July 15, 1948 Fort Devens was once again reactivated, and on Oct. 1, 1948, Lovell General South (the original Lovell General Hospital) was re-opened with 100 beds to care for the needs of the 2200 troops who were then stationed at Fort Devens. The hospital was designated Lovell section of the Murphy General Hospital. Fort Devens.

On May 1, 1950, the hospital was redesignated Station Hospital, Fort Devens and in 1956 was redesignated U.S. Army Hospital, Fort Devens.

The hospital which is now slated to be built on Fort Devens, had its origin back in February 1963, when plans were submitted to the Defense Department for inclusion of the hospital construction in Fiscal Year 1966.

DR. WILLIAM S. SHIELDS HONORED

HON. ROGERS C. B. MORTON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. MORTON. Mr. Speaker, the U.S. Service Academies rank among the finest educational institutions in the country. We can be proud of the young graduates who, through their training and experience, make valuable contributions to both the civilian as well as the military way of life. We owe a great debt to those who devote their lives to training these young men.

Mr. Speaker, I would like to call the attention of my colleagues to one such devoted educator, Dr. William S. Shields, the dean of admissions at the U.S. Naval Academy. Dr. Shields began his career teaching romance languages at Western Reserve in 1937. In 1940 he was commissioned in the U.S. Navy and was assigned to the modern languages department at the Naval Academy. In 1949 he returned to civilian life and was named educational adviser to the Superintendent of the Academy. He acted in the capacity of adviser until 1962 at which time he was appointed to his present position, dean of admissions.

Dr. Shields was honored recently by the Naval Association of New York. They presented him with their annual award for outstanding service to the Naval Academy. I would like to take this opportunity to add my congratulations and thanks to Dr. Shields and to the many other fine Academy educators, who give invaluable service to this country.

SOUTH SHORE HOSPITAL MOVES AHEAD

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PEPPER. Mr. Speaker, on March 9, 1969, I had the distinct pleasure to hear the speech of Col. Harry Zubkoff, U.S. Air Force, retired, who is performing a distinctive and outstanding service as executive director of the South Shore Hospital and Medical Center of Miami Beach, Fla.

It was my good fortune to be on hand as Colonel Kubkoff reviewed the amazing rapid growth of this community-serving hospital and its ambitious and worthwhile objective to expand from 50 to 200 beds.

It was my pleasure to address the fundraising dinner and join with all in paying tribute to Dr. David K. Pinks, founder and inspirational leader of the hospital.

So that we might all better understand the difficulties and triumphs of a progressive hospital such as South Shore Hospital and Medical Center, I would like at this point to insert into the RECORD the text of Colonel Zubkoff's speech:

Tonight you see before you an envious man. I have been asked to tell you how reality has caught up with a man's dream. To bring substance to a man's dream may be some measure of achievement but I would much prefer to have been the individual with the dream and that someone other than I had been given the job of describing to you the brick and mortar.

Other speakers who follow—far more qualified and competent than I—will pay earned homage to our honored guest of the evening. I must content myself with cold realities of statistics and brick and mortar.

South Shore Hospital is a reality. It is here. It is completely filled with patients. It is bulging at the seams. It now belongs to you. Its future belongs to you.

Our non-profit—I repeat, non-profit—to dispel an old wives tale perhaps spread by one or more groups of "haves" who with perhaps suspect motives may have resisted normal growth of medical activities to the detriment of Dade County and Miami Beach, in particular—our non-profit hospital is accomplishing its one and only function; namely, good patient care.

I am sorry that I must use the word "suspect" when referring to the motives of the "haves" but I have no choice when I recall five or six years ago our guest of honor initially tried to build this hospital. The city of Miami Beach council was told by the "haves", we need no more beds in Miami Beach. Since that date, over 50% more beds have been added by those same people and today they probably would again allege "we need no more beds". You people here, especially the physicians whose hearts and backs are perpetually burdened with the chore of no place to take care of the sick and injured people who look to you for actual medical salvation, know this allegation of "enough beds" to be a falsehood.

It is you physicians who must lead the way if you agree with what is said here tonight. It is you physicians who must give materially and always remember to tell each and every patient you care for "support south shore hospital—we all need it".

Every dollar invested in our hospital will buy only one commodity. Good patient care.

No money will be spent on research. No money will be spent on formal education. Unlike some hospital administrators I feel that school systems know more about formal education than do hospitals. Like the old Greek restaurateur cliche, "We cash no checks and the bank serves no soup". So I say, let the schools do the education.

At south shore no money will be spent on experimental equipment. We will provide the very latest tested and accepted equipment. We will not purchase each new fad in cardiac monitoring devices that hits the market only to fade in a short time, or sometimes, even before it is fully installed. To repeat, we will put every ounce of our dedication, ability and dollars into kind and competent concern and care for our patients.

I do not take issue with the medical complexes that have developed across our country.

There are medical schools and there should be medical schools to educate the student and do research.

There are university hospitals and there should be university hospitals to expose the students to some on-the-job experience and to train interns and residents.

There are non-affiliated large hospitals and there should be non-affiliated large hospitals which, unfettered by inbred academic restrictions that may be present in schools and university hospitals, can bridge the gap between research and training at the medical schools and the practitioners in the community.

But the problem is that none of these want to stick to their own knitting.

The school wants to get into the hospital business; the hospital wants to get into the school business. The result is a hodge podge where the patient and "good patient care" are almost forgotten.

For instance, if medical schools had stuck to their knitting of educating students, these schools would have been more successful over the past 20 years in responding to the request and heavy outlay of funds by the people and the Government to produce increased numbers of physicians that this country needs so desperately. This inability to produce in my mind is directly proportionate to their desire to spread into any and all areas of health, perhaps at worst financially motivated or at best overestimating their capabilities in their desire to serve humanity.

What about the large nonaffiliated or quasi-affiliated hospital? Why have they historically turned their backs on the very

communities from which they sprang and where they still are situated?

For some unknown reason, it is almost a dirty word to be a small or moderate size hospital—let's say arbitrarily 250 beds or less. Hospitals that reach this size, for some unknown reason, do not turn their efforts to refine and improve patient care—they try instead to get bigger and bigger, they play at doing research and believe me it is frequently only play which doesn't fool skilled field representatives from our Government who must judge before authorizing grants. These institutions fly off in all directions—education, new equipment evaluations, home care programs, full time staffing, product evaluations, etc. The fact that good patient care may be the loser seems not to concern the semi-large hospital or should I call it the large semi-hospital that has been bitten by the growth, research and education bug.

These large hospitals lose sight of the benefits that come from a patient staying with his hospital family during his stay; the same room, the same nurses, the same orderlies, the same food service people and the same surroundings. It loses sight of laboratory reports that don't catch up with the patient and his doctor until too late to be of diagnostic use: it loses sight of the radiology reports that somehow take second place to the alleged research being conducted, (sometimes nothing more than getting someone's name in print).

There is no doubt that at some indefinable number of beds these are the things that happen. I think the magic number is 250 beds. At this size hospital we can have the benefits that size does bring and I hope none of the disadvantages that real bigness brings.

Already the government is concerned about what it is buying with its Medicare dollar. With the advent of Medicaid which is almost upon us in Florida, the State government is even more concerned about what it will be buying for its dollar.

Recently at a South Florida hospital council meeting I heard Dr. Flipsee make a statement that the Government is concerned because it wants all of the medical benefits possible for its scarce dollar but that the triad or should I say the bigamist marriage of education, research, and large medical complexes make it impossible to relate the costs with the exact benefits. And well Dr. Flipsee and other government agencies should be concerned. The February 18th, 1969 issue of the hospital administrators bible "Hospitals" published by the American Hospital Association states that the same procedure—identical mind you—costs $17.40 at a small hospital and $57.77 at a hospital with over 400 beds. I do not suggest that the $17.40 hospital is the one I recommend. There is no doubt that at this price many basic services and precautions probably were missing. However, on the other end of the pendulum's arc I am sure that the $57.77 hospital included many "tie-in sales" which were either superfluous or not essential. I would recommend some middle range where the price would be consistent with the needed services.

It is my view that the Federal Government had its chance and muffed it but maybe it is not too late. With the advent of medicare the Government should have frozen the expansion of any hospital of over 250 beds in size and then supported the creation of principal and satellite hospitals. Existing large hospitals could have improved their capability to perform their primary functions. They, in turn, would be equitably surrounded by smaller hospitals not to exceed 250 beds.

As I have visited large hospitals I have never found a single one that has not been devoting its major thoughts and energies to expansion, expansion, expansion. Never have I found one that was concentrating on improving the things that were their primary reason for being and never, never, never did I find one that was really giving its major efforts to simply improving patient care. Federal grants for special projects or bed expansion including intensive care complexes seemed to be their sole reason for being.

This should not be.

I say, let's stop the numerical bed growth of these expensive non-oriented to patient care medical institutions. Let us start supporting our communities with a type of health facilities that can best provide for our needs in a personal and competent manner. Let us here in Florida let the rest of the Nation know that we are not only thinking but are doing something about it.

On two occasions I have heard a former president of the South Florida Hospital Council emphasize that hospitals are a "business" with no qualifying, amplifying or explanatory footnotes. Except that it is extremely important to bear in mind that hospitals are primarily a humane endeavor undertaken by a dedicated people who have a passion for compassion, I agree with him. However, if there are more who agree with him it is not sufficiently evidenced in their practices nor in their planning. If it is a business, then it would follow that competition upon which all business is based should be the accepted practice. Competition should be the leveller not some magic bureaucratic formula that is more interested to protect the "haves" than provide the finest and most economical health services through economic competition. "Figures are foolers." For instance, Florida is in group 3 for almost all medical geographical studies done by the American Hospital Association. Thus, Florida is included in the same group as Georgia for certain hospital studies. With no anthropology background and no statistics but only my eyes, ears and mind to make a judgment, I maintain this is absurd. Statistics are misleading. Again—an example. The State of Florida health plan states that 11.7% of the people in Dade County are over the age of 65. This may or may not be so but again when applied to my observation of a sample of the 75,000 individuals in South Beach, I would question whether our planning should be on the 11.7 percentage.

Too, statistics reflect the past and frequently are a poor barometer for the future. I would much rather rely on healthy American competition even when it means that an older medical institution may close its doors or curtail some of its activities because a younger and more competent health activity has managed to provide better health services. It should not and must not be a matter of which came first. Caliber of services delivered should be the criterion. Only competition will rid us of inefficiencies and wastefulness.

At South Shore Hospital our next phase will give us 150 beds and our final phase, I emphasize final phase, will give us 250 beds.

If and when more hospital beds are needed, and the daily replacement of individual homes by condominiums that significantly increase the population density per square foot of land that makes this a certainty on Miami Beach, I vow to support anyone who embarks upon construction of another small independent hospital where youth and vigor will make South Shore Hospital stay on its toes, knowing full well it is in a competitive field whose aim must always be "good patient care".

It is to this philosophy that I ask you to subscribe with both your spiritual and material assistance. To find within each of you the ability to give. To provide both for your community, yourselves and your family a most precious gift—the comfort of knowing that when illness strikes there is in your community the ability to give good patient care.

CONSTRUCTION SAFETY LEGISLATION

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, the Select Subcommittee on Labor of the House Committee on Education and Labor was privileged today to hear from Secretary of Labor, George Shultz, and Under Secretary of Labor, James Hodgson, on H.R. 3290, the construction safety legislation which is currently being considered by our committee.

For the benefit of my colleagues I include their statements as part of my remarks:

STATEMENT OF GEORGE P. SHULTZ, SECRETARY OF LABOR, BEFORE THE SELECT SUBCOMMITTEE ON LABOR OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR ON H.R. 3290, CONSTRUCTION SAFETY AND HEALTH, MARCH 27, 1969

Mr. Chairman and Members of the Subcommittee: It is a pleasure for us to be here today. I am accompanied by the Under Secretary of Labor, Mr. James D. Hodgson, who will stay following my brief opening remarks, to answer any questions you may have.

It is fitting, Mr. Chairman, that our first meeting with you concerns, generally, the subject of occupational safety and health, and, specifically, H.R. 3290 which is related to this subject to the extent that the bill recognizes the Federal Government's obligation to promote the safe and healthful working conditions of those employees who work under Federal contracting authorities.

The safety and health aspects of working conditions are already protected under Federal law in the case of those employed on Government supply and service contracts. The extension of such protection to the one group of workers presently unprotected; that is, to the construction workers employed under Federal and federally assisted construction projects, strikes us as wise.

I favor the enactment of legislation along the general lines of H.R. 3290 which recognizes that the Federal Government has a special obligation to those who work on Government contracts and extends safety and health protections to the one remaining class of workers who do not now have the benefit of those protections.

Mr. Hodgson will, I'm sure, expand on the Labor Department's views on this subject and answer your questions.

STATEMENT OF JAMES D. HODGSON, UNDER SECRETARY OF LABOR BEFORE THE SELECT SUBCOMMITTEE ON LABOR OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR ON H.R. 3290, CONSTRUCTION AND HEALTH, MARCH 27, 1969

Mr. Chairman and Members of the Subcommittee: Since I first assumed my duties as Under Secretary of Labor last month I have looked forward to the opportunity to discuss with you important legislative matters bearing upon the welfare of the working men and women of this country.

Therefore, I am pleased that H.R. 3290 reflects an interest in the broad subject of occupational safety and health, even though its provisions deal only with the working conditions and practices of the building and construction industry when Federal contracting is involved.

H.R. 3290 would promote safe and healthful working conditions for those employed in one segment of a single industry. The measure recognizes that the Federal Govern-

ment has a special responsibility toward those persons who work on contracts entered into under authority of the Federal Government.

Before going into the particulars of H.R. 3290, I believe it might be best to first examine the broad picture of industrial safety and health. In this way, we can gain some perspective on how H.R. 3290 fits into the more general view of industrial safety matters.

We have figures based on the year 1967 covering all industries, grouped into six major categories, which give us a fair overall picture of the workplace hazards for American employees. In industry as a whole, 14,200 persons are killed on the job every year; and over two million are disabled by injuries at work. Our figures show that these total deaths, approximately 20 percent occur in the construction industry. Of the total disabling injuries, the construction industry accounts for about 11 percent.

National Safety Council figures for the same year, but in a more detailed grouping of 41 industries, show an all-industry injury frequency rate of 7.22 disabling injuries for every one million man hours worked, the highest since 1954. That same rate for the construction industry is nearly double; that is, 13.21 disabling injuries. However, among the 41 industries, 22 of them have higher incidences of disabling injuries than the all-industry rate. And 8 of these industries, Mr. Chairman, have injury frequency rates that are higher than that of the construction industry.

In terms of accident *severity* rates, instead of frequency rates we see from the National Safety Council data more or less the same picture. There are 20 industries which have higher severity rates than the all-industry rate. Five of these have severity rates higher than that of the construction industry.

I want to digress a moment to say that we realize that our statistics on work-related deaths and injuries are not what they should be. One of the major problems in the field of occupational safety and health is the insufficient and inadequate reporting of such fatalities and injuries. But, incomplete as they are, the figures add up this way.

First, we see over 14,000 people killed and over two million injured every year while earning their living.

Secondly, we can conclude that the construction industry involves a more than normally hazardous type of employment. Indeed that industry is one of the most hazardous in the Nation. And it is a sizeable industry employing millions of workers, and involving the investment of billions of dollars annually.

At the same time, we might observe that while construction represents one of our most hazardous occupations, it is, in perspective, only a part of a general problem; it does not represent the whole problem. The construction industry accounts in statistical terms for a little less than a fifth of the overall National workers safety problem.

In the view of the Department, it would thus appear that some sort of comprehensive approach toward improving the working conditions and practices of all industries, including, of course, the building and construction industry, as a whole would be desirable.

However, legislation along the lines of H.R. 3290, which is confined to providing safe and healthful working conditions for the one group of employees working under Government contracting authorities who are not presently protected by Federal law, would be a step forward. The Federal Government would thus round out its safety coverage of those who work under its contracting authorities.

The purpose of H.R. 3290 is to extend to Federal construction contracts the same health and safety protections already provided under other Federal laws to those who work under Government contracts for the procurement of services and of supplies. Those other laws are the McNamara-O'Hara Service Contract Act and the Walsh-Healey Public Contracts Act.

We are not yet prepared to speak to the specific provisions of this construction safety bill, or of a general bill. I am sure you appreciate that we will need more time to work out the details of such legislation.

I would like to note, however, that as we see it, H.R. 3290 would operate as follows:

The new safety and health protection would operate as follows:

The new safety and health protection would take the form of a condition in a contract. The condition would be inserted in the types of contracts specified in the Contract Work Hours Act.

In the event the Secretary of Labor should find a violation of a contract condition relating to worker safety and health, the Government agency for which the work is being done could, after full due process of law, cancel the contract and enter into other contracts charging the additional cost to the original contractor.

H.R. 3290 would authorize the Secretary of Labor to enforce the bill's provisions in the same manner as the safety and health provisions of the Walsh-Healey Act are enforced. The Secretary would hold hearings, make decisions based on findings, make rules and regulations, and take other appropriate actions.

Finally, the bill substantially adopts the provisions of the Walsh-Healey Act authorizing the Secretary of Labor, following carefully defined procedures, to debar contract violators for 3 years.

In summary, Mr. Chairman, I reiterate that we have a strong interest in a comprehensive occupational safety and health coverage for all industries, including the building and construction industry. However, we endorse the idea of legislation which is especially designed for the building and construction industry—thus filling a gap in Federal coverage of on-the-job safety and health of those employees who work under Federal contracting authorities.

WHOSE HAND

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem entitled "Whose Hand" written by Mr. Ted Cook, of Brilliant, Ohio:

WHOSE HAND

(By Ted Cook)

Whose hand has shaped the firmament?
And placed the sky the lightning rent?
Who put the stars up in the sky?
And made the moon to shine on high?

Whose hand has caused a flower to grow?
To make the gentle breezes blow?
Who makes the cooling rain to fall?
And grows a tree so green and tall?

Who makes the bird's song sound so sweet?
And grows the green grass 'neath our feet?
The autumn leaves with colors gay?
The sunset glow at close of day?

Whose ear has heard a baby's cry?
And heard a mother's lullaby?
And made the softly falling snow?
To blanket earth so far below?

Who made the oceans vast and wide?
And caused the ever changing tide?
Who rules the destiny of man?
The one o'er all since time began?

So, men in space look up to God,
For they have risen from the clod,
And give their thanks to Him on high,
Who guides them safely through the sky.

So, atheists may rant and rave,
And say there's nothing but the grave.
But Christians know a peace of mind,
That infidels will never find.

So, people live and people love,
For they must look to God above,
Beyond the grave for you and me,
There is no death there's immortality.

CHINESE EMBASSY IN WARSAW ACCUSES SOVIET UNION OF KATYN MASSACRE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PUCINSKI. Mr. Speaker, an interesting article appeared in the Polish Daily Zgoda which reflects the growing intensity of the conflict between the Soviet Union and her neighbor Red China.

It is most interesting that the Chinese Embassy in Warsaw is showing a film which clearly establishes that Soviet police murdered 15,000 Polish Army officers in the Katyn Forest near Smolensk, Russia in 1940.

This is the first time that a Communist nation has formally accused the Soviet Union of perpetrating this monstrous crime and I do not believe the world should remain aloof to this charge by Red China.

May I remind this House that in 1952 a congressional committee headed by our distinguished colleague, the gentleman from Indiana, Congressman MADDEN, conducted a very exhaustive investigation of the Katyn massacre and concluded that it was the Soviet Union which was responsible for the murder of these Polish officers in Katyn.

The Soviet Union has denied these charges, but I believe it is extremely significant that its one-time stanch ally, the Republic of China, now brands the Soviet Union as the perpetrator of this crime against Polish soldiers.

It is also most significant, Mr. Speaker, that if this article is correct, members of the Polish Armed Forces apparently are now admitting that the Soviet Union was responsible for the Katyn massacre and is now trying to alibi that the Russians were justified in the brutal assassination of these Polish officers.

If this is indeed true, then this is also the first time that spokesmen for the present regime in Poland acknowledge Russian guilt for this hideous crime against the people of Poland.

Mr. Speaker, it was my privilege to be the chief investigator for the congressional committee which in 1952 investigated this international crime.

I said then and I say now that this horrible atrocity against the Polish officers committed by the Communists shall come back to haunt them time and time again.

Make no mistake. The ghost of Katyn hangs heavy over the Communist heads in Russia. I have every reason to believe

that some day the souls of those 15,000 Polish Army officers, so brutally murdered by the Communists in Katyn, will come back and provide the very impetus which will bring the collapse of communism in Poland and the Soviet Union.

While I have spoken in the sharpest tones against Red China and did not want any of my remarks ever to be misconstrued as in any way condoning the Chinese Communist Government, one cannot help but acknowledge the fact that the Communist Chinese have performed a notable public service by again bringing into sharp perspective this infamous crime by the Soviet Union against the people of Poland.

In 1940, the Katyn massacre was suppressed because American authorities and Soviet authorities did not want to drive a wedge between the allies in World War II.

This was one of the most tragic decisions of modern history. Had the people of the world been told about this Soviet infamy against Poland, the whole course of history could have been changed.

I do not believe that in 1969 we Americans should again make this mistake. I believe that it is important for the free world to again reflect upon the full details of Katyn, for in the brutal massacre of these 15,000 Polish officers we see a true picture of Soviet treachery and brutality.

Mr. Speaker, the recent invasion of Czechoslovakia and the wanton destruction of those brave Czechs who dared stand up to Soviet rule clearly shows that nothing has changed in the Soviet Union. The same forces of evil that engineered the Katyn massacre are still in command and Katyn stands as an everlasting monument to Communist treachery and infamy.

I hope the free world will never forget Katyn.

The article to which I have referred, and which appeared in the Polish Daily Zgoda in Chicago, follows:

CHINESE EMBASSY IN WARSAW SHOWED THE FILM OF KATYN

On the premises of the Chinese Embassy in Warsaw the film on Katyn, charging the Russians with the responsibility for the murder of Polish officers, was shown again. The show was accessible to the public which appeared in throngs.

The [Polish] regime's Ministry of Foreign Affairs submitted an official sharp protest to which the Chinese replied that this film was being shown for the employees of the Embassy to facilitate their study of the Polish language.

As a side effect of this film showing, a special meeting was called of higher officers of all branches of the Armed Forces at the General Staff office.

At this meeting the responsibility of the Russians for the "Katyn case" was not denied, but it was maintained that "this action was justified at that time" because, it was alleged, one of Beria's deputies prepared a false evidence to the effect that the Polish officers had been in contact with anti-Stalin opposition in Russia and tried to organize a mass escape.

On the basis of such "false charges" which "the Soviet Government had no opportunity to verify", an order was issued to liquidate the Polish officers.

The Chinese maintain the biggest embassy in Warsaw. Many of their members are fluent in the Polish language. They are very active and try to maintain as extensive as possible social contacts with the Poles.

This is rather easy to do because, according to the information from Poland, there are people there who see in China a potential destroyer of Russian imperialism.

So far, the Poles are not afraid to visit the Chinese Embassy. In summertime one can see many Polish families in the gardens of the Embassy. The children play and their parents have conversations with the members of the Embassy.

"MR. BASKETBALL" LEAVES

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, as I am sure you know, Mr. Basketball, Bob Cousy, has retired as coach of the Boston College team. The Boston College basketball, its fans and the entire Boston area have known with Bob Cousy the great joy of victory and the extreme happiness of consistently playing well.

When Cooz retired from the Celtics and No. 14 retired with him, part of an era was over. The Boston Celtics under the direction of Red Auerbach was I think the finest team in pro basketball but when Bob Cousy left something more than just one player left with him, and I am sure we will never forget that St. Patrick's Day in 1963 when Bob Cousy was honored at Boston Garden.

We all knew that great things were going to happen at Boston College when Mr. Basketball took over the coaching job and we were not disappointed. Cousy's first team had a 10–11 record. After 1 year working with the kids Cousy's club was 22 to 7 and Boston College was invited to the National Invitational Tournament for the first time. The following year came another National Invitational Tournament invitation followed by two NCAA tournaments. This year Boston College made the finals in the NIT and a beautiful, superb finish to Bob Cousy's coaching career.

It is almost impossible to describe the change that came over the Boston College team and its loyal fans. Every team wants to win but this team wanted to win not only for themselves and their school but for their beloved coach, and Mr. Speaker, they did win. The explanation for this lies primarily with Bob Cousy the man. He was a great player and a great coach but more than that he is an extraordinary human being and a dedicated athlete. He understands the joys and the benefits of team play and exalts in a good hard and fast competition.

Bob Monahan, staff writer for the Boston Globe, has described Bob Cousy the man and his effect on teammates, on players better than anyone else I have ever read. Under unanimous consent I place his article of March 9, 1969, in the RECORD.

One of the great stars of our day is entering a new phase of life and in order to pay tribute to him it helps to understand him. I know Mr. Monahan's article will contribute to that understanding:

HAPPY MEMORIES LINGER AS COOZ LEAVES

(By Bob Monahan)

Thank you, Bob Cousy . . . for the memories by the dozens. You made your last official Boston appearance Thursday night at Boston College. You left a void that will take this town some time to get over.

Cousy, alias Mr. Basketball, still is the Boston College basketball coach. He announced his retirement 16 games ago and it becomes official when his Eagles either win or are eliminated from the National Invitational Tournament in New York.

He has been a figurehead in this area for 23 years. Four of them were at Holy Cross where he earned All-America honors. Thirteen of them were with the Boston Celtics. The last six were with Boston College.

Bob is more than an out-going coach. He's a gentleman with a magic touch, former college great, ex-N.B.A. super star and he's in a class of his own.

His career at Boston College started with an ending. He took the B.C. job in 1963 after the Celtics won their fifth straight N.B.A. championship. It was during those years he earned the Mr. Basketball tag which he still owns.

He was a floor general who came through in the clutch. He made the Celtics fast break go. He thrilled thousands with his playmaking ability. No one who ever saw his behind-the-back dribbles or his pin point "blind" passes ever will forget them.

Cousy was unique. He still is.

On Mar. 17, 1963, the Celtics played their last regular season home game against the Syracuse Nationals at Boston Garden. It was a Sunday afternoon and it was Bob Cousy Day . . . a day to remember.

Cousy was on the court before more than 15,000 fans. His wife, Missy, and daughters, Mary Patricia and Marie Colette, were with him. He kept his head bowed and swallowed hard as people praised him. Red Auerbach and Bill Russell were close by. The plaudits were great, but they started to get to him. He swallowed hard again and again as did people in the stands. They knew one of the greatest athletes ever was leaving the game.

For a moment there was complete quiet . . . no yelling . . . no talking . . . not even a whisper or a cough.

Then it happened like a bolt of lightning. The silence was broken by a yell that touched everyone.

A young man in the balcony said it all with five words. He hollered: "We all love ya, Cooz." That did it. The words echoed throughout the Garden.

Those five words hit Cousy right in the heart. He wept. He wasn't ashamed and he need not have been. He couldn't fight off the tears any more. Over half the spectators wept with him as Cousy rubbed tears from his face.

Hard-nosed men cried with him . . . it was too much. But what a tribute. And he deserved it. Cousy, who flashed up and down the court with his now retired number 14 . . . who made the impossible play . . . who kept Boston basketball alive until the arrival of Russell was leaving and it hurt . . . it hurt deeply.

Then came the final playoffs against Los Angeles. The Celts were up three points when Cousy sprained an ankle. He left the game. L.A. made a charge and it looked as though they would take command. Coach Auerbach looked at Cousy. Number 14 limped back to the court.

He lifted the team even though in pain. He made the big play and kept control. With seconds remaining he hurled the ball into the air. The final buzzer sounded before it hit the court. Teammates hugged him. Mr. Basketball went out a winner which was in keeping with his style.

Bob displayed a great deal of emotion as a player. He carried that with him into coaching.

Cousy played pro ball to win. He carried that philosophy to B.C. where he was to launch a sensational basketball tradition. It didn't take long to catch on and he started to mold a top notch club. Great players wanted to play for him. Mr. Basketball was Mr. Magic. Kids looked at him in awe. To play for the Cooz . . . well, it was almost unreal.

His aim at B.C. was to install, build and retain the Celtics' winning tradition. He wanted a team which would feature the fast break. He wanted aggressive players who would excel at man to man defense. He did it.

"Playing the game is one thing," said Cousy. "Coaching is another. College ball was new to me.

"At first you expect too much from the kids. After a while I adjusted and knew what I was doing. It took a few years before I considered myself any kind of coach. I've been in it all my life and I'm still learning."

Two friends helped Cousy in his early coaching stages. They were Dee Rowe, new UConn coach, and former Assumption College coach Andy Laska who was a teammate at Holy Cross.

"I knew what I wanted but it was a bit slow coming," said Cousy. "But it did come . . . fast break . . . man to man and pressure ball. Of the six clubs I've had this current one does all those things the best."

Cousy's first team had a 10–11 record. The 1964–'65 club was 22–7 and the Eagles were invited to the N.I.T. for the first time. The following year they were 21–5 and again played in the N.I.T. Cousy did breathe life into what was the corpse of B.C. basketball.

The 1966–'67 team was 23–3 and last year's was 17–8. Both played in the N.C.A.A. tournament.

Cousy, one of the most dapper looking guys in the business, has many mannerisms of his ex-coach Auerbach. He always rolls up a program and holds it during a game. He's not the fire eater Auerbach was and is, but Cooz has been known to take the heat now and then. Most of the time he plays it cool. He keeps most of it inside.

"When I was playing I always felt sick before a game," said Cousy. "This happens to a lot of athletes. But I still get that feeling before a game now."

He's ultra emotional and that's one of the reasons why he'll quit at the end of this season.

"When I started coaching I knew it wouldn't be a life-long deal," he said. I'll miss Boston College and the wonderful kids, but I'm doing what I feel in my heart I have to do."

Bob, who never lost his New York accent, is easy going. No matter where he goes he's the center of attraction. At times he doesn't like it, but he doesn't show it.

He can be emotionally drained and physically tired, but he'll manage a smile and honor requests for autographs before or after a game or even while he's having dinner.

In December of 1966 he took his team to New Orleans to play in the Sugar Bowl classic. It was held several days before the Alabama-Nebraska Sugar Bowl football game.

Coaches and players from all the teams were invited to a luncheon. Cousy was sought after more than Alabama coach Bear Bryant. He's just magic no matter where he goes.

Cousy demands all out efforts from his players and gets it. The kids are loyal to him and vice versa. He more than proved his loyalty two years ago at a breakup dinner in Boston.

The dinner was planned for 6 p.m. and Cousy was grounded in New York. He rented a car and started to speed to Boston. The dinner started without him. The players knew he would make it. Dinner ended and there was a call from Hartford. Cousy said, "I'm still coming . . . I'll make it."

The program was stalled. Players who were not scheduled to talk, did. Some kids stumbled over words just to give Cooz more time. It appeared he wouldn't make it and the crowd of 250 was disappointed.

All of a sudden he was there. He was greeted with a wild standing ovation. All knew he went all out to be with his players. Not many coaches would do what he did. He did it because he's class. Players put out for him and he puts out for them. That's his way.

The man is loved and respected. This year's team proved it when he said he was going to resign. They were crushed at first.

Capt. Terry Driscoll called for a team meeting. The players agreed to try to prove their feeling for the coach by winning all their remaining games. They had won 15 in a row before meeting Duquesne two days ago.

The woman behind this man is something, too. Missy, the former Marie Ritterbusch, met Bob when he was 13. She followed his All-Scholastic career through Andrew Jackson High in St. Albans, Long Island, and at Holy Cross.

"I've known him since I was just a kid, but we never dated until he was in college," said Missy. "I've seen most of his games and I'd never trade a minute of what we've had together.

"He's had a lot of big moments and I enjoyed them with him. Two of my biggest thrills were the Celtics' first playoff championship and this year's B.C. team. And there are a hundred others."

You can't sum up Bob Cousy with several hundred words. You have to admire him for the goals he set for himself and how he attained them . . . that touch of class which is always there . . . the way he is respected . . . the many ways people went out of their way to honor him.

Thank you, Bob Cousy . . . thanks for the memories. And that guy in the balcony was so right. We all love ya, Cooz.

FREEDOM NOT POSSESSED

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. MILLER of Ohio. Mr. Speaker, I would like to have printed in the RECORD a poem written by the Reverend L. Milton Hankins, of New Matamoras, Ohio. The Reverend Mr. Hankins is a member of the American Poets Fellowship Society. His work has been published in the following periodicals and journals: Christian Century, the Baptist Leader, Tangent, the American Poet, United Poets, Major Poetry—an anthology—Prairie Poets, the Marietta Times, and St. Mary's Oracle. His latest poems appeared in "Field of Daisies," Nina Brewer Henry, editor, Prairie Press Books, 1968.

The poem follows:

FREEDOM NOT POSSESSED

(By L. Milton Hankins)

While malignant scars remain upon our flesh
And festers threaten to deface
Our pride in grandest freedom for our race
Let us not boast in shallow salves
And glibly swear the swollen sore
Has vanished to appear no more.
Health is not restored until the wound is done.
Can it be said in truth that race is free
Though statutes grants the freedom's not possessed
Until the man can measure to the rest
In every word and deed.
Freedom not till every man is pressed
By a choice response to every call
Not till liberty means the same to one and all.

THE POWER OF NATIONAL POLITICAL REPORTERS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. ASHBROOK. Mr. Speaker, the Daily Calumet is a Chicago-based newspaper which provides its readers the latest in community developments and, through its able columnists, informs on national issues as well. In the February 7 issue, Calumet columnist William Rentschler commented on a fascinating essay by nationally known David Broder of the Washington Post on the power of political reporters. The Broder offering appeared in the first issue of the Washington Monthly, a political-affairs publication newly born to the Washington scene.

Upon inspection, sections of the Broder account proved to be interesting indeed. Reporter Broder observes:

At any given time in this country, there are several hundred persons who are potentially candidates for nomination as President or Vice President.

He continues:

They are Senators, Representatives, Governors, Administration officials, mayors, military men, scientists, businessmen, educators, astronauts, and other assorted celebrities. Who is it that winnows this field down to manageable size? The press—and particularly that small segment of the press called the national political reporters.

Who comprises "that small segment of the press called the national political reporters?"

According to Broder, a member of the coterie:

The group is small. It probably includes a couple of dozen members, representing news organizations with a commitment to coverage of national politics year in and year out, in dull seasons as well as exciting times.

These organizations include: the three news magazines, the two wire services, the three radio-television networks and The New York Times, the Washington Post, Washington Evening Star, the Los Angeles Times, the Christian Science Monitor, the Baltimore Sun, the Knight newspapers, the Field papers, and the Gannett, Newhouse, Scripps-Howard, and Hearst chains. The political reporters for these organizations, plus a few syndicated columnists who cover politics along with other subjects, comprise the screening committee.

Broder then proceeds to give a general rundown of the characteristics of the select group:

Not only is the group small, but its characteristics make it a highly atypical group of Americans. Its members are all Easterners, by residence if not by birth. They are all college graduates. They all enjoy, despite the low-paying reputation of newspapers, in-

comes well over the national median. Not one of them is a Negro. Only two are women.

The listing continues:

More of them vote Democratic and fewer of them regularly attend church. I would guess, than in a random sample of the population. None is under 30 and few, except for the columnists, are over 45.

Finally, we get a fleeting glimpse of the group in action:

I often thought, for example, as I saw Romney during his Presidential campaign, surrounded by our circle—men a generation younger than he, many of us with cigarettes in our mouths, drinks in our hands, and cynicism in our hearts—that he must have felt as helpless with us as I would feel if my fate or future as a journalist were being decided by a committee of Romney's colleagues among the elders of the Mormon church.

There are other aspects to the Broder piece which, all in all, merit the "strong stuff" classification, to quote William Rentschler of the Daily Calumet. And I agree with Rentschler that—

David Broder, at the risk of alienating his clubmates, raises hard questions. He rates praise for raising them.

Let us hope that Mr. Broder is not "expelled from the press bus for life."

Under unanimous consent I submit the article, "Political Reporters in Presidential Politics," by David S. Broder for inclusion in the CONGRESSIONAL RECORD, as follows:

VIEWS OF THE PRESS: POLITICAL REPORTERS IN PRESIDENTIAL POLITICS

(By David S. Broder [1])

("Views of the Press," in which various contributors will discuss the handling of news on American politics and government, will be a regular feature of The Washington Monthly.)

It is nine o'clock in the morning—almost any morning of the Presidential campaign—and one of the great unpublicized rituals of American political journalism is about to begin.

The reporters, sleepy-eyed, file aboard the chartered 727 jet, many of them reaching for Bloody Marys to steady their nerves, then slump into their seats to grab some extra sleep while the candidate and his entourage are transported westward across the country to begin another day's stumping.

There is silence aboard the plane, except for the click-clack of a single typewriter in the staff section up front, where one of the candidate's speechwriters is putting the finishing touches on the advance text for tonight's speech.

He is working under pressure, with his portable typewriter in his lap, because he knows that when breakfasts and naps have been concluded, the reporters will be demanding the speech that should furnish the lead for their stories for the next morning's papers.

As the speechwriter finishes each page of the text, it is taken from his typewriter and handed to a staff secretary, who cuts a mimeograph stencil. A few more minutes, and 100 copies have been run off on the airborne mimeograph machine, and shortly thereafter the whole speech has been distributed to the reporters.

Now their sloth disappears, as they quickly read through the offering. "Where's the lead?" someone asks. "Bottom of page six!" shouts a wire-service man, who took a course in speedreading. Everyone underlines the designated passage.

In a trice, the click-clack of the speechwriter's portable has been replaced by the amplified chatter of 100 typewriters, as every reporter on the plane struggles to rephrase the speechwriter's prose in a fashion that will meet the demands of his own journal.

By the time the plane lands, 100 versions of The Speech will be in the hands of the Western Union man aboard. He will, if he is forehanded, have a dozen teletype operators at the airport, ready to punch tapes that will carry the stories into the newsrooms and wire service headquarters, and thence to the presses, where millions of copies of the papers will be printed.

As often as I have seen and participated in this ritual of campaign journalism, the artificiality of the process never ceases to amaze me.

If the speech is, let us say, prepared for delivery at an evening rally in Los Angeles, the stories in the Eastern morning papers will be on the newsstands long before the event itself takes place. Indeed, the candidate may not—if he is as harassed as candidates often are—even have seen the speech on which the stories have been based; he may not deliver it when the time arrives; but he will, as his press secretary assures the reporters, stand behind every word of the prepared text.

There is an element of essential phoniness to the whole procedure, in which all parties agree to delude the reader into thinking he has read something the candidate has said and to conceal from him the reality—that nothing has happened more significant than the passage of words from typewriter to mimeograph machine to typewriter to printing press. From beginning to end, the process has a life of its own, unrelated to reality, as the word moves from the speechwriter's typewriter to the newspaper headlines almost untouched by human minds.

Yet, ironically, it is when he is performing this almost-imbecile function of digesting and regurgitating someone else's thought that the political writer or campaign reporter is in his least controversial role. Almost anything else he attempts—and he does attempt other roles—will land him in some sort of difficulty.

These days political reporters are in increasingly hot water—both with the politicians and with the public. Their particular controversy is but part of the larger fight enveloping the press and the communications media. The fact is that the press as an institution in American life is under attack just as much as the universities, the churches, the labor unions, the businesses, and the agencies of government. Like these other institutions, the newspapers are being hard-pressed to adapt to the changing demands of their clientele. And the measure of their failure is the open skepticism and even derision with which they are viewed by their customers. The press has as big a credibility gap as any institution in this society—a vulnerability which other elements of the power structure have recognized and exploited.

That tiny undercurrent of anti-press emotion which General Eisenhower tapped when he invited the 1964 Republican convention delegates to express their scorn of "sensation-seeking columnists and commentators" has quickly become a flood. George Wallace found that newspaper editorial writers ranked right up there with those "pointy-headed guideline-writers who can't even park their bikes straight" as sure-fire targets for his oratorical fire. In Chicago at the Democratic convention, the press became—in quite literal terms—the favorite target of Mayor Daley's men.

The press is caught up in what John Gardner has called the crisis of our times—the necessity for institutional adaptation to the forces of change unleashed by the population explosion and the simultaneous revolutions of education, technology, and economics. It is my impression that the adaptive response from the press has been perhaps more sluggish than that of any other major institution. The practice of journalism has changed less than the practice of medicine or law or education or even politics in the past generation.

There are at least two reasons for this sluggishness of response, I believe. One is the comforting rationalization which all journalists—myself included—employ to convert outside criticism from a measure of our failure into a measure of our success. A political reporter who gets complaints about his work from both Republicans and Democrats is apt to say to himself, "Good, I'm catching hell from both sides, so I must be writing it right down the middle." There is, of course, another possibility—that his reporting is so far off-base that it outrages anybody of either party who understands what is really happening. But that is a possibility he does not usually examine.

The other reason that the press is so laggard in responding to criticisms of its performance is that most of us in journalism have not really taken a very reflective view of our own functions and responsibilities. We are in the habit of asking politicians and businessmen, labor leaders and generals to justify their actions and policies, but we do not often make the same demand of ourselves.

This essay is an effort by one political reporter to set forth some observations on the way he and his colleagues behave in their work—to describe the roles we play. They are personal observations and probably none of my colleagues would agree with the description. It is intended as a description of the behavior only of this one segment of the press—not of the press as a whole. It is not an effort to grade the reporting we do. I risk expulsion from the lodge in even attempting to describe what political reporters do; it would take a lot more nerve than I have to try to evaluate how well we do it.

My excuse for taking up the subject, under these limitations, is twofold: I think the political reporters are at the eye of the storm of controversy enveloping the press; there is, I suspect, a good deal more public concern over the impact of journalism on campaigns, elections, and government than there is over the press' influence on science or the economy.

Second, I have been persuaded by hours of bull sessions with my colleagues in the press, with politicians, and with political scientists concerned about the interaction of politics and journalism, that there is a real gap in the three groups' understanding of the role or roles the political reporter plays.

So, with apologies to those who will find much of what follows elementary and obvious, let me lay down what I consider a descriptive basis on which the discussion of the impact of the press on campaigns might proceed.

There would, at first glance, not seem to be much doubt about what a political reporter's job is. Most people think of him as the public's unseen proxy, the trained observer, dispassionately setting down what the candidates do and say. In this conception, the candidate is real and the public is real, but the reporter is the invisible man. His role is as insignificant as that of the telescope tube by which light from a distant star (the candidate) is captured and conveyed to the eye of the astronomer (the reader).

The classic plea for the reporter to act as a neutral observer was given by Richard Nixon in his famous "last press conference" after his 1962 campaign for Governor of California. Employing that delicacy of phrase for which he was noted, Nixon said he recognized the right of newspapers, "if they're

[1] David S. Broder covers national politics for the Washington Post.

against the candidate, to give him the shaft," but asked plaintively if they could not "put one lonely reporter on the campaign who will report what the candidate says now and then."

Well, what is wrong with that? Why shouldn't the reporter just tell his readers what the candidate is saying? Doesn't a candidate have the right to that kind of coverage?

There are two problems with the kind of political journalism that President Nixon—and dozens of other politicians—have recommended.

The first problem is this. The same Richard Nixon who made that earnest plea to have his words set down as he uttered them went around the country last fall systematically bending the truth to his own advantage. In this he was, of course, behaving no differently from any other candidate. Take the simple—and essentially inconsequential—matter of crowdmanship. Nixon's crowds were fine, but they were rarely as big as Nixon made them out to be. A reporter who followed the Nixon Rule of Political Journalism and quoted Nixon's own crowd estimates would no longer have been informing his readers but systematically misleading them.

So what does the reporter do? He checks Nixon's crowd estimates with an "independent authority," i.e., the local police chief. That is a fine method until you reach a place like Philadelphia, say, where the redoubtable Frank Rizzo, a stalwart of Mayor James H. J. Tate's Democratic regime in City Hall, deliberately underestimates the size of Nixon's crowd.

Faced with this sort of double duplicity, the reporter who has seen both Humphrey's and Nixon's crowds in Philadelphia is forced to make a judgment of his own. And as soon as he does so, he is on the way to becoming the controversial character that General Eisenhower, George Wallace, Mayor Daley, and so many others complain of.

The second problem with the Nixon Theory of Political Journalism—"Just write what I say"—is that he (and every other politician) says more than anyone in his right mind cares to read. Moreover, in a campaign, much of what he says today is the same thing he said yesterday, and the day before that, and the day before that. Moreover, his words are only part of the story of his campaign day. It is also important where he went, what he did, who he did it to, and what they did to him. Some days, what he does not say is more important than any words he utters. When Eisenhower campaigned with Joe McCarthy and said nothing about General George C. Marshall—the man who had sponsored his military career and whose reputation McCarthy had defamed—that was a story. When Hubert Humphrey walked arm in arm with Lester Maddox and said nothing about the racial views that had made Maddox the Governor of Georgia, that was a story. What the candidate says is only part of the picture of his campaign day—and sometimes the least significant part.

It is the job of the political reporter to cull from the thousands of words and the hundreds of incidents that comprise each day on the road with a Presidential contender those few words, incidents, and impressions that convey the flavor, the mood, and the significance of what occurred.

Here we can broaden the frame of our discussion, for the process of covering a campaign is no different from covering any story.

Selectivity is the essence of all contemporary journalism. And selectivity implies criteria. Criteria depend on value judgments, which is a fancy word for opinions, preconceptions, and prejudices. There is no neutral journalism.

Now, it happens that a great deal of a political reporter's time is spent in doing what Mr. Nixon recommended: summarizing the candidate's own statements. The anecdote at the beginning of this article gave only a slightly exaggerated picture of a typical campaign day. Obviously, the stories filed from the campaign plane contain more than just excerpts from an undelivered speech. But it is a rare day in the campaign that the candidate's words do not comprise a substantial portion of the story.

Even here, however, we find that the values or prejudices of the reporters play a part. Reporters are—or at least fancy themselves—literary fellows. They pride themselves on their "feel for words." Thus literary values, graceful phrases, balanced sentences, have an importance to them that is hardly reflective of the value the general public attaches to eloquence. A candidate like John F. Kennedy whose writers can turn a phrase will enjoy an advantage over those, like Humphrey and Goldwater, whose writers are pedestrian. There is very little justice in this, but a wise politician recognizes the premium on literary values and seeks to equip himself accordingly. Nixon, for example, reaped great publicity mileage from the series of radio speeches he gave in the past campaign—not because very many people heard them on the radio, but because the quality of the writing that went into them—much of it by Raymond K. Price, Jr., former editorial page editor of the late, lamented *New York Herald-Tribune*—was so extraordinarily high that papers like *The New York Times* and the *Washington Post* were often urged by the reporters covering Nixon to print full texts or extended excerpts of these addresses.

So, the reporter's first role is that of a summarizer of the candidate's positions. As we have seen, his own prejudices—at least his literary taste—enter into even this role, but nonetheless, of all his functions, it is probably the least controversial.

In a sense, I have leaped ahead of my own story in talking of this role. Serious attention to the man's words implies that he is worth paying attention to. And who decides that? The political reporters do—in their second role, that of talent scouts.

At any given time in this country, there are several hundred persons who are potentially candidates for nomination as President or Vice President. They are Senators, Representatives, Governors, Administration officials, mayors, military men, scientists, businessmen, educators, astronauts, and other assorted celebrities. Who is it that winnows this field down to manageable size? The press—and particularly that small segment of the press called the national political reporters.

Russell Baker has given us the concept of The Great Mentioner, that mysterious Someone whose existence is implied when we read that so-and-so "is being mentioned for President or Vice President." He works in clandestine ways. The Great Mentioner mentioned George Romney as a Presidential possibility before Romney made his first race for Governor of Michigan. The Great Mentioner has mentioned Mark Hatfield for Vice President every four years since Hatfield turned 30, and he never seems discouraged by Hatfield's failure to win the job. On the other hand, The Great Mentioner never mentioned Edmund S. Muskie for anything until just a few days before he was actually nominated for Vice President.

Just why The Great Mentioner mentions some names and not others is very puzzling. It has something to do with personality, but more, probably, to do with the black arts of public relations. George Romney, for example, became known through those big Rambler ads showing him, square-jawed and shirt-sleeved, addressing the workers on the joys of profit-sharing and the evils of big cars. His image was further enhanced by some controversial testimony to Senate committees on the dangers of concentration in the auto industry. But it takes something more than the arts of advertising to rate a mention from The Great Mentioner. It takes some special break. In the case of Romney, it is interesting to recall that the nudge to The Great Mentioner came from none other than Richard Nixon who tabbed Romney as a comer at several of those infamous Washington backgrounders in 1960 and 1961.

The function the political reporters perform in their role as talent scouts is one that most people would regard as a positive service. After all, the individual citizen can hardly be expected to discover for himself all the able people who feel a calling to public service. The reporter's job makes him a constant traveler in the political community; he is uniquely well positioned to detect the early intimations of greatness, to discover these statesmen in embryo and bring their rare qualities to the attention of a wider public.

But, alas, it is not quite that simple—or non-controversial. In his function as a talent scout, the political reporter not only puts some men forward, he rather ruthlessly bars the door to advancement for other men. Martin F. Nolan of the Boston Globe has compared the national political reporters to a band of traveling drama critics, covering the new political acts at their out-of-town openings in Sacramento or Lansing or Harrisburg. Their reports, like those in Variety, are frequently make-or-break. "No talent," they will say of one man, and his name is forgotten. "Promising," they'll say of another, and he is booked into the Gridiron Dinner or "Meet the Press." It's a formidable power, and one that the screening committee of reporters is thoroughly conscious of possessing.

It is important at this point to say something about the members of this screening committee. Obviously I am not the one to describe their shortcomings, since as a member of the group I probably have more than my own share of the characteristic failings, but I think I can give some description of the fraternity.

The group is small. It probably includes a couple of dozen members, representing news organizations with a commitment to coverage of national politics year in and year out, in dull seasons as well as exciting times. Those organizations would include the three news magazines, the two wire services, the three radio-television networks and The New York Times, the Washington Post, Washington Evening Star, the Los Angeles Times, the Christian Science Monitor, the Baltimore Sun, the Knight newspapers, the Field papers, and the Gannett, Newhouse, Scripps-Howard, and Hearst chains. The political reporters for these organizations, plus a few syndicated columnists who cover politics along with other subjects, comprise the screening committee.

Not only is the group small, but its characteristics make it a highly atypical group of Americans. Its members are all Easterners, by residence if not by birth. They are all college graduates. They all enjoy, despite the low-paying reputation of newspapers, incomes well over the national median. Not one of them is a Negro. Only two are women. More of them vote Democratic and fewer of them regularly attend church. I would guess, than in a random sample of the population. None is under 30 and few, except for the columnists, are over 45. I am deliberately not commenting on their school, political, or ethical views, but I think I have said enough to indicate that they—or we, I should say—represent a narrow and rather peculiar slice of this society.

I often thought, for example, as I saw Romney during his Presidential campaign, surrounded by our circle—men a generation younger than he, many of us with cigarettes in our mouths, drinks in our hands, and cynicism in our hearts—that he must have felt as helpless with us as I would feel if my fate or future as a journalist were

being decided by a committee of Romney's colleagues among the elders of the Mormon church.

Nontheless, the fact is that the reporters do function as a screening committee for aspirants to national office. (Other reporters do the same thing at state and local levels.) And whether their standards are good or bad, whether they are characteristic or eccentric so far as the society is concerned, they make their standards stick.

Thus, the same George Romney who was touted as a Presidential possibility before he ever ran for Governor was discarded as a Presidential possibility (by the press) before he ever got around to declaring his candidacy in late 1967. "I was the victim of the Teddy White syndrome," Romney has said, referring to the influence the author of The Making of the President books has had in impelling reporters to start covering Presidential possibilities long before they formally enter the race. There's not much doubt in my mind that the Governor is right—he was the victim of serious, sustained scrutiny at a point when he was not prepared for that kind of critical cross-examination. Whether the reporters performed a national service or caused a great wrong in eliminating Romney as a contender is an arguable proposition. What is not debatable is that the reporters have this power and regularly exercise it.

Closely related to the function of talent scouts is the political reporter's third role, that of race caller or handicapper. He is supposed to tell his public, every day, how the Presidential (or gubernatorial or senatorial) sweepstakes stands.

Here is a point where serious problems enter. Much of the reading and viewing public really doesn't care much about what happened yesterday in politics or in the campaign. Still less are these readers enamored of weighty analyses of why something happened. What they want to know is: What's going to happen tomorow? Who's going to win or lose? And if the reporter has even a vestige of conscience, he knows that that is the one question he can never answer with any confidence.

Yet much of political journalism is an artful effort to disguise prediction as reporting. Look at the use of public opinion polls by newspapers. A public opinion poll, when properly conducted and presented, is a perfectly legitimate tool for measuring opinion at a point in the past, i.e., the period of several days when the questions were actually being asked. But if the significance of the poll were accepted in those limited terms, few newspapers would give polls the prominence they now accord them. There is, let's face it, almost nothing as insignificant as a measure of how people would have decided last May a question that we know will not come to them for decision until November. Newspapers print and give prominence to the polls because they know their readers will take the poll to be exactly what it is not—a predictive device for guessing how the actual vote will come out.

A lot of political reporting is in the newspapers under exactly the same false pretenses, i.e., the assumption that a description of the standing of the race in May has some relevance to the actual order of finish in November. Indeed, we have now so far advanced this pseudo-science of political handicapping that all of us, myself included, write two or three years in advance of a Presidential election that so-and-so is the front-runner.

And what is the basis on which the political reporter makes these judgments? What are the landmarks we rely on in calling the race?

There are four types of evidence that go into the reporters' judgments, and I will list them in descending order of reliability.

First, there are the nationally-known public opinion polls—Gallup and Harris—which give periodic reports on the standing of the Presidential contenders. These polls are not without their problems, but they do offer the journalist a relatively standardized set of measurements, made by reputable practitioners whose methods of operation are open to scrutiny and whose full results are disclosed.

Far more often, the reporter bases his judgment, in part, on a private poll someone has given him. These may or may not be as carefully prepared as the Gallup and Harris polls, but they are much less reliable from the reporter's point of view. Rarely is he informed how the poll was made; rarely does he see the full results. Typically, a private poll on the standing of the Presidential (or other) race in some state is "leaked" to him by an interested party—often the candidate who is favored by the poll or one of his managers. If the reporter is properly skeptical, he will let his readers know that his information is second-hand and tainted by the possible bias of his source. But however he qualifies it, his reporting of the poll lends it an air of authority.

There are literally dozens of examples of inaccurate private polls distorting the journalists' and the public's judgment of a political race. Do such misjudgments have an effect on the outcome? Obviously, in many cases they do. The candidate reported trailing in these polls has a substantially harder time raising money, building an organization, or attracting publicity than the presumed front-runner.

To guard against the multiple distortion implicit in the "leaked poll" procedure, reporters have two other sources of information. Unfortunately, these two sources are even flimsier, in most cases, as a basis for handicapping the race.

He can consult the judgment of so-called informed politicians. Typically, a reporter making a political survey of a state will begin by asking, say, the Democratic chairman what he thinks of the situation—"I mean really, not for attribution, I want to know what you really think." The chairman hems and haws for a few minutes and finally allows as how his candidate just might win by 10,000 votes if he got all the breaks the rest of the way. The reporter thanks him, phones his Republican counterpart, and goes through the same procedure with him, eliciting the view that if they can manage to keep the candidate's alcoholic wife from making too many more public appearances, he ought to win by 40,000 votes.

Now, the scientific method, journalistic style, comes into play. The Democratic chairman has—sort of—claimed victory for his man by 10,000 votes. The Republican chairman has—with a shade more confidence—claimed victory for his man by 40,000 votes. The reporter cogitates and composes the following sentence: "While informed observers do not discount the possibility of a Democratic upset, the betting favors Republican candidate so-and-so to carry the state, perhaps by less than 40,000 votes.

That description is something of a caricature, I confess. The reporter will talk to more than two people, and he will weigh the words of each source according to his own past experience with the quality of the man's judgments. He will attempt to find some witnesses with no particular ax to grind. But in the end, he will attempt to construct some kind of consensus of informed judgment. Almost every one of the news organizations I listed earlier goes through this kind of process for its pre-election surveys, contacting party officials, informed citizens and newspapermen in all 50 states in order to make an "educated guess" in advance on the election results.

The enterprise of that sort I happened to be involved in this past fall was notably successful. Not only did we hit very close to Nixon's actual electoral vote, but we were equally on target in our estimates of changes in Congress and the governorships. But using exactly the same methodology in 1966, we managed to be off by a factor of 100 per cent on the size of the Republican gain in the House. We said 24 seats; they gained 47. What I would like to know, and what no one has told me, is how we could be so smart one year and so dumb the other, when the procedure was exactly the same?

Many veteran newsmen would say that all this is stuff and nonsense. They scorn the polls, published or private; they have only minimum trust in the judgment of politicians. What they rely on is their own "feel" of the situation.

Reporters of this school are easy to identify in the campaign. They are the ones who stand on their chairs to stare intently at the faces in the crowd when the candidate makes his entrance. I have never known what they see in those faces, just as I have never known how the emotions in a crowd at a political rally give you any clue to the likely voting behavior of the city or state in which the rally is taking place. I have yet to see the first bit of evidence establishing a positive correlation between the size of the crowd a candidate draws in a city and the number of votes he later receives there. But, like everyone else, I count the crowds and measure their reaction as "friendly" or "cool." Just because an old method has no validity is no reason to get rid of it.

The reporter as summarizer, as talent scout, and as handicapper has his problems, but he is behaving in a role that recognizably has some relation to the demands of his newspaper and, presumably, his readers.

In his fourth role, however, the political reporter tends to carve out for himself a function just a bit more glorious than any that his employer or his readers ever envisaged for him. He becomes, in his own eyes, the Public Defender.

Reporters—unless they are highly-opinionated columnists to begin with—really don't start the campaign with this role in mind. They couldn't care less who wins, they assure each other. There are no heroes or bad guys in the political drama they see, just mortals struggling with terribly complex problems.

But for months on end, they are locked up covering one of these mortals, engaged in an endless discussion of his personality, his mentality, his strategy, and his tactics. They become, in short, monomaniacs on the subject of the man they are covering. And eventually, some of them, at least, will discover that The Candidate Is Trying to Pull Something We Don't Like. The candidate and his men are artful manipulators, propagandists, slick Madison Avenue operators. The reporter is the truth-seeker. And he resolves, "I'm not going to let him (the candidate) get away with it. He's duping the poor voter and it's up to me to see that the poor little sap isn't conned by This Slicker."

Now in any setting less irrational than a campaign plane, the reporter would probably recognize that the charge of "duping the voter" really involves no more than the customary trimming of issues to suit the public mood. And the companion charge of "deliberately obscuring his stand" rarely indicates more than bafflement by the candidate on how to solve such essentially insoluble problems as the rise in crime or the decline in the dollar.

But, no matter. A wave of moral outrage sweeps over the reporters. It is expressed in the declaration, "We're not going to let him get away with this." Demands are sounded for press conferences. Questions are plotted that will cut off every avenue of escape or

evasion for the candidate. The trap is carefully set and, unless he is very wary, the candidate sooner or later walks into it.

Now, the serious point I would make about this mode of behavior is that once the reporter appoints himself Public Defender he abandons almost all pretense of being anything less than an arbiter of the outcome of the election. There is no consistency and no predictability as to when or whether he will adopt the role of Public Defender. Usually, he is provoked into it by the candidate's repeated use of an argument that is offensive to the reporter's own prejudices. Nixon, for example, "got away with" his Law and Order argument all year, even though many of the reporters thought there was an element of demogoguery in it. What finally provoked the reporters covering Nixon to become Public Defenders was a day in late October when he delivered a dozen whistle-stop speeches in Ohio (six times the usual number for a single day) and managed at each successive stop to give a more lurid description of the dangers that stalked the city streets under the unconcerned Democrats. That night, for the first time, a wave of "we-can't-let-him-get-away-with-it" talk swept the Nixon press corps, and the toughest stories of the campaign went whizzing out over the wires.

Nixon averted a new press crisis by softening his tone on that issue in succeeding days, a response that was in itself a measure of the power of the press when it goes on the warpath.

But it doesn't always go on the warpath. Often it is strangely passive. In 1960, for example, when John F. Kennedy promised day after day to get the country moving again, no petitions were passed in the press car demanding that he spell out how. When he spoke of a missile gap, no proof of evidence was demanded. When he spoke of America's falling prestige, no one pressed him on the definition and relevance of that word.

By contrast, Humphrey last year was hounded at almost every press conference to spell out his differences on Vietnam policy with the Johnson Administration. First Romney and then Nixon were pressed unceasingly to specify their program for ending the war. Innumerable other examples could be cited. The point is simply that with some candidates and on some issues—but not others—the press will "bore in." And in choosing when to push and when not, we are responding almost exclusively to our own values and prejudices and opinions.

Fifth and finally, I am constrained to report that from time to time the political reporter will so far forget himself that he becomes a volunteer, unpaid assistant campaign manager for the candidate he is covering.

This is the opposite of the Public Defender syndrome, and in every respect more obnoxious. When he is playing Public Defender, the reporter at least is living up to the stereotype of the hard-nosed, independent, aggressive news hound—even though his motives may have precious little to do with the pursuit of news.

But when he appoints himself Assistant Campaign Manager, he becomes a fawning lackey of the candidate, waiting on him with bits of advice, reveling in the supposed intimacy of his relationship. He takes to defending the candidate in the press bus, and may even go so far as to remonstrate with his colleagues who are writing "unfriendly" pieces about his new hero. He is a sad spectacle, but there is no blinking the fact that on every campaign I have seen, one or more of our colleagues have strayed from the paths of righteous skepticism and become avowed, active promoters of the candidacy of the man they are covering.

There is a subtle revenge, however, for the candidate who allows this to happen. Invariably, the advice that newspapermen give candidates is the worst claptrap imaginable. I could cite examples, but I will not. I have probably said enough already to be expelled from the press bus for life.

RAILROAD REDEVELOPMENT

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PHILBIN. Mr. Speaker, having received permission to revise and extend my remarks in the RECORD, I include herein a recent very able address by my distinguished friend, former Chairman of the Interstate Commerce Commission, the Honorable William H. Tucker, now New England vice president of Penn Central Railroad.

This fine speech was delivered before the chamber of commerce in Providence, R.I., on March 5, and I was so much impressed with it that I thought it should be placed in the RECORD.

It is most encouraging to note Commissioner Tucker's statement that Penn Central must be a dynamic force for improvement in regional railroading.

Our great railroad system was one of the principal contributing factors to the growth, power, wealth, and fabulous success of the American free enterprise system and the growth and prosperity of the Nation. It is truly a pity that leaders at every level apparently did not have the vision, or the will, nor were they prepared to assume the responsibilities and risks entailed, to keep this great system, or most of it, intact, operational and useful to American industry and the American people.

The collapse suffered by railroad transportation has adversely affected our economy and our way of life. Not only have we lost much of an extraordinary, efficient system of transportation but American life has also been largely stripped of one of the most colorful, engaging, fascinating and interesting of all modes of transportation.

If we spent half of the money to retain our railroad system, both freight and passenger, that we spend sometimes rather casually, in other areas of transportation, we would have reaped fantastic results in the form of improved carriage of commodities, industrial and agricultural products, and in fact, virtually everything transportable. We would have also been assured of comfortable, speedy service for the traveling public and the people, including service for many communities now isolated from any type of transportation.

I want to compliment and laud Commissioner Tucker for his able and vigorous speech. He said many things that should be said about the revival and rehabilitation of our great railroad system, and I certainly would continue to welcome the chance to move in this direction, to strengthen our rail system so that it is able to modernize, equip, and streamline many of the splendid services that it rendered the people in other years.

I am very anxious to join in reviving, rehabilitating, modernizing, rejuvenating, and strengthening the railroads for broader service in this space jet age. Comparable to what they once rendered the American people.

It is good to know that we have an experienced, dedicated and highly trained able leader like Commissioner Tucker, with his knowledge of transportation systems and their problems, engaged at high levels in bringing the railroad system back to its former glories and services in certain areas that would now find the rails truly indispensable.

Commissioner Tucker's remarks follow:

REMARKS BY WILLIAM H. TUCKER

I am pleased to have been invited to address you. I know what an important role the members of the Chamber's Down Town Council and Transportation Committee and, of course, the Board of Directors, play in the economic life of Providence and the entire state.

Some of you may be aware that I was to have delivered an address before a meeting in Boston a week ago. Due to the near blizzard, which I'm sure you remember well, the meeting was called off. Thus, this is my first opportunity to voice my thoughts on the inclusion, its problems and its meaning. And I'm glad to be doing so with you. Rhode Island's contribution to regional railroading—in interest and in revenue—far outstrips its population or geographic rank.

I'd like, therefore, to devote much of the few minutes I have, to talking about Penn Central and its relation to Rhode Island. And first, I'd like to make a major announcement. I think it's major, because it concerns something that, according to your papers, is one of the most vital issues of the day in Providence.

Gentlemen—we are going to fix the clock atop our Providence Station!

I may seem a bit facetious about its importance, but I'm not kidding about our pledge to repair it. As you know, the pigeons and starlings loved to roost on the hands. And their weight, especially at a quarter to three, was so great as to stop the clock completely. We had to stop the clock with the hands at noon.

Our building engineers tell me they expect shortly to install an electric mechanism which will be capable of making the birds, as well as time, fly.

I've mentioned this first because, in a way, it symbolizes the Penn Central inclusion of the New Haven.

What happened at the first of the year was not just a simple change of ownership of the New Haven operations. There's been a complete revision of attitude, morale, direction and spirit.

Penn Central knows that it must be a dynamic force for improvement in regional railroading. And it is going to be.

I hope that this has become evident in the recent discussions involving the possible relocation of the railroad in downtown Providence.

A week ago today, as you know, I met with Governor Licht, Mayor Dorley, and our associates at the Capitol.

Mayor Dorley told us that he had been disheartened for years by the lack of progress on numerous plans for relocating the mainline tracks of the railroad. He referred to these tracks, and the viaduct which carries them as a "Chinese Wall" dividing the heart of Providence.

Now, within two months of the inclusion, the Penn Central has gone to work on this—and at this time we are working on an engineering study. But, since it is still in the

study stage, I cannot be as definitive as I, or you, would like. I can say that what we do or propose will be that which we feel promotes the best interests of city, state and railroad.

I hope it can be seen that any effort we make to remove the Chinese Wall will be clear evidence of Penn Central's willingness to face the realities of the present and the responsibilities of the future.

We did not wait to be perssured by events. We realized that the construction of the next segment of I–95 would have a serious effect upon the railroad and its facilities. We instituted planning to deal with that effect. And we did so with the welfare of the public, as well as the railroad, in mind.

If this can be worked out, the relocation of track and facilities will make available prime downtown land. It will consolidate our various operations such as engine maintenance, freight forwarding, etc., in a much more efficient location. It will provide the best solution to the overall problem of the bisection of our downtown Providence tracks.

There are a number of alternatives being studied by state and city. A number of proposals have been made. We hope that what is now essentially a sketch plan will become in 60 days a blueprint upon which we and the city can build.

I would like to pay special tribute to Governor Licht for the role he has played, first in acknowledging the importance of the concept involved and, second, in galvanizing the various state and city agencies into quick constructive action with us.

There should be one word of caution, however. I'm sure you are aware that there are three railroads involved here—Penn Central, Boston and Providence and Providence and Worcester. Naturally, there are attendant legal complications. I can speak, at this time, only for Penn Central. But we do not regard any foreseeable problems as being insurmountable.

I spoke earlier of the role Rhode Island has been playing in the survival of rail service in this region. It is not a role that can be abandoned now.

Frankly, one of the greatest concerns to us in the past two months has been a public attitude that the Penn Central has an obligation to maintain, and underwrite, the same rail operations which dragged the New Haven down into bankruptcy.

When the Pennsylvania and New York Central railroads were allowed to merge, it was for the economic benefit of the people in regions they served. It was never ordered, nor was it ever intended, that the savings from the Penn Central merger were to be siphoned off into the near-bottomless pit of New Haven deficits.

At a time when airlines have been earning a rate of return of over nine percent, Penn Central and other eastern roads have been earning less than two percent.

And last year, Penn Central suffered a passenger deficit of about one hundred million dollars.

This year, we began with the New Haven inclusion, and absorbed a line which in 1968 had its own passenger deficit of more than ten million dollars and a freight deficit to match. To heap deficits upon deficits—as of the first of the year, changes in post office transportation resulted in a loss of postal revenues on the New Haven region of more than one million dollars.

Thus, when we took on the New Haven, it became even more of a liability for Penn Central than it had been under Trusteeship!

This serious financial problem was recognized by the Interstate Commerce Commission when it approved the inclusion. In fact, the I.C.C. specifically called the New Haven operations a "burden" for Penn Central . . . a burden that the states should share.

I quote the I.C.C. report: "Part of the burden falling to Penn Central consists of its common carrier obligation to sustain essential service in the New Haven territory. Since we find that the operations involved are likely to be at a continuing deficit, there is a concomitant obligation on the part of the state and local governments to help sustain the service."

You note that the I.C.C. said that we have an obligation to continue *essential* services. Penn Central plans to meet that obligation. But we can not do it alone.

Much of our current planning and our policies involve the restructuring of the New Haven's freight and passenger services—streamlining the New Haven operation down to essential operations. In cooperation with representatives of the states, we have begun—but not completed—the restructuring of our long haul passenger service.

We are pruning the low-revenue, high-cost branch freight lines. Again, where appropriate, this is being done in cooperation with public or private representatives.

A good example of this is our freight line between East Providence and Bristol. As you know, we are planning to abandon this branch. But we have initiated discussions with your State on what public use might be made of the line after rail service is withdrawn.

We are meeting our obligations in another way, too. We have begun extensive improvement programs in both freight and passenger services.

Single line freight service will save one to three days from Chicago, St. Louis and other midwest points. New special purpose equipment is being made available. We're preparing for the construction of ten additional tracks at the huge electronic classification yard at Selkirk, N.Y. These will be used for the assembly of fast-moving freight trains direct to Providence and other major centers in the region.

About a dozen renovated passenger coaches have already rolled out of our shop at New Haven. Car washing facilities have been reopened. We've repaired more than half of the big backlog of broken windows. An inspection team project has been started with supervisors riding our trains every day to check on the performance of equipment and crews.

It is going to be a long, hard job. It is impossible to catch up overnight with the years of deferred maintenance on the New Haven.

And, as I said, it is not a job we can do alone. Currently, we are meeting with representatives of the states, including your very able Public Utilities Administrator and Deputy Administrator, Archie Smith and George McLaughlin, and Director of Business Regulation, Francis J. Fazzano. Beyond our immediate needs to keep things going, we want to arrive at a permanent program by which the states can assume their fair share of the burden of continuing essential services.

The basic principles of our passenger service program can be summarized in this way—we plan improvement and upgrading of that passenger service for which there is a public need, a phasing out of little-used or unnecessary service, and public underwriting of the deficits of the service required to be continued.

Thus, you can see that there will be a continuing, and even permanent, role for Rhode Island and the other states in the maintenance of rail service in Southern New England.

Penn Central does not want year-to-year subsidies. It seeks permanent support programs, as I outlined, under which the states would join us in a continuing partnership, an investment in reliable, efficient railroad service.

What would Rhode Island's fair share be? This has not yet been determined, because our discussions with the states have not yet finalized what the permanent service will be.

Perhaps the states will decide that fewer trains are required to handle passenger demand, that the present level of service is not truly essential. We don't know. But we are making all of our information available so that everything is on the table.

In another area of State-Penn Central relations, we have stressed that tax relief for the railroad has no direct connection with the state's responsibilities concerning the continuation of long-haul passenger service.

Tax relief recognizes the facts of our economic life today—that to pile burdensome taxes upon a public utility simply results in higher costs to patrons of that utility or a drain of badly needed capital and assets. In the case of railroads, taxation has also become grossly unfair and inequitable.

Highways are constructed for the auto and bus with the use of Federal and state funds. Airports, air signal, communication and weather reporting systems are paid for by the government. In the face of such heavily-subsidized competition, is it any wonder that rail traffic has been dwindling?

The magnitude of the mistreatment of railroads is readily apparent in comparing the aid given transportation facilities. As Senator Harrison Williams of New Jersey points out, the Federal government spent approximately four and one-half billion dollars for highways. In contrast, the eleven million dollars committed to the Washington-New York Northeast Corridor project represents the first major public funds allocated to the rails in this century.

Tax relief is an effort on the part of fair-minded governments and their officials to make up for—even to partly remedy—past unfair treatment of the railroads. We anticipate that this enlightened attitude will continue to be displayed by Rhode Island in the future.

And I am hopeful that I have been able to convince you that there's a different, and enlightened, attitude at Penn Central.

We're glad that Mayor Dorley has said so. So has Mayor Burns of Pawtucket. As you may know, he met with us last week in Governor Licht's office in a discussion of the future of the empty, dilapidated Pawtucket station. Much to his evident pleasure, he found that we already had assigned an assistant vice president to study the station problem. The two met the following day and are now reviewing proposals developed at that session. We hope to seek bids on demolition and have expressed our willingness to investigate the city's own plans for municipal use of the area.

Yes, there is a new attitude now in regional railroading. Penn Central is ready to meet the obligations and the challenges imposed by the inclusion of the New Haven. It is moving ahead, making more than a reasonable effort to improve freight operations, to upgrade passenger equipment and restructure the service. It is not waiting for the states to act first on the matching reasonable level of support directed by the I.C.C.

But Penn Central cannot do the job alone. If it becomes apparent that public representatives are looking for a way to avoid, rather than to implement, their fair share of the task that lies ahead, we will be forced to reappraise our plans.

But at the moment I'm confident and optimistic. Like the clock atop the Providence station, the whole New Haven situation has been stopped at the desperation hour of high noon far too long.

Let's make sure that the clock will start to move again—and keep moving.

Thank you.

WHAT EVERY EMPLOYER SHOULD KNOW ABOUT THE HANDICAPPED

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. JARMAN. Mr. Speaker, the accomplishments of our youth today are too often submerged by the tidal wave of headlines about demonstrations and other displays of discontentment. Yet, some of us are likely to overlook the deep insight and keen interest our youth shares with certain problems existing in our present-day society. In this respect, I would like to take this opportunity to call attention to one particular young girl who has given serious thought to the problem of the handicapped person and his desire to be employed.

Becky Schumacher of Oklahoma City is one of this year's Ability Counts Contest entrants, and for her theme, entitled "What Every Employer Should Know About the Handicapped," Becky received top honors. For the benefit of my colleagues, I would like to include in the RECORD this outstanding essay:

WHAT EVERY EMPLOYER SHOULD KNOW ABOUT THE HANDICAPPED

(By Becky Schumacher)

The American way of life is taking on new dimensions. The canopy of opportunity is spreading over segments of human life which previously knew only the oppression of despair and prejudice. We are becoming an enlightened people; yet corners of darkness remain—shadows cast by fallacious information and conceptions. One of these shadows is the prejudice against the handicapped. To dispel this shadow, many must know the facts now available about the handicapped.

Otherwise-willing employers hesitate to hire the handicapped because of misinformation. Some hesitate because they believe the handicapped worker to be accident prone and thus assume that the company's workmen's compensation rates will rise. However, neither premise is true. Handicapped persons have about the same accident rate as that of the average work force. The handicapped are acutely aware of the results of accidents; consequently, their accident rate, in fact, is frequently lower. Since they are not accident prone, hiring handicapped workers does not raise the workmen's compensation rates. Only two factors determine these rates: the relative hazards of a company's work and its actual accident rate. The physical disability of the personnel is not a determining factor. Other employers hesitate because they believe that insurance company regulations prohibit their hiring handicapped persons. This, too, is untrue. The insurance contract says nothing whatsoever about the physical condition of workers whom an employer may hire. These premises, if true, would form valid barriers to the employment of the handicapped. However, none of them are true. Thus, the light of truth should eradicate these barriers.

Many of yesterday's reasons for reluctance to employ the handicapped are no longer sound. In today's society there are many jobs to be filled; and with automation, fewer of these required physical dexterity. The United States Department of Labor found that in a single ten-year period, thirteen million jobs disappeared and twenty million new jobs became available, creating a net gain of seven million new jobs; most of which were less physically demanding. We know that handicapped workers can perform these jobs with competence. Evidence that disabled persons are effective and productive employees has increased over the years. Recent studies made by the Veterans' Administration and the Rehabilitation Services Administration show that the quality and quantity of work by the handicapped compared favorably with that of able-bodied persons, as did their rates of accidents and absenteeism. These studies also show that handicapped persons help stabilize the work force. When properly placed, they tend to stick to their jobs because they know the difficulty of finding employment.

Knowledge can dispel many misconceptions about the handicapped, and this knowledge must include facts about the mentally retarded also. Those handicapped mentally show two strong points: a desire to perform well and the initiative to work hard. The mentally retarded are co-operative workers who stay with the numerous jobs which require repetitive, routine tasks. These people have known much failure and, like all other human beings, yearn for an experience of success which will allow them to retain their self-respect. The repetitive nature of these jobs provides the opportunity for such success.

Prejudice concerning the handicapped is often fostered by the image many have when they hear the word *handicapped*, an image of a completely dependent person, unable to perform the basic functions of life. However, some employers know from experience that this picture is distorted, that the handicapped individual when matched to job requirements is no longer "handicapped." In fact, employers have found it advantageous to give certain jobs requiring sharpened sensibilities to handicapped persons. These employers know that the image of the handicapped as a useless, dependent member of society is a false one, that exactly the contary is true. The handicapped worker seeks to command respect; he wants no preferential treatment. The greatest service an employer can render the handicapped is to treat him as he would any other employee.

Ironic, is it not, that in the twentieth century, when enlightenment is our crowning virtue, our knowledge of things far outstrips our knowledge of people. However, a new force is stirring in our country, and this force consists of kinetic energy, a desire to know more about people and to provide each of them a place where he can know self-respect and have assurance of his worth to mankind. The handicapped will share in the results of this new force. They will soon find that for which they seek, a product of our new dimension.

IDAHO STUDENTS BACK EDUCATOR

HON. JAMES A. McCLURE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. McCLURE. Mr. Speaker, University of Idaho students were told in mid-March that students all over the country will rebel because that is the only thing left to do. The speaker was leftist leader Thomas Hayden, a cofounder of the Students for a Democratic Society and a guest speaker at the university's annual Borah Foundation Symposium. His subject was "Violence and War," and Hayden predicted:

A person who is in every respect a normal American will become a warrior.

Two days after his fiery speech and grim predictions, university students—4,500 strong—gathered in torrents of rain before the house of University President Ernest W. Hartung. They were not there as warriors, and they did not carry protest signs. They were simply there expressing their support for Hartung and his policies.

Student body president Larry Craig of Midvale, Idaho, summed it up well:

President Ernest Hartung has moved the University of Idaho forward in three years as it has not been moved in 50 years. He has given to education and to the State of Idaho progressive leadership. Through his leadership, we have seen change without the violence seen at many other universities throughout the country.

Civic and educational leaders joined the students in their rally. The remarks of Moscow, Idaho Chamber of Commerce president Philip Guilfoy were particularly appropriate:

I see here tonight thousands of salesmen doing a great job for the University of Idaho. This is probably the first time a college demonstration has ever been held for and not against a president.

Mr. Speaker and my honorable colleagues, I am proud of those students and I want to take this opportunity to pay my greatest respect to a fine university and its leader. All too often, American students are guilty of destruction and pointless dissent.

I think the students at the University of Idaho have proven that they can work in close cooperation with the educational administration to achieve common goals and intellectual freedom.

MONEY LASTS LONGER IN AUSTIN, TEX.

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PICKLE. Mr. Speaker, the Bureau of Labor Statistics has made official what I have been championing all along. According to statistics compiled in "Three Standards of Living" issued last week, it costs less for a family of four to live in Austin, Tex., than any other urban area in the Nation.

The model budgets set forth by the Department of Labor are designed for high, moderate, and low family incomes. In each instance, it takes less money to live in Austin than anywhere else. Specifically: the "high" budget on the national average is $13,050—in Austin, to maintain the same standards requires only $11,299; the "moderate" budget nationally is $9,076—in Austin it is $7,952; and the "low" budget nationally is $5,915—in Austin, $5,237. All budgets include taxes.

Statistics are useful only to statisticians and are not very meaningful to individuals; but it is comforting to know that dollars can go farther in Austin. Especially when we read that the consumer price index rose 0.4 percent in

February and is up 4.7 percent in the past 12 months.

The Bureau of Labor Statistics explains that the printed budgets are not especially "typical" or "average"—but they are liveable. The family used by definition is: a 38-year-old husband working full time, a nonemployed wife, a boy of 13, and a girl of 8.

It is no accident that Austin ranks first. As Texas chronology goes, Austin is an old city; but nationally, it is young, and Austin has been blessed with leadership which kept the city abreast of development through the lean years and the boom years. Austin does not have the decay which is evident in some of the older cities of this Nation. It is still vibrant, moving and desirable. The tax base is broad enough to pay the way without imposing excessive burdens upon the taxpayers. Proof of this is easily illustrated. Just a few months ago, Austin became the first city in the State to receive an AAA rating on revenue bonds issued by the city. This resulted in a tremendous savings to the people who foot the tax bill, especially in light of the rising interest rates.

I am not advocating mass migration to Austin, but I would like to point out a few of the "reasons why" Austin is such a delightful place to live. My remarks are factual and without prejudice.

The population of 225,000 has a wealth of cultural and educational benefits at their fingertips: The University of Texas, St. Edwards University, Maryhill College, Huston-Tillotson College, Concordia College. These are available, too, for the men stationed at Bergstrom Air Force Base.

There are over 80 State and over 50 Federal agencies in Austin with over $94 million in payrolls. Being the State capital, Austin has attracted over 200 statewide association offices, 35 insurance offices, 300 manufacturing plants, medical centers, and many State schools and institutions. Total payrolls are in excess of $130 billion.

Then there is the sheer, natural beauty of the hill country and the highland lakes, and the weather, and the mood and atmosphere of the people—and most of all the people, for they are the daily writers of Austin's success story.

OUR RESPONSIBILITY IN THE MIDDLE EAST

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1969

Mr. BIAGGI. Mr. Speaker, the people of the Arab world are largely illiterate, wracked by disease and poverty, without the education and organization to enrich their harsh desert land. For decades, even the wealth of their oil fields has gone into palaces and Cadillacs, and above all into the armaments and trappings of war. For decades, irresponsible leaders have turned their people's frustration outward—toward the West, and to that tiny outpost of Western culture and ideals which is the State of Israel.

Israel has been fighting for her very existence too long. Only her arms and courage have allowed this tiny nation, with less than the population of New York City's Queens County, to defeat the armies of nations with total populations of tens of millions.

This gallant democracy, this nation of survivors from history's greatest example of man's capacity for senseless cruelty to his fellow man, cannot be allowed to succumb to the threats and assaults of her neighbors. And while this period of danger continues—until lasting peace settlement is achieved—we must maintain our vigilance in her behalf.

Since the creation of the State of Israel in 1948, the Middle East has been the setting for three bloody wars linked by border skirmishes and verbal threats. These conflicts have been both the flame and the fuel of an intense level of hatred in the area.

The loathing and hatred between Arab and Jew is an all consuming thing. Why has such mutual hostilities developed?

As many of us know, the story goes back nearly 2,000 years to the expulsion of the Jews from Palestine by the Romans in the year A.D. 70. This Diaspora marked the birth of a dream harbored by Jews throughout the world that someday they would be able to return as a people to the promised land. At last, in 1917, their chance came. Britain consented to establish a Jewish homeland in Palestine.

However, the Jews who immigrated to Palestine in the 1920's and 1930's, to buy land and to create a new state, were regarded as unwanted outsiders by many of the Arabs, who had been living in this barren land since the days of Christ. Under the yoke of foreign oppressors themselves for centuries, these Arabs dreamed too of an independent Palestine. Increasingly, growing Arab nationalism and Zionism clashed, often violently.

After World War II, under mounting pressure, the British proposed dividing Palestine into two states, one Arab and one Jewish. The Arabs protested that they wanted nothing less than one Palestine under Arab control. It might be true, they argued, that the Jews had been persecuted terribly in Europe. But then let Europe bear the cost of solving its own conscience, not the Arab world.

Without first reconciling these grave differences, the United Nations adopted the British partition plan, and in May 1948 Israel formally became a state. Outraged, the Arab armies attacked the new nation, vowing to drive the Jews into the sea. But, Israel, even in its infancy, had much more spirit and zest and determination and discipline than the Arabs. They were tougher inwardly and outwardly than the Arabs.

Israel did win the 1948 war, but peace in the Middle East was not realized. The Arab nations steadfastly refused to sign a peace treaty for this would have amounted to an unpalatable concession—recognition of the State of Israel. Instead, they declared they would not rest until our Jewish brethren were destroyed.

In less than a decade, the Middle East was ablaze again.

Following Egyptian President Nasser's nationalism of the Suez Canal in 1956 at which time he barred the passage of all Israeli ships, and his blockade of the Gulf of Aqaba—Israel's only remaining outlet to the East—Britain, France, and Israel together invaded Egypt.

Within a matter of days, Israel had routed Nasser's Army and driven across the Sinai Peninsula to the Suez. But again victory did not result in a peace treaty. A cease fire was arranged which called for Israel to withdraw her armies, and the situation remained as explosive as before.

Since then, the Egyptian Army has grown in power—and continues to grow in power. Unified Arab command has forced Jordan to double the size of its army. Sophisticated weapons—jets, guided missiles and submarines—continue to flow in from the Soviet bloc.

These arms are a threat to peace. They waste valuable development capital; they threaten the only near Eastern state with traditions of democracy.

The irresponsible and dangerous nature of the course chosen by Israel's enemies is becoming more clear to the world every day. And our commitment to Israel must be equally clear; it must be a total one. We owe our Jewish brethren nothing less.

JOHNS HOPKINS PROFESSOR SAYS RISKS OF STARTING ON "SAFEGUARD" ABM OUTWEIGH ANY BENEFITS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. REUSS. Mr. Speaker, Prof. Robert Rothstein, in a second article on the ABM in the March 29, 1969, New Republic, says:

> The risks of doing without a new weapons system may be much less than the costs of learning how to live with it.

I commend his perceptive observations on the so-called Safeguard ABM system to my colleagues. The text of the article follows:

NIXON'S ABM: VERY THIN INDEED

(By Robert Rothstein)

All that was missing from Mr. Nixon's virtuoso performance, when he announced his intention to begin deployment of a modified ABM system primarily designed to protect our land-based retaliatory forces, was the invocation of Eisenhower's name, or at least his benediction by telephone "consultation." Perhaps the omission is explained by the fact that several of Eisenhower's leading scientific advisers had spent a good deal of time that very week blasting the system as ineffective, unnecessary and provocative. Not at all, replied the President; instead, it will protect us from accidental attacks, from a Chinese attack within the next decade, and from a direct Soviet attack against our land-based retaliatory forces. He also assured us that the Russians will not regard the ABM as provocative, for its defensive intent is "unmistakable."

The contention that an ABM system would save lives in the event of an accidental missile strike, presumably involving only a handful of missiles, makes some sense in the abstract, but loses most of its force when placed in context. We cannot protect our-

selves from every conceivable danger; we do not keep to our bed because we are fearful of being killed in the streets. When we are thinking about survival, we make some rational judgment about probabilities. How probable is it that an accidental strike—released somehow without anyone's intending it, or by a mad commander hoping to trigger a third world war—will hit those missile sites? Mr. Nixon plans to "safeguard"? The chances are what? One in a hundred, a thousand, a million? It's an unanswerable question.

If an accident were to occur, we would want to protect our cities, not missile sites. Protecting two missile complexes and areas around them means that the rest of the country goes unprotected—unless, of course, the system is expanded into a countrywide area defense, plus point defense of missile sites. In the interim (after 1973 but before more sites are protected), the notion that we are safe against accidents is something of a joke, except in regard to the metropolitan areas of Montana and North Dakota. Finally, there are technical questions about the degree to which the ABM system *itself* is accident-prone.

We have to choose between insurance against every possible contingency, in which case we simultaneously create more dangerous strategic instabilities; and an action (forestalling ABM deployment) which may leave us somewhat more exposed if the improbable occurs, but which also offers one of the last hopes we may have of maintaining a stable deterrent.

Most professional students of Communist China believe that Peking's international behavior is not nearly as provocative as Peking's rhetoric. Mao and his colleagues know that they could be annihilated in any nuclear war with the United States. The probability that they will threaten or attack the U.S. with their rudimentary nuclear force is extremely low. If we have been able to deter a much stronger Soviet force without an ABM, why do we need one against the Chinese within the next decade?

If we could treat the Chinese threat in isolation from our other strategic concerns, it just might be worth trying to buy some insurance against it. But unless all informed current estimates are wildly off the mark, the Chinese nuclear force will be small in number and fairly unsophisticated for the foreseeable future. I can hardly imagine a situation in which the Chinese would attack our missile sites. If they did strike, it would surely be at our cities, so as to assure maximum destruction. Finally, no matter what the Chinese did, no matter where they might aim their missiles, they could not prevent us from retaliating, thus inviting their own demise. The ABM deployment Mr. Nixon has outlined not only does not protect our cities, but also fails to provide a missile area defense for the whole country—unless, of course, it is expanded well beyond the two sites.

Suppose we expand it? In terms of the assumed Chinese threat, the Chinese could counter that expansion by various tactics—for example, by a saturation attack on a city inadequately protected by an area system. We would then have to begin protecting our cities. But that of course begins to undermine the Soviet Union's retaliatory capacity, and could be very destabilizing, as Mr. Nixon himself explicitly noted. In sum, even if we decide we have to do something about a Chinese nuclear threat, the deployment contemplated by the President is thoroughly inadequate, and a "thicker" deployment threatens the Soviet Union, forcing them and us into more costly, dangerous and inadequate counter measures.

The essential rationale for the current ABM proposal is the capacity of a "thin" system to "safeguard" our land-based missile forces against a Soviet first strike; "to protect," in Under Secretary Packard's words, "our second strike capability." But if the Soviets want to maintain a first-strike capability against us—and it is not sure that they do—they have it within their power to do so, simply by increasing their offensive capability substantially: by investing in MIRV's (missiles with multiple warheads) for example, or penetration devices. If, on the other hand, the Russians settle for a second-strike capability, our ABM would be protecting the wrong targets—missile sites instead of cities—because the Soviets would reply to any first strike against them by retaliating against our population centers, not military targets.

It is extremely hard, therefore, to understand exactly what Mr. Nixon and his advisers have in mind, and why they are doing what they are doing. If the Russians chose to attack our missile sites, the ABM system proposed by the President would at best only complicate their efforts marginally. The system might be effective against a very light Soviet attack launched against a few of the sites, *after* we have completed full deployment of the ABM system recommended. But given the risk they would be taking against a strategically superior opponent, a light Soviet nuclear attack is almost beyond belief. Surely it would be all or nothing, and if it is all, Nixon's system is worthless.

I can only conclude that the Administration is tying "thin" deployment to a parallel effort to freeze current offensive missile levels; it's a bargaining counter. But that makes little sense either. If the Russians are willing to go along with such an agreement, we do not need the ABM at all. For it is designed to protect our retaliatory forces, and if the Soviets agree not to raise their offensive missile level substantially, our retaliatory force is not in jeopardy in the first place.

The bargaining thesis simply cannot be taken seriously. After all, the Russians know what we can do; they know too that we do not tend to underreact to their arms deployment. If they want an agreement, we hardly need initiate something which we may have to tear down. The best time to control the spread of arms is before they are deployed, not after. Once in place, they develop a role of their own, as well as a band of supporters. Consider the difficulty we had in extricating our useless and provocative missiles from Greece and Turkey, even after President Kennedy ordered it done! Their initial emplacement has to be justified on both political and strategic grounds; removing them also requires a complex and sophisticated justification. Inevitably, there are delays while political comprehension catches up to the notion of strategic obsolescence.

Anyway, Mr. Nixon has no intention of abandoning the ABM system, an arms agreement with the Russians notwithstanding. He said at his press conference that "the abandoning of the entire system, particularly as long as the Chinese threat is there, I think neither country would look upon with much favor." It is absurd to discuss the ABM as a bargaining ploy; once set in motion, the system is going to be with us permanently in one form or another.

Mr. Nixon argues that ABM's defensive intent is "unmistakable," primarily because the system he's recommending (sites, not cities) does not undermine the Soviet's capacity to retaliate against cities. ABM only improves our ability, the President says, to ride out a Soviet first strike and to strike back. In part, this reasoning appears to rest on the contention that the distinction between different kinds of ABM systems is hard and fast. Any system, however, can be seen as a preface to another, for the components and techniques are very similar. "Thickening" the system is primarily a matter of our willingness to spend more money. If the Russians do not trust Mr. Nixon and Mr. Laird, they may very well "read" this deployment as the beginning of a larger and more threatening one, which they can counter by greater investment in MIRV's and so forth. An ABM system *plus* larger investment in offensive missiles as destabilizing as the MIRV offers less security at a higher price. Parenthetically, Mr. Nixon's allusion to the possibility of reexamining the question of civil defense in this country could also be regarded as provocative; for that is a development which certainly would undermine the Soviet's second strike capability.

The President suggests that one reason his "safeguard" system is preferable to the Johnson Administration's alternative is that it is easier to defend missile sites than cities: for one thing, one need not worry very much about the fallout problem. However, Mr. Nixon's statement does not squarely face two other issues. First, though I agree that a city system requires virtually perfect defense, it is not clear that a missile site defense needs *only* a high percentage of kills to be effective. Missile site defense, for various reasons, may require a more accurate performance than the contemplated system promises. Second, once Mr. Nixon's system is installed, are there problems involved in getting *our* ICBM's off the ground during an attack, if there are Sprints exploding in the path of Soviet missiles in the immediate environment? I don't know the answers to these questions, but it is very important that they be asked.

There is, in my opinion, at least one other explanation for the deployment, to which I referred last week: the military wants an ABM system primarily because it would, they think, give them greater offensive flexibility in situations that are less than total confrontations (a third world war). What if the Russians theaten our "vital interests" in Europe, or the Chinese in Asia, the military asks? What response should we and could we make? One answer has been, in effect, that we ought to respond with equivalent force, in kind and degree. What happens, however, if the threat or the attack involves large numbers of ground troops and we are unable to meet in kind? In this instance, so the argument runs, we should contemplate *initiating limited nuclear strikes*, not necessarily against the attacking forces but against the enemy's *missile sites or airfields* in an effort to dissuade him from continuing his attack for fear of further limited strikes by us. This is *not* the same as Secretary McNamara's efforts to create some elements of control during a major nuclear war between the US and the Soviet Union. Mr. Laird has something different in mind, something that would occur at a level of provocation well below general war; it would involve, to borrow Mr. Laird's phrase, "limited nuclear reprisals."

Secretary Laird is not the only one who favors such a response. Harold Brown, formerly a top Pentagon official, said two weeks ago that we must anticipate nuclear confrontations in which each side fires a limited number of ICBM's at the other side's missile sites. So, Mr. Brown argued, our missile sites need ABM protection. I have also seen this argument raised in terms of a Chinese ground threat in Asia, but with the difference that in this instance our cities would need ABM protection, because the Chinese could not hit much else. I doubt that these advocates of "limited nuclear reprisals" really believe the Chinese would hit us; what they hope is that our President would not be deterred from a limited use of our nuclear force against the Chinese, if he was confident that the Chinese could not hurt us in turn. The "shadow of incertitude" which has kept the nuclear trigger from being pulled, might finally be lifted; no more need to step back from the brink, and no more need to ignore military advice as was done during the Cuban missile crisis.

This "limited nuclear reprisals" strategy tries to deal with a problem for which we

have no solution, but by means which are incredibly dangerous. If we are seriously contemplating this kind of action, its justification ought to be thoroughly debated.

The drawbacks to this strategy of limited nuclear reprisal are identifiable. It presumes that both sides will maintain control during a series of escalating nuclear exchanges, an eventuality which the Russians at any rate regard with considerable skepticism. Its advocates tend to act as if only we can protect our missile sites. But if the Soviets get an ABM as effective as ours, how will our small "limited" attacks get through? And what will they do in response, if our missile sites are protected but they feel the need to retaliate? Will they, like the Chinese, then aim at our cities? In effect, if both sides invest in ABM defenses, the "limited" exchanges may have to be very powerful to get through, and the chances of control are nil.

Underlying this strategy is an assumption about continued American strategic superiority. Thoughout the strategic debates that have gone on in this country—over massive retaliation, the use of tactical nuclear weapons, limited nuclear war—we have presumed that our superiority will not be challenged. That may be true today, but it will not be true for very long. A strategy that allows for limited nuclear retaliation not only tries to compensate for political deficiencies by technical virtuosity, but makes sense only if you think that you are superior enough at the nuclear level so that rational opponents will pull back in time. Let me repeat: this would require circumstances in which the Russians, in theory, would be firing only a limited number of missiles at our missile sites. It as almost the only conceivable circumstance in which the contemplated ABM deployment would make any military sense. I would be delighted to be convinced that my assumptions about the attractiveness of this strategy in certain quarters are wrong.

Most of us accept the fact that we must protect our retaliatory forces. But since ballistic missile defense, in the current state of the art, can neither guarantee that it will do that job better than other alternatives, nor guarantee that it will save lives, the critical question is how the other side would respond. What it *can* guarantee is that it will cost the aggressor more to mount an attack, and the defender more to meet it (especially if payloads go up to compensate for the possible kill rate of the ABM system), which is small consolation. No one knows what will happen once ABM deployment begins to take shape. The worst that *might* happen is much worse than the best that *might* happen if we go ahead.

The Soviets are still considerably weaker than we are in strategic terms. Understanding that, one understands their reliance on terror weapons, their desperate gamble in Cuba, their frenetic rhetoric and persistent fear of inspection. They *must* react to our actions, because it has been so difficult for them to maintain even the appearance of near equality. It is a grave risk for them to gamble that our purposes are wholly defensive, for their margin of error has been very, very narrow. They are, inevitably, more concerned with problems of defense. Finally, they are beset from all sides by problems and conflicts which must appear increasingly ominous to them. The prospects for reaching some serious arms control agreements with them are said to be substantial. If that is so, any development that appears potentially threatening to them could be very foolish. It would be especially foolish to overreact to defensive measures on their part, for their response to yet another such challenge could be destabilizing.

A plea for underreaction at this time is also justified because the Soviet ABM system has done nothing beyond "complicating our effort" (according to our own officials). We should resist the desire to complicate their effort, in turn. We can stand the marginal complications without undue strain. If we are ever going to achieve some control over these dangerous cycles of innovation, exploitation and obsolescence, it is by taking the short-run risk of foregoing development of something well within our means. This is a world in which stability is tenuous, and in which we are uncertain about how to maintain it. It may be a good rule of thumb—and we have nothing else—that the risks of doing without a new weapons system may be much less than the costs of learning how to live with it. Taking that risk now might yield nothing; but it would be a prudent gamble, for we are strong enough to survive any interim challenge, and the Soviets may be ready to recognize the futility of persisting in a weapons race that yields ever more insecurity at ever higher costs.

OPINION QUESTIONNAIRE

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. HAGAN. Mr. Speaker, in this day of riot and unrest in and around our various institutions of learning, it is heartening to know that Dublin High School in the First District of Georgia is taking steps to instill in its senior class sensible, progressive thinking, and voting prerogatives which will help so much in making these young people good and responsible citizens.

The following is an opinion questionnaire and the tabulated results of 131 senior students at Dublin High School, and I am truly gratified that 26 of these young people are already registered to vote.

I am indeed proud that the State of Georgia is a leader in allowing the registration of 17-year-olds and granting the voting privilege to 18-year-olds. I believe that this right-to-vote to our 18-year-olds is the first and most logical step in preventing further student unrest. With a voting privilege, our young people of Georgia and, hopefully, across the Nation will be able to voice their opinions and earn an expression of their views through their Representatives in Congress, rather than through disruptive influences and methods evidenced today in our universities and colleges. Because of frustration, bewilderment, and lack of a feeling of belonging to and having a voice in our Government, they choose the more radical methods of expressing their discontent.

I am sure that you agree with me that only praise should go to this group of high-school students and their teacher, Mr. Edward B. Martin, for such active interest in government:

DUBLIN, GA.,
March 13, 1969.

Congressman G. ELLIOTT HAGAN,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN HAGAN: Enclosed is an opinion questionnaire administered by a United States Government Class to the senior high students. There were 131 respondents, all of whom are to graduate in June of this year.

The results are as follows:

Question No.	Yes	No	Undecided
1	107	14	10
2	99	7	25
3	53	60	18
4	79	30	18
5	100	14	16
6	75	29	25
7	79	33	11

Enclosed also are the ballots for each person. You may note that of the 131 persons responding, 26 are already registered to vote. Almost all of this group will be registered within the year.

Highest regards,

EDWARD B. MARTIN,
Teacher, Social Studies,
Dublin High School.

OPINION QUESTIONNAIRE: UNITED STATES GOVERNMENT CLASS, DUBLIN HIGH SCHOOL

1. If the Paris Peace talks fail to produce positive results within a reasonable time, would you favor an all-out conventional effort by the United States to end the war in Vietnam?
Yes ☐. No ☐. Undecided ☐.

2. In the U.S.S. *Pueblo* incident, do you feel Navy Commander Lloyd Bucher acted in the best interest of his crew and his country?
Yes ☐. No ☐. Undecided ☐.

3. Would you favor a separate congressional investigation of the *Pueblo* incident?
Yes ☐. No ☐. Undecided ☐.

4. Are you in favor of President Nixon's proposal to eliminate the Draft System and have a Volunteer Army?
Yes ☐. No ☐. Undecided ☐.

5. Would you favor any change in the Draft System?
Yes ☐. No ☐. Undecided ☐.

6. In your opinion, is the Electoral College System outdated?
Yes ☐. No ☐. Undecided ☐.

7. Do you think Congress should move to eliminate the Electoral College System, so that the President of the United States would be elected by popular vote?
Yes ☐. No ☐. Undecided ☐.

Are you registered to vote?
Yes ☐. No ☐.

MORE ON THE PRESIDIO

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1969

Mr. KOCH. Mr. Speaker, I would like to apprise my colleagues in the House of the sentiments of some members of the legal fraternity, and in particular, members of the law faculty of New York University School of Law and Harvard Law School. I trust you will find their statement of interest.

A large portion of the NYU law faculty, including Dean Robert B. McKay, signed the statement, as did three-fourths of the Harvard law faculty. The names of the signators from the New York University School of Law have been made available to me and are also included:

STATEMENT BY NYU LAW SCHOOL FACULTY

As members of the legal community, we feel an obligation to express our concern over the court martial trials which are now being conducted at Fort Presidio, California. 27 soldiers, most of them under 21, are being

tried on charges of mutiny for staging a brief sit-down strike at the Presidio Stockade on October 14, 1968. The soldiers linked arms, sang "America the Beautiful" and "We Shall Overcome" and presented three demands asking for elimination of shotgun-type work details, psychological evaluation of stockade personnel prior to assignment, and better sanitary facilities.

An investigating officer, appointed as required by the Uniform Code of Military Justice, described the stockade grievance procedures as "shoddy and inefficient" and recommended that the mutiny charges be dropped and the soldiers be tried by special court martial (the maximum punishment is 6 months) or administratively discharged. The Commander of the 6th Army, Lt. Gen. Stanley R. Larsen, disregarded the recommendation and referred all cases to a general court martial on charges of mutiny. Last week the first three soldiers tried were convicted and sentences of 16, 16 and 14 years were adjudged.

We believe that serious questions have been raised by these courts martial concerning the administration of criminal law in our armed forces and the capacity of the present military justice system to insure basic due process rights to members of the military.

First, it must be asked whether the use of the serious charge of mutiny is appropriate in cases such as these. A peaceful and passive sit-down strike by prisoners is sometimes the only method for dramatizing and expressing grievances, and such demonstrations have not usually resulted in prosecutions when they have taken place in civilian prisons. It has been alleged that conditions at the Presidio Stockade were unsatisfactory and that there were 33 attempts at suicide during the 6 months preceding the sit-down strike.

Second, it must be asked whether the intense command interest in prosecuting these soldiers for serious crimes and the unusually severe sentences indicate that the court martial proceedings did not result in a fair and impartial trial.

The Presidio courts martial do not do credit to the Army or the American judicial system. We urge the Army authorities to give consideration to stopping the courts martial of the remaining soldiers and remedying the sentences already imposed. We also ask that serious consideration be given by the Department of Defense, the departments of the services, and Congress as to what steps can be taken to prevent a recurrence in the future of this type of proceeding.

Gottlieb, James Graham, Hyman Gross, Jerome R. Hellerstein, Graham Hughes, William D. Hutton, Carol Katz, Lawrence P. King. James C. Kirby, Charles L. Knapp, Homer Kripke, Jack L. Kroner, Andrew F. Lowenfeld, Robert B. McKay, Gerhard O. W. Mueller, John Peschel, Robert Pitofsky, John R. Reid, Charles Seligson, Lois Sheinfeld, John Y. Taggart, Peter A. Winograd, George E. Zeitlin, Stanley A. Zimmerman.

RADIO HAVANA PAYS DR. MANOLO REYES A "COMPLIMENT"

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PEPPER. Mr. Speaker, Radio Havana recently paid the highest possible compliment to Dr. Manolo Reyes, Miami's respected television news commentator and Cuban patriot. In a verbal attack seldom heard before, Radio Havana denounced Dr. Reyes for 15 minutes in reply to an interview Dr. Reyes gave to the Associated Press on the occasion of the anniversary of the "Declaration of Freedom" adopted by the Cuban people in exile.

Following is the Associated Press interview of Dr. Reyes along with Radio Havana's invective reply:

RADIO HAVANA PAYS DR. MANOLO REYES A "COMPLIMENT"

(By Theodore A. Ediger, Associated Press Writer, Miami, AP)

On February 14, 1969, Dr. Manolo Reyes gave an interview to the Associated Press in reference to his Declaration of Freedom which was proclaimed on January 23, 1966 at Key West, Florida at which time the entire audience of one thousand, five hundred people assembled on the streets of Key West, in front of the place where Jose Marti had his headquarters, to hear Dr. Reyes' speech.

The interview was broadcast by Associated Press International through its news service and reads as follows:

Cuban exiles, using secret channels, are flooding their homeland with copies of a "Declaration of Freedom."

"More than 10,000 copies of the document proclaiming a 'Revolution for Independence' have been infiltrated into Cuba," said Manolo Reyes. He uttered the declaration three years ago, and 1500 fellow exiles signed it. The paper invasion of Cuba is accelerating, Reyes reported.

"We can't disclose how we get the copies into Cuba because that would tip off Fidel Castro," said Reyes. "But I can say that some get in cloak and dagger methods . . ."

The Declaration says "the present Cuban regime is guilty of high treason." It pledges a fight to death "to free Cubans from communism."

The objective is to stimulate people inside Cuba to rise up against Castro, Reyes said.

"This is going into the hands of people of the regime as well as other persons," he reported.

The exile television commentator exhibited a cautiously worded letter recently arrived from Cuba. It said: "Some who are in the Castro regime and some who are not have received papers and copies of the declaration. Certain things have happened here and this is attributed to the type of propaganda coming from your city." Reyes interpreted "happenings" as sabotage acts. Exiles call the paper invasion "ideological warfare."

"It is bringing up a mystique among people inside Cuba, not for a leader but for an ideology," Reyes said.

The declaration of freedom calls God, country and family the cornerstones of the anti-Castro revolution. It calls for freedom of worship, teaching, press and enterprise. "One day Fidel is going to see the declaration of freedom plastered inside the windshield of his car," Reyes said. "It already is on walls of cities in Cuba."

Assisting in various ways in the paper invasion program, Reyes said, are exiles in New York, New Jersey, Illinois, California, Puerto Rico, Mexico, Venezuela, Colombia, and elsewhere as well as in Miami.

The password is "family", said Reyes. "The workers remain anonymous—names don't matter, just ideology. We have no organization. We just say, 'we are part of the family'."

A joint resolution commending the declaration of freedom has been introduced in Washington by Rep. Claude Pepper, D-Fla. The resolution is before the House Committee on Foreign Affairs. Reyes has put aside a giant copy of the declaration "for signing inside Cuba some day."

Four days later specifically on February 18, 1969, radio Havana in a broadcast in short wave, in the Spanish language to the Americas picked up at 1300 GMT—responded violently to the Associated Press item with a feature story entitled "Cuba Replies to Aggression." (Observers believe that this is the first time that Red Radio Havana, the official voice of the Fidel Castro regime devoted an entire program of fifteen minutes to attack an individual Cuban exile.)

The Communist broadcast from Cuba stated as follows:

"A News Release from the AP U.S. News Agency, from Miami, devotes special attention to a terrible and threatening ideological campaign against Cuba started by Manolo Reyes.

The Cuban Exiles, using secret means, are sending to their country copies of a freedom declaration. The News Release said that more than 10,000 copies of a document titled "Revolution for Freedom" had been infiltrated into Cuba, according to Manolo Reyes.

"Reyes said that its delivery to Cuba is being rushed."

According to statements of this impudent person, the objective is to stimulate the people in Cuba to rise against the revolutionary regime. The news agency reported that the exiled television commentator said that the preparation of the declaration began three years ago and that 1500 (fifteen hundred) exiles had signed it. As we see it, the job is a difficult one, to get 1500 exiled Cubans in Miami to sign the Declaration, you do not need that much time. Reyes is a very slow man even though he seems to be happy about the results attained. Reyes, after casting furtive glances to his right and left, showed the AP newsmen a letter which, according to him, arrived recently from Cuba and which says "some who are here and some who are not have more papers. Certain things have taken place here and that can be attributed to the type of propaganda coming out of this city." Reyes explained the meaning of that mysterious letter. Those who are here are people from the revolutionary regime, those who are not here are enemies of the revolution. The papers are copies of the Declaration and the phrase 'certain things have taken place here' are evidently sabotage actions against the Revolution."

Manolo Reyes affirmed that the Declaration is now posted on walls in Cuban cities and said that very soon it will be posted on the windows of the cars used by the revolution's leaders. As we can see it, the imagination of a worm has no limit. Reyes said that he has the support of exiles in U.S., Puerto Rico, Mexico, Venezuela, and Colombia. Quick calculations tells us that either there are too many worms in those places or there are not enough signatures or Manolo Reyes is kidding the AP newsmen.

Manolo Reyes was very popular in Cuba a few years ago when he was a small boy and advertised cafe pilon. Later the small boy grew, his pants are longer but everything indicates that his brain did not develop normally. "Manolo Reyes promises to fight until Death." This is a theatrical phrase, because for those who try to fight the new Cuba, an inglorious end and death awaits. Manolo Reyes will not take that step; he prefers to win battles from Miami, make statements to press agencies, dream about sabotage, and chatter about the terrible ideological war which he will unleash in Cuba which we learned about from the Association Press.

Manolo Reyes considers that it is necessary to fight in Cuba to achieve religious education, and freedom of the press and enterprise. To achieve the first three freedoms we do not need declarations of worms. We have had complete religious freedom in Cuba since 1959: we have free education, which means anyone can study whatever he or she wants,

depending entirely on their wishes. In the past only the sons of rich people could study. We have freedom of the press because the press here fulfills its obligation to inform and orient the people. Manolo Reyes has other concepts of freedom; for him it is the freedom of the people who try to exploit the poor and the humble, the freedom of Yankee monopolies to loot the country, the freedom of the large landowner to condemn the landless farmer to die of hunger, and the freedom of the politicians to steal from the national treasury and later, in the newspaper, to appear as a benefactor. That type of freedom has disappeared forever from Cuba.

As far as freedom of enterprise is concerned, our people do not need promoters, They are self sufficient and are capable of organizing and developing the economy. The revolution has elevated the dignity of man and for those like Reyes the present is gloomy and there is no hope of returning to the past.

IRRATIONAL PATTERN DISCERNED IN STUDENT REVOLTS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1969

Mr. PUCINSKI. Mr. Speaker, nearly 60 percent of the Nation's high schools are being plagued by student unrest. These protests have ranged from the usual student murmuring to actual student rioting. The contested issues have included prohibitions against long hair and short dresses, teachers' qualifications, racial composition, and academic credits.

As are many of my colleagues, I am bewildered by the riots on our college campuses within the last year. But I am even more perplexed and concerned with the unrest in our high schools. In an effort to increase awareness of these protests I am inserting in the RECORD three newspaper articles.

The articles follow:

[From the New York Times, Feb. 14, 1969]

IRRATIONAL PATTERN DISCERNED IN STUDENT REVOLTS

(By John Leo)

A study of 19th- and 20th-century student movements has concluded that all student uprisings are "symbolic parricide," in which a young generation tries to humiliate and overthrow the institutions of its parents, regardless of the political issues or consequence.

Because of this "irrational element," says the author of the study, Lewis Feuer, professor of sociology at the University of Toronto, student revolts are almost always counter-productive, leading to a period of reaction or repression.

The study will be published on Feb. 28 by Basic Books under the title "The Conflict of Generations."

"Student movements are the most sincerely selfless and altruistic the world has seen," Professor Feuer said in an interview. "But they are distorted and pulled toward extreme and amoral means because the driving energy comes from unconscious sources."

TWENTY NATIONS INCLUDED

The book surveys student movements in more than 20 nations, with particular attention to Russia, Bosnia and Germany in the 19th century and Japan and the United States in the 20th.

"The pattern is the same in practically every country," said Professor Feuer. "The movement is rooted in altruism, a concern for establishing community and overcoming alienation. It begins by celebrating liberal democratic values and usually ends by discrediting those values for the whole society.

"In Prussia, the great student movement of 1819 postponed the liberalization of Germany for 30 years. In Russia, as Kropotkin wrote, a liberal constitution could have been achieved in 1881 if the students hadn't polarized the society. In Bosnia, the universal acceptance of assassination by the student movement produced the murder of the Archduke and touched off World War I.

"Student movements commonly escalate to terrorism, and sometimes assassination, not because these tactics are politically wise, but because they satisfy the needs of generational hatred on the latent, unconscious level. This symbolic parricide runs through every student movement I studied."

TYPE OF LEADER

The movements, he said, are typically led by young men who have had particular problems with their fathers.

"You can see this," he went on, "in one movement after another: Karl Follen, the key figure in the Prussian movement; Gavrilo Princip, who assassinated the Archduke; down to Mao Tse-tung and leaders of American movements.

"These leaders reach out to students in whom the problem is much more attenuated. Then at some crisis—let's say the arrival of police on campus—the leaders appeal to generational solidarity, and the struggle is finally revealed in its true aspect."

At this point, he continued, the desire to punish the older generation can easily override rational politics and the initial goals of the movement.

ALWAYS THE IRRATIONAL

"I think this was true of the student movement in the thirties that I was part of at City College," he said. "We accomplished certain things and brought life to the campus, but there was always that irrational element. We all circulated the Oxford pledge not to fight in another war at the moment Hitler was arming to the teeth. The anti-generational drive was stronger than reason.

"If we can make this irrational element overt, then perhaps student altruism won't flow into the same self-destructive channels. That's my whole purpose in writing the book."

Referring to the student uprisings at Berkeley and Columbia, he said: "Berkeley led to a remarkable rise in crime in the area, the election of Ronald Reagan, and created a climate for what happened in Watts. Columbia set the stage for the New York school strike.

"If we don't want it to happen again and again, it's important to get moderates, liberals and conservatives to assert themselves on campus. If the whole campus can be involved in electing a student government willing to take over disciplinary matters in case of an outbreak, a rational position may be worked out."

Professor Feuer, who formerly taught philosophy at the University of Vermont, was professor of sociology at Berkeley when that campus erupted in 1964. He was a favorite target for student activists who considered his comments on their movement, both on campus and in national magazines, inaccurate and unsympathetic. He moved to Toronto in 1966.

STUDY SEES A RISE IN YOUTH PROTEST

(By Kathleen Teltsch)

UNITED NATIONS, N.Y., February 15—Student demonstrations in more than 50 countries during 1968 represent only a warning rumble of bigger and bolder protests to be expected from youth in the future, according to United Nations sociologists.

Estimating that those in the 12-to-25 age group number 750 million and will reach a billion by 1980, the experts predict in a report made public yesterday that "youth of the world will begin to predominate in world affairs."

"World opinion is going to become increasingly the opinion of the world's youth and the generational conflict will assume proportions not previously imagined," they add.

"Young people of all walks of life are prepared to march, to demonstrate and to riot if necessary in support of views which may not be those of the electorate, nor of the majority nor yet those of government."

MORE THAN IMPATIENCE

The sociologists also see prospects for converting youthful impatience into a positive force. They call for immediate steps by governments to prepare national youth policies and programs at the very highest levels and they recommend that those policies be drawn up not as a response to fears or sudden crises but as comprehensive and lasting undertakings.

Such programs might be coordinated by a single ministry of youth or under the aegis of a prime minister or high authority, the report suggested.

The first detailed review of youth problems by the United Nations, it was made for a two-week session of the 32-member Commission for Social Development that will open here Monday.

The 80-page study is based on an anaylsis of reports, interviews with youth leaders and field trips conducted in 40 countries over a two-year period, but not for this study alone. The emphasis was on the poorer countries of Latin America, Africa and the Middle East. No in-depth study of the situation in the Soviet Union or the United States was attempted.

THE DEVELOPED AND THE POOR

Three sociologists—two Britons and an American youth expert—prepared the report. In keeping with United Nations practice, they were not named. The countries discussed are not identified, but the writers draw broad distinctions between the developed—meaning prosperous—countries and the poorer countries.

They report the existence of a "youth culture" that has cut across frontiers and linked young people in rich and poor countries because of mutual aspirations, tastes and drives. The report finds a strong sense of unity among young people, "whatever the cause of their campaigns may be."

Educated youth vie with trade unions as an effective nonparty force in politics, the study said. This clamor for attention can be expected to continue as young people begin to realize their strength in world affairs.

"The younger generation seems to have lost confidence in the capacity of the older generation to guide affairs without some assistance and planning from young people," the report found.

In the poorer countries, beset by economic difficulties, the report saw prospects that youth could help stimulate national growth. It also pointed out that youthful dissidents could pose a "recurrent political threat."

[From the Washington (D.C.) Post, Mar. 3, 1969]

STUDY FINDS PROTESTS WIDESPREAD

SAN FRANCISCO, March 2.—Student protests, which range in intensity from vocal complaints to riots, have occurred recently at nearly 60 per cent of the Nation's high schools, a survey of principals showed today.

Results of the survey, which involved a random sample of 1026 principals, were reported at the 53rd annual convention of the National Association of Secondary School Principals. It was made by the association staff.

"The basic message is clear. Student activism is here," said J. Loyd Trump, associate secretary.

"Sixty-seven per cent of the city schools surveyed are experiencing protests. For schools in the suburbs, the number with protests is also 67 per cent. In rural areas, it drops to 53 per cent, still more than half of the respondents.

"One of the surprises of the survey was the fact that protest is almost as likely to occur in junior high schools as in senior high schools. Among the junior high schools, 56 per cent report protest activities, as compared to 59 per cent of all senior high schools."

Trump said young people are becoming vocal on every topic from glue-sniffing to the vote for 18-year-olds. He said it was hard to discern a pattern because so many subjects were mentioned.

But dress and hair requirements head the list of complaints, followed by smoking rules, cafeteria and assembly fare, censorship of student papers and scheduling of sporting events.

Forty-five per cent of the schools with protests reported activism regarding the way pupils are educated. Complaints included poor teachers, curriculum content, scheduling, grades and exams.

Protests over racial relations problems were reported by 10 per cent of the schools. Three per cent of the protests involved Vietnam and 2 per cent the draft.

SENATE—*Monday, March 31, 1969*

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Reverend EDWARD L. R. ELSON, D.D., Chaplain of the Senate. On the day of his first inauguration, January 20, 1953, President Dwight David Eisenhower attended a brief preinaugural church service in the National Presbyterian Church, after which he went to to his rooms and wrote a prayer of his own. Several hours later, in front of this Capitol Building, when he began his inaugural address, he asked everyone to join him as he offered his own prayer. In the words of his prayer, let us pray today:

"Almighty God, as we stand here at this moment, my future associates in the executive branch of the Government join me in beseeching that Thou will make full and complete our dedication to the service of the people in this throng and their fellow citizens everywhere.

"Give us, we pray, the power to discern clearly right from wrong and allow all our words and actions to be governed thereby and by the laws of this land.

"Especially we pray that our concern shall be for all the people, regardless of station, race, or calling. May cooperation be permitted and be the mutual aim of those who, under the concept of our Constitution, hold to differing political beliefs—so that all may work for the good of our beloved country and for Thy glory. Amen."

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, March 27, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, when the Senate completes its business today, it stand in adjournment until 12 oclock noon tomorrow.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of March 27, 1969, the Secretary of the Senate on March 28, 1969, received a message in writing from the President of the United States informing the Senate of the death of Dwight David Eisenhower, the 34th President of the United States.

DEATH OF FORMER PRESIDENT DWIGHT DAVID EISENHOWER—INFORMAL PROCEEDINGS IN THE SENATE CHAMBER AND FUNERAL SERVICE IN THE ROTUNDA

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD the transcript of the proceedings of the informal meeting of Senators in connection with the funeral ceremonies for the former President of the United States, Dwight David Eisenhower, held in the Senate Chamber yesterday, Sunday, March 30, 1969.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, I ask unanimous consent also to have printed in the RECORD the eulogy delivered by the President of the United States and the benediction by the Reverend Edward L. R. Elson, Chaplain of the Senate, at the memorial service on yesterday.

The VICE PRESIDENT. Without objection, it is so ordered.

The transcript of the proceedings, the eulogy, and the benediction were ordered to be printed in the RECORD, as follows:

IN THE SENATE CHAMBER, SUNDAY, MARCH 30, 1969

An informal meeting of Senators, called by the majority leader, the Senator from Montana (Mr. MANSFIELD), and the minority leader, the Senator from Illinois (Mr. DIRKSEN), was held at 3:30 p.m. in connection with arrangements for the funeral ceremonies for the former President of the United States, Dwight David Eisenhower.

The meeting was called to order by the Senator from Louisiana (Mr. ELLENDER), as Presiding Officer.

FUNERAL SERVICES

Mr. MANSFIELD. Mr. President, this is an informal meeting of the Senate, and I wish to make the following announcement on behalf of the distinguished minority leader and myself:

Funeral services for the late President at the Washington National Cathedral will be held tomorrow at 4:30 p.m.

Buses will depart under escort from First Street NE., between the Senate Office Buildings, at 3:30 p.m. and return immediately after the services. Those going in private cars are advised to enter the cathedral grounds from Woodley Road and proceed to the north transept entrance.

Tickets for the services for Senators and wives will be delivered by the Sergeant at Arms. Members of the Senate delegation are scheduled to be seated in the cathedral at 4:15 p.m.

ORDER OF BUSINESS

The minority leader and I have discussed schedules for the next several days. It is our thought that tomorrow ought to be devoted to eulogies by all Members of the Senate who desire to deliver them, but that on Tuesday we will have regular business.

Unanimous-consent agreements have been asked for and granted. As I recall, the Senator from Louisiana (Mr. ELLENDER) asked for 1 hour at the conclusion of morning business on Monday. That time will be taken on Tuesday. According to the secretary for the minority, Mr. Mark Trice, several Republican Senators have made similar requests for Monday, and they will be heard on Tuesday.

Mr. PASTORE. Mr. President, will there be any votes?

Mr. MANSFIELD. There will be no votes that I know of.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. HOLLAND. Will there be any objection to our having committee hearings on Tuesday? I have postponed hearings previously scheduled for tomorrow.

Mr. MANSFIELD. It would be appreciated if no hearings were held tomorrow, Monday; but from Tuesday on, hearings may be held.

EASTER RECESS

Mr. MANSFIELD. Mr. President, the leadership has been discussing the Easter recess, which was planned to expire on April 9. In view of the fact that the calendar is fairly clear and because of our desire not to call the Senate back when there is nothing to be done except to be in attendance, we shall join the House in seeking to adopt a resolution—which no doubt will be agreed to—which will extend the recess to the 14th of April. Senators should keep that in mind and make plans accordingly. We are doing this because the calendar, like Mother Hubbard's cupboard, is bare.

FUNERAL SERVICES

Mr. DIRKSEN. Mr. President, we were in some doubt as to whether an official delegation from the House and Senate should attend the funeral at Abilene, Kans. At the last minute, however, it developed that it was not desired to have the formal attendance of a House dele-

gation, and therefore those concerned were not particularly happy about having a Senate delegation.

There are two reasons for that. There will be an outdoor service on the Eisenhower Library steps. Then a private service will take place in the little chapel. The chapel holds 50 persons. The service will be brief. So the idea of sending a delegation was discouraged. Therefore, there will not be a delegation from the House or the Senate. That, however, does not preclude any individual Member of the Senate who desires to do so from attending the funeral. Moreover, I am advised that Senators probably will not find any accommodations in Abilene, because military personnel from all over the country are already there.

Mr. MANSFIELD. I should think it would be most appropriate for the Senators from Kansas to go, if they desire to do so, because the funeral will take place in their State, and it is personally important to them.

Mr. PEARSON. My colleague from Kansas, Mr. DOLE, and I intend to go.

ADJOURNMENT OF INFORMAL MEETING

Mr. MANSFIELD. Mr. President, as previously ordered, the Senate will meet at 12 o'clock noon tomorrow.

I now move that this informal meeting of Members of the Senate be adjourned. I suggest that the distinguished Senators from Kansas both meet directly behind the President pro tempore of the Senate.

The motion was agreed to; and (at 4 o'clock and 13 minutes p.m.) the informal meeting of the Senate was adjourned.

The Senate proceeded in a body to the rotunda and the bier of the former President of the United States, Dwight David Eisenhower, headed by the President pro tempore of the Senate (Mr. RUSSELL); the Senators from Kansas (Mr. PEARSON and Mr. DOLE); the majority leader (Mr. MANSFIELD); and the minority leader (Mr. DIRKSEN).

PRESIDENT NIXON'S EULOGY TO GENERAL EISENHOWER

We gather today in mourning but also in gratitude. We mourn Dwight Eisenhower's death, but we are grateful for his life. We gather also conscious of the fact that in paying tribute to Dwight Eisenhower we celebrate greatness. When we think of his place in history, we think inevitably of those other giants of World War II. And we think of the qualities of greatness and what his were that made his unique among all.

Once, perhaps without intending to do so, he himself put his finger on it. It was 1945 shortly after V–E Day at a ceremony in London's historic Guildhall. The triumphant Supreme Commander of the Allied Forces in Europe was officially given the freedom of the city of London. In an eloquent address that day, Dwight Eisenhower said:

I come from the heart of America.

Perhaps no one sentence could better sum up what Dwight Eisenhower meant to a whole generation of Americans.

He did come from the heart of America, not only from the geographical heart but from its spiritual heart. He exemplified what millions of parents hoped that their sons would be—strong and courageous and honest and compassionate. And with his own great qualities of heart, he personified the best in America. It is, I think, a special tribute to Dwight Eisenhower that despite all of his honors, despite all of his great deeds and triumphs, we find ourselves today speaking first not of his deeds but of his character.

It was the character of the man—not what he did, but what he was—that so captured the trust and faith and affection of his own people and of the people of the world. Dwight Eisenhower touched something fundamental in America, which only a man of immense force of mind and spirit could have brought so vibrantly alive. He was a product of America's soil and of its ideals, driven by a compulsion to do right and to do well. A man of deep faith who believed in God and trusted in His will. A man who truly loved his country and for whom words like "freedom" and "democracy" were not cliches. But they were living truths. I know Mrs. Eisenhower would permit me to share with you the last words he spoke to her on the day he died. He said:

I've always loved my wife, I've always loved my children, I've always loved my grandchildren and I've always loved my country.

That was Dwight Eisenhower.

A MAN WHO GAVE ENORMOUSLY

He was a man who gave enormously. His way of relaxing from the intense pressures of office or command was to do something else intensely, whether as a fierce competitor on the golf course or executing one of those hauntingly beautiful paintings that he did with such meticulous care.

But even more than this, he gave enormously of himself to people.

People loved Dwight Eisenhower. But the other side of this coin was that he loved people. He had the great leader's capacity to bring out the best in people. He had the great humanist's capacity to inspire people, to cheer them, to give them lift. I remember, for example, just a few months ago when I asked all of the members of the Cabinet to go out and call on him, each of them returned with wonder and admiration and said, "You know, I went out there to cheer him up and instead I found he cheered me up."

His great love of people was rooted in his faith. He had a deep faith in the goodness of God and in the essential goodness of man as a creature of God. This feeling toward people had another side.

In the political world, strong passions are the norm. And all too often these turn toward personal vindictiveness. People often disagreed with Dwight Eisenhower but almost nobody ever hated him. And this I think was because he himself was a man who did not know how to hate. Oh, he could be aroused by a cause. But he could not hate a person. He could disagree strongly, even passionately, but never personally. When people disagreed with him, he never thought of them as enemies. He simply thought, "Well, they don't agree with me." I remember time after time when critics of one sort or another were misrepresenting him or reviling him, he would sit back in his chair with that wonderful half-smile and half-frown, he would say, "I'm puzzled by those fellows." And he was genuinely puzzled by frenzy and by hate and because he was inescapable of it himself, he could never understand it in others.

The last time I saw him, that was what he talked about. He was puzzled by the hatred he had seen in our times. And he said the thing the world needs most today is understanding, an ability to see the other person's point of view. And not to hate him because he disagrees. That was Dwight Eisenhower.

And yet, of course he was more than all that. He had a side more evident to those of us who worked with him than to the rest of the world. He was a strong man, he was shrewd, he was decisive. Time and again, I have seen him make decisions that probably made the difference between war and peace for America and the world. That was always when he was at his best. No matter how heated the arguments were, he was always then the coolest man in the room.

Dwight Eisenhower was that rarest of men, an authentic hero. Wars bring the names of many men into the headlines and of those some few become national or even international heroes. But as the years then pass, their fame goes down. But not so with Dwight Eisenhower. As the years passed, his stature grew. Commander of the mightiest expeditionary force ever assembled, receiver of the surrender of the German armies of World War II, president of Columbia University, supreme commander of NATO, 34th President of the United States, the honors and offices were there in abundance, every trust that the American people had it in their power to bestow he was given.

And yet he always retained a saving humility. His was the humility not of fear but of confidence. He walked with the great of the world and he knew that the great was human. His was the humility of man before God and before the truth. His was the humility of a man too proud to be arrogant.

The pursuit of peace was uppermost of his mind when he ran for the Presidency and it was uppermost in his conduct of that office. And it is a tribute to his skill and determination that not since the 1930's has the Nation enjoyed so long a period of peace, both at home and abroad, as the one that began in 1953 and continued through his Presidency. As commander of the mightiest allied force ever assembled, he was the right man at the right place at the right time. And as President, once again he was the right man at the right place at the right time. He restored calm to a divided Nation. He gave Americans a new measure of self-respect. He invested his office with dignity and respect and trust. He made Americans proud of their President, proud of their country, proud of themselves.

And if we in America were proud of Dwight Eisenhower, it was partly because he made us proud of America. He came from the heart of America and he gave expression of the heart of America

and he touched the hearts of the world. Many leaders are known and respected outside their own country. Very few are loved outside their own country. Dwight Eisenhower was one of those few.

CAPTURED DEEPEST FEELINGS

He was probably loved by more people in more parts of the world than any President America has ever had. He captured the deepest feelings of free men everywhere. The principles he believed in, the ideals he stood for, these were bigger than his own country. Perhaps he himself put it best again in that Guildhall speech in 1945. He said then:

Kinship among nations is not determined in such measurements as proximity, size and age. Rather, we should turn to those inner things, call them what you will, I mean those intangibles that are the treasures that free men possess. To preserve his freedom of worship, his equality before the law, his liberty to speak and act as he sees fit, subject only to provisions that he not trespass upon similar rights of others, a Londoner will fight—and so will a citizen of Abilene. When we consider these things, then the valley of the Thames draws closer to the farms of Kansas and the plains of Texas.

Some men are considered great because they lead great armies, or they lead powerful nations. For 8 years now Dwight Eisenhower has neither commanded an army nor led a nation. And yet he remained to his final days the world's most admired and respected man, truly the first citizen of the world. As we marvel at this, it leads us once again to ponder the mysteries of greatness. Dwight Eisenhower's greatness derived not from his office but from his character, from a unique moral force that transcended national boundaries even as his own deep concern for humanity transcended national boundaries.

HIS LIFE REMINDS US

His life reminds us that there is a moral force in this world more powerful than the might of arms or the wealth of nations. This man who led the most powerful armies that the world has ever seen; this man who led the most powerful nation in the world; this essentially good, and gentle, and kind man; that moral force was his greatness. For a quarter of a century to the very end of his life Dwight Eisenhower exercised a moral authority without parallel in America and in the world. And America and the world are better because of it.

And so today we render our final salute. It is a fond salute to a man we love and cherish. It is a grateful salute to a man whose whole extraordinary life was consecrated to service. It is a profoundly respectful salute to a man larger than life, who by any standards was one of the giants of our times. Each of us here will have a special memory of Dwight Eisenhower. I can see him now standing erect, straight, proud, and tall 16 years ago as he took the oath of office as the 34th President of the United States of America.

We salute Dwight David Eisenhower standing there in our memory—first in war, first in peace, and wherever freedom is cherished, first in the hearts of his fellow men.

BENEDICTION

The Reverend EDWARD L. R. ELSON, Chaplain of the U.S. Senate. Unto God's most gracious care and protection, we commit you.

The Lord bless you and keep you.

The Lord make His face to shine upon you and be gracious unto you, the Lord lift up His countenance upon you and give you peace, now and evermore.

And now may the God of peace who brought again from the dead our Lord Jesus Christ, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work, to do His will, working in you that which is well pleasing in His sight, through Jesus Christ our Lord to whom be glory for ever and ever. Amen.

(This marks the end of the proceedings, of Sunday, March 30, 1969.)

DWIGHT DAVID EISENHOWER—IN MEMORIAM

Mr. MANSFIELD. Mr. President, I send to the desk a resolution and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The resolution will be stated.

The legislative clerk read as follows:

S. RES. 174

Resolved, That the Sergeant at Arms of the Senate is hereby authorized and directed to purchase a floral wreath to be placed by the catafalque bearing the remains of former President of the United States and General of the Army of the United States, Dwight David Eisenhower, while lying in state in the rotunda of the Capitol of the United States, the expenses of which shall be paid from the contingent fund of the Senate.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. 174) was considered and unanimously agreed to.

THE MESSAGE FROM THE PRESIDENT

The VICE PRESIDENT. The Chair lays before the Senate the message from the President of the United States on the death of Dwight David Eisenhower which will be read and laid on the table.

The legislative clerk read as follows:

To the Congress of the United States:

It is my sad duty to inform you officially of the death of Dwight David Eisenhower, the thirty-fourth President of the United States.

We have lost a great leader, a great friend and a great man. I know there are many members of the Congress who had the privilege of serving under his military leadership, and who later, during his eight years, as President, shared with him in the building of a better America. He had a profound respect for the traditions, the institutions and the instruments of our nation. He leaves to the Congress and to all Americans the spirit of patriotism and statesmanship beyond party which marked his entire career. As we grieve at his death, we all will recall that spirit, which can guide and sustain us in our tasks ahead. He has been an inspiration to us all, and ours is a better government because he walked among us.

RICHARD NIXON.

THE WHITE HOUSE, *March 28, 1969.*

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, communicated to the Senate the intelligence of the death of General of the Army Dwight David Eisenhower, beloved former President of the United States of America. The message, ordered to be laid on the table, is as follows:

H. RES. 351

Resolved, That the House of Representatives had learned with profound regret and sorrow of the death of General of the Army Dwight David Eisenhower, beloved former President of the United States of America.

Resolved, That in recognition of the many virtues, public and private, of the illustrious soldier and statesman, and as a mark of respect to one who has held such eminent public stations, the Speaker shall appoint a committee of the House to join with such Members of the Senate as may be designated, to attend the funeral services of the former President.

Resolved, That the House tenders its deep sympathy to the members of the family of the former President in their sad bereavement.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy of the same to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the former President, this House do now adjourn.

A RESOLUTION

Mr. PEARSON. Mr. President, on behalf of myself and the distinguished junior Senator from Kansas (Mr. DOLE), I send to the desk Senate Resolution 175 and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The resolution will be stated.

The legislative clerk read as follows:

S. RES. 175

Resolved, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Dwight David Eisenhower, a former President of the United States and General of the Army of the United States.

Resolved, That as a token of honor to his illustrious statesmanship, his leadership in national and world affairs, his distinguished public service to his nation, and as a mark of respect to one who has held such eminent public station in life, the Senate hereby expresses its deep sensibility of the loss the nation has sustained by his death, and its sympathy with the family in their bereavement.

Resolved, That the two Senators from Kansas be appointed by the President of the Senate to attend the funeral of the deceased, to be held at Abilene, Kansas.

Resolved, That the Secretary of the Sen-

ate transmit these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the deceased the Senate do now adjourn.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. PEARSON. Mr. President, when the inevitable and expected word came, I believe that all of us thought of the life rather than the death of Dwight David Eisenhower.

As a soldier, as a President, and as a citizen, he constantly occupied a great place. Solomon said, "The place showeth the man." And the great places that Eisenhower held, by offer of a free people, did indeed show the man. It revealed that he understood that the high ground of command was useless unless it represented the power to do good. The places he held persuaded him that progress was essential and that good thoughts are no more than good dreams unless action follows.

As a soldier, he believed in peace.

As a President, he gave confidence and stability and a calmness to our people to the end that our acts were brighter and our institutions stronger. Somehow, Eisenhower, befuddled by the world of politics, found strength and truth that the career practitioners of government never learn nor understand.

And now, in his last years as a citizen, he served as an example of what is great in our people and good in our time. One example we might find of greatest comfort is that he was proof once again that in a free society difficult events and hard circumstances will produce the right man at the right time.

Abraham Lincoln once said:

If I went West, I think I would go to Kansas.

Ike now goes west to Kansas, from whence he came, and to the rewards that God assures all mankind.

THE PEACEMAKER

Mr. DOLE. Mr. President, today the world mourns Dwight David Eisenhower, and while there is a sense of profound loss, there is not despair. After a full life of service, his memory is unquestionably forever secure in the affections of his fellow men everywhere. He was truly a leader of men and of nations in war and in peace.

His dreams as a boy in Abilene, Kans., could never have envisioned the heights he was to scale in his lifetime From a family of humble origins in the heartland of America, General Eisenhower rose to command successfully the largest military force ever assembled.

The honesty and sincerity so characteristic of this man throughout his life can be traced to the spiritual heritage of his ancestors and strong guidance from his mother. His broad grin and good humor that reflected these qualities made him a popular idol and were part of his magic. Wherever seen throughout the world, people reacted to the special qualities exuded by this man. Winston Churchill understood these qualities and once commented that Ike "was a great commander, who not only can lead an army, but can stir men's hearts."

The contributions made by General Eisenhower are legend. His success in time of war marked him as a great leader of men. Thereafter his unparalleled success in politics underscored the respect and confidence he enjoyed in America.

It is only natural that those of us from Kansas have always exhibited special pride in General Eisenhower, for as President Nixon so eloquently stated yesterday, General Eisenhower "did come from the heart of America—the geographical and spiritual heart."

General Eisenhower once said:

I come from the people, the ordinary people.

Kansas are proud to be termed ordinary people and especially proud and honored that the people from whence he came were Kansas people.

His great triumphs and deeds were always marked by the extra dimensions of his personality, his character, and his humanity.

On behalf of all Kansans, I proudly salute General Eisenhower as we pause to commemorate his greatness.

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the RECORD a list of 23 accomplishments which former President Eisenhower thought were most significant in his term, and also a prayer for a friend which President Eisenhower read at Morningside Heights, N.Y., on the morning of his election day which I had prepared for him the night before.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A PRAYER FOR A FRIEND

(By HUGH SCOTT)

Dear God, in all things Thy will be done. If it please Thee that Thou shalt give to us the victory, help him to judge that which is surely good, to turn aside from all unworthiness.

Help him to share and to hold that faith shown bright in the eyes of the little children along the many places of his going.

Help him to follow after the ways that lead to peace, that by Thy grace the sounds of battle may be stilled, our sons returned to field or marketplace.

Help him, by high example, to bring our people together in friendly amity and tolerant accord that each may, in his own fashion, freely enjoy the fruits of a peaceful, happy land.

Help him, above all, O Lord, to be himself. Amen.

(Prepared on election eve in November 1952 and read by General Eisenhower on the morning of election day while standing by the fireside mantel in his home in Morningside Heights in New York City.)

[From the Philadelphia Inquirer, Mar. 31, 1969]

EISENHOWER LISTED 23 TOP ACCOMPLISHMENTS IN 8 YEARS AS PRESIDENT

WASHINGTON, March 30.—In a heretofore unpublicized letter, Gen. Dwight D. Eisenhower listed the end of the Korean War, the first civil rights law in 80 years and 21 other events as principal accomplishments of his Administration.

And he wrote critically of those who take deportment and words rather than achievements as the measure of people in responsible positions.

The letter was written Oct. 18, 1966, from Eisenhower's Gettysburg, Pa., farm to James C. Hagerty, press secretary during the Eisenhower presidency.

Hagerty read it Sunday on television during coverage of memorial ceremonies for Gen. Eisenhower, who died Friday. Hagerty is an ABC executive.

In the letter, Eisenhower said: "A few days ago when asked for a list of accomplishments of the Republican Administration I dashed these off from the 'top of my head' along with a few comments."

The list:

Statehood of Alaska and Hawaii.

Building of St. Lawrence Seaway.

End of Korean War; thereafter no American killed in combat.

Largest reduction of taxes to that time.

First civil rights law in 80 years.

Prevention of Communistic efforts to dominate Iran, Guatemala, Lebanon, Taiwan, South Vietnam.

Reorganization of the Defense Department.

Initiation, and great progress in, most ambitious road program by any nation in all history.

Slowing up and practical elimination of inflation.

Initiation of space program with successful orbit in less than three years, starting from scratch.

Initiating a strong ballistic missile program.

Conceiving and building the Polaris program, with ships operating at sea within a single administration.

Starting federal Medical Care for the aged (Kerr-Mills).

Desegregation in Washington, D.C., and Armed Forces even without laws.

Fighting for responsible fiscal and financial policies throughout eight years.

Extension of OASI (Social Security) coverage to over 10 million persons.

Intelligent application of federal aid to education (Defense Education Bill).

Preservation, for the first time in American history, of adequate military establishment after cessation of war.

Using federal power to enforce orders of a federal court in Arkansas, with no loss of life (Little Rock school crisis).

Good will journeys to more than score of nations in Europe, Asia, Africa, South Africa and in the Pacific.

Establishment of the Department of Health, Education and Welfare.

Initiation of plan for social progress in Latin America after obtaining necessary authorization from Congress for $500 million—later called Alliance for Progress.

Atoms for Peace proposal.

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President, I ask unanimous consent that Senators may have 21 days to include in the RECORD their remarks on the death of Dwight D. Eisenhower, and that remarks at the desk prepared by Senators who are absent be printed in the RECORD as if delivered.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, to all that is mortal comes the day of dissolution. What comfort there is in the fact that to the moment when the shadow of death hovered over him, he was lucid, peaceful, and ready. What counts now is the lesson of his life.

We refer to Washington as the Father of our Country. Eisenhower was a father to the country. He came at a time when concern and ferment were everywhere. He came when an uneasy Nation needed

him. In his touch was that magic balm to dissipate fear, to restore confidence, and to set the Nation on the high road again.

What words or what phrase best describes his impact on the people? I would have to say from my friendship with him that it was the "wholesome touch." Perhaps there are times when a Nation needs brilliance in diplomacy, skill in administration, in-depth background on legislative needs. But there are also times when a Nation needs an abiding father with the wholesome approach of a national leader, and this is precisely what he brought when it was needed.

Years ago, a Senator said to me:

If there were no third-term limit, Eisenhower could be elected and reelected as long as he lived, because people believe in him.

To that I replied:

And because he believes in people.

Prior to World War II, he might have been considered just another among many officers in the U.S. Army. But there was a difference. He did his homework and he did it well. And when the time came to find a grand captain for the vast and serious task which confronted the world, he was ready. The military hierarchy, whose task it was to find an outstanding planner and tactician, made no mistake.

First, he became the commander in chief of the U.S. forces in Europe. Later he became commander in chief of the Allied forces in Africa. Later he became supreme commander of the Allied Expeditionary Forces.

It was all done with so little personal publicity. It was done without propaganda. It was not glory but victory that he sought.

How comparatively little we heard about his rescue of Africa from British disaster. How little we heard about his healing touch in dissipating the fear and gloom in Britain after the tragic retreat to Dunkirk. Only when he mounted the grand assault from the beaches of Normandy did we hear much of him. Eleven months later the enemy surrendered.

I was privileged to be present at the Thanksgiving service in Rheims, France. It was the day after victory. I saw him there. But I also saw something else—humble people, kneeling in church, expressing their gratitude for victory and their appreciation for his service and leadership.

It was not so strange that a grateful people in this land should turn to him in time of peace for guidance and leadership. They felt that one who could meet the challenge of Hitler could also meet the challenges and complexities of the postwar period. So from supreme commander he became President and Commander in Chief of the Armed Forces of the United States. It was not so much some vast, undisclosed, administrative talent which endeared him to the people, but the rightness of his outlook, his humane views, his compassionate heart, and his dedication to the cause of peace.

In his day, many things were contrived to serve the cause of continuing peace. The North Atlantic Treaty Organization came into being. The U.S. Information Agency was created. The Southeast Asia Treaty Organization was ratified. An International Finance Corporation was created. An International Atomic Energy Agency was approved. A U.S. Development Loan Fund was established. A mutual security pact with Japan was consummated. There were many others—all of them designed to serve the cause of peace.

As this effort to serve the cause of peace and understanding continued, he was always mindful of the inescapable fact that to give effective leadership to the free world we ourselves must always be strong and secure. There were many things to attest that fact.

The first nuclear submarine was approved. The U.S. Air Force Academy was established. The National Aeronautics and Space Administration was created. The Defense Reorganization Act came into being. The National Defense Education Act was consummated. These and others were designed to maintain a military posture which would command respect.

But even as he sought to serve the cause of peace and security, he was equally mindful of the needs of the Nation at home. The Department of Health, Education, and Welfare was established, the better to coordinate the services of the Federal Government in this field. Social security benefits were broadened. The research and assistance program on air pollution was enacted. The minimum wage increase was approved. The Interstate Highway Act came into being. The basic Civil Rights Act—the first in more than 80 years—was consummated. There were so many others, including medical care for the aged, small business investment, poultry products inspection, library service, water facilities, the disposal of surplus agricultural commodities, return to the States of their rights to submerged lands, the Korean GI bill of rights, and the Great Plains program.

This—all this—is a monument to the universality of mind and heart and spirit of one who in our time achieved greatness without losing his humility, who was loyally served because he was esteemed, and who found a place deep in the throbbing hearts of Americans and the world because they loved him.

A TRIBUTE FROM MEXICO

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram received from the Honorable Luis M. Farias, President, Gran Commission of the Congress of the United Mexican States.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

GRAN COMMISSION OF THE CONGRESS OF THE UNITED MEXICAN STATES

Mexico City, Mexico, March 29, 1969.

Senator MIKE MANSFIELD,
Majority Leader, U.S. Senate, Capitol Hill, Washington, D.C.

DEAR MIKE: Once more I must address you in mourning. A great American has died leaving a feeling of emtpiness. Courageous in war, firm in his handling of public affairs, full of warmth in personal relations, Dwight D. Eisenhower left many friends in all corners of the world. To my country he always showed his fondness. Please accept my condolences.

HON. LUIS M. FARIAS,
President.

DWIGHT DAVID EISENHOWER

Mr. MANSFIELD. Mr. President, we were a nation at war; Dwight David Eisenhower, general, did much to end it.

We were of an Atlantic community on the verge of a second great war; Dwight David Eisenhower, Supreme Commander, NATO, did much to prevent it.

We were a people torn by political dissension and ideological confusion; Dwight D. Eisenhower, President, did much to calm it.

We were of a world divided by ideology into hostile camps; Dwight D. Eisenhower, statesman, threw across the chasm the lines of human contact.

This man entered into the service of his country as a young lieutenant of the armies; he left its service as President of the United States. Until his death, his counsel remained at the call of his successors; it was sought, in turn, by President Kennedy, President Johnson, and President Nixon.

Why is it that the trust which he had from friends in his earliest years enlarged into a trust of countless millions in this country and throughout the world? Was it because Dwight D. Eisenhower was a friendly man, warm with the strengths and weaknesses of his humanity? Was it because he was a wise man with a folk wisdom of rural America, enriched by an ever-widening experience in the affairs of the Nation and the world? Was it because he was a dependable man, with a determined but dogmatic-free dedication to his duties, his country, and the ideals of freedom?

It was for all these reasons and more that Dwight D. Eisenhower was trusted. He was trusted, in the end, because he was the personification of a trusted America. He incarnated America's revulsion with the Nazi-racism of his era and America's compassion for all those who suffered under its ruthless political-militarism. He expressed America's simple hope for a world of peace and order. His smile spoke vividly of America's friendship for all peoples.

The era which he personified is gone; Dwight D. Eisenhower is gone. Yet, they are not gone. They are tied together—the man and his times. Together, they are woven into the Nation's continuing effort to give full meaning to the Constitution's promise for all citizens. Together, they are forever a part of the world's search for a peaceful order of life for all peoples.

Dwight D. Eisenhower, 1890–1969, boy from Abilene, soldier, general, President, and before all else, decent American.

Mr. JAVITS. Mr. President, I rise today to pay tribute to Gen. Dwight D. Eisenhower whom I knew well before he had achieved the rank of general and long before he sought the Presidency. I met him when he was G–5 at the Pentagon in 1941, when I first came to Washington and became a civilian aide to the Chief of the Chemical Warfare Service.

I had occasion to see the general in that service before Pearl Harbor and then had occasion to serve under him

when he was in command in the European Theater both in the United Kingdom and in Algiers, North Africa.

After the war, I had the privilege, I think, of being among the first to suggest that he should seek the Presidency in 1948. I then joined with 18 or 19 other Members of the House, at the end of 1951, in urging him to stand for the Presidency as the nominee of the Republican Party. Then, of course, I had the great privilege of working for his election in 1952 and in running with him in 1956 when I first sought election to the Senate from New York.

Over the years I have seen a great deal of General Eisenhower. I saw him, of course, while he was President. Thereafter, as he gradually withdrew from activities, I saw him again in Palm Springs, Calif., and at Gettysburg, Pa.

Dwight D. Eisenhower was one of America's really genuine heroes in the eyes of its people. As so many have said—and as President Nixon said so beautifully yesterday—he was a man of tremendous warmth and sentiment, a very personable man, one with a great sense of humor, deep feeling, and passionate conviction. He could get very angry, but anger never controlled his actions. He could be the warmest, the dearest, the most special human being on earth. Just to see him with Mamie in his later years would make anyone understand that.

I heard stories from a wide range of individuals—from the generals who served under him, like Al Gruenther, and the dressmakers who served Mamie, like those in New York—which proved that to them he was, uniformly, the greatest human being.

Our Nation and the world have lost a great leader in war and a great champion of peace. For Dwight D. Eisenhower was that rare military captain who genuinely renounced the very calling which put him among the historic greats.

Dwight David Eisenhower was one of the greatest friends the people of the world ever had. A commanding personality, he inspired trust and confidence through his warmth, compassion, and simple lack of pretension. These unique qualities of leadership enabled him to bring together the clashing interests of many nations into the greatest wartime alliance in Western civilization. He, as much as any man in history, represented the aspirations of free people the world over to defeat tyranny and maintain peace through the collective strength of the free.

Mr. President, the evaluations of history are always interesting, especially for one, like myself, who has lived with a man—as so many others have—like Dwight D. Eisenhower. I had the rather interesting opportunity to try that out. The New York Times' Sunday magazine, some years ago, published an interesting and informative piece evaluating Presidents, and where they stood in the hierarchy of greatness in the eyes of their countrymen. They did not rate President Eisenhower very high. They put others ahead of him.

I protested that. The general got a great kick out of my protest. The New York Times printed my letter in which I stated that I thought he was a great President. Mr. President, I ask unanimous consent that that letter be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, greatness consists not only of great achievements—and I think it is only fair to say that Dwight Eisenhower's greatest achievement was in leading the forces of victory in World War II—but also lies in the good sense and the wit, even the brilliance, not to do some things, to keep the Nation from doing them.

I think that General Eisenhower could just as easily have gotten into the Vietnam trap as his successors, but he did not. I think that it was just as hard to make peace in Korea as it will prove to be in Vietnam; but he managed to carry it off. It took a very long time to do so. It posed great difficulties.

Dwight D. Eisenhower was the first President of my party since 1932 after 20 years out of power. It would have been possible for President Eisenhower to pursue a negative course. The party had been in opposition for a very long time, under a conservative, perhaps an isolationist influence. He did not pursue that course. On the contrary.

Although I had many differences with him, especially in the field of civil rights and economics, he brought the Republican Party into the mainstream of modern American political thought. Even in such areas as health, it is too often forgotten that President Eisenhower's administration produced the first medical care plan which had really seriously been put before Congress. It was defeated in the other body, where I was serving at that time; but, nonetheless, President Eisenhower's administration produced it. And so with a whole host of other developments. The Republican tradition on civil rights was extended by the first breakthrough on civil rights legislation since Reconstruction days, desegregation in the District of Columbia, and the will to use Federal troops in order to sustain Federal safeguards for the individual American.

But above all, President Eisenhower made his greatest contribution in foreign policy, confirming and extending America's role as a world power concerned with the development of free societies everywhere, but ever cautious to avoid precipitating a conflict in such troubled areas as Berlin and Vietnam. As historian Henry Steele Commager has written:

> History will accord Eisenhower a major part of the credit for the generosity and maturity with which the United States accepted and discharged her obligations during the Fifties; it will accord him credit for preventing the Republican Party—and perhaps the country—from going down the dusty road to a sterile isolationism at a crucial moment in history.

Thus, Mr. President, I rise to join the leadership and my colleagues in paying tribute to a great, a warm, and a happy American.

Interestingly enough, because of his temperament, his tremendous optimism, and his unflagging will to live, I think that he will be an inspiration to our youth, in spite of their changing and rather restless character. Those of us who remember him as the immensely popular wartime commander and peacetime Chief Executive will always think of him as a great champion of peace. He knew war well but renounced it. We all know of his "open skies" proposal and his goals in disarmament and arms control, and we hope that they will guide our own actions today.

For Mrs. Javits and myself I extend our warmest sympathies to Mamie Eisenhower, whom we both know, and to John and his children, whom the President loved so much. The comfort of that family is in the fact that Dwight Eisenhower was a man who kept the light of faith in America's traditions and institutions more brightly and inspiringly lit than any other man in modern history. He will always remain a beautiful, inspiring, warm figure for that reason, as well as a most pleasant memory in my heart and the hearts of a whole host of Americans who, like myself, had the privilege of warm personal contact with him.

EXHIBIT 1

EISENHOWER GREAT

To the EDITOR:

With reference to your article by Arthur M. Schlesinger, "Our Presidents: A Rating by 75 Historians" (July 29), I have no desire to quarrel with such an eminent group but I found their evaluation of Dwight D. Eisenhower as an "average" President extraordinary.

Perhaps Professor Schlesinger did, too, for he found it necessary to at least offer a defense for their surprising evaluation: "* * * Eisenhower, the most recent, and consequently, the hardest of the Presidents to evaluate. * * *"

I believe that as history is evaluated in the perspective of time even this same group of historians would come to agree that President Eisenhower deserves the label of "great" for his achievements in the cause of peace (Korea, United Nations, Middle East, etc.); for his impact on the course of the Republican Party (decisively putting it on the road in favor of a reasonable Government role in the country's welfare and preventing a resurgence of isolationism); and for giving the nation an unparalleled sense of moral dedication and unity when it was most needed.

JACOB K. JAVITS,
U.S. Senate.

WASHINGTON, D.C.

DWIGHT DAVID EISENHOWER: A GOOD MAN

Mr. PERCY. Mr. President, Dwight David Eisenhower was a good man. A military strategist, a statesman, leader of his political party, a humanitarian, an educator—all of these accomplishments marked his fruitful life. But ask the average citizen of the world how he would describe Dwight David Eisenhower in a few words and chances are he would simply say: "He was a good man."

How many leaders of men would qualify for such a description? He achieved great power without ever really grasping for it. He was disappointed when friends disagreed with him but he never personalized opposition. His temper flared on occasion, but his aim was only to assure excellence.

The "man from Abilene" probably was

liked by a broader cross section of Americans than any other public figure of his times and this in fact served as the basis of his wide appeal. It was his inner spiritual force that caused his outward radiation of goodness and charm and gained him acceptance at home and abroad as a man of profound good will. He always preferred to conciliate opposing points of view rather than to demand strict obedience to his orders. And his manifest sincerity disarmed even those who opposed him.

As a friend of both generals and captains of industry, he left as his legacy a warning of the dangers inherent in the military-industrial complex. As a military man, he desired above all else and worked without cessation for one goal—a lasting peace in his time.

In fact, the choice of every means, the foundation of every decision made by Dwight Eisenhower during his long service to our country, has been a judgment whether the cause of peace would thereby be served. Several years ago, looking back on his career, Dwight Eisenhower said that he regarded the greatest achievement in which he had participated to have been the defeat of Nazi Germany only 11 months after the Normandy invasion and an 8-year Presidency without war. Typically, he felt his greatest disappointment was our inability to bring about a lasting accord with the Soviet Union, for he had hoped the years of his Presidency would bring us to a place where we could say that a just and permanent peace was in sight.

The affection for him knows no boundaries among men. His appeal is universal and his lifetime of service to his fellow man had some impact on virtually every person on the face of the globe.

Dwight David Eisenhower marched through the history of his times with other great men—Franklin D. Roosevelt, Harry S. Truman, Sir Winston Churchill, George C. Marshall, Douglas MacArthur, Charles de Gaulle, and all of the others in the world's capitals and on its battlefields. And his warmth as a man, let alone his military and diplomatic skills, was the equal of any of his contemporaries and superior to most.

Let us not forget on this day what Dwight Eisenhower said to us at the end of his 8 years in the White House:

> To all of the peoples of the world I once more give expression to America's prayerful and continuing aspiration. We pray that peoples of all faiths, all races, all nations may have their great human needs satisfied; that those now denied opportunity shall come to enjoy it to the full; that all who yearn for freedom may experience its spiritual blessings; that all who are insensitive to the needs of others will learn charity; that the scourges of poverty, disease, and ignorance will be made to disappear from the earth; and that, in the goodness of time, all peoples will come to live together in a peace guaranteed by the binding force of mutual respect and love.

Today, leaders of the world have come to Washington to pay tribute to our 34th President. We are grateful for their display of affection and high regard for this truly great man. But the eulogy that would have meant most to him, however, would not come from such great figures, but from that citizen of the world whose simple but profound tribute today would be: "Dwight David Eisenhower was a good man."

Just before he died, Dwight Eisenhower said that he had always loved his wife, his children, his grandchildren, and his country.

I should like to express the deepest sorrow to Mamie Eisenhower, who had stood by his side for so many years, and who, in recent months, had borne the greatest part of the burden of the Nation and the world as the general's health failed. Her accomplishments, her dignity, and her greatness in what she had contributed to him through his lifetime should never be underestimated.

A very special relationship also existed between Dwight Eisenhower and his brother Milton. Often, during the course of his Presidency, he told me that Milton Eisenhower should have really been President. That showed the respect he had for his brother, to whom he turned many times for guidance and judgment.

Though he had a great respect for all the members of his family, there was a very special affection between Dwight Eisenhower and his brother Milton. I think every Member of this body would recognize the wonderful relationship those two men had.

So I extend particularly to my friend Milton Eisenhower my deep sorrow, but also a sense of gratitude in knowing how much he had been able to contribute to his brother.

On this day, when we join with his family in mourning their loss, we can say that his family, his friends, and his country will always love Dwight Eisenhower.

Mr. SPARKMAN. Mr. President, I join Senators in paying tribute to Dwight David Eisenhower. I first met General Eisenhower during the maneuvers in the Carolinas in the days before we became involved in the Second World War. Then I visited his headquarters in Belgium during the war. I visited him in Paris when he was in command of the newly established NATO forces. And, of course, I knew him here at home.

Dwight D. Eisenhower was an unusual person. To my way of thinking, he is one of the really great men of America. He had unusually great achievements in the military service, both as commanding officer of the Allied forces during the great crusade in Europe—a successful crusade, a crusade that was a victory not only for our country but for many of the countries that had been overrun and for many of the countries that had little hope of ever attaining freedom—and as Chief of Staff of the Army, after his assignment was over in the expeditions in Europe.

Then he became commander of the first NATO forces in Europe; and I think to him must go a great deal of credit for welding together the forces of the different countries participating in NATO.

Finally in that connection, I saw General Montgomery, on television, make a short statement in which he paid tribute to General Eisenhower. In spite of the differences that they sometimes had and the difficulties that they encountered in working together, he paid high tribute to General Eisenhower for the masterly job that he did in welding together the forces of the various countries in the Allied effort during World War II.

I was impressed by a statement that I heard made on TV last night when the representative of the Tunisian Government came to the microphones at Dulles Airport. He said that Tunis and all Tunisians were grateful to President Eisenhower because he had brought freedom to their country; and he said that, as a matter of fact, every freedom-loving person in the world owed a debt of gratitude to Dwight D. Eisenhower, because he had opened up so many countries that had little hope prior thereto.

President Eisenhower, after completing his service as head of the NATO forces, became President of the United States. I have said, in answer to questions put to me with reference to the 1952 campaign, that I felt that President Eisenhower was destined almost from the time he was nominated to be elected President, and that I believed it was because of the great, warm place that he had in the hearts of Americans, particularly the parents of American boys whom he had commanded in the crusade in Europe.

President Nixon, yesterday, in paying his eulogy to President Eisenhower, referred to something that was first said of President Washington—and, you know, when we think of the two, there are many similarities that can be drawn. He said that Dwight D. Eisenhower occupied the unusual place of being first in war, first in peace, and first in the hearts of the freedom-loving people all over the world for whom he had done so much.

I think that was a very fitting statement regarding President Eisenhower. I join with those who say that he was a man of great kindness, gentleness, and firmness in his convictions. He was a man of big heart, whom the American people came to love and whom, with hearts full of gratitude, they will always remember.

Mr. WILLIAMS of Delaware. Mr. President, I join my fellow Senators in paying my respects to General Eisenhower and to the members of his family.

Volumes have been and will continue to be written about the achievements of this great American, Dwight David Eisenhower, but if it were all to be summed up in just a few words it would be to say: "General Eisenhower was a good man, a man of integrity, a man dedicated to the cause of peace, and one who took great pride in serving his country and his fellow man."

With his passing, free men everywhere have lost a good friend, but we can take comfort in the knowledge that our country and the world are better places in which to live as the result of his life.

Mr. KENNEDY. Mr. President, it is a very solemn occasion we observe today, as the Nation prepares to bury one of the outstanding citizens of this century, General of the Army Dwight David Eisenhower. It is fitting that every one of us pay tribute to him; for in thinking back over his remarkable life and reflecting upon his personal qualities, there is much we can learn as well as admire.

I believe that the words of a distinguished Senator from Massachusetts, Henry Cabot Lodge, Sr., spoken about Theodore Roosevelt, can be said as well of Dwight Eisenhower:

> He was a great patriot, a great man; above all a great American. His country was the ruling mastering passion of his life from the beginning even unto the end.

General Eisenhower first became known to the American people when he was named Supreme Allied Commander in the European Theater in World War II. For those any younger than myself it is almost impossible to recreate the tension and the drama of those days. World War II was perhaps the last time when the unity of this Nation was complete and the private interests of our citizens subordinate to an overriding national cause. Many of us lost brothers, sons, and fathers in that war. But no one had any doubt about why these sacrifices had to be made. As the ships set out across the English Channel, bearing with them the hopes of free civilization; and as the President of the United States raised a simple prayer for their success to Almighty God, the Nation knew that the responsibility for developing and coordinating and seeing through what still stands as the most massive and difficult military operation in the history of the world, was in the hands of one man—Dwight Eisenhower.

What he did in those years made him a hero to all Americans and a liberator to many of the nations of the world. This gave him the overriding respect and popularity that allowed him to be a force for peace and world leadership.

General Eisenhower was a career soldier. He embodied the best qualities of the military as those qualities are expressed in the motto of the West Point he loved so much—in the words "duty, honor, country."

It is said that Americans neglect their military in times of peace and rush for its protection in time of danger. Watching the change from what the Armed Forces were in 1939 to what they became in 1942, General Eisenhower could certainly see merit in that view. But he believed—and he made it very clear in his actions and statements as President—that the Armed Forces, just as the executive and legislative branches of the Government, are servants of the people and that their preparations and activities must stay within the confines of public policy, even if that policy later turns out to be wrong. This is their duty to their country and it is what distinguishes a nation directed by its people from a people directed by their state.

As President of the United States for 8 years, General Eisenhower made significant accomplishments. He was the American President who negotiated an end to a war without insisting on capitulation. He made the first approaches toward a reduction of tension between the United States and the Soviet Union through his atoms-for-peace proposal. He created the first program for economic aid to Latin America. On major foreign policy decisions, like the reaction to the French defeat in Indochina and the military action in Suez, he exercised a wholesome restraint on our use of power.

Here at home he was the first President forced to use the power of the Federal Government to enforce the law of the land on equal opportunity in education, and he was instrumental in bringing about the acceptance by all political parties of the most basic domestic reforms accomplished since 1933. But in many ways his major accomplishment was that he helped to unify the United States and helped to calm it after a period of intense domestic conflict and bitterness. He led us through a useful period of tranquillity in which we prepared for new assaults upon our country's problems.

Many look back upon the Eisenhower years as a period of calm that will never again be with us. Perhaps, as Abraham Lincoln said:

> The dogmas of the quiet past are not adequate for the stormy present.

But certainly the qualities of personality that Dwight Eisenhower had—which had so much to do with his success—his religious faith, his humility and his candor, his ability to bring men together—certainly these examples can help us in the stormy present. And as Ralph Waldo Emerson said of Abraham Lincoln:

> His heart was as great as the world, there was no room in it to hold the memory of the wrongs.

And of course, Dwight Eisenhower's great personal courage in the face of declining health in the last few years stands as a great testimony to all his personal qualities—all of his courage.

It is in reflecting on these qualities, as well as on his life, that every American, on this solemn day of memory and prayer, can draw strength and hope from the life and example of Dwight David Eisenhower for the future.

Mr. BAKER. Mr. President, today I sadly join the millions of mourners throughout the world who are paying tribute to the memory of Dwight D. Eisenhower.

From out of the volumes that have been written and from the new comments that are sure to be made, one single thread in the life of Dwight Eisenhower seems to me to have endured beyond all the other outstanding characteristics of this great man: That was his continuing contribution to world peace.

Many men have sought this elusive goal, but few have added so much to this massive effort that has consumed the talents and energies of so many over the ages.

I hope these remarks are free of vanity or are not too highly personalized—they are meant to be neither—when I point out that my generation is uniquely a product of the Eisenhower age.

I entered the Navy in World War II at the age of 17, in the midst of General Eisenhower's preparations for ultimate victory in Europe. I returned from the service to enter law school in the midst of the Korean war. Then followed his election to the Presidency and the end of the Korean hostilities.

My beginning years as a practicing lawyer were during the stability of the Eisenhower administration, and the focus of much of my effort and attention since coming to the U.S. Senate has been an effort to implement the Eisenhower-Strauss plan for a series of nuclear desalting plants to reach the root causes of conflict in the strife-torn Middle East.

I recall with pride and satisfaction my conversations with the former President Eisenhower, at his office at Gettysburg, about the philosophy and form of his grand proposal for the Middle East and his counsel and advice on measures calculated to bring about its implementation.

My store of experience and knowledge is richer, as is the country's and the world's, for the talents and the time of Dwight David Eisenhower.

Mr. President, I extend my heartfelt sympathy and condolences to Mrs. Eisenhower and her family on my own behalf, on behalf of my wife, and on behalf of my mother, who served in Congress and was a friend of the Eisenhower family.

Mr. BYRD of Virginia. Mr. President, Dwight David Eisenhower's great strength as a leader was that the people had confidence in him.

He was trusted by the people of the United States as few men ever have been.

Virginia lays claim to a special relationship to Dwight Eisenhower. His mother, Ida Stover, was born and reared in Augusta County, about 10 miles south of Harrisonburg. It is interesting to note in passing that Abraham Lincoln's father was born about 10 miles north of Harrisonburg, in Rockingham County.

Ida Stover was born 107 years ago in a small white frame farm house near Fort Defiance, Augusta County. She lived the first 21 years of her life in that area. It was after the death of her parents that she went West and was one of the first women admitted to Lane College, Lecompton, Kans. It was there that she meet David Eisenhower, the general's father.

General Eisenhower was proud of his mother having been a Virginian. Addressing the Virginia Legislature in 1946, he opened his brief remarks with these words:

> It is one of the high honors of my life to return to a joint meeting of the Legislature of the State in which my mother was born and reared.

Virginians responded with affection to Dwight David Eisenhower. He was enormously popular in our State.

In the summer of 1948, the Democratic State convention called on General Eisenhower to seek the Democratic nomination for President—and the State convention pledged to the general its delegates' support at the Democratic National Convention to be held in Philadelphia.

Four years later, when Dwight Eisenhower was the presidential nominee of the Republican Party, he carried Virginia handily, and 4 years later increased his majority.

While he became the supreme commander of the greatest army in the history of the world and later President of the United States, the most powerful position in the world, he remained to

the end the same approachable, lovable "Ike."

Freeman Gosden, a native of Richmond, Va., who reached fame and fortune in California and was a neighbor and constant companion to General Eisenhower in Palm Springs, Calif., during recent years, gave me, last night, this interesting insight into the late President.

The former President, said Mr. Gosden, liked to shop in the supermarkets. Frequently he would gather his golfing companions, Mr. Gosden, Mr. George Allen, and sometimes Mr. Randolph Scott—who has many family connections in Jefferson County, W. Va.—and would go to the local market to buy groceries. He would pick out a cart, push it himself, make his purchases and instruct the butcher how to cut the beef. When he would be recognized and spoken to, he always would take off his hat with a bow to the lady speaking to him.

Yes; Dwight David Eisenhower walked with kings, but he never lost the common touch.

On Saturday, March 29, 1969, the Richmond Times-Dispatch published an editorial captioned: "Dwight David Eisenhower: A Greatly Beloved Leader." It was written by the longtime editor of the Times-Dispatch, now retired, Virginius Dabney.

It is so beautifully written, and it captures so well the spirit of our late President, that I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DWIGHT DAVID EISENHOWER: A GREATLY BELOVED LEADER

The world's most beloved man is dead. DWIGHT D. EISENHOWER was not the most brilliant man of his time or the most erudite or the most widely read. But he had a personality which inspired affection throughout the globe. Wherever he went in the years after World War II, cries of "Ike" resounded on every hand, and signs bearing the words "We Like IKE" were widely displayed.

It was the affection and trust which he inspired, no less than the admiration, which made him an unbeatable Republican candidate for president in 1952 and 1956. The Democrats had been in power for 20 years, and they seemed destined to stay there for 20 more when GENERAL EISENHOWER was persuaded to become a candidate.

His two terms gave the country a period of stability and orderly progress, free from wars and riots, which were in happy contrast to the hectic era in which we find ourselves today. So-called intellectuals were never happier than when ridiculing PRESIDENT EISENHOWER—for his sometimes confused sentences at press conferences, his fondness for golf, and so on. But he gave the United States a welcome interlude from hopelessly unbalanced budgets and colossal and continuing deficit spending, from grafting "five percenters" and other chiselers, from perpetual catering to this or that bloc of voters.

HE CRUSHED HITLER

GENERAL EISENHOWER'S career in World War II made him one of the great military figures in American annals. His role as supreme commander of Allied forces in Europe imposed upon him the duty of deciding when to invade HITLER'S "Festung Europa," in the face of German mines, bombs, shells, and machine guns.

Storms along the English Channel in early June, 1944, made the invasion potentially disastrous. But GENERAL EISENHOWER got all the expert advice he could from every quarter, and then he alone decided, despite the obvious risks, to send the vast Allied armada through the channel fogs against the heavily fortified coast of Normandy on the early morning of June 6. The rest, the saying goes, is history.

EISENHOWER was a world figure after the war, and both political parties wanted him to run for the presidency. After much pressure from numerous directions, he finally consented—primarily as a public duty. He had taken practically no part in politics up to that time. He decided to join the Republican party and to let his name be placed in nomination at the Republican National Convention of 1952. Once he got the nomination, he was unbeatable for two terms.

DWIGHT D. EISENHOWER was a "good" man, in the best sense of the word. His face bespoke honesty and integrity, and he looked you in the eye when he talked to you. His flashing smile was of well-nigh incredible dimensions, and lit up a room like a giant electric bulb.

He was never stuffy, never impressed with his own importance. He was considerate of the feelings of others, no matter how humble they might be. The latter trait is illustrated in an episode which occurred during "IKE'S" presidency, at a dinner in the grand ballroom of the Statler Hotel in Washington.

A GENEROUS GESTURE

As the waiters were removing the dishes, one ill-fated waiter dropped an entire tray within a few feet of MR. EISENHOWER at the speaker's table. The tray hit the floor with a noise that sounded like an exploding bomb. Secret Service men leaped from behind potted palms, and the poor waiter stood there amid the debris, looking as though the end of the world had come.

"IKE" reached into his pocket, took out a couple of bills, and pressed them into the waiter's hand. Nobody saw him do it except the lady who was seated next him. It was a generous and characteristic gesture.

The jibes at PRESIDENT EISENHOWER because he played golf fairly frequently were entirely uncalled for. Other Presidents have been similarly careful of their health, and they had to be, in order not to break themselves down.

In a conversation in 1947, when he was Army Chief of Staff, he revealed that whereas the bursitis in his left shoulder was much better, he had developed an arthritic condition in both forearms. The doctors had told him, he said, that if he didn't use them actively, the arms would atrophy.

So he said he had just taken golfing lessons in Florida from "JOE" KIRKWOOD, the professional, and added: "As soon as the weather opens up it'll be nine holes a day, or at least twice a week."

He did not seem alarmed over the prospect that his forearms might atrophy, and as matters turned out, they never did, presumably because he followed the advice of his doctors and played golf regularly from that time on.

The facts as to his arthritic forearms have never been published before, as far as we are aware. Why he did not make them known, and thereby avoid much unfair criticism is a mystery. We reveal them now in justice to GENERAL EISENHOWER.

Statistics showed that he was not absent from his office any more than PRESIDENT JOHN F. KENNEDY, for example, if as much. Yet he was sneered at regularly and over the years because of his fondness for golf.

HE KNEW U.S. HISTORY

As for the charge that MR. EISENHOWER seldom read anything, he was more widely read than he got credit for. One expects a president of the United States to be well acquainted with American history, and especially with the administrations of predecessors in office. But when "IKE" was Army Chief of Staff, soon after World War II, with no thought of becoming president, he was nevertheless well versed in the history of the men who had occupied the White House. This was obvious to persons who talked with him informally at the time.

Virginia lays claim to a special relationship to DWIGHT EISENHOWER, since his mother, Ida Stover, was born and grew up in Augusta County. Ida Stover's birth on May 1, 1862, took place in a small white frame farmhouse at the bottom of a hill near a creek in the area of Fort Defiance, 10 miles from Staunton. She lived there or nearby for the first 21 years of her life.

Ida Stover went West after the death of her parents, and was one of the first women admitted to Lane College, Lecompton, Kan. It was there that she met David Eisenhower, to whom she was later married. They moved to Texas, and seven sons were born to them. Dwight David was the most eminent, but each of the six who lived to manhood made his mark.

Many Virginians were not aware that DWIGHT EISENHOWER'S mother was a Virginian until 1946, when the General came to Richmond as aide to Winston Churchill, who addressed the Virginia General Assembly. Mr. Churchill made the principal address, but "Ike" almost stole the show with a brief talk made in response to repeated cries from the audience that he say something.

HIS VIRGINIA MOTHER

"Ladies and gentlemen," said GENERAL EISENHOWER in opening his impromptu remarks, "it is one of the high honors of my life to return to a joint meeting of the legislature of the state in which my mother was born and reared." A few other equally simple and sincere sentences followed. The talk made as deep an impression as the more formal address of Mr. Churchill.

DWIGHT EISENHOWER'S early days in Denison, Tex., and Abilene, Kan., where his mother and father strove to rear and educate their six sons, influenced his future life for the better. The parents had difficulty making ends meet. The father was a railroad mechanic, a creamery worker, etc. The boys had to find jobs, help with the family chores, and so on. They came up the hard way, but they made it.

DWIGHT DAVID EISENHOWER became not only supreme commander of Allied forces in Europe in World War II, but president of the United States. None of these honors "went to his head" or caused him to "lose the common touch." He remained to the end, the same approachable, lovable "Ike," the man whom millions looked up to, and who left an indelible mark on American and world history.

V.D.

WE LOVED "IKE"

Mr. MILLER. Mr. President, the Nation has lost a great and dearly beloved citizen—one whose death seems to have taken a piece from each of our hearts. History will record that the people of the United States—of all political faiths—respected and trusted him more than any President of recent memory. He and his good wife and family maintained dignity, wholesomeness, and understanding in the White House and wherever they went.

Perhaps the most memorable day in my life occurred on May 13, 1965, when I spent an entire day with this great man. We flew out from Gettysburg together to Grinnell, Iowa, where he spent the day at Grinnell College, visiting the classrooms and answering questions, and capping it with a fine address to

the entire student body that evening. He made similar campus visits on several occasions in his later years, because he had a deep affection for young people and wished to do what he could to help them face the responsibilities of good citizenship which would soon be theirs.

Our country is the better for what will be known as the Eisenhower years—years which have now ended but which should inspire all of us to be better citizens.

It will be written that we not only "liked Ike, but that we loved him."

Mr. GORE. Mr. President, teeming and uncounted millions of people, not only in the United States, but also throughout the world, have a sense of genuine loss in the passing of the 34th President of the United States, Dwight David Eisenhower.

As I have listened to the tributes being paid to President Eisenhower in the Senate today, I have found wholehearted agreement with the eloquent references made to his greatness in war, his ennobling characteristics as a domestic leader, and his qualities of character.

By what strange circumstances do men rise to possess great leadership, great trust, and great affection in the hearts of their countrymen? One cannot prescribe a set formula. Life is not that simple. Political fortunes are not so achieved. It is, rather, by a strange and fortuitous combination of qualities, circumstances, and character.

President Eisenhower possessed qualities which endeared him to people. It was said eloquently by the senior Senator from Illinois (Mr. DIRKSEN) today that Dwight David Eisenhower was a father to the country. I think he did have a father image to the country. But he also had a big brother image. He also had an image of companionship and friendship. If it would not be termed disrespectful, I would say he had the image of a jolly good fellow. He was a forthright man—nothing devious, deceptive, or dissembling about Mr. Eisenhower. People instinctively trusted him and identified themselves with the admirable attributes he exemplified.

Possibly, historians will not characterize him as an activist President, but I think it should be noted that he brought to the White House a conception of staff performance and a willingness and an ability to select good men, to vest confidence in those men, and to delegate to those men genuine responsibility. Perhaps more than any other President to his time, he institutionalized the office of the Presidency. Throughout his term he had keen disappointments but also notable successes. It would take a book adequately to treat with this man.

Permit me to close, Mr. President, by saying that in my opinion he was one of the most beloved Americans of all time.

Mr. MURPHY. Mr. President, I should like to take this opportunity to join with my colleagues in expressing my great grief at the passing of our beloved friend, great general, and great President.

In periods of deep grief, such as we are experiencing today, we mortals are often inclined to compensate for our sorrow by allowing our thoughts to revert to happier times.

Like many of my fellow Americans, I, too, have found much needed consolation in the personal memories I associate with our former President's halcyon days.

In particular, I have found a measure of solace in reminiscing about the particularly cheerful periods when I had the privilege of serving him during the inaugural ceremonies for the newly elected President in 1952, and again for the reelected President 4 years later—the Lincoln Birthday celebrations, the closed-circuit dinners, the informal gatherings at the White House. Those were the happier days, and I shall always cherish them as being among the most enjoyable moments of my life.

I recall a luncheon at Palm Springs, where the host at the luncheon was General Eisenhower. Also present was the son of a former President, Herbert Hoover, Jr.

A group of 10 friends met for lunch to decide whether I should become a candidate for the Senate or not.

One of my friends at the luncheon pointed out, "You have never run for office before. You'll have no chance."

General Eisenhower, pointing to Herbert Hoover, Jr., said, "His father had never run for elective office, and I had never run for elective office. We both got elected President of the United States. Therefore, that should be no objection. Now, what's the next order of business?"

I am pleased to say that it was on that day I decided to become a candidate.

I mention these things today because my recollections, I think, are typical of the reactions of people from San Diego to Bangor, and from Seattle to Miami, all of whom felt a rare and inspiring closeness with this understanding and compassionate man.

For each of us, General Eisenhower was something special—something deeply and intensely personal.

In my case, as I have said, I like to think of those happier inaugural days, especially in 1952.

At the same time, I cannot help remember that those were also days in which we were engaged in a long, bloody war in Korea, and we were weary of the long casualty lists and the apparent failure of our efforts to obtain a timely, just, honorable peace.

These days we sometimes hear people say, "Beware of the judgment of military men." I would remind them that this was a man whose life was dedicated to the military, and who brought us more peace than any other man during my lifetime.

On the domestic scene, there was the restless uncertainty that always accompanies wartime stresses and tensions.

If ever in our history there was a need for a man of heroic principles and inflexible strength, it was in those bleak days of late 1952 and early 1953; and we, as a nation, turned to the man we had just elected as our President to provide us with the leadership and example we so sorely needed.

History has long since written the formal record of his foreign and domestic successes.

But somehow the factual accounts of the archives seem today to be strangely out of place, cold and insufficient.

For example, we remember mainly in this hour how "I like Ike" was transformed from a political slogan into a personal expression of the national spirit—a spirit based on trust, hope, and integrity.

We remember, too, the Eisenhower years of peace, but within our souls we recognize that the legacy of that era is not only a devotion to the cause of peace, but also, and just as important, a national dedication to the principle that international tranquillity must be accompanied by honor and justice.

In addition, we remember the important domestic progress of the Eisenhower years. But once again the official transcripts fail to tell the entire story; for what we have today, which is even more important than the laws and precedents themselves, is a renewed conviction that social advances must be based on the dignity of the individual rather than the enhancement of the State.

Yes, the most enduring record of General Eisenhower's greatness has been indelibly inscribed, not only in our tomes and records, but also in our hearts and souls and minds, for all time.

For each of us, it is a most personal heritage.

For the Nation as a whole, it is a priceless gift, for he reminded us as no other man has ever done that the State is only as strong as the individuals who compose it.

This was a great, beloved, courageous, kind man.

May he enjoy that special peace reserved for the soldier who has fought the gallant fight and returned to his rightful home.

I extend my sincere sympathy to Mrs. Eisenhower and the entire family in this period of national grief. This is a sad day for our Nation, but it should be a day of rejoicing, because once again we have sent a man to history in whom we can all take great pride.

Mr. BYRD of West Virginia. Mr. President, as I recall Dwight David Eisenhower, I can best recall special qualities of him, as a man, which I believe were basic to his greatness as a world leader.

One of these was his ability to inspire others to have confidence in him and to respect him as a man of integrity and a true disciple of peace, both in his own time and in future time, for the people of his Nation and of the world. Another very great quality of his—his inner strength—made it possible for him to marshal his inner resources to meet the demands upon his thoughts and his physical self, so often heavily placed upon him.

As supreme commander of the Allied Expeditionary Force in World War II, as president of Columbia University, and ultimately as Chief Executive of the United States, Dwight David Eisenhower believed in peace throughout the world; and in his leadership in the interests of peace, he became, as he has been often titled, "truly a citizen of the world."

Although a professional soldier, an expert in the direction of armies, he by his nature was first and foremost a humani-

tarian devoted to the well-being of his fellow man.

This attitude, so basic to his character, was demonstrated in March 1945, just before American Forces crossed the Rhine.

On the particular occasion about which the anecdote has been told and retold, General Eisenhower noted a young soldier who appeared worried and despondent. He approached him and asked, "How are you feeling, son?"

"General," came back the answer, "I'm awful nervous. I was wounded 2 months ago and just got back from the hospital yesterday. I don't feel so good," said the soldier.

"Well," said Eisenhower, "You and I are a good pair, because I am nervous, too. Maybe if we just walk along together to the river we will be good for each other."

This humility, this common bond with those who served under him, was to endear him to millions, and was to become one of the most widely recognized attributes of this very great soldier and dedicated public servant.

Yet, although Dwight Eisenhower had great compassion for others, his own character allowed him no self-pity. When he was only 16, this self-discipline was to serve him well. Blood poisoning developed in his left leg and, as it spread, doctors urged amputation, saying that it was his leg or his life. But this future commander of armies, this future great leader of men and nations, from the depth of his own inborn discipline, refused to have the operation and through his determination and faith was able to walk out of his room on two healthy legs just 3 weeks later.

This same inner strength was exhibited time and again during World War II, when his decisions were responsible for the success of campaigns against the Germans.

It was exhibited when President Eisenhower, in pursuit of peace, flew to Paris for the North Atlantic Council meeting after having suffered a stroke only days before. Although this determined gesture could very probably have brought on another siege of illness, Eisenhower ignored the possible consequences, shouldered his burdens, and applied decisive and imaginative leadership to the critical affairs of state at that period.

Yet Eisenhower was never known, apparently, to be overly imbued with his personal importance. It is said that he approached his tasks as president of Columbia University in a vein of humility and some anxiety as to his ability to do a job so very different from that to which he had devoted his long military career. Having accepted the appointment because of his conviction that he could do a great service for the youth of America through the advancement of education, he nonetheless felt concerned as to his ability to do justice to his new tasks.

At one time, it is reported that this early anxiety which he had felt was mentioned to him after a reception at one of Columbia's affiliated colleges. A professor confided:

You know, General, when we heard you were coming here, some of the faculty were downright scared of you.

General Eisenhower is reported to have replied:

The faculty would have been reassured to know I was scared to death of them.

It is a matter of history now that General Eisenhower, unsure though he might have been about his new position, nonetheless turned in a good performance. He has been credited with being a superb administrator who supported orderly academic freedom and campus democracy.

I have on occasions during recent months thought that had General Eisenhower been president of Columbia University during these times of student unrest, current on our Nation's campuses and universities, he would have set a tone of self-discipline and responsible leadership which might well have provided a model for similar behavior in our Nation's academic councils.

Eisenhower is gone. Myriad legends about him will be told and retold. The Eisenhower legend will last as long as our country does—a country which is better and nobler for his having lived, and served, and died as an American.

Mr. YOUNG of North Dakota. Mr. President, Gen. Dwight D. Eisenhower's passing has saddened the hearts of all Americans. As a general, he occupied one of the most important military assignments in the history of the Nation, that of commander of all Allied European forces in World War II. His superb handling of this difficult assignment made him a hero to people everywhere.

As President of the United States, he had a way about him that commanded the respect and admiration of people in every walk of life. No President was more loved and respected than he. He will go down in history as one of our greatest Presidents.

It was when he was President that I came to know Dwight Eisenhower best. As one of the Republican leadership of the Senate, I met with him quite often on important national and international matters. It was always a great inspiration to meet with him.

Dwight Eisenhower had a way about him that in the eyes of most people he could do no wrong. There was a reason for this. Besides having a wonderful personality, he was a very honest and courageous man who had natural good judgment and good sense. It was these qualities that people all over the world recognized and appreciated.

Because of the great respect and esteem the American people had for him, he was probably the only President in our history who could have been elected on either the Republican or the Democratic ticket.

It was a great tribute to him that his popularity, and the esteem in which people everywhere held him, continued long after he left public office and until his death.

He will be remembered through history as a beloved, great leader of a great nation. This is a sad day for all of us. I extend my deepest sympathy to Mrs. Eisenhower and all of his wonderful family.

(At this point, Mr. PEARSON assumed the chair.)

Mrs. SMITH. Mr. President, Dwight D. Eisenhower, the foremost military leader of his time, had many great attributes. But his greatest achievement was peace. He was a five-star general; yet he accomplished more peace in his 8 years as President than did his civilian predecessors and successors at the White House.

He was a man of peace. He was a leader of peace. He was an achiever of peace. What greater achievement can any mortal being have given to his fellow human beings.

It was on this note of peace that my association with him first started. He asked me in August 1952, to write an article for the Woman's Home Companion on why he should be elected President. I did, and in it stressed his desire and capability for peace.

He made other requests of me. I granted every request he made. The only one I now regret and feel that I made a mistake on was when he called me from Camp David and asked me to vote for the Dixon-Yates contract and said that my vote would mean a great deal to him personally.

I am sure that I cast many votes that displeased him. It has been widely reported that two of my votes greatly disappointed and displeased him. But he never expressed his displeasure to me and did not contact me either before or after those two votes.

Such was a measure of this man of peace who refrained from giving vent to his feelings concerning those who disappointed him and those who attacked him.

This morning on the NBC–TV "Today" program, William Monroe observed that while George Washington could not tell a lie about cutting down the cherry tree, Dwight Eisenhower would not tell a lie about the U–2 spy plane flying over Russia.

His honesty in this crisis brought down on his head the sharpest political attacks ever made on him. Some persons apparently felt that at long last he had made a serious political error that could be greatly politically exploited.

There were those who charged Dwight D. Eisenhower with being senile, lazy, and having disgraced the United States in this matter; and there were those who publicized such charges and represented them as documentation of the thinking of the people at the grassroots.

Dwight D. Eisenhower never defended himself against such slurs. He never replied in kind.

Yet there were those critics who charged that he was unduly sensitive to criticism—that he was hypersensitive. If he was, he never displayed such hypersensitivity.

But he was sensitive—and I am proud that he was—because that very sensitivity made him the thoughtful, responsive, and warm human being that he was.

Last September and October I was a

fellow patient in ward 8 at the Walter Reed Army Medical Center with him. Through the attending doctors and nurses we kept informed on each other's respective progress and exchanged messages of cheer and encouragement.

On his birthday I gave him some of the new super solid state golf balls to symbolize my confidence that he would recover enough to return to his favorite pastime. He gave me some of his birthday cake.

During these 2 months it was my privilege to get to know Mrs. Eisenhower better. Very thoughtfully she would stop by my room to cheer me. We had some most enjoyable conversations, and in getting to know her better I could certainly have a greater appreciation of the saying that behind every great man there is a woman.

I came to know Mamie Eisenhower for the great woman that she is. I saw her, day by day, maintain her constant and dedicated vigil. I saw her maintain an undaunted courage and cheerfulness that lifted the spirit of the entire ward 8. I know that her spirit and her kindness helped to accelerate my own mending and recovery.

Dwight D. Eisenhower's will to live was a medical marvel—almost a medical miracle. But I am sure that one reason his brave, but weakening, heart wondrously rallied so many times was that his devoted wife at his bedside gave so much of her own heart to him to help carry the necessary strength of heart for recovery.

Yes, Dwight D. Eisenhower was a man of peace. He planned and fought for peace. He lived for peace. And he died in peace—in the peace of the mind that he had not only fought the good fight for peace but that few mortals had ever achieved as much peace for as many people as he did.

Mr. AIKEN. Mr. President, the great things a President does are repeated a thousand times over after his death but I have always felt that it was the everyday things of life and the attention paid to smaller matters which characterize a man.

President Eisenhower's deeds which affected the Nation and the world will be repeated for generations to come and his praises will be sung by all people and all nations, so I would like to recite a few small events which I believe portrayed his character as much as the invasion of Germany, as much as the end of World War II, or the 8 years of peace and progress for which his administration is so well remembered.

It was after the war and before he became a candidate for President that I was driving along the road in northern Vermont with my radio tuned to the Canadian Broadcasting System.

General Eisenhower was making a speech, as I recall, in Toronto.

Where he made it does not matter, but what he said has remained in my mind ever since.

He said in effect that his greatest ambition in life was to put men in his line of work out of business.

After he was elected President and had been inaugurated, I wrote him a note which said in effect that I would not attempt to tell him how to run the Government of the United States, but that I would be available if I could help him at any time.

I did not call at the White House very often, and then only when matters of importance required the President's attention.

At the time he took office, the agricultural attachés of our embassies abroad were used largely as guides for very important persons visiting those countries.

Some of them knew very little about agriculture and were not expected to.

Representative Hope, of Kansas, chairman of the House Committee on Agriculture, and I called on the President one morning to tell him that a change should be made in this system.

He listened to us and without hesitation called the State Department and stated that from then on he wanted the agricultural attachés to have the same standing as the military attachés in foreign countries.

Since that time they have been among our most effective representatives abroad.

At another time a serious agricultural problem arose. At this time, I cannot even remember what the problem was, but I do remember well the circumstances. It was Saturday noon when I learned of it, and action had to be taken before 9 o'clock Monday morning. The Secretary of Agriculture had gone to the mountains to spend a weekend.

Ordinarily, one would not have expected to find top officials at the White House or even in Washington on Saturday afternoon.

I took a chance and called the White House. The President responded almost immediately. I told him the problem.

He said, in characteristic fashion, "I will look after it myself."

Secretary Benson was called back from his weekend vacation and the problem was solved by 8 o'clock Monday morning.

On only one occasion did I see President Eisenhower lose his poise.

At that time he literally went through the ceiling expressing his opinion of the war contractors who were currently exerting great pressure upon the Defense Department.

By his actions at that time he clearly expressed himself as believing human life to be of greater value than war contracts.

These are some of the incidents which characterize the man Dwight Eisenhower.

The pages of history will not record them, but to me they were of marked significance.

Mr. MUSKIE. Mr. President, for more than a quarter of a century, Dwight Eisenhower has been a familiar and well-loved name in American homes and in distant lands around the globe.

It is a name associated with historic events and historic achievements; with great leadership; with the skills which led us to victory in war; and with a deep-seated urge to lead mankind toward peace.

Above all, however, he was a man and a human being whose quality and character made a deep and lasting impact upon each of us.

To those of us who served in World War II, he was more than a superlative military leader. He was a man whose warmth, simplicity, and sturdiness were reassuring, inspiring, and comforting.

To all of us, his postwar leadership in Europe, as the first commander of NATO, represented an appropriate conversion of his talent for leadership from war to his unceasing search for peace.

It was understandable and inevitable, notwithstanding the frustration of his political opposition, that he should be called to the Presidency.

And again, in the 8 years of his Presidency, it was the quality of the man which we remember most—his capacity to inspire the trust and confidence of his people.

It was because his countrymen believed him to be a good man that they entrusted him with leadership and responded to it.

And it is thus that we will remember him—a good man who loved his countrymen and who was loved by them.

Mr. HATFIELD. Mr. President, we shall long remember Dwight David Eisenhower as a soldier whose victories won the peace; as a President whose abilities brought confidence in a time of increasing fear; and as a man whose entire life was characterized by integrity, courage, and, above all, faith. We have all shared in the warmth of his personality and in the depth of his spirit. In a time of growing impersonalization, he brought to the Office of President a personal vitality and singular devotion which were a constant source of inspiration for all Americans. Just 17 years ago, General Eisenhower spoke to the Republican National Convention and the Nation in words which are a fitting tribute to his own life as well as a guideline for our future.

None of us—

He said:

has known of a time that has placed a higher premium on statesmanship—on courage, competence, and leadership—on solid commonsense, on willingness to subordinate self to the general good.

And so it was with Ike.

During his service as supreme commander of the Allied Forces during World War II, our servicemen, including myself, discovered in the general a continual source of reassurance and confidence. We placed our faith in Eisenhower—faith in his judgment, faith in his wisdom, and faith in his courage.

In the years following that war, America found itself wandering, doubting, and unsure of its future. Destiny called Dwight Eisenhower again; it called him because he was worthy of the people's faith. Our Nation knew that Eisenhower as President would bring wise, calm leadership and reassurance during that crucial decade. The accomplishments of those years are often overlooked with the rapidly increasing pace of change in our world. But let us recall that it was President Eisenhower who ended the Korean war; promoted desegregation in our Armed Forces; won passage of the first civil rights bill in 80 years; enforced the orders of the Federal courts to desegregate our school system; established the Department of Health, Education,

and Welfare; initiated efforts to encourage social progress in Latin America; and proposed the Atoms for Peace program to the U.N.

Yet the true contribution of Dwight Eisenhower is to be found not in these significant accomplishments of administration, but in his qualities of character.

The faith that the people of our land placed in President Eisenhower was matched by his faith in the people of the world. In his good will trips throughout the globe, President Eisenhower conveyed the warmth and openness of the American people to the citizens of the world community. His originating of the people-to-people programs demonstrated his belief that the bond of mankind can overcome the barriers of nation, race, and ideology.

In his farewell address to the Nation in January of 1961, President Eisenhower demonstrated wisdom and foresight which must be carefully pondered by our Nation today. As an academic leader and former President of Columbia University, it was President Eisenhower who cautioned us about the threat to academic freedom posed by the Government's growing involvement in university research. As our greatest military leader of the century, it was President Eisenhower who first warned against the alarming growth and influence of our defense industry.

But again, let us remember Dwight Eisenhower as a man of faith. The citizens of our Nation found him worthy of their faith, and he constantly demonstrated his faith in his fellowmen. But these qualities were rooted in a far more fundamental commitment. Dwight Eisenhower placed a quiet, confident, and firm faith in God. It was Eisenhower's spirit which we shall remember. His personal devotion and trust in his Creator is his greatest and most lasting quality.

Today the general lies in the Capitol as thousands pass by to pay their tribute. On January 20, 1953, Dwight Eisenhower was also at the Capitol. He rose to give his inaugural address. Before he began, he asked for the privilege of offering his own personal prayer. Let us always remember him standing there and steadfastly praying these words:

> Almighty God, as we stand here at this moment my future associates in the Executive branch of Government join me in beseeching that Thou will make full and complete our dedication to the service of the people in this throng, and their fellow citizens everywhere.
>
> Give us, we pray, the power to discern clearly right from wrong, and allow all our words and actions to be governed thereby, and by the laws of this land. Especially we pray that our concern shall be for all the people regardless of station, race or calling.
>
> May cooperation be permitted and be the mutual aim of those who, under the concepts of our Constitution, hold to differing political faiths; so that all may work for the good of our beloved country and Thy glory. Amen.

Mr. ALLEN. Mr. President, the Nation mourns the passing of President Dwight David Eisenhower.

Today I speak for myself as an American, as an individual citizen, and as a representative in this august body of the State of Alabama and her people.

The people loved, admired, and respected President Eisenhower. They had confidence in him. They trusted him. They felt that they knew him; that he was their friend; that he stood for all that was best for them and their country.

They felt that to him a public office was truly a public trust.

He was a man above partisanship; above sectionalism. He was a man from the people, a man of the people, a man for the people—all of the people.

Let us all profit by the example that he set, by the high road that he followed throughout life.

Of him it can truly be said—in the words of Rudyard Kipling in setting some of the attributes of a real man—he could "walk with kings, nor lose the common touch."

Americans and the free world are poorer because of his passing, but richer because of his life among us.

On behalf of the people of Alabama and of Mrs. Allen and myself, I extend heartfelt sympathy to Mrs. Eisenhower and the Eisenhower family.

Mr. THURMOND. Mr. President, General Eisenhower will long be remembered for many things. His long and distinguished career as a soldier and as a statesman leaves a legacy of noteworthy accomplishments. In my judgment, however, one quality of General Eisenhower's stood out. That quality was his ability to win the affection of people—both of those who knew him and of the public. "I like Ike" was more than a political slogan. It summed up the warmth and respect which people had for General Eisenhower and which was his greatest strength.

In political life all men aspire to a certain degree of popularity. It is, of course, a prerequisite to even limited success in service in government, but General Eisenhower's popularity was more significant and deeper than that which comes to most political figures. It characterized his distinguished military career. During World War II, I served in the First Army in Europe under General Eisenhower. There is no question that he was held in great esteem by the soldiers and that this was a tremendous asset to him. Later when I served as national president of the Reserve Officers Association, I had the privilege of having a number of conferences with President Eisenhower at the White House. He was courteous, friendly, and helpful. From his own personal experience he realized the importance of the Reserves to the Nation. During World War II, 98 percent of the Army and 85 percent of the Navy consisted of citizen soldiers. He favored the Reserve program because he knew firsthand of its importance to the Nation.

Mr. President, the popularity which General Eisenhower enjoyed was important to the Nation when he served as President. The personal qualities of General Eisenhower—his warmth, his dignity, his integrity, and the response these qualities inspired in the public—were of great importance in unifying the American people. The personal bitterness and abusive language which unfortunately have become more a part of political life in the last few years, were largely absent during Dwight Eisenhower's tenure as President, and much of this must be due to the kind of man that President Eisenhower was. His political enemies might disagree with him but nevertheless they liked him.

Mr. President, more than any other American in the 20th century, General Eisenhower commanded the affection and respect of all the people of the United States. All of us are saddened by the passing of this brave soldier, great statesman, and renowned world figure. All through his career he was supported, fortified, and encouraged by his lovely wife, Mamie Eisenhower, who was an inspiration to him—in every activity in which he engaged. My sympathy is with Mrs. Eisenhower and the other members of the family in this time of sorrow. I know that they are comforted by the knowledge that President Eisenhower gave so much of himself to his God, his country, and his fellow man.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

DWIGHT D. EISENHOWER, A GENERAL OF PEACE

Mr. YARBOROUGH. Mr. President, Dwight David Eisenhower was a general at war, but a man of peace. He was a man who worked to end wars and to prevent wars.

Dwight D. Eisenhower, after World War II, sought the world to follow the Biblical injunction to beat swords into plowshares and spears into pruning-hooks. After World War II, he followed the advice of Isaiah, "Nation shall not lift up sword against nation, neither shall they learn war any more."

Though he admonished this, it fell to Eisenhower to lead a great army in the biggest war in the history of mankind. History records the great battles of World War II won under the leadership of Eisenhower in the crusade in Europe. People have recorded in their hearts the memory of Eisenhower, the supreme commander of Allied forces in Europe, taking time to visit the men who would do the fighting, just before the invasion forces started to France, and of his visits to them across Europe as the lines of battle advanced. It was this humaneness that set him apart and above the average man. It was evident to all who knew Eisenhower as a soldier, that his quest was peace, not military victories only.

It was my privilege and honor and duty to serve under Gen. Dwight D. Eisenhower in the crusade in Europe. I was a staff officer of the 97th Infantry Division in that war, serving in several different armies and corps, as we were transferred from sector to sector of the fighting front, ending up on V–E Day on the road to Pilsen, in Czechoslovakia. All

who served in the vast Allied armies in the crusade in Europe for the freedom of mankind felt the impact of the Eisenhower personality. Perhaps the greatest of all of his accomplishments was his ability to get men of different nations and languages to work harmoniously together in a common cause. As one admirer said:

> Eisenhower knew how to work with people and he knew how to get people to work together.

He had the knack of tact, to hold divergent forces together and to keep them working together.

The author John Gunther visited General Eisenhower in France in 1951, when Eisenhower was head of supreme headquarters, Allied Powers in Europe. Gunther came from that meeting and wrote, not of great war plans, but of Eisenhower the man, saying:

> He has been a soldier all his life, but believes in peace. He does not stand for war, but for defense against war.

Eisenhower achieved a great victory in Europe in World War II. He later went back to Europe to build forces which would preserve peace, preserve it without fighting.

As a newly elected President, Eisenhower brought about a settlement of a shooting war in Korea.

Through all of this, moments of great strain and moments of great triumph, Eisenhower remained a man of the people.

He never forgot or ignored his birthplace in Texas or his home in Kansas where he grew to manhood. It was this tie to the heartland of America which kept President Eisenhower first in the esteem of his countrymen. People instinctively liked General Eisenhower. All were touched by his ready smile.

It was this fondness which people felt for Eisenhower which has made his death such a sad, personal event for the people of this country. People admired him for his achievements, but they loved him for himself.

No man could ask for a greater tribute than the love and esteem the people of this country have for Dwight David Eisenhower.

The love of his fellow man is the tribute to Eisenhower, the man. The peace he won and preserved is the tribute to President Eisenhower, the soldier-statesman.

The Bible says, "Blessed are the peacemakers; for they shall be called the children of God." While his critics were screaming for a war with China, and accusing him of a no-win policy, Eisenhower had the judgment, the wisdom, the humaneness, the greatness to save America and the world from a long, bloody war in Asia. For this, the American people should and will love him always.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CASE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PEARSON in the chair). Without objection, it is so ordered.

Mr. CASE. Mr. President, I think that all of us at this time, for reasons that run very deep, are saddened by the death of General Eisenhower. However, it seems to me that the overriding fact that comes to the minds of all of us when we think about the life of President Eisenhower is the strange and providential way in which man seems to be called by our country and by the world for leadership when he is desperately needed.

This has been true throughout the history of our country, and throughout the history of the world—else, probably mankind would not have survived as long as it has.

If ever the world needed a leader, if ever our country in its history needed a leader, it was at the time we discovered how to destroy all mankind, including ourselves.

I do not believe anyone could have come to the helm of government in the United States more profoundly qualified for leadership in the transition from what we might call the world of innocence to a world in which man's survival lay in his own hands and better fulfill the role which was demanded of him than General Eisenhower.

He was not a deeply intellectual man, and he was often derided by sophisticates as an amiable buffoon, which only goes to prove how inadequate sophisticates are in dealing with the great problems of the world and of society.

President Eisenhower had a kind of intuitive sense of what was necessary in the gravest matters that put him uniquely into a position of world leadership as well as, of course, the leadership of our country. He articulated and made it acceptable to the people of this country and, I think, of the world, too, that atomic war could no longer be tolerated, that confrontation between the great powers in the direct sense would no longer be possible, that that sort of war unthinkable.

He sensed this, and he made it stick. It is now accepted doctrine. And men have found that they can live in such a world.

We will always be blessed with the guidance which he gave us on that issue which, I think, was the greatest contribution any man could possibly have given any nation or the world.

It is for this intuitive understanding of what human respect required and his ability to make that understanding common property that I think he will go down in history.

We are lucky in our time to have found the leader that our time required.

Mr. RUSSELL. Mr. President, the death of Dwight D. Eisenhower has removed from this earthly scene a man who possessed to an unprecedented degree the love and confidence of the American people and the respect of the entire world. His services as President have been greatly underrated and with the passing time his stature will loom larger and larger among the 37 who have served in that position.

The confidence of the average citizen in Dwight Eisenhower should renew the hopes of every American for the future of our country. His faith in the patriotism and judgment of our people in the mass was probably greater than that of any President since Jefferson. He sought and held our highest political office without being a politician. His sincerity and integrity were so transparent that he did not find it necessary to come up with a new program every day in the effort to buy the good will and support of some special group.

Being human, he made mistakes and, being too trusting, he was at times betrayed by those whom he had trusted. But his great decency and honesty shone through the miasma of demagoguery and promises of "something for nothing" which mark politicians of this period and were completely comprehended by the vast majority of our people.

It was my high privilege to know President Eisenhower personally over a long span of years. I admired him as a man and was grateful for his friendship. I share the sorrow that is common to all who knew him and worked with him, and I extend my deepest sympathy to his family.

Mr. COTTON. Mr. President, my first memory of General Eisenhower was when as a member of a subcommittee of the Committee on Appropriations of the House of Representatives, I visited NATO headquarters in 1951. We were briefed by him over a period of days. I returned from Paris convinced that the Nation needed him as its President. I was one of the 19 Members of the House who joined in a letter asking him to return and be a candidate. After he consented, I became one of the delegates from New Hampshire pledged to his cause.

It was my privilege to serve, first in the House and then in the Senate, during those 8 years when nations that had long before learned the firmness of his purpose and felt the magic of his name remained at peace. No American boy perished under gunfire anywhere in the world.

Like President Nixon, my most vivid memory of General Eisenhower is his first inauguration. In my scrapbook, where I keep the utterances I have heard and will never forget, are the words he spoke that day:

> The peace we seek signifies more than stilling the guns, easing the sorrow of war. More than an escape from death, it is a way of life. More than a haven for the weary, it is a hope for the brave.
>
> This is the hope that beckons us onward in this century of trial. This is the work that awaits us all to be done with bravery, with charity—and with a prayer to Almighty God.

He was a great soldier, but a far greater apostle of peace.

Now he is at peace. May peace come to the country he loved and led.

Mr. PASTORE. Mr. President, a great man moves on to immortality as Dwight David Eisenhower passes from history's living page.

From a life crowded with service for others, he will be remembered under many names—President, general, edu-

cator, author, family man, and by the universal and affectionate title of "Ike."

This seems to personify the humble and democratic heart of a man who walked with kings.

I would turn back the pages of time to December 8, 1953, for an Eisenhower date and deed I shall always remember.

On that day President Eisenhower gave an astonished General Assembly of the United Nations his proposal of "atoms for peace." He assured them that the United States would join with all interested nations—including Communist Russia—in cooperative research into the peaceful uses of atomic energy.

Out of this proposal came the International Atomic Energy Agency within whose framework we have studied and striven for effective nuclear restraints.

Dwight Eisenhower—a man of highest military stature, a man of deepest humanity—was essentially a man of peace.

A worried world sought his counsel.

His judgment will be missed.

Mr. ALLOTT. Mr. President, the last battle for a great general has ended and our Nation has suffered the loss. All of us, young and old, mourn the passing of General Eisenhower.

He stood for so much that has made America what it is today: dedication, public service, military bravery, commonsense, and devotion to God and country.

Like all men of his stature, his service to his Nation is appreciated more today than it was while he occupied the important positions of responsibility which filled his lifespan. History will appreciate Ike even more.

I knew him well, and with all who served with him in government I respected him and his principles, just as he respected the principles which made America great.

That he lived as long as he did is a final tribute to his spirit for life. Many a weaker man would have given up long ago. Ike was a fighter and he fought until the end.

While his passing was not unexpected, it nevertheless is a trial to all those who knew and loved him. Welda and I join the whole Nation in extending our deepest sympathy to his wife, Mamie, and the whole Eisenhower family.

Mr. RANDOLPH. Mr. President, shortly after the passing of Dwight David Eisenhower on Friday, March 28, I issued the following statement:

Former President Dwight Eisenhower was a soldier and statesman who served our Republic in war and in peace.

Americans admired the general for his fortitude and faith.

I recall his personal and official kindness and consideration during the years I was in the Senate during his administration.

IKE—A HERO FOR ALL TIME

Mr. MUNDT. Mr. President, yesterday afternoon the President of the United States shared with the world the moving last words of Dwight Eisenhower as spoken to his wife on the day he died:

I've always loved my wife, I've always loved my children. I've always loved my grandchildren and I've always loved my country.

Less than two dozen words are contained in those brief sentences.

But what immense sweep these words have, for they tell us all that we need ever know about the man and what he has meant to this country and what the people of this country—all humanity, in fact—meant to him.

Virtually every trust of leadership that could be demanded of a man was given him.

And because of that victorious leadership in war, bringing us victory and peace, and his successfully ending yet another war in far-off Korea—virtually every honor that could be bestowed upon Dwight Eisenhower was his.

We knew him as the general who directed the greatest military operation of all time in bringing to defeat the forces of oppression and tyranny which had enveloped Europe.

We knew him as the supreme commander of NATO who brought the Western nations together again as the impenetrable shield to prevent another massive, destructive war.

We knew him as the President who brought an end to another war in Korea and then kept the peace—an era of peace longer than any this Nation has known for three decades.

But we all knew—and the world knew—Dwight Eisenhower best as "Ike."

And those last words of Dwight Eisenhower—telling of his great love—define for us more clearly than all of the books written about him, all of the articles devoted to his life, and all of the eulogies spoken of him, why "Ike" will remain in the hearts of Americans a hero for all time.

When Dr. Billy Graham learned of the death of General Eisenhower, he described the former President as the greatest American since Abraham Lincoln.

I think Dr. Graham has captured in his description exactly the sentiments felt by the citizens of this country, as well as those of free peoples everywhere, who believe Dwight Eisenhower personified the American ideal of the love of liberty which has stood continually as a beacon to the oppressed and a barrier to the oppressor.

Mr. President, those of us who have had the honor to serve in one capacity or another with Dwight Eisenhower have been privileged beyond expectation. I shall always cherish my days in the House of Representatives and in the Senate in which I had the opportunity to be a member of those committees which conferred with him during his years of military service, and during those years in which he served as our President.

Mr. President, Mrs. Mundt joins with me today in extending our sympathies to the family of Dwight Eisenhower, the great man, who, as President Nixon said, came from both the geographical and the spiritual heart of America.

Because of him, truly, we are the richer in spirit.

Mr. McCLELLAN. Mr. President, when I learned that General Eisenhower had passed on, Mrs. McClellan and I promptly dispatched a wire to Mrs. Eisenhower extending to her and members of the family our deepest sympathy and prayerful expression that they would be comforted and sustained in this time of their greatest bereavement. Some excerpts from that message of condolence can be appropriately repeated in my remarks today.

I stated to her that "General Eisenhower was a patriotic, courageous, and valiant soldier who led the mighty forces of the free world to victory over aggression and conquest" in World War II. I also said that "he was a statesman of understanding, patience, and wisdom who brought calmness and hope to a troubled world." And that "the exemplary and forceful qualities of leadership that he provided as President instilled confidence and inspired peoples and nations to exert greater and more dedicated efforts in the cause of peace and tranquillity among nations."

I further emphasized that he "earned and received the respect and esteem of the American people and was admired and beloved by them to a degree unexcelled by any other great leader or President of this generation."

Mr. President, his passing is a great loss to humanity. He contributed much to the social and cultural progress of our people and steered the ship of state, when he was at the helm, in the direction of a higher civilization and a better and safer world. These sentiments I record with deepest sincerity and out of a reverent respect and esteem for him as a man, as a citizen, and as one of America's greatest leaders of our time and generation.

Mr. JORDAN of Idaho. Mr. President, because of his long and grave illness the news of General Eisenhower's death comes as no surprise. Even so, the acute sense of loss is not lessened for the respect he had is universal.

The world has lost a great soldier and statesman, our Nation has lost a beloved leader, and all of us have lost a wise counselor and friend.

The life of General Eisenhower is a splendid example of American achievement. Perhaps only in America can a boy, born of humble, God-fearing parents, rise to such heights of leadership in war and in peace.

I shall always prize my personal contacts with him, starting with the kickoff of his 1952 presidential campaign from the capitol steps in Boise when I was Governor. On his invitation I came to Washington, D.C., to be Chairman of the International Joint Commission and to work in related problems in natural resources.

He has made a great contribution to the world he served in time of crisis, and to the country he loved with such fervor and served with utmost dedication. He will be remembered, not only for his record which speaks for itself, but for the fact that for all his work with national and world leaders, and the tremendous power he wielded over the course of history, he still kept the humility and the common touch and the sense of humor of the smalltown boy from Kansas.

"I LIKE IKE" WAS THE SENTIMENT OF A NATION

Mr. PROXMIRE. Mr. President, no American in this century inspired in people all over the world the love and trust General Eisenhower inspired. He was a good and gentle man, a man of

peace and compassion, a man of monumental integrity and honesty.

Ike had a genius for unifying disparate personalities into a working and effective team. This was his great strength as commander of the largest military force in history, a force which liberated half a continent from the Nazi tyranny. It was one of his great strengths as President.

He brought to the White House a dignity and a sense of honor that elevated the Presidency in the eyes of the people.

He had nothing but scorn for those public men who engaged in demagoguery and character assassination.

Ike did not regard the Presidency as a bully pulpit. He did not believe the President should dominate the other coequal branches of the Government in making national policy. Many disagreed with that view. But one must pay it high respect.

The man who led allied forces against the blackest example of one-man rule in modern history surely had ample reason to mistrust the concentration of political power in the hands of one individual.

President Eisenhower's warning against the influence of the military-industrial complex in his farewell address as President was never more relevant than it is today as we are about to move ahead with expensive new weapons systems.

"I like Ike" was not merely a narrow party slogan. It was, to the end, the sentiment of a nation.

Mr. GOLDWATER. Mr. President, standing in the rotunda of the Capitol yesterday as President Nixon eulogized former President Eisenhower, the thought came to me that while many men who had served our country well and with valor had gone to rest with the flag draped over their coffins, very few had so richly deserved and won that honor as had General Eisenhower. The flag means more to us because of him, and our country will forever be better through the great example he set of devotion to it and love for it.

Mr. DODD. Mr. President, a great leader of the American people has passed away, and the Nation is in mourning. Our hearts go out in sympathy to his beloved widow and family.

I was privileged to serve in both the House of Representatives and the Senate during his term as President. I shall always remember his unfailing courtesy, consideration, and kindness.

Great men are able to rise to distinguished positions within a certain field or a certain career. But it is the extraordinary man who achieves comparable greatness in more than one realm. The late Gen. Dwight David Eisenhower was such a man.

General Eisenhower was a military genius of the first order. His thoughts and actions were characterized by discipline, decisiveness, and deep courage.

As President, General Eisenhower helped the American people to maintain a sense of balance and to view events in proper perspective. He fostered among us a spirit of security and hope.

Our grief at the death of General Eisenhower is magnified by the knowledge that we shall not soon see his like again. He represented an America for which we feel nostalgia, an America where our values were clear and there was no compromising with one's duty to one's country.

Mr. DOMINICK. Mr. President, our Nation mourns the loss of a great soldier, statesman, and President. I feel the deep personal loss of a good friend with the death of former President Eisenhower. To the very last day of his life he was a symbol of strength and honor for the people of the United States and the world.

General Eisenhower was a frequent visitor to our State of Colorado and often said he considered it his second home. I first met Ike in 1951, when he was president of Columbia University. He was a guest in our Colorado home in 1954 and 1956. He was one of the major reasons that I first entered politics back in the early fifties.

Our thoughts are with Mrs. Eisenhower, who has always shown such courage during the many episodes of illness endured by the general over the past several years.

Mr. PELL. Mr. President, if ever there was a man who epitomized the word "good," who possessed the quality of goodness to an infinite degree, it was Dwight David Eisenhower. He was a man of peace who proved himself unsurpassed in war. He was a man of gentleness who lived a life of high adventure. He was a gentle man who vested some of the most bestial fighters of our century. He was a simple man whose goodness, kindness, and humility helped him overcome obstacles and achieve his objectives. His services to our country as soldier and leader of armies, as president of a great university, as a man of inspiration, and as President of the United States were all of the highest order.

Most important, he was a man of truth, incapable of duplicity. Our country and our world trusted him. Finally, he was a man of wisdom and vision, whose farewell words as President, warning us of the dangers of the industrial-military complex, should be heeded by the Nation that now mourns the passing of this great and good man.

Mr. HRUSKA. Mr. President, in the death of General Eisenhower, the world has lost one of its towering figures, one whom history will regard among the truly great.

Born and raised against a humble, midwestern background, this remarkable man led the forces of freedom to victory in a great world war and, at the end of that career, answered a further call to serve his country in its highest office. Again, he demonstrated an inspired ability to unify and to lead the Nation at a particularly critical time in its history. As we look back on the 8 years of his administration we recognize the great stability, firmness, and progress which marked that time.

Even after he had laid down the burdens of the Presidency, he continued to play a constructive and effective role as a true elder statesman, spurning petty partisan considerations and concerning himself only with the welfare of the country he loved and served so long and so well.

It is amazing that one generation could produce both an Eisenhower and a Churchill, two mighty and beloved leaders who will be revered as long as men prize freedom.

Mr. RIBICOFF. Mr. President, we mourn today the loss of Dwight David Eisenhower. We mourn his passing, and we remember his contributions to this world.

He was a leader—a man who led great armies to victory in the Second World War. Because he knew the horrors of war, he worked unceasingly for peace. Few men have left a more significant imprint on the 20th century.

In his lifetime, he won high office and held imposing titles—General of the Armies—president of a great university—President of the United States. But our memories of Dwight Eisenhower are not related to pomp and ceremony. We remember him as a warm, outgoing person—a man of character, integrity, and good will.

He battled in the arena of politics—and won. And he won more than the Presidency. He won the affection and respect of the American people.

Now he is gone, and we will miss him. But his words and deeds will live on in our history and influence our Nation for generations to come.

Mr. FANNIN. Mr. President, the Nation, and indeed all of the free world, mourns the death of Dwight D. Eisenhower. His absence will be lamented not only by free men everywhere but also by those who long to be free, for Dwight Eisenhower epitomized the fight for freedom in all aspects of his life.

From a Kansas farm boy to Supreme Allied Commander in Europe to President of the United States, Dwight David Eisenhower symbolized all that is good about America. His life bounded all elements of the American ideal and wrapped them in reality.

Now we are all much poorer because he is gone.

To say that he was a great American is inadequate.

To say he was a great statesman lacks completeness.

To outline his accomplishments in war and peace as a protector of the free world ignores the foundations for domestic progress he laid here at home.

It remains for history to indelibly inscribe upon the tables of time the unique and continuing contributions made by Dwight Eisenhower, not only through his public service but by his private example of integrity, courage, and devotion to duty.

Though we grieve over his death and sorrow at his passing, our lives are enriched by the record of the life he lived in service to his fellow man, his nation, and his God.

Mr. MONDALE. Mr. President, Dwight David Eisenhower is gone, and Americans everywhere mourn his passing.

What he did is engraved in the national consciousness: at Normandy; at Bastonge; on the Elbe; in 8 years as one of the most beloved Presidents with which the Nation has been blessed.

I would speak of Dwight Eisenhower the man, for, in many ways, what he was, was even more important than his deeds, great though they were.

He was a uniquely American product: A soldier who had seen the face of war, and who turned his country away from it. He was perhaps the most beloved man of this time, yet a man who never lost his humility.

We asked of him perhaps more than we should ask of any man. It was his decision, and his alone, that determined the life or death of hundreds of thousands of American men on that June 6 D-Day more than two decades ago. It was his decision, more than once in his 8 years in the White House, that meant the difference between peace and war.

A small incident, unknown at the time, illumines his character. On the eve of D-Day, when the greatest invasion force in man's history moved toward Omaha, Juneau, and the other beaches of Normandy, Dwight Eisenhower, in the loneliness of his command post, wrote two communiques. In the first he foretold a great victory for American arms. In the second—should that happen—he wrote of a bloody defeat, and in the communique he wrote that the defeat was his alone, that he had made the decision, that the blame was his alone.

He was, above all, a good man, in the best sense of that most overused word. We knew that he was, and we gave him our love; he gave to us his all.

Mr. COOPER. Mr. President, I do not believe I can add anything to the tributes which have been paid to Dwight David Eisenhower. Certainly nothing can be added to the record of his life.

I can only voice my own appreciation of his life, and for having known him and having served under him in the Army of the United States in Europe in 1944 and 1945, as Ambassador of the United States to India and Nepal by his appointment, and as a Member of the U.S. Senate when he was President.

Although I am sure these following articles have been placed in the RECORD by other Senators, I feel that they, added to the magnificent eulogy by President Nixon, have expressed the admiration and the affection of the American people.

I ask unanimous consent that the editorial published by the New York Times on Sunday, March 30, and the article by Mr. Arthur Krock published by the Times on Saturday, March 29, be printed in the RECORD following my remarks.

I emphasize President Eisenhower's initiative toward ending the cold war, and toward the achievement of peace. I quote the last two paragraphs of an editorial in the New York Times of March 31, entitled "Guests at the Funeral":

The passage of time has only added importance to the beginnings toward ending the cold war that were made when Eisenhower and Khrushchev met in Geneva in 1955 and then in this country in 1959. Their meetings broke the ice of the Stalinist era and—despite the U–2 flareup in 1960—helped pave the way for the limited but important progress that has been made this decade.

The world leaders at this funeral of a soldier for peace could render him no more significant tribute than to advance the spirit of reconciliation he set in motion.

Finally, I take the liberty of using that part of the eulogy of President Nixon when he quoted the last words of President Eisenhower to Mrs. Eisenhower:

I've always loved my wife. I've always loved my children. I've always loved my grandchildren. And I've always loved my country.

To Mrs. Eisenhower, who shared his trials and triumphs and who contributed to his life, we offer our admiration and sympathy.

We shall miss him.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 30, 1969]

A PEACEMAKER REMEMBERED

On this day of national mourning for Dwight Eisenhower, there is everywhere a sense of loss but not of tragedy. It is a time of sorrow but not of desolation, of nostalgia but not of despair. After a full, active life of service to his nation and mankind he died rich in honors and secure in the affections of his countrymen.

In war, he had known moments such as the North African invasion and the Normandy D-Day when daring and high resolve were rewarded. In peace, he had labored with patience and insight for better international relationships and helped bring about a significant change in the cold war. As party leader and President he was no stranger to controversy. Like all men he had some failures of understanding and made some mistakes of judgment, but he left the White House after eight years still retaining the confidence of the nation.

Even in the last year of his life when pain and distress were often his unwelcome companions, he had also occasions for satisfaction—the political party of his choice restored to power, a political protege elected to the White House, a grandson married. As with the lives of General George C. Marshall, his close military colleague, and Winston Churchill, his great wartime ally, there is about Eisenhower's life a sense of fulfillment, of missions accomplished.

He played a historic military role in a warlike age but it is as a peacemaker he will be remembered. He had a sure instinct for popular sentiment. In a television talk in 1959 with British Prime Minister Harold Macmillan, President Eisenhower said, "I think that people want peace so much that one of these days governments had better get out of their way and let them have it."

Tendered a dinner in his honor by New York City in June 1945, he early defined the philosophy that guided his peace-keeping efforts: "I believe we should be strong, but we should be tolerant. We should be ready to defend our rights but we should be considerate and recognize the rights of the other man."

His tolerance, his fairmindedness, his ability to put himself in the other man's shoes and see the problem from another viewpoint won the confidence of his fellow Americans, ignited the hopes of his contemporaries and earned the respect of his adversaries. Regardless of provocation and pressure he never lost sight of his essential goal. He overruled military advisers and refused to intervene in French Indo-China in 1954. He broke with the nation's oldest allies, France and Britain, to oppose the Suez invasion of 1956. He incurred the political risks of inviting Premier Khrushchev for a tour of this country in 1959 and did not lose faith in eventual Soviet-American accommodation despite the Premier's tirades at the unsuccessful Paris summit conference in 1960. His farewell message to the American people upon leaving the White House the following year was a warning against the power of the military-industrial complex.

"He is great who is what he is from nature, and who never reminds us of others," Emerson wrote in his Essay on Great Men. Eisenhower met this definition. As a famous general, he was as unlike Napoleon or Wellington in his personal style as any man could be, and just as dissimilar to his American predecessors of past wars—Washington, Jackson, Grant, Pershing. He was unique.

Yet, from another vantage point, Eisenhower could, like Lincoln, say that he was a common man but God must like common people because he makes so many of them. "Ike" looked like everybody's grandfather. In his simple tastes, plain dress and easy manner, he could have been an obscure country doctor or another Midwestern businessman. Of his generation, he was the typical American writ large, and so countless millions whom he had never met could think of him as a neighbor and a friend. Born in Texas, reared in Kansas, educated in New York, on duty at Army posts across the country, and retiring at last to a farm in Pennsylvania, Dwight Eisenhower belonged to all Americans. They honor him today, neighbor, friend, peacemaker.

[From the New York Times, Mar. 29, 1969]

TOPICS: "AN UNCOMPLICATED MAN"

(By Arthur Krock)

WASHINGTON, March 28.—"To mold, to balance and to integrate" the forces contending, designedly or inherently, to undermine "the principles of our democratic system"—this was the lifetime mission of Dwight D. Eisenhower as he saw and practiced it. In many conversations with him before, during and after his Presidency, his sense of this mission invariably emerged. So it was wholly in character that his fixed dedication dominated Eisenhower's Farewell Presidential Address to the American people on the night of Jan. 17, 1961.

A BASIC DOCUMENT

To schoolboys the best-known examples of state papers in this particular field are Washington's Farewell Address and the peroration of Lincoln's Second Inaugural. Indeed, they are the only ones with which schoolboys are familiar. But as time recedes into eternity from the day of Eisenhower's death on March 28, 1969, the extraordinary combination in his Farewell stress on his lifetime principle, and foresight of the threat to which it was being increasingly exposed, will establish this document also as fundamental to the basic education of Americans.

He cited two forces in particular as comprising the threat to "the very structure of our society": A military-industrial complex and a "scientific-technological élite," both born of another new threat. And this he described as "a hostile ideology—global in scope, atheistic in character, ruthless in purpose and insidious in method." In other words, the Bolshevist design to impose Communism by force throughout the world.

CARICATURE REFUTED

If there were room here for additional extracts, they could only serve to support the point I am seeking to make. It is, that not only does Eisenhower's Farewell reflect and maintain the purpose which guided him as President, as soldier and as a private person: the Address refutes the caricature drawn of Eisenhower by variously motivated critics as a chief magistrate who let his subordinates do the governing because he had no original ideas, no passion for the advancement of humanity and a distaste for mental concentration on the problems confronting the President as steward of the nation.

But the refutation of this appraisal has much more material to produce than the Eisenhower speech of Jan. 17, 1961. The records of the crisis meetings of the National Security Council, 1953–61, are now under seal at Camp Ritchie, Maryland. When these

papers are released for publication they will, according to a common judgment expressed to me by participants in the discussions, reveal that the President:

Made all the final decisions; firmly and fully enforced them; that his reliance on the staff system stopped at the deciding line; that his grasp of complex issues was profound; and that his expositions of his own views were both forceful and clear.

SOURCE OF POPULARITY

But, since a large part of the public incessantly read the contrary in the press, and heard it on the air and in the political arena, what were the sources of a popular sentiment that, the political professionals generally agreed, would have elected Eisenhower to a third term if he had been legally eligible—and willing?

He has been a victorious American commander of the largest armies ever assembled. But victory in war, even a war that preserved the Union, did not save Grant from the political obloquy in which his Presidency ended. And Washington left the Presidency amid a rising tide of malice and slander.

GOOD AND UNSELFISH

The sources of Eisenhower's unbroken hold on the American people were probably that few could see, hear or talk with him and not come away with the conviction that here was a good man, an uncomplicated man, unselfish in his patriotism—the kind of man who has risen from simple beginnings to the possession of great power without impairment of integrity.

This certainly was my feeling in conversations, intimate and otherwise, in Paris, in the Pentagon, at the White House and thereafter. And, aside from the foresight, perception and passion for the traditional concept of "the democratic system" in the Farewell Address, Eisenhower was the kind of President the nation wanted in his time, a time that may come again.

(NOTE.—Through all the years of the Eisenhower Presidency, Arthur Krock wrote the "In The Nation" column in The Times.)

Mr. BOGGS. Mr. President, death has taken from us Dwight David Eisenhower who dominated the middle of the 20th century as a soldier, statesman, and humanitarian.

We all are diminished by the loss.

My deepest sympathies go to Mrs. Eisenhower and their wonderful family.

People throughout the world had great faith and confidence in General and President Eisenhower. And he, in turn, had great faith in the goodness of man and in the simple virtues.

In 1952, before his election, he put some of the tenets of his faith down on paper, and I believe they have great relevance for us here today. He said:

If each of us in his own mind would dwell upon the simple virtues—integrity, courage, self-confidence, and unshakeable belief in the Bible—would not some of our problems tend to simplify themselves?

Would not we, after having done our best with them be content to leave the rest with the Almighty? I think it is possible that a contemplation, a study, a belief in those simple virtues would help us mightily.

General Eisenhower's great faith in this country and its people was reciprocated fully by the people.

My personal faith in this great man springs from the dark days of World War II when I served under him in Europe. I recall we had absolute confidence in his command leadership. But he was more than a military leader. He was beloved by the men in the ranks, to whom his infectious grin and willingness to consider their problems symbolized a great moral leader.

It was my privilege to get to know the general better in later years. In 1952 and 1956 I campaigned for him as I was running for Governor of Delaware. His visits to our State were memorable occasions to me.

He frequently held briefing sessions for the Governors in those days, and it was my privilege as Governor of the First State to be seated at his side. He was always well prepared at those sessions and brisk in matters of business. But he also liked to talk about his golf game and tell of the pleasure he found in doing his own cooking.

President Eisenhower's years of preminence served his country well. He answered every call—to the military, to education, to his Nation's highest office—but, above all, to his fellow man.

It may well be said, as Louisa May Alcott wrote:

For such as he there is no death;
His life the eternal life commands;
Above man's aims his nature rose.
The wisdom of a just content
Made one small spot a continent,
And tuned to poetry Life's prose.

Mr. TOWER. Mr. President, it will be many, many years before the Nation is again blessed with a man such as Dwight David Eisenhower. Many others have chronicled his historic achievements, which were very great indeed, and I can add little to that. The thing that I best recollect about the general, however, is his strong sense of humanism and his dedication to the morality that has pervaded the American people and made them able to endure all the hardships that befall a great nation.

Soldier, statesman, writer that he was, I believe that he will be best remembered in the history of our Nation as the guiding light for America during years of peril and an inspiration to us all in rebuilding the world and leading it from devastation to unprecedented growth. The general lived as he died, always fighting against overwhelming odds and seeking out the best of all possible solutions.

The years 1952–60 are already looked back upon in nostalgic terms for our Nation. During that time, we were a nation unified for a common purpose, seeking a common goal, hand in hand. The Eisenhower years were a Periclean age when we were recovering from nearly 12 years of warfare and international strife. The leadership provided during those years enabled us to bind up our wounds, rebuild much of the world, and chart a course for growth unknown before in the world.

As easy as it is to heap praise upon someone with General Eisenhower's stature, I am certain that he would want to be remembered as a man of the people, an American Cincinattus, who heeded the call of his Nation when it needed him even at the risk of great personal sacrifice. When the former President suffered his first heart attack which brought him so close to death some 14 years ago, it would have been easy for him to have retired from public life, which was the advice of many physicians. However, in the true Eisenhowerian sense, he put his personal considerations aside to serve his country that he loved so dearly.

Mr. Eisenhower spoke often of his country and the people who comprised it during his colorful and spiritually rewarding service to his nation, but I believe that one of his most poignant statements came from him just after he had assumed his Presidential office in 1953 and was proceeding on his work. When he spoke, he captured what must be considered as one of the finest thoughts on the essence of what is America. As always with the general, it was short, simple, and to the heart of the matter:

But never let us forget that the deep things that are America are the soul and the spirit. The Statue of Liberty is not tired, and not because it is made of bronze. It is because no matter what happens, here the individual is dignified because he is created in the image of God. Let us never forget it.

Mr. SAXBE. Mr. President, Dwight David Eisenhower was a man for all seasons and all peoples. America has lost a great patriot and a great leader. The sadness of this time is even deeper because America has also lost a great man.

This soldier-statesman, a man of peace and love of country, was a fighter to the end. He was a marvelous fighter who lived like a general and died like a general.

Yet even in war, Mr. Eisenhower was a messiah of peace. On a 20th-century day of apprehension, June 6, 1944, for example, he messaged the people of Western Europe while Allied troops were storming ashore in Normandy:

This landing is part of the concerted United Nations plan for the liberation of Europe, made in conjunction with our great Russian allies . . . I call upon all who love freedom to stand with us now. Together we shall achieve victory.

In all of my personal contacts with Mr. Eisenhower, I was always impressed with his outgoing, warm personality and attitude. Even when he ascended to the two highest positions of his twin caceers—General of the Army and President of the United States—this plain-talking man from Abilene never lost the humility and touch that bonded him to his people. Perhaps his greatest appeal, in fact, rested in the way even the most humble of Americans was able to identify with the man we all called "Ike."

Mr. Eisenhower's view of humility may have been best expressed late in World War II, in an address at Guildhall, London. He said that day:

Humility must always be the portion of any man who receives acclaim earned in the blood of his followers and the sacrifices of his friends,

Dwight David Eisenhower, our 34th President, was born October 14, 1890, in Denison, Tex. He was the third son of David and Ida Elizabeth Stover Eisenhower. A year later the family moved to Abilene, Kans., where the young "Ike" earned both academic and scholastic honors at Abilene High School. Eisenhower entered West Point in July 1911, where, 4 years later, he was commissioned a second lieutenant in the Infan-

try and assigned to Fort Sam Houston, Tex.

It was there that he met Mamie Geneva Doud, a gentle lady who would spend the next 52 years at his side. They were married July 1, 1916, at Denver, Colo.

General Eisenhower's military career is known today to nearly all Americans: It spanned two world wars and a number of lesser crises in our history. His ability as a master planner and tactician were quickly recognized by his superiors.

The general was named commander in chief of Allied forces in North Africa in 1942, and directed the successful campaigns in Africa, Sicily, and Italy.

Later, he was named supreme commander of all Allied Forces in Europe and directed the "great invasion" that eventually brought the enemy to his knees.

I do not intend to recount Mr. Eisenhower's political career here, except to note that he was elected President in November 1952, and took office January 20, 1953. He was reelected President in 1956.

It was typical of Mr. Eisenhower that, for a man who spent more than half of his life in the uniform of a warrior, he was always a highly religious and devout man. Shortly after World War II, when he had directed the most awesome military machine ever assembled, Mr. Eisenhower was asked about his religious beliefs. He replied:

> I am the most intensely religious man I know. Nobody goes through six years of war without faith.

His inner beliefs were perhaps best expressed for all time in a message to the American people in 1953. He said:

> The things that make us proud to be Americans are of the soul and spirit. They are not the jewels we wear, or the furs we buy, the house we live in, the standard of living, even, that we have. All these things are wonderful to the esthetic and to the physical senses.
>
> But never let us forget that the deep things that are America are the soul and the spirit. The Statue of Liberty is not tired, and not because it is made of bronze. It is because no matter what happens, here the individual is dignified because he is created in the image of his God . . .

That was Dwight David Eisenhower.

Mr. MATHIAS. Mr. President, millions of words, in many languages, have been written and spoken in tribute to Dwight David Eisenhower through the years and over this sad weekend. As heads of state, prominent men and women, and ordinary citizens have expressed their admiration and respect for General Eisenhower, one remarkable theme has been that of simple, universal affection for this extraordinary man.

Americans can say of Dwight Eisenhower, more than of any other man, that he was their friend. Those of us who had the privilege of knowing him only share in a richer sense this conviction that he was a genuinely warm and sincerely dedicated human being.

It was this human quality that gave an extra dimension to General Eisenhower's dramatic career as a soldier. He directed the greatest Allied Expeditionary Force in history, and in the course to that victory he was able to shape a grand alliance of free men which reached and endured far beyond the formal accords of governments.

It was this human quality that gave the Eisenhower Presidency its emphasis on peace and on humane concerns, an emphasis which met a deep national need, steadied the country, and brought the free world to new, lasting confidence and energy.

It was this human quality that produced the great sense of friendship and regard for Dwight Eisenhower which we have witnessed among those far too young to have served in World War II or voted in the national elections of the 1950's.

It was this human quality which made him, as President Nixon stated in his moving eulogy of yesterday, "an authentic hero"—not only recognized for his heroic deeds, but loved for his authentic faith and personal commitment.

To some, General Eisenhower's death marks the further disappearance of those grand figures and historic leaders who made the free world a reality. To many, his death has brought a sadness and nostalgia for a somehow simpler world in which there were great men who could lead peoples in great causes, live rich and full lives, and pass on peacefully.

Yet, in the respectful quietness of national mourning, we have all felt a return to those qualities of humanity and decency which are at the heart of America. We have felt a sense of community which, although evoked by sorrow, gives us hope.

Dwight David Eisenhower is mourned and will be remembered above all else because he had a vision of a world in which men would be guided by their higher ideals, a world in which the selfishness and folly of nations would be submerged in the greater desire and willingness of people to act together in the cause of peace and freedom. It is this vision, grounded in faith and infused with compassion, which will be his legacy and should be our guide.

Mr. SCHWEIKER. Mr. President, many words have been spoken and written in the hours since Gen. Dwight D. Eisenhower lost his gallant fight for life on Friday, even though words are inadequate to express America's loss of a great man. His dedication to freedom and his service to his country as a soldier and as a statesman to maintain that freedom have been widely praised. His strength of character, which in turn gave moral strength to millions of Americans for two decades, has been widely honored.

I should like to add a short personal tribute to General Eisenhower, as one who was honored to have known him as a friend and adviser. I am particularly moved to be able to make my tribute in this historic Senate Chamber, because it was General Eisenhower's early support and encouragement over a year and a half ago, that contributed to my decision to become a candidate for the U.S. Senate seat I presently hold.

General Eisenhower lived in, and loved, Gettysburg, Pa., and we in turn, from Pennsylvania, gained the honor of calling him a neighbor. He brought the same high sense of personal honor and integrity to his activities in Pennsylvania, as he did to the affairs of state as President of the United States. He brought the same love of his fellow man to the town of Gettysburg, as he did across the world, in the many stirring trips as President we still remember.

As a general, he united allied countries to wage a fight against oppression. As President, he united our country in an unprecedented time of peace and prosperity, to improve the lot of all mankind. As a man, he represented the highest qualities of what has made America great, and he served his country long and selflessly to make it great. I can think of no better eulogy than to recount his life of service, and his love of humanity, and the inspiring example that his life provided for us all.

We have lost a great leader, and the Eisenhower family has lost a great man. He was, is, and will be one of America's most beloved Presidents.

Mr. STEVENS. Mr. President, for a large portion of my life, Dwight David Eisenhower was my Commander in Chief, in peace and in war. Today, millions of Americans feel, as we do, the sense of loss that somes from losing not only a leader, but a friend.

No President in our memories has so firm a place in the hearts of our Nation. Fathers fought under his command, and their sons grew up to know him as a man of peace. All Americans mourn him today. But it is mourning that covers a deep sense of gratitude. America is a better place for his having been here; Americans know this and are thankful for it. He led his countrymen through some of the most difficult years the United States has ever known—and he led them later to peace, strength, and prosperity at home and abroad.

President Eisenhower held a special place in the hearts of Alaskans, over and above that which exists so completely throughout the country. For it was under his administration that Alaska became our 49th State. It was with President Eisenhower's support that Alaskans were granted the full rights and privileges of American citizenship. In a speech in Denver in 1950, recognizing the unjustness of territorial status, he said:

> Quick admission of Alaska and Hawaii to statehood will show the world that America practices what it preaches.

For our 34th President, statehood for Alaska was a matter of simple justice. And in January, 1959, this hope of equality for Alaska became a reality with his proclamation of January 3, 1959, that Alaska was a fullfledged member of the Union. In a very real sense he was a "50-star" general—for he was the first President to serve as the leader of our Union of 50 States. Alaskans mourn his passing with special sorrow. He gave us so much; indeed, without Dwight David Eisenhower, I doubt seriously whether many of us would be here today.

A nation should always mourn the passing of a leader. But many of us today not only mourn; we grieve the passing of an era. It seems only a short time ago that, as supreme commander, Gen.

Dwight Eisenhower's firm voice commanded the Allied Armies in Europe; and an even shorter time ago that he steered this great country through crisis and change. He conceived of Atoms for Peace and started the process by which we shall achieve our ageless dream of reaching the stars. His strengths, ideals, and accomplishments will be landmarks for use and all American in times to come.

Mr. President, as Dwight D. Eisenhower gave unstintingly to America, America in return gave him its love and respect. He had many honors, the love of his country, and the respect of the world. But when he listed the accomplishments of his administration, statehood for Alaska and Hawaii appeared first on the long list of achievements of the Nation under his leadership.

To Alaskans, he was a man who matched our mountains—a man who stood above the crowd, a man firm in purpose, devout in his heart, and true to the ideals he espoused.

Dwight Eisenhower loved his country—he served it well.

He would ask no greater epitaph than that.

Mr. FONG. Mr. President, I am deeply grieved by the death of our beloved leader Dwight David Eisenhower. Hoping against hope, I had prayed that this gallant soldier would once again conquer physical adversity.

There is no question that America has lost one of its greatest heroes—a brilliant general, a skilled statesman, an outstanding leader.

We—and the world—will sorely miss one of our foremost citizens, a man of upright convictions who throughout his entire life was a force for goodness and justice for all mankind.

It is sad indeed that his wise counsel is lost to us particularly at a time when the winds of dissension tear at the fabric of our civilization and moral confusion corrodes a growing segment of society. We need so much his calm and reasoned counsel and his dignity and faith and inspiration.

His passing is a real loss, not only to the American people but to peoples in far-flung lands around the globe, who recall his magnificent record in ending war and in building peace.

Millions of Americans remember General Eisenhower in his capacity as World War II commander in chief of the Allied Forces in Europe, and their gratitude to him for his leadership is personal.

Millions of Americans remember his strength and ability as supreme commander of the North Atlantic Treaty Organization, which served to keep the hard-won peace in Europe after World War II.

Millions recall his tenure as president of Columbia University, a magnificent institution of higher education, to which he imparted great prestige and honor.

Millions of Americans lived during the 8 years of his Presidency, and they know from personal experience the peace and tranquility and progress of the years 1953 through 1960—and their gratitude to him is personal.

Other millions are two young to remember most of the deeds and the accomplishments of Dwight David Eisenhower in his long life of service to the American people and to freedom-loving people everywhere. They only know from history books of his wartime record and his performance as 34th President of the United States.

In these eulogies, we hope to recall and convey as best we can something of the greatness and the goodness of Dwight Eisenhower and to preserve for posterity the fundamental precepts for which he stood.

Trained as a soldier, he left military service after reaching the pinnacle of success to enter civilian life, where he also reached the pinnacle of success—success measured not alone by his winning two terms as President of the greatest Nation on earth, but success measured by his ability to keep the peace.

A soldier of war became one of America's greatest peacemakers. Surely his skill at maintaining peace is one of the greatest monuments to his memory.

Others will chronicle the triumphs, the milestones, and the contributions of Dwight Eisenhower to his country and to the world. Today I should like to emphasize his major achievements as two-term President of the United States—"major" as he himself assessed his tenure in office. For his own evaluation of his record reveals, better than my words can do, his sense of values and his concern and compassion for people.

Called upon in October 1966 to defend his record as President, General Eisenhower enumerated 23 accomplishments.

We see Dwight Eisenhower's passionate devotion to peace in these achievements on his list:

End of the Korean war—thereafter no American killed in combat while he was President.

Good will journeys to more than a score of nations in Europe, Asia, Africa, South Africa, and in the Pacific.

Prevention of Communist efforts to dominate Iran, Guatemala, Lebanon, Formosa, South Vietnam.

Atoms-for-peace program.

Preservation for the first time in American history of adequate military establishment after cessation of war.

Initiating a strong ballistic missile program.

Conceiving and building the Polaris program, with submarines operating at sea within a single administration.

Reorganization of the Defense Department.

Initiation of a plan for social progress in Latin America after obtaining necessary authorization from Congress for $500 million.

We see Dwight Eisenhower's compassion for people in these accomplishments on his list:

Intelligent application of Federal aid to education—National Defense Education Act.

Extension of social security old-age and survivors insurance to over 10 million persons.

Starting Federal medical care for the aged—Kerr-Mills program.

Establishment of the Department of Health, Education, and Welfare.

We see Dwight Eisenhower's firm adherence to Government's obligation to maintain a sound currency and monetary system in the following achievements he listed:

Slowing up and practical elimination of inflation.

Largest reduction in taxes to that time.

Fighting for responsible fiscal and financial policies throughout 8 years.

We see Dwight Eisenhower's awareness of the need for resource development and technological progress in the following achievements on his list:

Building of the St. Lawrence Seaway.

Initiation of the Nation's space program with successful orbits in less than 3 years, starting from scratch.

Initiation of, and great progress in, the most ambitious road program by any nation in all history.

We see Dwight Eisenhower's deep passion for justice, fairplay, and equal rights in these accomplishments on his list:

The first civil rights law in 80 years.

Using Federal power to enforce orders of a Federal court in Arkansas, with no loss of life.

Desegregation in Washington, D.C., and in the Armed Forces by administrative action.

And last, but not least, statehood for Alaska and Hawaii.

It is significant that Dwight Eisenhower mentioned statehood first in his listing. But I mention it last because I want to say a few words about Dwight Eisenhower's vital role in statehood.

We of Hawaii owe a special debt of gratitude to him, for he made it possible for Hawaii to become a State of the Union, a status for which we had struggled for more than half a century.

As President he was an ardent champion of statehood for Hawaii. In his state of the Union message on January 5, 1956, President Eisenhower spoke of "one particular challenge" confronting Americans. He said:

> In the Hawaiian Islands, East meets West. To the Islands, Asia and Europe and the Western Hemisphere, all the continents, have contributed their peoples and their cultures to display a unique example of a community that is a successful laboratory in human brotherhood.
>
> Statehood, supported by the repeatedly expressed desire of the Islands' people and by our traditions, would be a shining example of the American way to the entire earth. Consequently, I urgently request this Congress to grant statehood for Hawaii.

Never before had any Chief Executive called for statehood for Hawaii with such enthusiasm or urgency. Within 4 years, the issue was resolved on the side of justice and fairplay.

Congress passed the Hawaii statehood bill in March 1959, and President Eisenhower promptly signed it into law. It was a glorious victory in Hawaii's struggle for equal rights that began more than a half a century earlier.

The long and arduous campaign for statehood came to a final end on August 21, 1959, when President Eisenhower signed a proclamation which declared, in part, that "admission of the State of Hawaii into the Union on equal footing with the other States of the Union is now accomplished."

I remember so clearly the day Dwight Eisenhower invited me, one of Hawaii's first two U.S. Senators, to the White House to accept the first 50-star flag representing the addition of Hawaii to the Union. Ike's pleasure and pride in Hawaii statehood were genuinely evident, and we all realized a wonderful new chapter in our Nation's history was beginning.

So, on this 10th anniversary of statehood, the people of Hawaii salute Dwight Eisenhower with a grateful "Thank you" and with the warmest aloha from our hearts. We are indeed deeply touched that he listed statehood for Hawaii as one of the great achievements of his Presidency.

Just as Hawaii has special reason to be grateful to Dwight Eisenhower, so billions of freedom-loving human beings on this planet have good reason for gratitude. As an outstanding and victorious soldier, he captured the affection and respect of his countrymen and of the peoples saved and liberated through his brilliant leadership.

And as a soldier of peace in the decades following, he increased their affection and respect. Dwight Eisenhower became the most popular President since George Washington and, although he had been out of public office for 9 years, he remained the most admired man in the world to his final days.

As President Nixon so aptly said yesterday in his moving eulogy, Dwight Eisenhower "was probably loved by more people in more parts of the world than any President America has ever had."

When future generations of America ask "Why was this so?" we want them to know the qualities of mind and spirit that so endeared Dwight Eisenhower to his fellow man.

He personified the essential goodness and greatness of the American Nation and the American people. He came from humble beginnings and he was taught to revere God, to love his country, and to honor his fellow man.

He was taught to distinguish right from wrong and to persevere in behalf of what is right.

Raised in the heartland of America, among plain, God-loving, dignified people, Dwight Eisenhower personified those enduring qualities that are universally admired and respected—gentle kindness, inherent decency, human compassion, unquestioned honesty, integrity, courage, strength in adversity, self-respect, humble confidence, and unfailing faith in God and in men, the children of God.

These but barely sketch the true dimensions of this giant among men. Ordinary standards and ordinary words inadequately measure the extraordinary man that Dwight Eisenhower was.

Perhaps the simplest and best way to describe the stature of Dwight Eisenhower is to say that he was a man who loved people and his love was so all embracing that billions of human beings here and abroad reciprocated.

In many lands, among many races, and in many tongues, the feeling is, and for years has been, expressed in the same way: "I like Ike." No higher tribute can be paid the memory of Dwight Eisenhower.

My wife Ellyn joins me in extending our deepest sympathy to Mrs. Eisenhower, John Eisenhower, and all the members of the Eisenhower family. We shall always cherish the memory of their beloved "Ike."

Mr. GOODELL. Mr. President, today this Nation mourns not only a former President and general, but a man.

It is a cliche to say that Dwight David Eisenhower was admired; how much more fitting to his memory it is to say "we like Ike."

It might be worth noting in passing that all the political slogans in American history—"Fifty-four forty or fight," "Tippecanoe and Tyler too," "Back to normalcy," "Chicken in every pot," and many many others were slogans about an issue or about a man and an issue. "I like Ike" was the only slogan that expressed America's feeling about a man.

There is a deeper reason for this mass affection than the fact of his military genius or his infectious grin.

I think President Nixon put his finger on it when he said in yesterday's eulogy:

> We find ourselves, thinking today, not of his deeds, but of his character.

I think that no finer tribute to Ike can be made than that we resolve today to rededicate ourselves, not only as a people but as individuals, to the basic values that went to make up that character.

Ethics, morality, courage, integrity, honor, decency, faith.

Dwight David Eisenhower possessed and used these simple homely virtues each day of his life.

We would do well to reassess our outlook on what these values mean in our society today.

We have, to all too great extent, relinquished much of our self-control as well as our public control. There has been a loss of resolve, a lessening of the built-in deterrents that are such an essential part of the human psyche.

We have become a nation of people that is increasingly more permissive and increasingly less prohibitive in its critique of the scene in which we are involved.

Our sense of proportion seems to have undergone a not too subtle erosion.

It is my earnest belief that the basis of decent human conduct is still to be found in the fabric of the Ten Commandments and the Sermon on the Mount.

Today, unfortunately, it has become somewhat "square" to refer to the values of the spirit—and yet there is not one of us, who deep in his heart does not desire for his children that they grow up with a deep sense of spiritual value.

Let us therefore on this day of sadness, pause to reflect and to make use of the lesson of Ike's career and how he conducted himself personally.

Let us each in our hearts, resolve to be unafraid and unashamed to proclaim that the quiet dignity of good character, is a virtue to be praised, rather than to be ridiculed as "out of date."

And let us see to it—each of us—that we never let this concept die, that we follow the words of the passage from Deuteronomy that say:

> And these words which I command thee this day, shall be upon thy heart. Thou shalt teach them diligently unto thy children and shalt speak of them when thou sittest in thy house, when thou walkest by the way, and when thou liest down and when thou rises up . . . that ye may remember and do all my Commandments and be holy unto your God.

Dwight Eisenhower was "holy unto his God." People realized this; it was an unspoken understanding.

In the words of President Nixon:

> We are grateful for the life of Dwight David Eisenhower. He truly came from the heart of America.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADOPTION OF RESOLUTION

The question is on agreeing to the resolution, which will be stated.

The legislative clerk read as follows:

S. RES. 175

Resolved, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Dwight David Eisenhower, a former President of the United States and General of the Army of the United States.

Resolved, That as a token of honor to his illustrious statesmanship, his leadership in national and world affairs, his distinguished public service to his nation, and as a mark of respect to one who has held such eminent public station in life, the Senate hereby expresses its deep sensibility of the loss the nation has sustained by his death, and its sympathy with the family in their bereavement.

Resolved, That the two Senators from Kansas be appointed by the President of the Senate to attend the funeral of the deceased, to be held at Abilene, Kansas.

Resolved, That the Secretary of the Senate transmit these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the deceased the Senate do now adjourn.

The resolution (S. Res. 175) was unanimously agreed to.

ADJOURNMENT

The PRESIDING OFICER. In accordance with the provisions of Senate Resolution 175, under the order previously entered, and as a further mark of respect to the memory of the deceased former President of the United States, Dwight David Eisenhower, the Senate will now adjourn.

Accordingly (at 2 o'clock p.m.), the Senate adjourned until tomorrow, Tuesday, April 1, 1969, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES—*Monday, March 31, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Yea, though I walk through the valley of the shadow of death, I will fear no evil: for Thou art with me.—Psalm 23: 4.

Almighty and Eternal God, the comforter of Thy children and the strength of those who put their trust in Thee, we assemble this day with sorrow in our hearts at the passing of General of the Army Dwight David Eisenhower, our beloved 34th President. Even in the sadness of farewell we think fondly of him who walked so worthily in our midst and who served so well as the leader of our country.

We mourn his passing because he reflected in his own personality the tradition of a free people and revealed in his life the shrine of our Nation's faith and hope.

We thank Thee for him, for his courage of mind and heart, for his strength of character, for his desire to do what he firmly believed to be right and for his devotion to his family and to his country. Certainly our United States is a better nation—stronger and freer—because he lived and led us in war and in peace.

So we honor the memory of this great and good man, "who more than self his country loved," and in so doing we dedicate ourselves anew to Thee and to our Nation in the global struggle between democracy and dictatorship.

Comfort the family with Thy sustaining spirit and strengthen them for these hours and for the days to come. Keep them and us, steady and strong, this day and forever more. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, March 27, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J. Res. 584. Joint resolution making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes.

The message also announced that the Vice President, pursuant to Public Law 170, 74th Congress, appointed Mr. BAYH as a delegate on the part of the Senate to attend the Interparliamentary Union Meeting to be held in Vienna, Austria, April 7 through April 13, 1969.

The message also announced that the Vice President, pursuant to Public Law 77-250, appointed Mr. HRUSKA to be a member of the Joint Committee on Reduction of Nonessential Federal Expenditures in lieu of Mr. ALLOTT, resigned.

The message also announced that the Vice President, pursuant to Public Law 86-420, appointed Mr. BYRD of West Virginia and Mr. JAVITS to attend the Mexico-United States Interparliamentary Conference to be held in three cities in Mexico from April 2 through April 8, 1969, in lieu of Mr. BAYH and Mr. MURPHY, excused.

TRANSFER OF SPECIAL ORDER

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the special order granted to me for Wednesday may be transferred to tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

POSTPONEMENT OF SPECIAL ORDERS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the special orders scheduled for today be postponed until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

GENERAL LEAVE TO EXTEND—AND GENERAL LEAVE TO EXTEND ON THE LIFE AND CHARACTER OF FORMER PRESIDENT DWIGHT DAVID EISENHOWER

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that, without establishing a precedent, all Members may have the privilege of inserting their remarks and including extraneous material therewith in the body of the RECORD today, and that all Members may have 3 legislative days in which to extend their remarks in the RECORD on the life and character of our former President, Dwight David Eisenhower.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

MARCH 28, 1969.

The Honorable the SPEAKER,
U.S. House of Representatives:

DEAR SIR: I have the honor to transmit herewith a sealed envelope addressed to the Speaker of the House of Representatives from the President of the United States, received in the Clerk's Office at 3:35 p.m., on Friday, March 28, 1969, and said to contain a message from the President wherein he informs the Congress of the death of former President Eisenhower.

With kind regards, I am
Sincerely,

W. PAT JENNINGS, *Clerk.*

OFFICIAL NOTIFICATION OF THE DEATH OF DWIGHT DAVID EISENHOWER, THE 34TH PRESIDENT OF THE UNITED STATES—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States:

To the Congress of the United States:

It is my sad duty to inform you officially of the death of Dwight David Eisenhower, the thirty-fourth President of the United States.

We have lost a great leader, a great friend and a great man. I know there are many members of the Congress who had the privilege of serving under his military leadership, and who later, during his eight years as President, shared with him in the building of a better America. He had a profound respect for the traditions, the institutions and the instruments of our Nation. He leaves to the Congress and to all Americans the spirit of patriotism and statesmanship beyond party which marked his entire career. As we grieve at his death, we all will recall that spirit, which can guide and sustain us in our tasks ahead. He has been an inspiration to us all, and ours is a better government because he walked among us.

RICHARD NIXON.

THE WHITE HOUSE, *March 28, 1969.*

TRIBUTE TO THE LATE HONORABLE DWIGHT DAVID EISENHOWER

The SPEAKER. The gentleman from Pennsylvania (Mr. MORGAN) will assume the chair.

The SPEAKER pro tempore (Mr. MORGAN). The Chair recognizes the gentleman from Massachusetts, the distinguished Speaker of the House.

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent to insert at this point in the RECORD the eulogy delivered on President Eisenhower yesterday in the rotunda by President Nixon.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The President's eulogy to Dwight David Eisenhower follows:

PRESIDENT'S EULOGY TO EISENHOWER AT RITES IN CAPITOL'S ROTUNDA

Mrs. Eisenhower, your excellencies, friends of Dwight David Eisenhower in America and throughout the world.

We gather today in mourning but also in gratitude. We mourn Dwight Eisenhower's death. But we are grateful for his life.

We gather also conscious of the fact that, in paying tribute to Dwight Eisenhower, we celebrate greatness. When we think of his place in history, we think inevitably of the other giants of those days of World War II.

And we think of the qualities of greatness and what his were that made his unique among all.

Once, perhaps without intending to do so, he himself put his finger on it.

It was 1945, shortly after VE Day at a ceremony in London's historic Guildhall. The triumphant Supreme Commander of the Allied Forces in Europe was officially given the freedom of the city of London.

In an eloquent address that day, Dwight Eisenhower said:

"I come from the heart of America."

MEANING FOR AMERICANS

Perhaps no one sentence could better sum up what Dwight Eisenhower meant to a whole generation of Americans. He did come from the heart of America, not only from its geographical heart but from its spiritual heart. He exemplified what millions of parents hoped that their sons would be—strong

and courageous and honest and compassionate.

And with his own great qualities of heart, he personified the best in America. It is, I think, a special tribute to Dwight Eisenhower that, despite all of his great deeds and his triumphs, we find ourselves today thinking first, not of his deeds, but of his character.

It was the character of the man—not what he did, but what he was—that so captured the trust and faith and affection of his own people and of the people of the world.

Dwight Eisenhower touched something fundamental in America which only a man of immense force of mind and spirit could have brought so vibrantly alive. He was a product of America's soil, and of its ideals, driven by a compulsion to do right and to do well, a man of deep faith who believed in God and trusted in his will, a man who truly loved his country and for whom words like freedom and democracy were not clichés—but they were living truths.

I know Mrs. Eisenhower would permit me to share with you the last words she spoke to him on the day he died.

He said, "I've always loved my wife. I've always loved my children. I've always loved my grandchildren. And I have always loved my country." That was Dwight Eisenhower.

LAST WORDS QUOTED

He was a man who gave enormously of himself. His way of relaxing from the intense pressures of office or command was to do something else intensely—whether as a fierce competitor on the golf course or executing one of those hauntingly beautiful paintings that he did with such meticulous care.

People loved Dwight Eisenhower. But the other side of this coin was that he loved people. He had the great leader's capacity to bring out the best in people. He had the great humanist's capacity to inspire people. to cheer them, to give them lift. I remember for example, just a few months ago when I asked all of the members of the Cabinet to go out and call on him. And each of them returned with wonder and admiration and said, "You know, I went out there to cheer him up and instead I found he cheered me up."

His great love of people was rooted in his faith. He had a deep faith in the goodness of God and in the essential goodness of man as a creature of God. This feeling toward people had another side. In the political world strong passions are the norm. And all too often these turn toward personal vindictiveness. People often disagreed with Dwight Eisenhower, but almost nobody ever hated him. And this, I think, was because he himself was a man who did not know how to hate. Oh, he could be aroused by a cause—but he could not hate a person. He could disagree strongly, even passionately, but never personally.

When people disagreed with him, he never thought of them as enemies. He simply thought, they don't agree with me.

I remember, time after time, when critics of one sort or another were misrepresenting him or reviling him, he would sit back in his chair, and with that wonderful half-smile and half-frown, he'd say: "I'm puzzled by those fellows."

And he was genuinely puzzled by frenzy and by hate; because he was incapable of it himself, he couldn't ever quite understand it in others.

AN AUTHENTIC HERO

The last time I saw him that was what he talked about. He was puzzled by the hatreds he had seen in our times. And he said the thing the world needs most today is understanding, and ability to see the other person's point of view, and not to hate him because he disagrees. That was Dwight Eisenhower.

And, yet, of course, he was more than all that. He had a side more evident to those of us who worked with him than to the rest of the world. He was a strong man. He was shrewd. He was decisive. Time and again I have seen him make decisions that probably made the difference between war and peace for America and the world.

That was always when he was at his best.

No matter how heated the arguments were, he was always then the coolest man in the room. Dwight Eisenhower was that rarest of men—an authentic hero. Wars bring the names of many men into the headlines and of those some few become national or even international heroes, but as the years then pass their fame goes down.

STATURE CONTINUED TO GROW

But not so with Dwight Eisenhower. As the years passed his stature grew. Commander of the mightiest expeditionary force ever assembled, receiver of the surrender of the German armies in World War II, president of Columbia University, Supreme Commander of NATO, 34th President of the United States—the honors, the offices, were there in abundance. Every trust that the American people had it in their power to bestow, he was given.

And, yet, he always retained a saving humility.

His was the humility not of fear but of confidence. He walked with the great of the world and he knew that the great are human. His was the humility of a man too proud to be arrogant.

The pursuit of peace was uppermost in his mind when he ran for the Presidency, and it was uppermost in his conduct of that office.

And it is a tribute to his skill and determination that not since the 1930's has the nation enjoyed so long a period of peace both at home and abroad as the one that began in 1953 and continued through his Presidency.

As commander of the mightiest allied force ever assembled, he was the right man at the right place at the right time. And as President once again, he was the right man at the right place and at the right time.

He restored calm to a divided nation. He gave Americans a new measure of self-respect. He invested his office with dignity and respect and trust. He made Americans proud of their President, proud of their country, proud of themselves.

And if we in America were proud of Dwight Eisenhower it was partly because he made us proud of America. He came from the heart of America and he gave expression to the heart of America and he touched the hearts of the world.

Many leaders are known and respected outside their own countries. Very few are loved outside their own countries. Dwight Eisenhower was one of those few.

He was probably loved by more people in more parts of the world than any President America has ever had. He captured the deepest feelings of free men everywhere.

PRINCIPLES HE STOOD FOR

The principles he believed in, the ideals he stood for, these were bigger than his own country. Perhaps he himself put it best again in that Guildhall speech in 1945.

He said then:

"Kinship among nations is not determined in such measurements as proximity, size and age. Rather, we should turn to those inner things—call them what you will—I mean those intangibles that are the real treasures that free men possess. To preserve his freedom of worship, his equality before the law, his liberty to speak and act as he sees fit, subject only to provisions that he not trespass upon similar rights of others, a Londoner will fight and so will a citizen of Abilene.

"When we consider these things, then the valley of the Thames draws closer to the farms of Kansas and the plains of Texas."

Some men are considered great because they lead great armies, or they lead powerful nations. For eight years now, Dwight Eisenhower has neither commanded an army nor led a nation. And yet he remained through his final days the world's most admired and respected man, truly the first citizen of the world.

SOURCE OF HIS GREATNESS

As we marvel at this, it leads us again to ponder the mysteries of greatness. Dwight Eisenhower's greatness derived not from his office but from his character, from a unique moral force that transcended national boundaries, even as his own deep concern for humanity transcended national boundaries.

His life reminds us that there is a moral force in this world more powerful than the might of arms, or the wealth of nations. This man who led the most powerful armies that the world has ever seen; this man who led the most powerful nation in the world; this essentially good and gentle and kind man—that moral force was his greatness.

For a quarter of a century to the very end of his life, Dwight Eisenhower exercised a moral authority without parallel in America and in the world.

And America and the world is better because of him.

And, so, today we render our final salute. It is a fond salute to a man we loved and cherished. It is a grateful salute to a man whose whole extraordinary life was consecrated to service.

It is a profoundly respectful salute to a man larger than life who by any standard was one of the giants of our time.

Each of us here will have a special memory of Dwight Eisenhower.

I can see him now standing erect, straight, proud and tall 16 years ago as he took the oath of office as the 34th President of the United States of America.

We salute Dwight David Eisenhower standing there in our memories—first in war, first in peace and, wherever freedom is cherished, first in the hearts of his fellow men.

Mr. McCORMACK. Mr. Speaker, the sense of loss that afflicts this great Nation when a man who has occupied its Chief Magistracy passes to his eternal reward has a profound and touching effect upon us. In the death of Dwight David Eisenhower we see once again how deeply run the feelings of Americans, how fervently wells in their hearts a love of country, and how measureless is their fundamental respect for their greatest leaders. Has any monarch of the kingdoms of old, has any tyrant of the totalitarianisms of yesterday or of today, ever evoked by his demise the grief that has been experienced by all of us at President Eisenhower's passing?

The forebears of the man who was to lead the most massive invasion in the history of the world left Germany because of religious persecution. They settled, during the eighties of the 18th century, in Pennsylvania. General Eisenhower's grandfather migrated to Kansas in 1878, and in Kansas the young American who was to be his country's 34th President grew to manhood. He was graduated from the U.S. Military Academy in 1915 and pursued one of the most distinguished military careers in this country's history. He led the invasion of north Africa and the invasion of Europe, both with stunning success. His overwhelming personal popularity among his admiring countrymen brought him to the Presidency for two terms.

His life is an example for all Amer-

icans, particularly of the younger generation to follow.

The policies that he followed as President of the United States were enunciated forcefully and unambiguously in his first state of the Union message on February 2, 1953, and never once did he waver from them. Down the long years those words of his return to our recollections as an apotheosis of the man, the soldier, the statesman, the humanitarian, the leader in peace and war, the President whom we have lost in death:

As our heart summons our strength, our wisdom must direct it. There is, in world affairs, a steady course to be followed between an assertion of strength that is truculent and a confession of helplessness that is cowardly. There is, in our affairs at home, a middle way between untrammeled freedom of the individual and the demands for the welfare of the whole nation. This way must avoid government by bureaucracy as carefully as it avoids neglect of the helpless. In every area of political action, free men must think before they can expect to win. In this spirit must we live and labor: confident of our strength, compassionate in our heart, clear in our mind. In this spirit, let us together turn to the great tasks before us.

In the sunset of his years, this great American has recounted for us how, as a West Point plebe, he experienced a sudden sense of pride in his country's flag and commenced the lifetime of devotion to its causes that made him one of the bright and shining heroes of our national life.

The plebes assembled toward evening of that long-ago day of June 14, 1911, and, as a member of that group whom we knew best has told us:

With the American flag floating majestically above us, we were sworn in as cadets of the U.S. Military Academy. It was an impressive ceremony. As I looked up at our national colors and swore my allegiance, I realized humbly that now I belonged to the flag. It is a moment I have never forgotten.

Dwight David Eisenhower's devotion to his country was the motivation of a lifetime in its service. His belief in his country's ideals led him to its Presidency. His belief in the worth of his fellow man, his religious idealism, his unaffected ways, his natural leadership, his magnetic smile, his stanch courage, endeared him to his countrymen who always had a special place for him in their affections. That special place, now vacant, is full of sorrow.

On March 29, 1969, I sent the following telegram:

MRS. DWIGHT DAVID EISENHOWER,
Washington, D.C.:

DEAR MRS. EISENHOWER: In the passing of your beloved and distinguished husband, the Nation has lost one of its most outstanding statesman and military leader who served his country with sound judgment and courage in peace and in war. Your dear husband will always occupy a foremost position in American and in world history. For myself personally and as Speaker of the U.S. House of Representatives and for the Members thereof I extend to you and your beloved ones our deep sympathy in your bereavement.

JOHN W. MCCORMACK,
Speaker, U.S. House of Representatives.

We are all deeply touched. Not only the country but the world stops and pauses to pay tribute to one who took the journey of life, one who took it with vision and foresight, and who took it with courage and determination. This was a man of indomitable will, a man of extraordinary courage, who always kept foremost in his mind the flag of our country and, as he referred to it on past occasions, everything that our flag stands for. He has taken the journey into the great beyond, but the memory of Dwight David Eisenhower as citizen, soldier, statesman, and as a human being with great love for his fellow men will always live in the minds of men and women everywhere, particularly those who want to be free under their own law.

Again, for myself and all of my colleagues, and for Mrs. McCormack, I extend to Mrs. Eisenhower and her loved ones my deep sympathy in their great loss and sorrow.

Mr. Speaker, I now yield to the gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Speaker, the tributes that already have been given in memory of Dwight David Eisenhower have been so heartfelt and so moving that it is difficult to say more. This was my feeling after hearing President Nixon's eulogy in the rotunda on Sunday. I feel the same way now after hearing the fine and kind words of our beloved Speaker.

There is, however, one aspect of the late President's remarkable character on which I would like to comment. It is the great interest he had in the warm confidence he showed in America's young people. As commander of allied forces in World War II, he had led hundreds of thousands of young men in battle; he knew what they could do and the dedication and sacrifice of which youth is capable, so it is no wonder that he believed in them as he did. Because he had seen firsthand the sacrifices of youth and the struggle for peace he had no doubts about the youth of the past nor those of the coming generation. He was not dismayed by the ill-advised activities of the small minority among our youth because he knew the overwhelming majority were as dedicated to America as he himself. Frequently he called the youth of the past and particularly the youth of the future the finest generations of young Americans this Nation has ever produced.

It is curious that although he was older in years than any of our other Presidents when he left the White House, General Eisenhower was younger in spirit and attitude than many men half his age. He once observed that no man is truly a man who does not have something of a boy in him, and he never lost his competitive drive, his enthusiasm, and his great capacity for friendship.

One day, after the general had laid down the burdens of the Presidency, Mrs. Ford and I visited Gettysburg with our two oldest boys, Mike and Jack. I had arranged an appointment with the general because we wanted them to have an opportunity to shake hands with and see at close range this great American, but we had not expected in this courtesy call to take but a few minutes of his time. Instead, General Eisenhower kept us for almost 2 hours, detailing for our two sons the Battle of Gettysburg and recalling for them some of the fascinating highlights of his full career. He had a way with young people, and Mike and Jack were drawn to him because he never talked down to them and because he was so clearly interested in them and their opinions. I have often thought that if General Eisenhower had not become President, we would be eulogizing him for his great service on behalf of all mankind and for his leadership as a great university president or for some other conspicuous and dedicated service in the postwar years.

As President for 8 years, he was always mindful of the younger men in Government, always attentive to their views and conscious of his duty to bring them along the path of future service. He made the once ceremonial office of the Vice Presidency into an important adjunct of the Chief Executive, and those of us who were younger Members of Congress during his days in the White House will remember how closely he watched our performance and how sympathetically he considered our problems.

In recent years it was my privilege to serve with him on the national Republican coordinating committee, and there was no man of this group more faithful in attendance or more spirited in debate than the former President. Yet he never sought to dominate our discussion. What stands out in my mind most vividly with regard to General Eisenhower's contributions were the times when we on the committee were tempted by an excess of partisan zeal to swing a haymaker at the current occupant of the White House. In such circumstances the general would gently remind the rest of us:

Well, gentlemen, if I were sitting in that chair I wouldn't like that one bit. Remember, he is the President of the United States.

It is the true measure of General Eisenhower's greatness that he cannot easily be compared with any of our other national heroes. He had the dignity and integrity of General Washington, but his beginnings were as humble as Lincoln's. His dedication to free government was as deep as Jefferson's and his vision of a world at peace as profound as Wilson's. But an authentic hero must be unique, and Dwight David Eisenhower was, above all, himself. Those who once complained he was no politician now know that this, being true to one's own best self, is the best politics of all.

Mrs. Ford and I express our deepest sympathy to Mrs. Eisenhower and the family. America has lost one of its greatest sons and all mankind one of its finest leaders.

Mr. ALBERT. Mr. Speaker, will the distinguished Speaker, the gentleman from Massachusetts, yield?

Mr. McCORMACK. I yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, when word reached us on Friday last that President Eisenhower had died I think my reaction must have been similiar to that of just about every man, woman, and child in this country. I felt a sense of deep personal grief. I felt that someone close to me had gone. A strong pillar which for so long had helped to support the genera-

tion to which I belonged had been pulled down.

Now that his last days on earth have ended we see Dwight David Eisenhower in the total spectrum.

We see Eisenhower, the President—Eisenhower, the general—and Eisenhower, the man.

It is difficult at this point in history to assess the Eisenhower Presidency. In my opinion, given the perspective of time, Dwight D. Eisenhower as President will be rated much higher than many contemporary historians have seen fit to rate him in his lifetime. It is true that on the domestic front there were not spectacular new developments during the Eisenhower years comparable to those of the Roosevelt-Truman period before him, and the Kennedy-Johnson period after him. Nor can it be said that there were major changes in the broad outlines of President Truman's foreign policy. However, it must be said of President Eisenhower that he presided over the longest period of peace which our people have enjoyed since the late 1930's.

As a military leader General Eisenhower earned a unique place in the history of the Nation and in the history of warfare. It may be that other generals have been greater strategists and tacticians, more capable field commanders, but in the overpowering job of organizing, consolidating, and leading diverse interests and nationalities to sure and final victory against nazism, he stands in my opinion without peer in modern history.

From D-day to V-E Day he took personal responsibility and is entitled to personal credit for the success of every major decision.

It was General Eisenhower, the soldier, who, in the face of threatening weather reports, personally made the decision to cross the channel on June 6, 1944.

It was Eisenhower, the military leader, who shaped concerted and effective action from the work of many great field commanders of highly different views and talents.

It was Eisenhower, the statesman, who could win effective cooperation from the hands of all the Allied governments. His weapons were those of persuasion, patience, and firmness.

With it all he had total assurance in his own competence and in his own authority.

Surely it can be said of Dwight Eisenhower, even more surely than Byron said of Napoleon, that "he was the Cincinnatus of the West."

It is to Eisenhower, the man, that we must turn to get a glimpse of the total impact of his life and character. Born on the Texas frontier, just 6 miles from Indian territory, reared on the plains of Kansas, midst pioneer environment, into a family of little wealth but high ideals, his rise to fame and power was as sure and certain as that of Abraham Lincoln. As Walt Whitman said of Lincoln, we can say of him: One "never sees that man without feeling that he is one to become personally attached to, for his combination of purest, heartiest tenderness and native western form of manliness."

Here was a man to whom people almost instinctively turned. Though patient and unassuming, he was uniformly successful in accomplishing every important job he ever undertook, and very important jobs, indeed, did he undertake: supreme Allied commander in Europe in World War II, Chief of Staff, supreme commander and organizer of NATO, and President of the United States. He had attributes of character and experience which engendered confidence in everyone who ever saw him.

First of all, he was likable. Everybody liked Ike. He was probably the most beloved President since Washington. In the second place, he was never a petty partisan. Although he was finally convinced that he could best serve his country by running for President on the Republican ticket, he seemed to abhor traditional party politics. In his splendid essay on the American Presidency Harold J. Laski pointed out in substance that the American people disliked extreme partisanship in their Presidents. Mr. Eisenhower was probably the least partisan President since George Washington. More significant than all those facts perhaps, is the fact that the American people, and indeed the people of all the world on both sides of the Iron Curtain, had confidence in the judgment and competence of General Eisenhower. From his broad experiences in war and in NATO, as a result of his unparalleled knowledge of military and political leaders around the world, General Eisenhower had developed a vast reserve of knowledge which gave him unique qualifications to make proper decisions when questions of war and peace were hanging in the balance. This, in my opinion, caused the American people to trust him, and it caused the leaders of every nation to respect him. This, it seems to me, was a most important factor in Eisenhower's Presidency and one that historians will have to take into account in assessing his total contributions to America and to the world.

Until the day he died, President Eisenhower was beloved across his native land. We still cherish and will long cherish his memory. He still lives in the hearts of his countrymen.

We in this Chamber now salute this great and noble man who sleeps today in honor and glory beneath the historic dome of this magnificent building within which we meet.

To Mrs. Eisenhower and her son and his family, the whole Nation extends its deepest sympathy as it mourns the loss of one of its greatest and noblest sons.

Mr. McCORMACK. Mr. Speaker, I yield to the distinguished gentleman from Illinois (Mr. ARENDS).

Mr. ARENDS. Mr. Speaker, to all the wonderful words that have been said about former President and General Dwight David Eisenhower, I shall say, Amen.

Mr. Speaker, our Nation has lost its most beloved leader. I have lost a personal friend.

Not since Gen. George Washington has America known a servant of the people, both in war and in peace, more dedicated to his country than Gen. Dwight D. Eisenhower.

His leadership, and the deep sincerity of his devotion to the cause of freedom, engendered a faith in him among men everywhere and assures him a foremost place in history. His nobility of character and sincerity of purpose—that all men are born equal and endowed by their Maker with a right to be free—endeared him to the peoples of the world and earned for him their lasting gratitude.

He exemplified the finest qualities of America and of all Americans. His contribution to a better America and a better world was not solely on the field of battle nor in the councils of government, but also in the high quality of his moral leadership.

It is not we alone who mourn his loss. The humblest and the highest everywhere, around the globe, share our national grief.

He was a constant inspiration to me and to all of us who were privileged to work with him as our President.

For 8 years during his Presidency I was privileged to work closely with him. I looked forward to the weekly leadership meetings at the White House. However grave the matters discussed, he instilled in us confidence that what needs be done could be done. He was always understanding of different points of view and always objective as to what he hoped and desired to do legislatively. He sought to do only that which was in the best interests of our great country.

I was also privileged to play golf with him many, many times. Golf is a game he loved. It is often in a game, such as golf, that one gets to know his friend or adversary under the best and worst of circumstances, when one's skill and perseverance is being tested. He was a terrific competitor. He was one who always with every shot attempted to do his best. He played the game both hard and fair. And this is how he played the game of life, always fairly, with determination and purpose. For President Eisenhower I had the greatest respect, admiration, and love. He was one of the greatest men I have ever known. We are all the richer from having known him and for having had him as our leader.

Mrs. Arends joins me in extending our most sincere sympathy to the family.

Mr. McCORMACK. I yield to the distinguished gentleman from Louisiana (Mr. BOGGS).

Mr. BOGGS. Mr. Speaker, I am honored to join my colleagues—and indeed the people of the world—in mourning the loss of a great American leader, Dwight David Eisenhower.

General Eisenhower once said, "I come from the heart of America." Today, as we mourn his passing, I think it is appropriate to say that it is in the heart of America that his memory will forever reside.

For during his lifetime, General Eisenhower affirmed America—he was committed to our goals—and because of his devotion to our country, he rose from humble origins to her highest office.

Bismarck once observed that genuinely great men are known by three signs—generosity in the design, humanity in the execution, moderation in success. These, I believe, were the hallmarks of General Eisenhower's long and productive life.

The natural grief we feel on the loss of this great leader is, I think, tempered by our knowledge that few men live such long and accomplished lives.

In times of peace, in times of war—in all times of great national need—Dwight Eisenhower gave fully and generously of his rich resources of leadership. For his fellow man, he defended freedom, won victory, brought peace, and established security. No one, it would seem, could presume to do more.

He was, indeed, one of the great men of modern times, and I consider it one of the high honors of my life to have known him.

To his widow and his family, I join my colleagues in expressing our sorrow on his passing and our gratitude for having shared him with us.

Mr. McCORMACK. Mr. Speaker, I now yield to the gentleman from Kansas (Mr. MIZE).

Mr. MIZE. Mr. Speaker, last Friday, March 28, 1969, Dwight David Eisenhower, General of the Army, the 34th President of the United States, loving husband and gentle father, the beloved leader of his people in war and peace, passed from this life.

His death saddens free men everywhere, for he did as much as any man to protect and perpetuate human freedom. He dedicated his entire life to it.

Dwight Eisenhower carried our burdens upon his strong, broad back. He was bigger than life, and he cared. His work for freedom was done willingly—eagerly—and done exceedingly well.

We pay tribute to his accomplishments today, and our tributes are fond tributes. The affection which Americans held for Ike was genuine, and the loss we suffer with his passing is the loss of a good friend. That is the most grievous loss that anyone can sustain.

THE YEARS IN ABILENE

Eisenhower naturally liked people and respected them. He enjoyed the company of kings, of presidents, and prime ministers, and was at home with the lions of industry. He sought no less the companionship of students, farmers, workers, schoolteachers, small businessmen, and the troops. He gained strength from all of them.

In his youth, he knew no social stratification, no class distinction. No one was his "better"—no one was held in low esteem for want of proper heritage or current position. Each man had unique opportunity to prove himself, and each man deserved every success that came to him, for he had earned it.

That is the way it was in Abilene.

Abilene, at the turn of the century, was not a place for the habitually idle or frivolous. The unpaved, rutted, dusty streets, the hand-sawn lumber sidewalks, the sparse shops, the unrelenting challenge of the farms, and the wind-whipped outdoors in the dead of winter were enough to deter the faint of heart or weak of will from settling there.

Men came to Abilene for a decent chance to earn an honorable living, and most came with little more than a few chattels. The only avenue to achievement was bone-crushing hard work.

There were few charities and virtually no government programs of relief. No one was called to Abilene by special privilege, and practically no one was ever asked to leave. Men came there for better opportunity than they had ever known, and they stayed because that opportunity came to them if they worked.

Men were respected for what they did themselves, and the lessons of Eisenhower's youth were practical lessons.

Frugality, good commonsense, hard work, respect for knowledge, and attention to the teachings of the Bible were hallmarks of human dignity in Abilene those days.

In 1890, the year Dwight Eisenhower was born, the Populist movement was strong in the Midwest. Five Members of Congress and one U.S. Senator were elected from Kansas on the Populist ticket that year. The party achieved a clear majority in the lower house of the State legislature, and courthouses were well staffed with adherents to the cause.

Prevailing adverse economic conditions could not be squared with the abundance of rich Kansas farmland, the competence of the people, and their commitment to fair dealing and hard work.

Most Kansans fervently believed that low farm prices were unconscionable, that the railroads and bankers held too much power, and that foreclosures were unsufferable and had to be regulated for the protection of small businessmen and farmers.

By the time Eisenhower was a teenager, the political movement had waned. But the code of Populist idealism—reverence for work and respect for the people who did the work—was firmly established.

Those views that had swept Kansas like a prairie fire were widely debated during Eisenhower's youth—albeit with some restraint by that time—at the Chautauquas, the meeting halls, the husking bees, and no doubt at the creamery where he worked after school.

Walter T. K. Nugent, in his study of Kansas populism, gave this description of the prevalent notions of the time:

> The Populist belief consisted of a feeling that the United States was a different *kind* of political society from any that had ever existed before and therefore more worth preserving than any previous one. America was not just another nation-state but an embodiment of certain ideals. It was an embodiment of democratic republicanism: a society where the people rule, where the governed consent to their governors, where the rights of life, liberty, and property are protected because this very protection is the object of their own self-government. It was the embodiment, too, of economic democracy: where resources wanted only honest labor to be translated into the reality of abundance, where opportunity was equal, where the distribution of the nation's wealth was equitable. It was the antithesis of Europe. . . . It was a place, in short, where the people rule for themselves and for the protection of their natural rights.

This, then, was the heritage which Dwight David Eisenhower carried with him to the U.S. Military Academy at West Point. His roots were firmly implanted in the nourishing earth that was Abilene. His parents were representative of the finest citizens of Abilene, and he was their own true son.

He never severed those early ties. The lessons he had learned in youth helped him achieve good works throughout his distinguished career of public service.

THE YEARS IN UNIFORM

From the time he boarded the train at Abilene bound for West Point until he resigned as Allied commander in Europe to seek the Presidency, Eisenhower was throughout an Army man. During 2 intervening years as president of Columbia University, he had been restive. President Truman's call for his return to active duty had been welcome.

He was an Army man in the finest tradition, and yet his style of command was somehow distinctive. Nobody ever dared wave at any other five-star general and shout, "Hi, there, Pal," yet everybody yelled, "Hi , there, Ike." He always grinned at them and waved back. Perhaps that was the difference.

Early in his "yearling" or sophomore year at West Point, he was revolted at the humiliation he had inflicted upon an unfortunate plebe and vowed to refrain from harshly reprimanding any other victim of West Point's indoctrination system. For his 3 remaining years at the Academy, he kept the resolution.

While a junior officer, Eisenhower preferred assignments with the troops rather than prized staff positions that carried certain promotion with them.

Throughout his military career, he had an almost mystical capacity to capture the affection of his subordinates—whether a platoon or an entire army—as well as their respect and allegiance. This affection, which he returned and appreciated, was perhaps not unusual for the man whose roots were so deeply imbedded in the mainstream of humanity.

He viewed that stream as many, many individuals, working together for a common goal. He never regarded a regiment or a republic as a "mass of people," but rather as a very special selection of unique and important individuals. No wonder his troops, and later his countrymen, were so unstinting and unswerving in their loyalty to him, their affection for him.

He, of all the professionals in the U.S. Army, was the logical choice to lead that force of citizen-soldiers, that force of workers and farmers and clerks and businessmen, that was to liberate Europe from the Nazis and the Prussian officer-elite.

Ike's men knew that he was one of them, for all his training and high professional skill. They loved him—they followed him. Together they conquered.

THE YEARS IN THE WHITE HOUSE

General Eisenhower came to the White House a popular man, and he left it a popular man. Through 8 years of difficult decisions, through successes and reversals, he held the confidence of those that had selected him for their leader.

He was a brilliant administrator at the White House, just as he had been in Europe. The people wanted a respite from the agonies of war in Europe and war in Korea. They wanted quiet efficiency. He gave it to them.

Americans are like other peoples—they genuinely want to have confidence in

their President. Dwight David Eisenhower, the 34th President of the United States, provided a lifetime of leadership which inspired confidence.

No man will ever be called upon to render higher service to America—if she lasts 10,000 years.

Mr. McCORMACK. I yield to the distinguished gentleman from South Carolina (Mr. RIVERS).

Mr. RIVERS. Mr. Speaker, I associate myself with the noble sentiments of our beloved Speaker of the House. I would just like to observe about this great man Eisenhower a statement of Edwin Markham:

When he fell in whirlwind, he went down
As when a lordly cedar, green with boughs,
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky.

I doubt if we can think of one in the country who found as deep a place in the hearts and the love of America. He was truly a great man, a kindly man, a humble man.

Mr. McCORMACK. Mr. Speaker, I yield to the distinguished gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. Mr. Speaker, no finer tribute to the memory of our fallen leader can surpass the knowledge that whatever history says of his leadership—in war and peace—the people will affectionately remember him as "Ike."

He was never the textbook picture of the tough and austere military man; nor did he surround his presidency with the trappings of power as he could have. He was at heart a sincere, gregarious, and selfless public servant; and what he was at heart shown through to the American people. They knew that the man called "Ike" could be trusted implicitly.

The aura of power surrounded the man but it did not affect his presence. The feeling of command was there and yet no one could have divined to have been ordered. What sage could define the qualities of such leadership and charisma?

The country and the world will miss the man, but he left behind a memory of something more precious than a simple recall of his legion of accomplishments; he left us with a memory of an infectious smile.

The loss of that smile, with its ability to calm our fears, renew our strength, and uplift our spirits, is the greatest loss we suffer on the passing of Dwight David Eisenhower. It was a smile that came from the heart of a man who epitomized the great American dream. There was the knowledge from Ike's smile that he trusted people, and they returned that trust without bounds. It was, according to one writer, "the smile of sincerity in an age of contrivance."

That smile is physically gone now, but the place it holds in the hearts of the countrymen of Dwight David Eisenhower can never be replaced.

Mr. McCORMACK. Mr. Speaker, I yield to the distinguished gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Speaker, as we today pay honor to a great American, I welcome the opportunity to record a personal experience with Gen. Dwight David Eisenhower. In it we find further evidence of those great qualities which made him beloved as a leader in war as in peace.

This incident took place on March 23, 1945. The 30th Infantry Division, of which I was a member, was moving into position in preparation for a night attack across the Rhine River at Wessel, Germany. We had spent many hours practicing with assault crossings of the Maas River in Holland. We knew what we were to do. But the Rhine River was wider and the attack was to be at night under cover of darkness. In practise no one was trying to keep us from landing. Still assault boats had capsized and in one instance the occupants had drowned. So, we approached our task afraid that we might never see loved ones again. Then, the paratroopers started dropping behind enemy lines in great numbers from the sky. We sensed their mission was much more dangerous than ours but would certainly increase our chances of reaching the other side. Sporadic shell fire made us ill at ease and attested to the presence of the enemy and his intention to see that our mission failed. While we were there, marching gloomily in combat column, a staff car approached and stopped beside where I was walking. General Eisenhower stepped out. For a moment, I froze with apprehension. Then, I made a poor attempt to salute, which seemed the thing to do. The General extended his hand to shake mine, flashed his warm smile, and said—I think, "Hi soldier," although in the dramatics of the moment I cannot now be certain of his exact words. The general walked up and down the column shaking hands and encouraging his troops. He came, too, I am sure, to get a better look at the tactical situation. I remember distinctly saying to a buddy, "He shouldn't be here. Doesn't he know he is liable to be killed?" General Eisenhower was up with the troops risking his life but the inspiration his presence gave cannot be imagined. Later, I was to receive the Silver Star because our battalion commander, Lt. Col. Ernest Frankland, thought I performed my small part of that battle with extraordinary heroism. As I reflect, I am not inclined to acts which would warrant any such honor. If I deserve it, General Eisenhower deserved, at least, some of the credit. Two years ago many of us as freshman Congressmen visited with President Eisenhower at Camp David. We talked briefly about the Rhine River crossing.

Our Nation is sad because of the death of our great general and President. He was loved for his courage, warmth, and understanding. Yes; we are saddened, as a nation by his passing. Yet in his death, as in his life, we are caused to reflect on the heritage of our great country, the outstanding contributions of the great Dwight David Eisenhower and the necessity just now, as perhaps never before, for an extra effort to preserve our freedoms.

Mr. McCORMACK. I yield to the distinguished gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Speaker, for the past several decades, it seems that fame and notoriety has gone principally to those who accumulate great material wealth, commit some hideous crime, or have a reputation for abusing power or do the unusual. Many millions of Americans are honest and have a great desire to see justice but few become famous for having those attributes. General Eisenhower was one of those few. The loss of a man with worldwide fame for such characteristics is a great loss and the whole Nation and world suffers from such loss.

As Dwight David Eisenhower sleeps in the rotunda a few steps from here, the Nation mourns the loss of a truly great American, and I join those who extend their condolences to his family.

Mr. McCORMACK. I yield to the distinguished gentleman from Kansas.

Mr. WINN. I thank the distinguished Speaker.

All the world is saddened by the death of Gen. Dwight David Eisenhower, a truly great yet humble man. The former President—who preferred to be called General after his retirement—probably will not go down in history as a politician's President, but rather as a true statesman, highly respected by the leaders of all nations of the world.

As a young Kansas Congressman, I was fortunate enough to meet personally with this great man, who grew up on the western prairie of Kansas, at his peaceful Gettysburg farm. His knowledge of both national and international affairs proved to be most helpful to me as a new Congressman.

Men of all political philosophies sought his counsel and guidance on matters of importance. And all succeeding Presidents have at one time or another turned to him for help.

To the end, this uncommon man was characterized by uncommon strength.

Mr. Speaker, at the Capitol today are 50 Kansas schoolchildren who are here to pay tribute to Dwight D. Eisenhower. They have brought with them a beautiful box of long-stemmed wheat from the great State of Kansas, as a symbol of their love for our wonderful former President. They are here in person to add this wheat to the many beautiful flowers covering the rotunda of this Capitol.

One of the sponsors of this Kansas group has written a poem which I should like to read to this distinguished body today. This poem was written by Barbara Hanna Gray and endorsed by the 50 schoolchildren from Kansas.

This poem reads as follows:

WHEAT: IN MEMORY OF DWIGHT DAVID EISENHOWER

(By Barbara Hanna Gray)

A shock of wheat—Ripened in the sun of a Kansas prairie, tendered gently there from small green sprout until tall and golden—unbent by the winds that blow hard.

A shock of wheat—Filled with the grain of a Kansas youth, harvested by God to feed His flocks with the bread of his life—unbent by the winds that blow hard.

A shock of wheat—Having borne its fruit must die to live anew, returning now to the promised land of everlasting life—unbent by the winds that blow hard.

Mr. McCORMACK. I now yield to the distinguished gentleman from Oklahoma (Mr. EDMONDSON).

Mr. EDMONDSON. Mr. Speaker, I brought my family to the Nation's Capital in January of 1953, at the beginning of the Eisenhower-Nixon administration.

As a freshman in the 83d Congress, I became acquainted for the first time with the warm, friendly, and genuine American who was to lead our country through most of the 1950's.

The impression I then received—of a man with a deep love for our country and a great respect for all his fellow citizens—was to continue for the 17 years which followed.

The opportunity to know the man and to appreciate his great character was one of the real treasures of my own years of public service.

Mr. Speaker, the Nation has lost one of its finest sons in the death of our beloved former President, Dwight David Eisenhower.

General Eisenhower was a soldier-patriot in the great American tradition—a worthy successor to George Washington and Andrew Jackson.

As commander of the Allied forces who liberated Europe from the tyranny of Nazi armed conquest, he was a crusader for freedom in one of history's most trying challenges to freedom.

Eisenhower leadership for freedom continued in the tumultuous years which followed World War II, as he united the NATO powers to halt the westward drive of another tyranny—that of Soviet communism lead by Stalin.

As President of the United States during the cold war years of the 1950's, Dwight Eisenhower continued to lead the free world in the quest for both freedom and peace.

As the acknowledged leader of free nations throughout the 1950's, President Eisenhower pledged the terrible power of the atom to the search for peace, in an address to the United Nations which inspired all the world.

When he completed his second term as President, he continued to serve his country, providing wise counsel and assistance to the three Presidents who have followed him—regardless of party affiliation.

A man who loved and served his country well, a man who was above partisan politics on the major questions of peace and war at all times, a man who was loved and respected by all Americans—that was Dwight David Eisenhower.

America has lost a great champion and a great leader. I join my colleagues in mourning our great loss.

Mr. McCORMACK. I now yield to the distinguished gentleman from New York (Mr. REID).

Mr. REID of New York. Mr. Speaker, I thank the distinguished Speaker for yielding.

In the death of General Eisenhower America has lost our most widely loved public figure. General Eisenhower had very special qualities of humility, sincerity, spiritual conviction, and great human warmth. All of these animated his long service to his country.

I remember on more than one occasion his turning to friends and saying, "Well, the really educated member of the family is Milton." He always thought of the other person first, such as when he knew almost a year ago that his chances for the future were perhaps not the brightest. Then, he looked death in the face and he found it preferable. He said to a friend:

I have a pretty good idea as to what my chances are. I would like to go on living for as long as I can be useful to somebody, even though I know I am not going to set the world on fire at my age. But I had just as soon the end came now if to go on living means that I will be a burden to my family and tie up all those doctors who could be taking care of guys with a full life ahead of them.

Mr. Speaker, I think this deep and ingrained humility was uniquely characteristic of General Eisenhower.

Few will ever forget his broad smile and his capacity to inspire confidence and accomplishment—among both men and nations—whether it was before Normandy or during Europe's troubled days while NATO was being formed or in his dramatic "open skies" proposal at the Geneva summit, which no other American could have put forward with the same effectiveness. Indeed, his smile was capable of lighting up a nation here or overseas, as the great throngs that turned out to greet him illustrated so vividly. We felt better when we saw that smile—it was unique—it was a personal one, it was a humble one, and it called forth our deepest trust.

I also remember the period during the late 1940's and early 1950's when General Eisenhower had several opportunities to consider the nomination for the Presidency. Perhaps no other American in public life turned down such clear offers for the presidential nomination as forthrightly as he did.

I think the point that finally motivated him to accept the Republican nomination was his concern over the war in Korea and his desire to work for peace. He could not have forgiven himself had he sacrificed an opportunity to save the lives of young men and to truly serve the people of the country he so deeply loved; but it was not in his nature to seek the power of the Presidency.

Mr. Speaker, General Eisenhower certainly was one of the most successful commanders of a multinational alliance. He revitalized the Republican Party and thereby strengthened the two-party system. His character and ability certainly put to rest many thoughts of isolationism of prewar America.

He was responsible for many progressive steps to strengthen our domestic policies, whether they involved the establishment of the Department of Health, Education, and Welfare or increases in social security. Neither will America forget that it was President Eisenhower who succeeded in passing the first civil rights bill since Reconstruction and warned of the dangers of the military-industrial complex.

All remember, I believe, his achievement in bringing peace to Korea. Surely history will record the unifying leadership he brought to America in the Presidency following the divisive years of war overseas.

But his overriding concern in the Presidency was to work for a world of universal peace with justice. His unqualified support of the U.N. was fundamental. His leadership in the "atoms-for-peace" program in the Alliance for Progress, in progress toward a nonproliferation treaty, and for a détenté with the Soviet Union remains basic to the future.

I was at the White House one day when the subject of nuclear weapons was raised. He looked out the window and said very simply that he was opposed to their use, and that there would be no such thing as the use of one tactical nuclear weapon, for any such action would inevitably invite a full nuclear exchange.

Certainly, Mr. Speaker, former President Eisenhower had a real spiritual quality, character and judgment, steadiness under pressure, and a complete honesty and sincerity about him. He inspired men to work together; he had total disdain for personal public comment; he was contemptuous of narrow partisan motives, and more than once rejected temporary political gain for the greater good of our country. Such a man brought stature and trust to the White House. He represented Americans, perhaps, more faithfully than any in our time. Certainly, he was loved and trusted both overseas and here. In a unique way his life will stand as an inspiration for all those who believe in character in government.

He was a great human being, and he will be judged kindly by future historians, not only for his positive accomplishments but indeed for those decisions which did not make the headlines, such as his refusal to be stampeded into any commitment to Vietnam.

His life is a testament to public service, and of the highest traditions of America, and General Eisenhower now clearly belongs to the ages.

Mr. Speaker, I wish to join with all of the Members of the House in expressing our grief upon the passing of General Eisenhower, and I wish to express our deepest sympathy, that of Mrs. Reid and my mother, Helen Rogers Reid, to Mrs. Eisenhower, John Eisenhower, and all members of the family.

Mr. McCORMACK. Mr. Speaker, I now yield to the distinguished gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, America today mourns the loss of one of her most noble sons. I deem it a great privilege to join with the Speaker and others in paying tribute to the memory of Dwight David Eisenhower.

Mr. Speaker, I like to think of Dwight D. Eisenhower in terms of three plateaus: first, as a military leader, he was without a peer. His greatest strength was his ability to bring people together. It was his genius as an organizer, as a persuader, as a mediator, and as a military tactician that helped put together the fantastic military machine that frustrated the designs of the Axis Powers upon the freedom of this country and the rest of the world.

I do not believe that even at this day

we realize the enormity of his accomplishments in pulling together divergent military views, in pulling together divergent military concepts, different equipment, different ideas, and welding them into one successful effort which brought victory and freedom to the world.

I believe that Dwight Eisenhower today deserves to be called the greatest military genius of our time.

Second, as President of the United States he had abiding faith in the rugged spirit of American individualism. Many of his critics have erroneously interpreted his stubborn refusal to plunge Government controls into every facet of our American life as a record of inaction. President Eisenhower in my judgment reflected the true spirit of Thomas Jefferson. He had a social consciousness. He realized things had to be done, and he wanted to move forward, but he also realized that the dignity of an individual is supreme in a free nation, and he wanted to let the individual do as much for himself as humanly possible.

President Eisenhower gave the country a great record to build on. In the ensuing years his successors have built upon that record. There is no question but that Mr. Eisenhower has made great contributions as President of this country.

Finally, Mr. Speaker, I believe his third great achievement was as an American in his farewell address when he warned the Nation against the military-industrial complex. Here was a man who had had occasion to observe first-handedly as a military leader and as the President of the United States the inherent dangers of permitting that sort of a combination to get out of hand. The enormity of his warning is best exemplified as we look today and see that some 200 American corporations have more than $30 billion worth of Government contracts. The warning given us by President Eisenhower cannot go unheeded.

Mr. Speaker, I am not at all surprised that the political leaders of my own party exerted every effort to induce and persuade General Eisenhower to run on the Democratic ticket. Mr. Eisenhower would have been a great President on either party's ticket.

Nor am I at all surprised to learn that President Truman had designated him as his heir apparent, because we all have recognized Mr. Eisenhower's genius and his great dedication and his abiding faith in America.

Mr. Speaker, in paying tribute today to Dwight Eisenhower I would say that he gave majesty and nobility to the cause of public service. His conduct in public affairs leaves all of us in public office with a legacy we can proudly emulate.

Mr. Speaker, Mrs. Pucinski joins me in extending and expressing our deepest sympathy to Mrs. Eisenhower, the entire Eisenhower family, and, yes, to all Americans who today mourn his passing.

Mr. McCORMACK. Mr. Speaker, I now yield to the distinguished gentleman from Michigan (Mr. CEDERBERG).

Mr. CEDERBERG. Mr. Speaker, I am honored to join my colleagues today in paying respect to the memory of General Eisenhower. Many of us in this body had the honor of serving under his command in Europe during World War II, and I recall those days as well. I was division headquarters company commander of the 83d Division.

The first time I saw the general was shortly after the invasion when he visited our division headquarters and on several occasions after that he visited our division.

As a junior officer I had the privilege of being in the division war room when he was conferring with the senior officers of the division. At no time did he ever fail to inquire about the troops of the division. He always was concerned about their welfare—were they getting enough food, were they getting the proper clothes. This was a man who was not only a great general but also a great humanitarian.

Then shortly after the war, many of us had the honor of entering into public service in the Congress at the same time he became President of the United States. We still have a number here on both sides of the aisle who came in as Members of the 83d Congress in 1953. We can recall our visits with him during those years. He understood the role of the Congress and respected it.

Mr. Speaker, I think that when history writes the record of General Eisenhower, that record is going to be one of great achievement both in war and in peace. He was a man who really cherished freedom—and a man who hated war.

He never hesitated to take such action as was necessary to preserve our Nation. The world has lost a great leader but his inspiration will live on forever.

Mrs. Cederberg and I extend our deepest sympathy to the Eisenhower family.

Mr. McCORMACK. Mr. Speaker, I yield to the gentleman from West Virginia (Mr. HECHLER).

Mr. HECHLER of West Virginia. Mr. Speaker, the gentleman from Michigan (Mr. CEDERBERG), the gentleman from Ohio (Mr. WYLIE), and others have called attention to the large number of Members of Congress who served under General Eisenhower when he was commander of the European theater of operations during World War II.

The qualities of General Eisenhower's leadership as commander were manifest in the planning and launching of the great invasion of Normandy as well as in many other ways.

I would like to call attention to something that General Eisenhower wrote in "Crusade in Europe" and what he described as "one of my happy moments of the war." When he received the news of the first crossing of the Rhine at Remagen, Germany, General Eisenhower capitalized on this great event which materially shortened the war in Europe. He wrote this about the Remagen Bridge capture:

This news was reported to Bradley. It happened that a SHAEF staff officer was in Bradley's headquarters when the news arrived, and a discussion at once took place as to the amount of force that should be pushed across the bridge. If the bridgehead force was too small it would be destroyed through a quick concentration of German strength on the east side of the river. On the other hand, Bradley realized that if he threw a large force across he might interfere with further development of my basic plan. Bradley instantly telephoned me.

I was at dinner in my Reims headquarters with the corps and division commanders of the American airborne forces when Bradley's call came through. When he reported that we had a permanent bridge across the Rhine I could scarcely believe my ears. He and I had frequently discussed such a development as a remote possibility but never as a well-founded hope.

I fairly shouted into the telephone: "How much have you got in that vicinity that you can throw across the river?"

He said, "I have more than four divisions but I called you to make sure that pushing them over would not interfere with your plans."

I replied, "Well, Brad, we expected to have that many divisions tied up around Cologne and now those are free. Go ahead and shove over at least five divisions instantly, and anything else that is necessary to make certain of our hold."

His answer came over the phone with a distinct tone of glee: "That's exactly what I wanted to do but the question had been raised here about conflict with your plans, and I wanted to check with you."

That was one of my happy moments of the war. Broad success in war is usually foreseen by days or weeks, with the result that when it actually arrives higher commanders and staffs have discounted it and are immersed in plans for the future. This was completely unforeseen. We were across the Rhine, on a permanent bridge; the traditional defensive barrier to the heart of Germany was pierced. The final defeat of the enemy, which we had long calculated would be accomplished in the spring and summer campaigning of 1945, was suddenly now in our minds, just around the corner.

My guests at the dinner table were infected by my enthusiam. Among them were veterans of successful aerial jumps against the enemy and of hard fighting in every kind of situation. They were unanimous in their happy predictions of an early end to the war. I am sure that from that moment every one of them went into battle with the élan that comes from the joyous certainty of smashing victory.

Ten years after that event, President Eisenhower assembled at the White House the heroes of that event and he told them on March 7, 1955:

Gentlemen, I have asked you to come here this morning because you know old soldiers' minds are bound to turn back once in a while to dramatic events of war—particularly of the kind that took place at the Remagen bridgehead.

Now, of course, that was not the biggest battle that ever was, but for me it always typified one thing; the dash, the ingenuity, the readiness at the first opportunity that characterizes the American soldier.

That was one of the qualities of leadership of General Eisenhower when he commanded our troops in Europe.

I would like to quote also briefly from the very last words in General Eisenhower's book "Crusade in Europe," words that mean a great deal in terms of his basic philosophy:

We believe in individual liberty, rooted in human dignity, is man's greatest treasure.

If the men and women of America face this issue as squarely and bravely as their soldiers faced the terrors of battle in World War II, we would have no fear of the outcome. If they will unite themselves as firmly as they did when they provided, with their allies in Europe, the mightiest fighting force of all time, there is no temporal power that can dare challenge them. If they can retain the moral integrity, the clarity of comprehension, and the readiness to sacrifice that finally crushed the Axis, then the Free World will live and prosper, and all peoples, even-

tually will reach a level of culture, contentment, and security that has never before been achieved.

That was Dwight D. Eisenhower.

Mr. McCORMACK. I yield to the distinguished gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Speaker, it was my good fortune also to serve under the leadership of General Eisenhower, both militarily and in civilian life; first as an infantryman from Omaha Beach to the Ruhr River in Germany during World War II and subsequently in Congress during his Presidency.

Among the exchanges of correspondence I have had with General Eisenhower, the first was a letter dating back nearly 20 years, which I have prized very much, for it was written at a time when there was considerable talk of his running for President while serving as President of Columbia University.

President Nixon in his eulogy made several references to Dwight Eisenhower's coming from the "heart of America" and the subject of my first exchange of letters with General Eisenhower had to do with my hope in any political ambitions he might have that he would never forget his midwest heritage.

While his first letter to me dated November 16, 1949, said in part:

So far as any personal politics may be concerned . . . I have not changed my mind in the slightest degree.

We are all so grateful and so much better off for his having reassessed the situation and changed his mind.

His 8-year administration was indeed a period of calm and tranquillity accompanied by significant progress in all levels of national life. We long and yearn for similar days in the new administration.

Of all the millions of words written about General Eisenhower I believe the true measure of the man was captured as well as anything I have seen by Mr. Hugh Sidey, writing in the August 17, 1968, edition of Life magazine. He said:

There are even those who dare to suggest that his soothing spirit, the innate goodness of the man himself, did more to lift up the hearts of Americans and hold them together in a reasonable state of public happiness than many of the social reforms that have been propounded since.

Mr. Speaker, I ask unanimous consent that the full text of the letter from Dwight Eisenhower, referred to before, and Mr. Hugh Sidey's article be included with my remarks at this point in the RECORD.

I extend our profound sympathy to Mrs. Eisenhower and all the members of the family whom he loved so much as he always loved his country.

The SPEAKER pro tempore (Mr. MORGAN). Is there objection to the request of the gentleman from Illinois?

There was no objection.

The letter and article are as follows:

COLUMBIA UNIVERSITY,
New York, N.Y., November 16, 1949.

Hon. ROBERT H. MICHEL,
Representative in Congress,
Peoria, Ill.

DEAR MR. MICHEL: It is always nice to hear from an old soldier, particularly one who served in the Infantry, my old arm. Additionally, of course, I must thank you for the very great compliments paid me in your letter of the 12th.

While it is obviously necessary that, so long as I am connected with Columbia University, I be officially classed as an "Easterner," it is equally true that the roots of my family and my life are buried too deep in the West for me to ever think of myself as anything but a mid-Westerner.

I assure you, though, that these facts have no implications of any kind in the political world—at least so far as any personal politics may be concerned. I have earnestly and honestly tried to make my own position clear about these matters, and I assure you I have not changed my mind in the slightest degree.

With best wishes to a former comrade of ETO.

Sincerely,

DWIGHT D. EISENHOWER.

THE PRESIDENCY—THE SMILE OF SINCERITY IN AN AGE OF CONTRIVANCE

(By Hugh Sidey)

Dwight Eisenhower came into the living rooms of 30 million Americans the other night, and he was old and bald and he used a TelePrompTer and still flubbed a few of his lines, but there was more power in his 10-minute appeal than in any of the presidential political oratory of the past 12 months. And it may be that the effort to make his talk brought on the heart attack that has him seriously ill.

It has been one of those mysteries of national life why all the would-be Presidents (and President) who have been frantically searching for some formula to catapult them to the heights of popularity have failed to study the example of Eisenhower. Perhaps in this age of contrivance it is too simple to be believed—decency, sincerity and honesty. It shines out of Ike like a beacon, and it should give those in the political business some pause. Because it illustrates anew that all the programs espoused and the bills passed and the billions spent are only a part of this thing of being President and maybe even the lesser part in a time of dispirited affluence.

It should be of some significance that while almost everybody else was engaged in a season of shifting views, cloaked opinions, denials of internal trouble and even espousal of the right of a government to lie to its people, the steady virtue of Eisenhower raised him to a new pedestal while all those others fell lower. He was polled the most admired man in the nation last year and probably ranks as high today. There is some kind of hunger there. Even among the unwashed and on the campus, the cry is for candor and compassion, which is the same thing.

Lyndon Johnson has used an inordinate amount of his time and energy raising monuments to his own greatness, and all the while his esteem has slipped. Ike's self-promotion runs at such a low voltage as to be undiscernible. He still acts a little embarrassed at new honors. He still wonders why people care—and that only intensifies the phenomenon. A while back in his modest office on the corner of the Gettysburg College campus he marveled at this public. He didn't have an unusually big nose or extraordinary ears or any other physical features that made him easily identifiable, he explained. Yet, there he had been in New York in the back of an unmarked limousine, almost out of sight, and as he drove down the street, "the darndest thing happened. People leaned out and yelled, 'Hello, Ike.' How did they know who I was?"

While all the candidates from Reagan to McCarthy diagnosed in detail the national ailments, Ike maintained a hearty belief that it was a fever, and the body was fundamentally sound. He could beat any of them in a runoff. While the scowl has become the symbol of this season's stump (with the exception of Hubert Humphrey), there has been that enduring smile of Eisenhower's that reached more men's hearts than social security. There is the feeling from Ike that he trusts people and they return it in spades. He has confessed that it would be nice sometime to take Mamie and go to the Metropolitan Museum and "just drift through it without having to shake hands or sign an autograph." But, says Ike, with a chuckle, whenever he brings up that complaint (one of the few anybody has heard him make about his lot in life), Mamie turns to him and says, "How would you like it if they all disliked you?"

In these days of rebellion against order, Ike has been more than ever conscious of the example he must set, which is another of those unmeasurable qualities that go into leadership and has been missing on occasion with the men now in the ring. Eisenhower confesses a liking for horses and horse racing, and yet he has scrupulously limited himself to one appearance at the track each year, simply because he believes that that is enough for a man who is held in the public gaze.

There are a lot of people who still feel that Ike never really understood his job of being President. Yet today his commonsense observations about the Presidency are more cogent than a lot of the other talk. He, for instance, does not like the disuse of the Cabinet and the National Security Council in the executive branch and the resulting deep personalization of the Presidency. "You need," he says, "bitterly debated advice and conflicting considerations." The frantic pace of today's Presidency has also disturbed him. He played golf, yes, but the business was never out of his mind." A President has got to have time to think about his main problems." There are a growing number of presidential observers who endorse that need.

He feels that the heads of the great Federal departments, should have more far-reaching power in setting up their staffs. He feels that the momentum of the big bureaucracies tends to sweep the Cabinet officers right along with them, and these men are often almost powerless to combat the system which grows bigger when it is obvious that in some ways it should grow smaller. This is the theme song now of all the candidates.

So far the historians have not ranked Eisenhower very high in the presidential legend. But there is growing conviction that the measure of the man himself may be more of a factor in the national life than anyone has been willing to admit before. Ike has not been referred to as a top-drawer expediter, one who knew the machinery of government, but there are hints that the tradtional assessment of those qualities may be outdated and inaccurate. The eight years of relative world calm under Ike, achieved without losing any territory or much prestige, have taken on new importance. There are even those who dare suggest that his soothing spirit, the innate goodness of the man himself, did more to lift up the hearts of Americans and hold them together in a reasonable state of public happiness than many of the social reforms that have been propounded since.

Mr. McCORMACK. I yield to the distinguished gentleman from Colorado.

Mr. ROGERS of Colorado. Mr. Speaker, I appreciate the distinguished Speaker yielding to me so I may join with other Members in mourning the passing of our late President and general, Dwight David Eisenhower.

This is a significant day in which to pay tribute to a man who had his roots in my congressional district. In fact, he was married to Mamie in Denver, Colo., and after that Denver was his second home. Throughout the years before he became prominent as a forthright leader of the Nation, he spent many years and days in the city and county of Denver. It was

during that period of time that those he came in contact with learned to know and love him. They appreciated the fact that he had the spirit and the fairness and the understanding that are not as well attributed to all men as they were to Ike.

After he became famous, so to speak, when he led our armies in Western Europe to victory and then he returned to the United States, he came back to Denver, Colo. Once again, General Eisenhower enjoyed the respect and honor and leadership that he so well deserves.

We in Denver express our thoughts this moment to the family and mourn the loss of his leadership. I express my sympathy to Mrs. Eisenhower and the family. I know his death is a great loss to the Nation, and particularly it is a great loss to the people of my district.

Mr. McCORMACK. I yield to the distinguished gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I express my gratitude to the Speaker for yielding to me, and also for taking the lead in expressing eulogies and giving us the opportunity to express our personal eulogies for our former President, Dwight David Eisenhower.

Dwight David Eisenhower, 34th President of the United States and General of the Armies, is dead, and like millions of Americans and people throughout the world, I deeply mourn his passing.

Whenever I think of President Eisenhower, the words "warm" and "human" immediately come to my mind. Will Americans ever forget that big grin—the smile, known around the world, which genuinely reflected his warm personality.

When I first met this great, dedicated, and devoted American, I was overwhelmed by his down-to-earth sincerity. Being in his presence gave me renewed confidence and faith in the goodness of unselfish public service. Having met him in person, one soon realized that he had just met greatness.

Now America has lost its most distinguished elder statesman and the world has lost one of the truly great men of the 20th century.

Dwight Eisenhower was a professional, career soldier who spoke of war as "this damnable thing." He led a great military crusade that saved Western Europe and the free world from tyranny, yet warned of the creation of a "military-industrial complex" in America.

President Eisenhower always spoke of the "greatness of America" and the "strength of the American people." He was not a flamboyant man or a great wit, but he was genuinely liked—even by his political and philosophical opponents.

Dwight Eisenhower has been called a national hero, a leader in war, a crusader for peace—and it is true; he was all of these things. But more important, he was a humble man who was called to greatness by those who recognized in him that rare quality of leadership that makes some men stand taller than others.

As a military figure, he was not a great authoritarian, or a disciplinarian. Instead, he inspired men by his example and by his logic. He had a unique ability for drawing people together in a common cause and welding them into the most awesome and proficient military armada ever assembled.

As our President, he brought to this great Nation something it desperately needed—unity, purpose, and a sense of direction. Whether they voted for him or not, most Americans were proud of Dwight Eisenhower and felt a measure of security while he was in the White House.

In the twilight of his life, "Ike" displayed the same courage and tenacity that he had reflected on the battlefield and in the quiet counsels of the Presidency. I have never known a man to survive seven heart attacks and so many other medical complications and still maintain that keen insight into the future or that illuminating awareness of history that "Ike" held to the end.

In my judgment, leadership is the ability to influence human behavior, and it was for this reason, I believe, that people trusted "Ike." They trusted him with the lives of their sons in war, and with their own destinies as our President.

Though he was trained as a soldier, "Ike" was truly a man of peace.

Dwight David Eisenhower will go down in history as a humble man who responded to the call of his country in its time of greatest need—not once or twice, but whenever the need arose.

(Mr. DON H. CLAUSEN asked and was given permission to revise and extend his remarks.)

Mr. McCORMACK. I yield to the distinguished gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. Mr. Speaker, I thank the Speaker for yielding.

Mr. Speaker, General Eisenhower helped us win a war that could not be avoided and kept us out of several that could. In this dangerous world, no public service could be more beneficial nor earn higher marks in history. General Eisenhower has earned his greatness.

Mr. McCORMACK. I yield to the distinguished gentleman from Idaho.

Mr. HANSEN of Idaho. Mr. Speaker, I thank the distinguished Speaker for yielding to me.

The people of Idaho join with the millions of Americans across this land and, indeed, the millions in other lands in mourning the death of a great leader, Dwight David Eisenhower, and in paying tribute to his memory.

I shall never forget the first time I met General Eisenhower. It was at the convention in Chicago in 1952, a short time before he was nominated to be President of the United States. I had the feeling at the time that I was meeting one of the great men of history. General Eisenhower had completed a career of distinguished service to his country as a soldier. He was about to enter upon the period of his greatest service to our country as one of its most beloved statesmen. On the occasion of this first meeting, General Eisenhower's personal warmth, his infectious smile, and the twinkle in his eye made a profound impression on me.

The pleasure of my first meeting with General Eisenhower was matched by the pleasure of meeting Mrs. Eisenhower on the same occasion. Her friendliness, her warmth, and great charm are among the qualities that have marked Mrs. Eisenhower as one of the truly great ladies of American history.

President Eisenhower honored the people of the State of Idaho by paying us a visit in 1962, when he was accorded a welcome that reflected the depth of the love and respect that the people of Idaho bear for him.

General Eisenhower was a distinguished soldier and military leader, but was also passionately devoted to the cause of peace. He dedicated all of the energy and strength he could command to the task of building an enduring world peace.

General Eisenhower's life exemplified the best in America. Because of him, all Americans stand a bit taller. All of us feel prouder of ourselves and of our country. He had a deep belief in the American dream, a faith in God and in the future of our country.

He was a leader of great strength and toughness. Yet, he was kind, gentle, compassionate, and understanding.

The high principles and purposes that motivated General Eisenhower are reflected in his speech to the men and women of the Allied Expeditionary Force at the end of his great crusade in Europe. I quote from the closing sentences of his address:

> Each of the fallen died as a member of the team to which you belong, bound together by a common love of liberty and a refusal to submit to enslavement. No monument of stone, no memorial of whatever magnitude could so well express our respect and veneration for their sacrifice as would perpetuation of the spirit of comradeship in which they died. As we celebrate victory in Europe, let us remind ourselves that our common problems of the immediate and distant future can be best solved in the same conceptions of cooperation and devotion to the cause of human freedom as have made this Expeditionary Force such a mighty engine of righteous destruction. Let us have no part in the profitless quarrels in which other men will inevitably engage as to what country, what service, won the European war.
>
> Every man, every woman of every nation here represented has served according to his or her ability, and the efforts of each have contributed to the outcome. This we shall remember—and in doing so we shall be revering each honored grave and be sending comfort to the loved ones of comrades who could not live to see this day.

Mr. Speaker, we have lost a great leader. But as we face the challenge of the future to carry on the work which was so effectively advanced by Dwight David Eisenhower during his lifetime we can, if we will, continue to draw strength, inspiration, and guidance from the life and service of this dedicated American. We can best honor his memory by learning and applying in our own public service the great lessons he has taught us.

Mr. McCORMACK. I yield to the distinguished gentleman from Alabama (Mr. BEVILL).

Mr. BEVILL. I thank the Speaker for yielding.

Mr. Speaker, I was deeply saddened by the death of that great American, former President Dwight David Eisen-

hower. I join all Americans and citizens throughout the world in extending my deepest sympathy to the Eisenhower family.

The light of liberty burns brighter and the strength of our Nation is far more secure today because we were fortunate enough to have had the services of General Eisenhower.

There are no words adequate to express the love and admiration held in the hearts of all Americans for the general. Many of us were privileged to serve under General Eisenhower in the European theater during World War II.

Occasionally an individual comes along who possesses a rare quality of leadership, an insight into life, and the needs and aspirations of our people. General Eisenhower was such a man.

An individual destined to take his place as one of the great military leaders of all times, General Eisenhower was a man of peace, an individual destined to become one of his country's greatest Presidents, General Eisenhower knew when to stand strong and firm for freedom.

He brought to public life a spirit of American know-how and dedication unexcelled in our generation.

A man of the people, General Eisenhower was raised in the simple, dignified tradition which molded the life of another great American, Abraham Lincoln. He lived close to the earth, and like Lincoln, received strength from it.

From the beginning, General Eisenhower was destined to carry on his shoulders the responsibilities of a growing, thriving, sometimes troubled nation. And he never shirked these responsibilities.

Throughout his illustrious career, General Eisenhower maintained the bearing of a patient, persistent worker for every American. Indeed, he leaves behind a legacy of service to his country which will enrich the lives of generations to come.

Perhaps no greater tribute can be paid to General Eisenhower than to say that "Ike" will be missed by those who love freedom and believe in the dignity of man.

Mr. McCORMACK. I yield to the distinguished gentleman from Utah (Mr. LLOYD).

Mr. LLOYD. I thank the Speaker for yielding to me.

In behalf of the citizens of my Second Congressional District in Utah, I rise to pay tribute to one of the greatest of all Americans.

Dwight Eisenhower represented the American ideal. As someone has said over this weekend, he was the kind of man the American father wants his son to grow up to be.

Except for the far left or pretentiously sophisticated writers, who find something "square" about traditional virtues, the tributes to this authentic American hero have expressed the heart of America, as President Nixon said yesterday, that General Eisenhower himself represented the heart of America.

I was privileged to visit with our former President on two occasions in 1967. The first with the 90th Club of Republican freshmen. He greeted us at his home in Gettysburg from where we went to a quiet picnic grove adjacent to a canyon stream. There the general sat down with us and ate a steak and baked bean lunch from a paper plate, showing his personal consideration for our welfare by his every move and expression, and then we had the rare privilege of listening to him answering our questions for nearly an hour. I was struck by the clarity of his mind and by the clarity of his words and by his intellectual articulation of basic knowledge and basic truth.

Later with a Republican task force on Western alliances, we visited with him in his office on the campus at Gettysburg College. Around luncheon tables, he discussed with us his convictions in the field of foreign relations. Again I was struck by his modesty, the simplicity of his movements, the clarity and force of his expressions, and his constant consideration for those of us around him.

It is said that he was not a politician. However, he believed and expressed something very basic which the Members of this Congress and the American people should remember. He said that what was best for this country would prove to be the best politics. So, in a day when some use the word "statesman" in derision and glorify political cleverness, the constancy and the patriotism of Dwight David Eisenhower stands out monumentally.

It was our good fortune as Americans, that Dwight Eisenhower was granted the years to complete his work and he passes to eternal glory with the love, the gratitude, the reverence, and the eternal respect of the American people.

Sentiments of Utahans are expressed in editorials from the Salt Lake Tribune and the Deseret News, which follow:

[From the Deseret News, Salt Lake City, Utah, Mar. 28, 1969]

WHY AMERICANS WILL ALWAYS LIKE IKE

As a sorrowing nation mourns the passing of one of its greatest and most beloved leaders, there is little to be said about Dwight David Eisenhower that has not only been said before but repeated frequently.

From his early years as a Kansas farm boy to his rise from an obscure lieutenant to become supreme commander of the Allied forces that smashed Hitler's "fortress Europe," from his stint as President of Columbia University to his accomplishments as the first Republican President of the United States in 20 years, and his public services after leaving the White House, the life of Ike Eisenhower has been thoroughly chronicled as have few others.

No words can add or detract from his accomplishments, or the honors bestowed upon him all over the world. Nor can words enhance the love or ease the sadness that his countrymen feel at his demise.

As Americans reflect upon the life and works of this remarkable soldier, statesman, and leader, they would do well to ask why he won not only the admiration but also the respect of so many people in all walks of life.

Was it because Dwight D. Eisenhower was a fatherly figure to the entire country—firm but kind? Was it because he had the "common touch," being a man of simple tastes? Was it because he genuinely liked people—and they responded in kind? Was it because of his undeniable sincerity as a man of peace? Was it his clear-cut integrity?

No doubt these and many other well known aspects of Dwight Eisenhower's personality help explain his amazingly intense, widespread and enduring popularity.

But there is one facet of his character that has been generally neglected, but which speaks volumes about the man. It was a facet that was touched on in a thumbnail sketch written two years ago by Bryce N. Harlow, one of Eisenhower's closest aides during his eight years in the White House who observed:

"Take the attributes you consider the most admirable in the people you know, put them in a mixer, and you'll come up with the Eisenhower blend.

"He is vitality and power and force—yet he is profoundly sensitive to the needs and feelings of others. He dominates the people around him—yet eagerly solicits their advice and readily acknowledges error. He has great dignity and reserve, reflecting a quarter century of command and association with world leaders—yet he transforms instantly into 'Ike of Kansas' with a school-boy grin radiating amiability and warmth and the friendliness of a cocker spaniel.

"He has had the adulation of people all over the world for two decades and more—yet is humble to the point of being self-effacing. He detests the perpendicular pronoun, and has scratched out hundreds of 'I's' from speech drafts. Many of his political speeches have ended up almost sterile because of his dislike of blowing his own horn.

"During all of his White House days he forbade the use of the word 'my' before 'Cabinet,' insisting that the prestigious institution should always be called 'The Cabinet.'

"One of his favorite admonitions is, 'Always consider your job important, never yourself.' In 1942 in North Africa, General Marshall asked him what is the most important attribute of a leader. His answer was selflessness."

Whatever history records of Dwight David Eisenhower's accomplishments as a soldier and statesman, the record will not be complete without his accomplishments as a man and the inspiration he provided in helping Americans live better lives of service and devotion to their country.

[From the Salt Lake (Utah) Tribune, Mar. 29, 1969]

A MAN FOR HIS TIMES

Often in this fortunate country's history the right man has come forth in times of national need. Former President Dwight D. Eisenhower was such a man.

During World War II he rose from relative obscurity to plan, then execute, the invasion of Hitler's Fortress Europe. In 1952, when Americans were frustrated and bogged down in a seemingly fruitless and unwanted war in Korea, he agreed to seek the Presidency if given a "clear call to political duty." Republican leaders saw to it that the call was forthcoming and General Eisenhower, then serving as Supreme Commander of the new North Atlantic Treaty Organization forces, answered without further hesitation.

Americans of all political persuasions turned to the former general in hope that his international prestige could restore and preserve peace and bring on the good life. To a remarkable degree these hopes were realized. The 8 Eisenhower years, though frayed at times by tense international incidents, were, in the overall, good ones.

His death Friday at the age of 78 will be mourned as one mourns the passing of a kindly relative who saw the family through troubled times in other years that now seem almost placid by comparison.

Though he was coaxed into politics and never practiced that art in the usual fashion, General Eisenhower was nevertheless reluctant to cut political ties after stepping

down. He continued active in Republican affairs and spoke out frequently in criticism—and sometimes support—of the Kennedy and Johnson administrations that followed. He took a hand in reknitting the Republican Party, which strayed from his more liberal concepts and came to disaster in the Goldwater debacle of 1964. His last public utterance was addressed to the party, revitalized and then meeting in convention in Miami Beach, last August.

History has yet to pronounce its verdict on Eisenhower the general or on Eisenhower the President. Criticisms of both roles have been made by knowledgeable persons of high repute and these must be weighed. But Eisenhower of the infectious grin and fatherly aura must be audited in the abstract.

His greatness lay in his ability to instill in millions of people here and abroad the feeling that the world's mightiest power was in responsible hands and that all was well. Though hampered by illness and pressed by mounting crises that eventually eroded some confidence in his leadership, Dwight Eisenhower made good that trust. The America he handed over to John F. Kennedy was by no means perfect, but it had been calmed and rested and made ready to withstand the upheavals that have visited it since.

Mr. MAHON. Mr. Speaker, President Eisenhower's work has been finished. He has written his record. It is a brilliant and moving record. The Nation and the world are now appending the closing chapters to the biography of Dwight David Eisenhower who, in the eloquent words of President Nixon on yesterday, was one of the giants of our time. Thomas Carlyle said that the history of the world is but the biography of its great men.

It was not my good fortune to know the late President as intimately as some, but I had the privilege of many interesting associations with him, and I counted him as my personal friend. My official relations with him often came about through my chairmanship of the Subcommittee on Defense Appropriations. He was always forthright and cooperative. He had a genius for getting to the heart of the proposition and making his views clearly understood.

The late President Eisenhower was blessed with a richness of personal qualities that make great men greater—qualities that find a permanent home not only in the hearts of his countrymen but of people everywhere. Unimpeachable character and integrity, great depth of sincerity, love of liberty and country, and devotion to the service of the common good were among the shining precepts of the personal coat of arms of this unpretentious man.

A victor in so many battles even in the last days, it is hard to realize that the late President is no longer here. He was so permanent, so enduring, so indestructible throughout his long years.

All of us who have been associated with him in official matters, on the golf course, and otherwise will treasure the memory of our experiences and be glad that we had the opportunity of knowing a man of his stature. Surely his life and work will be widely noted and long remembered by this and coming generations.

May the Lord bless his memory and give strength and comfort to Mrs. Eisenhower and family and others of his loved ones.

Mr. MORGAN. Mr. Speaker, in the passing of Dwight D. Eisenhower one of our greatest statesmen and national heroes has joined the ranks of the immortals. The pages of our history as a people and a nation have a special luster imparted by his life and deeds.

I shall always cherish the memories of my association and friendship with Dwight Eisenhower. He was a man to inspire respect, confidence, and admiration as well as friendship. These he won in large measure from me and from my colleagues on the Committee on Foreign Affairs in the days when he used to testify and assist us obtaining information we needed on foreign policy matters involving military aid to our allies.

These sentiments were confirmed and strengthened when he became our President. His stature as a dedicated public servant transcended politics and he retained the affection and esteem he had won during his military career.

It is sad to meditate on his passing, because it is a deep and grievous loss to his family and friends, and also in a very real way to all of us. At the same time, our grief is tempered by our gratitude and deep sense of appreciation for all that Dwight Eisenhower accomplished for his country and his fellow man.

During the war, Dwight Eisenhower led the greatest forces in mankind's history. In peace, he held the highest office in our land. His true greatness did not stem from holding these high posts. I agree with those who knew him best, that his real greatness was due to his unique personal qualities which fitted him to be the gretest hero of our time. In making these brief remarks I join my fellow Americans in saluting and paying tribute to a patriot whose devotion to our well-being has helped shape the course of war and of peace so that our Nation could survive and prosper.

Mr. BOLAND. Mr. Speaker, I am profoundly saddened by the death of Dwight David Eisenhower, one of this Nation's greatest leaders and one of its most acclaimed public figures.

I had the honor of being elected to Congress in 1952, the year General Eisenhower was elected President. My admiration of him increased during these years as I witnessed Dwight Eisenhower's unyielding courage, high integrity, abiding faith in his fellow man, and his quest for world peace.

General Eisenhower's historic record of achievement is, in a sense, this Nation's record of achievement for the past three decades.

Chief architect of the Allied effort that rescued Europe in World War II, leader of the North Atlantic Treaty Organization, 34th President of the United States for two terms, counselor to succeeding Presidents, Dwight David Eisenhower led our Nation through one of the stormiest periods in its history.

He was not afraid to show hope instead of despair, faith instead of cynicism, honest toil instead of idle talk. He was a good and compassionate man whose words and deeds were an inspiration to all Americans and millions of people throughout the free world.

Dwight David Eisenhower embodied all that is best in American life. Through sheer hard work and determination he brought himself from humble beginnings to the pinnacle of success.

Mr. Speaker, I join my colleagues in extending my heartfelt sympathy to Mrs. Mamie Eisenhower, and son, Ambassador John Eisenhower.

Mr. PATMAN. Mr. Speaker, Dwight David Eisenhower occupied, even before his death, a very special position in the hearts of his countrymen, and now that his gallant soul has reached the haven of eternal peace, it is our duty and our right to claim him for posterity as the very symbol of what it means to be an American. It is necessary to use the phrase, "a self-made man," in the best possible sense of that term because he rose to great position from a home of average circumstances through the application of hard work and the intelligent use of the opportunity afforded to all young men in our democratic society—remember that his career in the public service started with a highly competitive examination for the military academies. His character was well nurtured and formed in the midst of a family that believed deeply in God Almighty, in what we have come to call the American dream, and in the power, dignity, and integrity of the individual person, in that order though dependent one upon the other. This noble character was the source from which Dwight Eisenhower derived his strength and the abilities that were later to lead his Nation through years of strife, when our future as a free people was in critical balance.

Let us not forget that Dwight Eisenhower gave superior and loyal service and invaluable advice and counsel to Presidents Franklin Delano Roosevelt and Harry S. Truman, and that under their administrations he became a legend in his lifetime. As President for 8 succeeding years, he achieved a serenity and balance which enabled him to implement his basic belief and faith in our democratic institutions. Indeed his wisdom and thorough experience in every facet of the administrative process, and his tremendous gift for leadership, engendered a trust and confidence among all Americans that is unique in the history of our Presidents. Almost to the hour of his passing, his inspired guidance was significant to the course of our Government.

Possibly the most sincere indication of his concern for the continued well-being of his fellow citizens was the admonition in his farewell address that—

> We must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

Coming from a man who had spent so many years with the military his warning was indeed a splendidly independent and objective guidepost—in itself it was a great and significant service to his fellow Americans; a statement worthy of the respect, admiration, and affection given to him without stint by millions of Americans and by the many millions in other countries who revere

his memory as the architect of world peace and stability.

In this time of deep sadness, I join with my colleagues in expressing my heartfelt sympathy to his wonderful and gracious wife, Mamie, who shared his burdens and his triumphs, and to the other much beloved members of his family. For them the sharp pain of personal loss is greatest, but all Americans share in their grief, for this was a man much loved by all people. He, more than any man of our century, fits the often-quoted description of our first President, George Washington, for in his time, Dwight David Eisenhower was also "first in war, first in peace, and first in the hearts of his countrymen." Truly, we shall miss this great American champion whose spirit is now and forever with all people and all lands as a resplendent symbol of the United States of America.

Mr. AYRES. Mr. Speaker, I stand on the floor of the House of Representatives as a spokesman for all the people of Summit County. On the subject of the qualities of Dwight David Eisenhower, we are unanimous in our homage. We well understood this great man of our own Midwest. As often as I met with him, I told him of the support our people gave his successful efforts to make us a land of peace.

The great man that he chose to succeed him in the Presidency, President Nixon, closed his eulogy of General Eisenhower by stating:

> We salute Dwight David Eisenhower standing there in our memory—first in war, first in peace and wherever freedom is cherished, first in the hearts of his fellow men.

As the Representative of the 14th Ohio District, to Mamie Eisenhower and her family, I wish to express our deepest sorrow at their great loss. We are grateful to them for having shared Dwight David Eisenhower with us.

Mr. DENNEY. Mr. Speaker, I join my fellow Americans and the world in mourning the death of General Eisenhower, the 34th President of the United States.

Dwight D. Eisenhower will return to his midwestern plains boyhood home after a full life, but, as described in his own words, one with "his work unfinished." Indeed, the work of the world is unfinished. His death reminds us all of the test we have before us and stresses the point that each of us must become involved if we are to count our accomplishments to this end. He was involved. He encouraged not only those around him, but all people to do the same.

Throughout his endeavors in war, peace, and politics, he was not one to lose sight of his beginnings. He had grown to appreciate the honesty and integrity of those who had surrounded his boyhood life. He was a man to be trusted and he served as an example of the virtue of our way of life. He was typically American, and yet perhaps as Rev. Billy Graham recently said, "the greatest American since Lincoln."

Mr. LUKENS. Mr. Speaker, I join with my colleagues in paying tribute to a truly great American.

On Friday, March 28, 1969, at 12:25 p.m. the world suffered a great loss—former President Dwight David Eisenhower became history.

There will be many eulogies and documentaries as well as perhaps a few books. Yet, in all this, it will be nearly impossible to express the true nature of this beloved mortal. A man of great dignity who had the respect of his fellow man, he rarely found it necesary to command it. Although greatly respected, we warmly referred to him as "Ike" as readily as if he were our closest acquaintance. Surely, "Ike" felt this way about the people who chose him as their leader, as well as the rest of the human race which was also captivated and influenced by his statesmanship.

Dwight Eisenhower was a warrior but also a peace-loving man, a political leader and a statesman, an intellectual and a firm believer in his fellow man. He was a Christian who had a keen sense of justice and who would act in a just manner; he had unlimited courage.

He will be remembered for his controversial directing of Federal forces into a city of this country to enforce what he considered to be justice. This demanded a tremendous amount of courage. As general he used every ounce of courage, physical strength, and mentality to defend this country and all people of the world from an aggressive nation. As supreme commander of Allied Expeditionary Forces, he accepted the unconditional surrender of Germany. As President he alone brought peace in Korea. History now shows that he was at this very time fully prepared to again defend this Nation and the world if necessary.

At a time when the military leadership of this Nation is coming under heavier and heavier attack, it is well to remember that one of the greatest military geniuses of our time was a proven man of peace. For eight years under his administration we experienced our longest period of peace since World War II.

Throughout his life he practiced strength and proper use of strength which was clearly illustrated when he ordered our marines into Lebanon to maintain the peace in the Middle East.

A warrior and a fighter to the end, he loved life so much that he fought for weeks grasping onto that thread of life. As with Winston Churchill and the other greats of this era, he belongs to the ages. Now, surely, he has found peace.

Mr. DULSKI. Mr. Speaker, on this day of national mourning for President Eisenhower, I would like to convey condolences on behalf of myself and the Buffalo, N.Y., area which I represent.

As I said upon learning of the general's passing last Friday:

> I, along wtih millions of Americans have offered my prayers during the illness of President Eisenhower. Although aware of the gravity of his illness, I was profoundly shocked and grieved at the news of his death. During my earlier terms in Congress, I came to know him, respect, and revere him as a soldier and as President. The influence for good which he exerted, the high ideals which were voiced by him and his noble examples, all combine to stamp him as a man among men. My wife and I have conveyed our condolences to his immediate family and I shall return to Washington to pay my personal respects.

The feelings of Buffalonians are well expressed in editorials appearing in our two daily newspapers, as follows:

[From the Buffalo (N.Y.) Courier-Express, Mar. 29, 1969]

UNITED STATES MOURNS SOLDIER-STATESMAN

A grief-stricken nation mourns the death of former President Dwight D. Eisenhower, a man beloved and esteemed by the American people. His deeds as a military commander will be enshrined in history as long as Western civilization endures. It was he who directed "Operation Overlord," the invasion of the European Continent, which resulted in the defeat of the Nazis. When he became President, the energy and zeal which he had displayed in war were devoted to the objective of bringing about lasting world peace.

Probably no other President in this century was as universally popular as Gen. Eisenhower. Theodore Roosevelt, Franklin D. Roosevelt and Calvin Coolidge came close, but each profoundly displeased a minority. The two Roosevelts were disliked by conservatives and Coolidge by the progressives. President Eisenhower, who pursued a middle-of-the-road policy toward national problems, was disliked by few Americans—a fact emphatically attested to in his 1956 reelection.

Mr. Eisenhower possessed the qualities that Americans seem to admire most in their chief executive. A pleasant and photogenic man, Mr. Eisenhower possessed a personality that radiated confidence. As a soldier, he had risen to prominence through his own brilliance. As an educator, he championed academic freedom. And as a statesman, he represented the United States with dignity and honor.

The president came to the occupancy of the highest office in the land with no experience in politics and little in government. No one realized it more than he did. Hence, he did not rush into a legislative program, but permitted his first year, 1953, to pass by without major recommendations. In 1954, he submitted a comprehensive program to Congress which was designed to cover his entire term. This included tax revision and reduction, based on curbing expenditures.

Perhaps the American people felt most indebted to him for a victory scored outside the legislative realm. That was the ending of the Korean War.

The United States and the free world have lost one of the noble and justly revered soldier-statesmen of history.

[From the Buffalo (N.Y.) Evening News, Mar. 29, 1969]

DWIGHT D. EISENHOWER

However history ranks him among Presidents or among generals, Dwight D. Eisenhower has already been ranked in the hearts of his countrymen among the best-loved Americans of all time.

Ike had that special magic of personal warmth, that glow of inner decency and dignity, that won him an all-but-universal affection—evidenced not only by the familiar "I Like Ike" buttons of his two spectacularly successful presidential campaigns, but by the millions who served under his command in World War II and the tens of millions who later greeted him wherever he traveled abroad.

As President, he could be bracketed with Washington but not with Lincoln—as an inspired unifier and team captain, but not a driving leader. His eight-year presidency was a success by the standards of those who believed deeply, with him, in a government of restraint and rigidly limited use of its vast powers—but not by those who prefer to see the Presidency played, a la FDR or LBJ, as a virtuoso performer plays a great organ.

As a general, too, Eisenhower can be ranked

with history's great team captains, but not among its brilliant strategists or dashing warriors. The MacArthur style was not for him, nor the Marshall command of over-all organization. His was a kind of generalship that could keep a prima donna Montgomery, a brilliant Bradley and a swashbuckling Patton all working for the same winning team.

His greatest single contribution—indeed the very theme of his life from the "Crusade in Europe" through the organization of NATO, his eight-year presidency and on into his eight years of retirement—was his dedication to the concept of the collective self-defense of the free world.

In World War II, his triumph was the effective captaining of a multi-nation coalition of armies to defeat the most evil tyranny of modern times. In organizing NATO, he was the logical one man in all the free world to be brought back into uniform to put the free nations of the North Atlantic Community into another effective coalition against the danger of Communist aggression.

In leaving NATO to fight for the Republican presidential nomination, his main motivation once again was his devotion to the concept of collective security and his fear that America might revert to isolationism or to go-it-alonism. And throughout his presidency and on to his final illness, he never wavered in support of this nation's commitment to defend its friends and maintain a strong set of globe-girdling alliances to keep the free world free.

Looking back over his whole career, what sticks out is a passionate devotion to three words: Freedom, security, peace—and in that order.

The first he formed into this virtual credo, in a 1949 speech while president of Columbia University: "To men who have lived in freedom, there is nothing in life so valuable as freedom—not even life itself."

To the second, his nation's and the free world's security, he not only devoted his whole career as a soldier, but his deepest concern as a statesman—right up to last summer's ominous warning to the Republican national convention: "Abroad, in every major sector, we confront a formidable foe—an expansionist tyranny which respects only toughness and strength and still displays little interest in traveling the pathways to peace, with honor and justice. . . . To call for retreat by America is the best way I know to stockpile tragedy for our children."

Yet this is the same Ike who warned us in his presidential farewell speech eight years ago to be wary—in a time when our security depended on a vast military-industrial complex—of letting "the weight of this combination endanger our liberties or democratic processes." And his greatest pride in looking back on his own presidency was simply that it had kept us at peace and secure for eight years, while his bitterest disappointment, as he himself sized it up, was his inability, despite a massive peacewaging effort, to bring about a trustworthy accord with Soviet Russia.

What the world will best remember about Ike, however, is not his speeches or his sometimes fractured syntax but that marvelous Eisenhower grin and the infectiously optimistic faith in human decency that it punctuated. Rank him where you will in greatness among the unforgettable free world leaders of his momentously historic times—Churchill, Roosevelt, MacArthur, Marshall, DeGaulle, Adenauer—and Eisenhower will be remembered as long as any and probably with more sheer affection.

Mr. BRAY. Mr. Speaker—

So he passed over, and all the trumpets sounded for him on the other side.

A man of unfaltering kingly bearing that was complemented by a genuine native warmth and humility, he was by nature and by character as open and as free as the western plains and prairies of his youth. Few men ever sought less; he asked for nothing more than the opportunity to serve, when called and where ordered. Few men ever received more; he is one of the scant handful of men in the history of our American Republic whose fellow citizens spontaneously and overwhelmingly elevated him to be a symbol in his own lifetime. And the symbol was not merely of an era, but of the country itself, and of its people, and of the ideals and the good in the two that were both existing and hoped for.

As soldier, as general, he directed the most awesome array of military might ever entrusted to one man. It was his duty to order entire armies into some of the bloodiest combat in the history of warfare.

As statesman, as President, he gave to his country a Chief Executive with a commitment to peace that can only be known by one like himself who had carried the heaviest of the burdens and agonies of war. Six months after his first inaugural in 1953, the guns of the Korean war fell silent. For the next 7½ years of his Presidency, not one American combat death occurred.

His call to serve—first as soldier, then as statesman—came from his own country, yet the scope of this service was truly worldwide. As soldier, millions in this country and abroad looked to him in time of war for the hope of victory and of liberation. As statesman, these same millions looked to him in time of peace as that symbol of the forces of good that had gained victory, and would strive to preserve the peace so dearly won.

Measure him, in part, by the nature of his critics, that small band of petty men whose stock in trade is the supercilious conden.nation, the mocking jest, and arrogant condescension. Such trivia, such meanness, only made more clear the true nobility of his own character, and exposed more glaringly the shallowness of theirs.

The legacies he leaves to his fellow men are rich and many. But perhaps the greatest of them all is this: In a day when it sometimes seems that "image" is all, and that character counts for nothing, this man lived and practiced, openly and unashamedly, the old, simple precepts of "The Gods of the Copybook Headings."

The love, honor, and respect that millions gave him has proven beyond any doubt that mankind is, and always will be, more receptive to, influenced by, and appreciative of a basic, simple code of honor and decency such as this man practiced than all the false glitter and manufactured rhetoric that so quicky loses its luster.

The roll of the muffled drums, the rumble of the caisson wheels, and the clear, high notes of "Taps" will now mark the passing of one who carried and fulfilled some of the most momentous and difficult tasks ever placed upon one man. He passes into history, but he passes as one whose part in the constantly unfolding drama of human existence and civilization will be forever remembered. And the example he set by his life will be forever called to mind, wherever and whenever men lift up their eyes unto the hills, and seek from a power beyond themselves that inner strength and support that man must have to prevail.

Soldier from the wars returning
Spoiler of the taken town,
Here is ease that asks not earning;
Turn you in and sit you down.

Peace is come and wars are over,
Welcome you and welcome all,
While the charger crops the clover,
And his bridle hangs in stall.

Now no more of winters biting,
Filth in trench from fall to spring,
Summers full of sweat and fighting
For the Kesar or the King.

Rest you, charger, rust you, bridle;
Kings and Kesars, keep your pay;
Soldier, sit you down and idle
At the inn of night for aye.

Mr. SMITH of California. Mr. Speaker, I wish to join my colleagues in paying tribute to Dwight David Eisenhower. Americans have lost one of their greatest leaders of all time.

Dwight David Eisenhower was a leader of soldiers; he was the leader of a distinguished university; and he was a leader of the greatest nation on earth.

A distinguished military career followed his graduation from the U.S. Military Academy in 1915, and the greatest tribute that could be paid to his services to this Nation was given by the American public in 1952 when he was elected President of the United States.

When the American public returned him to that office in 1956, there could be no higher honor, no higher tribute to the inspiration and the dedication of this great man.

History will record this man's lengthy list of outstanding contributions, taking note that he always was sought after by his fellow man. He always ascended to the highest positions of leadership, and dispatched his offices in a gentlemanly fashion with dignity and efficiency.

Mr. Speaker, Mrs. Smith joins me in extending our deepest sympathies to Mrs. Eisenhower and the members of the family.

Mr. SHRIVER. Mr. Speaker, on behalf of the citizens of the Fourth Congressional District of Kansas, Mrs. Shriver, and myself, I want to express the feeling of deep sorrow over the passing of a beloved and great American, Dwight D. Eisenhower. Our heartfelt sympathy goes out to his beloved wife, Mamie; his son, John; and the entire Eisenhower family.

Dwight Eisenhower's fight for life, his physical and mental strength in the face of suffering, was an inspiration to all of us. America has lost one of its great statesmen and soldiers. We, from Kansas, are especially proud of the heritage and accomplishments left behind by this native son of Abilene.

Every World War II GI who served under Ike will forever treasure his military leadership and organizational genius. Free men everywhere will long remember his leadership in bringing peace and stability to the world as 34th President of the United States.

We are all the beneficiaries of his

lifelong devotion, dedication, and service to America and free men everywhere.

Mr. CORMAN. Mr. Speaker, I join my colleagues in paying tribute to President Eisenhower and to underscore the deep sense of loss felt throughout the country at the death of this gallant and remarkable person.

Dwight David Eisenhower has rightly been called a great general and a great President. But, mostly, I would call him simply a great man.

The key to his greatness was the warmth and sincerity of his personality, which were reflected in his compassion and regard for his fellow men. The measure of his greatness was the strong hold he so easily retained throughout his entire career on the confidence, respect, and affection of the people of this Nation; indeed, throughout the world community.

General Eisenhower has left to America a legacy of bravery, integrity, courage, and devotion to country and to democratic principles as a way of life. He was a man of essential decency and kindness, the traits which endeared him to the Nation.

His place in history is firmly established by his many services to his country. In the dark days of World War II, he emerged as the strong commander of the Allied forces to win for the millions of Europeans their freedom from Nazi tyranny. Who of us can forget D-day and the extreme courage the general displayed in executing the invasion, which was the only hope of stemming the Nazi onslaught? The remarkable trust he instilled in the men who crossed the channel and went on to the beachheads on that June day was the hallmark of his ability to command and to lead. He sent the Allied forces on to a glorious victory that gave Western Europe its freedom, and he stayed to watch over the liberated lands and helped to rebuild them. He returned to America a "conquering hero" in the true sense of the word, and it was his just due.

His two terms as President was a grateful nation's recognition of qualities of leadership. In his person, he represented what America is—in war and in peace.

Dwight David Eisenhower will always be remembered and revered by every American now living and for all generations to come. His page in history is a shining example of a truly wonderful man and a great American.

Mrs. Corman and I extend our deep sympathy to Mrs. Eisenhower and the family. We hope they will find solace in the knowledge that the Nation mourns with them.

Mr. ERLENBORN. Mr. Speaker, it seems to me that Dwight Eisenhower was one of those rare leaders with a genius for bringing people together. He was a maker of friends, not a maker of enemies—for himself, for his political party, for his point of view, for his country, and for the people of the world.

His administration was a time of healing, of peacemaking, and of peacekeeping. His life was devoted to goodness and mercy.

His greatness as a man overshadows his greatness as a general or as a President; and yet, his ready smile and his well-known temper marked him as being made of the same stuff as the rest of us.

Samuel Butler, the great English novelist of the 19th century wrote a line at about the time Dwight Eisenhower was born:

A virtue, to be serviceable, must, like gold, be alloyed with some commoner but more serviceable metal.

Mr. Speaker, I believe Dwight Eisenhower was a marvelous alloy. Millions of people around the world today are repeating a famous phrase: "I like Ike."

Mr. SCHERLE. Mr. Speaker, today I am introducing legislation that would authorize the minting of all quarter-dollar pieces with a likeness of former President Dwight David Eisenhower.

This tribute to President Eisenhower is only fitting when one considers his dedicated service to his country. Our country and the world are more secure because of his efforts in times of war and peace. He was a man of courage; a man of integrity, and above all, a man of kindness. Even in death, President Eisenhower's spirit of dedication to his countrymen and his Nation will remain as an inspiration to all.

The people of Iowa have had a special feeling in their hearts for President Eisenhower throughout his career, because his beloved wife was reared in our State. I know the people of Iowa will join me in extending our prayers and sympathy to Mrs. Eisenhower and the family in this time of sorrow.

Mrs. SULLIVAN. Mr. Speaker, with the dignity befitting his entire lifetime, and with the respect he always earned and enjoyed, the American people have been saying their personal farewells to a great and good man who served them well.

We salute his fine family for the admirable manner in which they have borne the long and trying months of General Eisenhower's final illness, and for the inspiration they have given all of us to bear our own burdens with similar courage and fortitude.

Mr. Speaker, there are unlimited tributes one could pay to our former President and great wartime leader. When I heard of his death on Friday, and the newspapers in my district asked me for my comments, I made the following statement:

STATEMENT BY CONGRESSWOMAN LEONOR K. SULLIVAN UPON THE DEATH OF FORMER PRESIDENT DWIGHT D. EISENHOWER, FRIDAY, MARCH 28, 1969

I don't think there was ever any narrow partisanship in the character of Dwight D. Eisenhower during his eight years as President of the United States, which was one of the reasons why he could serve as effectively as he did as a Republican President with a predominantly Democratic Congress during six of those eight years. I think every Member of Congress recognized in him a man of decency and of great dedication to the cause of freedom, and even when we disagreed with him—as we frequently did—on domestic issues, there was never any bitterness or attacks on his personal integrity.

Few Americans have ever left the White House with as much genuine good will and warm feeling of approval as a person. History may not regard him as one of our greatest Presidents, but it is certain to include him among the greatest Americans. And considering the fact that his entire adult life was spent in the military service until just a few years before he became President of the United States, his performance as President was indeed remarkable in many respects, particularly in recognizing the supremacy of the civilian authority over our national destiny.

Even when I was fighting him vigorously on some issues in the Congress—on food stamps, medicare, and some of the other domestic issues—I never doubted for a moment the sincerity of his views or the honesty of his approach. He was, in all respects, a man to be admired and respected. I join all of my fellow citizens in sorrow over his death following such a magnificent and dignified and courageous life of service to his country.

Mr. ROBISON. Mr. Speaker, my family joins with the millions of others throughout the world who will mourn the loss of Dwight David Eisenhower—a great and good man.

His death, after his prolonged illness and almost miraculous recovery from prior heart attacks, comes as no great shock but it is, nevertheless, a personally difficult thing to accept the fact that his wise counsel and always-encouraging presence has been removed from us.

Dwight Eisenhower's place in history was assured long before he assumed the Presidency, but there have been some who have questioned whether or not his tenure in that most difficult of all offices added anything to his stature. I have never understood nor shared those questions. To my mind, back then and now, today, as I review the tumult and the trouble of these past 8 years, General Eisenhower was—and will forever remain—one of our great Presidents. He brought peace and a respite from both domestic and international tensions to a nation badly in need of such relief; he proved, if such needed proving, that we could have prosperity without war, a steadily rising standard of living without crippling inflation, and that true progress could be made in the field of human rights without recourse to public confrontation in city streets.

God grant that Richard Nixon, under today's worsened circumstances, can do half as well—and God grant, too, that as Dwight Eisenhower leaves us, we, the American people, will be so inspired by his precept and example as to prove worthy of the trust he always had in us.

Mr. HUTCHINSON. Mr. Speaker, I have been deeply moved by the eulogies today on the life and career of General Eisenhower. It was not my privilege to have served in Congress during the years of his Presidency. In those years I served in the legislature of my State. But on two occasions, once before his election as our Chief Magistrate, and once afterward I met him, and his personal warmth I have always remembered. When he was campaigning for the Republican nomination, before the Republican Convention in 1952, he came to Detroit. It was my privilege to sit on the platform with him at that time, and to meet him on that occasion. After the close of his presidential years, during the Michigan Constitutional Convention in the spring of 1962, General Eisenhower came to that convention in Lansing. A few of us who were delegates at that convention were

privileged to have luncheon with him at the home of Dr. John Hannah, then president of Michigan State University. I sat across the table from him then, and for an hour and a half he kept us enraptured by his experiences, his philosophy, and his life as a retired President living at Gettysburg and his interest in Eisenhower College. The occasion impressed me deeply, and I shall remember him vividly as long as I live.

Mr. DANIELS of New Jersey. Mr. Speaker, I rise to express the profound sorrow of the people of the 14th Congressional District of New Jersey at the passing of our 34th President, Dwight David Eisenhower.

Because in the later years of his life he was involved in the world of partisan politics, his was to some extent a controversial figure. There were those who agreed with him on particular policies and those who differed with him. Yet, while there might have been disagreement about Eisenhower the President, there was no disagreement about Eisenhower the man. I know that there has been no man who in my lifetime has enjoyed the trust and confidence of his fellow citizens to the extent that General Eisenhower did.

Mr. Speaker, General Eisenhower was a professional military man and indeed one of the great military figures of our history. He ranks with Washington, Grant, Lee, Sherman, Sheridan, Pershing, and MacArthur in our glossary of military leaders. He possessed military virtues in abundance. He was always an enlisted man's general, humble and self effacing. And it was General Eisenhower who had spent almost all his adult life as a professional soldier who warned his fellow citizens about the dangers of the military-industrial complex in a free society.

Dwight David Eisenhower brought to public life a sense of decency, a sense of propriety, and above all, a deep devotion to this Nation and its ideals. His virtues were perhaps the virtues of an earlier America, an America which was not ashamed to wear its patriotism on its sleeve, an America which believed in God and the family as the basic unit of a free and just society. At this critical time these seem to be the virtues that this Nation needs most.

His contributions to this Nation and to the free world will live after him. Of him it may be said, as Richard Henry Lee said of an earlier military man, George Washington, who served as President during trying times, he was "first in war, first in peace, and first in the hearts of his countrymen."

Mr. BENNETT. Mr. Speaker, every American and every freedom-loving person on this globe has lost a dear friend in the passing of General and President Eisenhower. At the end of World War II, as I was a patient in Army-Navy hospital in Arkansas, I wrote to General Eisenhower and urged him to run for the Presidency, as I felt he was just the man who was needed to lead our country in those troubled times. I was never sorry that I had made that judgment and that in the years that followed that he went to the White House and led our country so well in peace as he had in war. In the years since General Washington, no one has better earned the phrase that he was "first in war, first in peace, and first in the hearts of his countrymen." He had the uncommon quality of understanding the common man and helping him to achieve his finest potentialities. No President in our history has been better loved and it will always be one of the treasures of my life that fortune gave me the opportunity to know him personally. Our country will always be his debtor, as in fact so will we and all of humanity.

Mr. RHODES. Mr. Speaker, the life of Dwight Eisenhower was a very special gift of the Almighty to our contemporary world. Few men have been endowed with the personal qualities to make them, all at the same time, effective, objective, resolute, and compassionate. Few men have been able to encompass in one life the roles of warrior, statesman and peacemaker. Few men have been able to inspire, at the same time, love from their friends, respect from their enemies, and confidence from their fellow men. Yet, he did all of these things.

General Eisenhower was a true moderate. In one of the first utterances he ever made in my presence, he said, "No progress can be made by walking in the gutter to the far right, or the far left. It can only be made by walking resolutely down the middle of the road. This is where I plan to walk."

The world is today a poorer place than it was yesterday because President Eisenhower is no longer in it. We thank God for his life, we express our sympathy to Mrs. Eisenhower and the Eisenhower family, and we pray that Almighty God will give his great soul rest and eternal peace.

Mrs. REID of Illinois. Mr. Speaker, I join with Americans everywhere and people the world over in mourning the passing of our 34th President—who in death as in life will be remembered among our country's greatest statesmen and patriots. He was one of those individuals who had the rare privilege of seeing himself become a living legend—hailed and admired by peoples around the world. He won the love, respect, and devotion of his fellow man. In our Nation's darkest hour of need, he came forward to lead the free world to victory.

Dwight David Eisenhower began his service to his people as a soldier of war. He ended as a crusader for peace. For both he will be long remembered by a world that knew and loved him. He believed superbly in the motto of West Point, his alma mater—"Duty, honor, country"—and he dedicated his life to these high principles. He was a man of great strength, wisdom, and compassion.

As we mourn the passing of General Eisenhower, we think first of the loss of a man who stood for America, a man whose courage, personality, and integrity lifted the Nation in times of crisis—a pillar of strength who could be relied upon for wise counsel and leadership. We think of all he exemplified, of all he did—as commanding general in World War II, as an educator, serving as president of Columbia University, as the organizer and first supreme commander of Allied Powers in Europe within the North Atlantic Treaty Organization, as our President, twice elected by landslide majorities, and as a man still revered after he left office. But aside from all this, General Eisenhower has left our Nation a legacy to which to cling—to live by, to build on—basic principles and basic commonsense good in any circumstances.

There was his essential decency as a man, his humility as a leader, his readiness to make deicsions, and his willingness to take the blame if the decisions went wrong. President Nixon, in a statement, pointed out that the one key to the character of General Eisenhower was revealed in a message the general had prepared in case the landings in France on D-day had failed. This message—never issued because the landings were a success and led directly to the end of the war—included these sentences:

> The troops, the air and the Navy, did all that bravery and devotion could do. If any blame or fault attaches to the attempt it is mine alone.

This was typcial of General Eisenhower—a man ready to take the consequences of decision.

The convictions which led to his decisions were bolstered by the thoroughness with which he made them, and one of the fundamentals in his planning was to consider the consequences if they proved wrong—what to do next—what alternatives. These were the qualities which made him a great general, and the qualities maintained through the major decisions of his years as the Nation's Chief Executive. They are qualities that too often have been lacking in Washington when great plans were pushed through with little or no thought to the possiblity of failure, or to the alternatives. But these qualities are essential to the leadership of the future—and they are General Eisenhower's most enduring legacy.

In death Dwight Eisenhower becomes no longer a man of the 20th century but a man of immortality who will live on through the ages in the hearts of his countrymen—along with Washington, Jefferson, Lincoln, and others who have made our Nation great. This generation and those to come will never forget the legend of Eisenhower the general, Eisenhower the President, and "Ike" the citizen.

At this time, I want to extend my deep sympathy to the Eisenhower family.

Mr. NICHOLS. Mr. Speaker, America has lost one of its finest citizens in the passing of former President Dwight David Eisenhower. The President leaves an outstanding record as a military tactician and former commander of all Allied forces in Europe during World War II. He was a distinguished military graduate of West Point and had the distinction of leading this country both in time of war and peace.

His 8 years as President of our country saw America prospering and under his able leadership our country was recognized world wide for the strength of our military forces, and for our industrial growth. Also our abilities to negotiate and work with other nations of the free world were well known. During the last

8 years of his life, he sought retirement to the serenity of a small farm in Gettysburg, Pa., on lands which ironically join to the great military battlefield between the North and South during the War Between the States.

As I silently walked past the body of this great American lying in state in the rotunda of the U.S. Capitol, which traditionally is reserved exclusively for outstanding Americans, my mind went back some quarter of a century ago when the general was my own military commander just prior to the invasion of Normandy in World War II. I still treasure the individual letter which he wrote each man taking part in the invasion of France. It was a warm, personal sort of message from a leader whom we all had great confidence in and whom we would follow without question in carrying out his orders for the long-awaited and much-planned landing in Normandy.

It was a solemn hour going across on the old Navy LST's on the morning of June 6, 1944, but somehow every GI felt better about whatever he might face during the days and weeks ahead, because he carried that special letter from Gen. Dwight D. Eisenhower in his pocket or tucked away under his steel helmet.

In the after years, we may not have always agreed wholeheartedly with some of the President's decisions nor necessarily all of his political views, but make no mistake about it, he was indeed a great American. General Eisenhower will be missed, for a man of his stature does not come along every day. I am confident that both his spirit and his influence over the men he commanded in battle and over those who served with him during his 8 years as President of our country will long be remembered. His influence will be felt in this country and throughout the world for many, many years to come.

Mr. McCLURE. Mr. Speaker, the greatest monument to a public figure is the esteem in which he is held by his fellow man. If that is the measure, then Dwight Eisenhower was truly the man of his time.

His service to his country, to the world, and to the cause of freedom is unmatched in this century. He marshaled the greatest force for war in the history of mankind. After that, he marshaled the greatest force for peace the world has seen—the spirit of the American people. There is a certain irony in the fact that this man of war gave us the longest sustained period of peace in the last three decades.

Those of us from Idaho have always felt a special fondness for Dwight Eisenhower. We recall that the first speech he gave in his quest for the Presidency was delivered on the steps of the State capitol in Boise. From that point in 1952 to his final resting place in Abilene, Ike traveled the path of peace and freedom. It is a journey that will be remembered throughout history.

On behalf of the citizens of the First District of Idaho, I wish to extend our deepest sympathy to Mrs. Eisenhower and the other members of the Eisenhower family.

Mr. COLLINS. Mr. Speaker, as we assembled in the rotunda of the Capitol Sunday to pay our respects to the great President of peace, Dwight David Eisenhower, my thoughts went back to my earlier discussions with the President.

Serving him as Regional Chairman of the White House Conference on Youth, I recall how often he would urge our Nation's youth to use "commonsense." Every single individual was unique, and had something special to offer to America. Every single individual was important to "Ike," and he would often speak of the great need to provide better educational opportunities for America's youth. I remember how he outlined the "way" for our youth.

We must not look for the simple way—the easy way—but we must understand and know that the best way is so often the hardest way. Many men put forth their ideas to simplify a youngster's education and growth. "Ike" would pause a moment, then more deliberately and more thoughtfully restate his belief that America's youth could—and would—respond to the call for individual responsibility and individual development.

And because "Ike" believed in you—you believed in yourself. And you believed in the others who struggled daily beside you in the bettering of an often-troubled world. "Ike" understood Emerson's phrase:

The only way to have a friend is to be one.

General Eisenhower was my leader during the war as this Nation forsook the easy way for the grueling, hard way that brought us the one true victory that men call peace. Dwight David Eisenhower was my leader again as he paced us as the great President for peace and prosperity. "Ike" was my friend as he befriended our Nation, and as he issued the call for individual leadership on the part of all Americans.

Mr. GALLAGHER. Mr. Speaker, everything in the life of Dwight David Eisenhower became him like the leaving it.

The accomplishments of Dwight Eisenhower as soldier and statesman, as general and President, richly deserve the praise and admiration they have received. But I would like to focus upon another of his great achievements; the courage of Dwight Eisenhower in the face of death.

Many times during 1968 the dark solemnity of the death watch settled over Walter Reed Hospital here in Washington; just as many times the bright light of the famous grin of Ike was shed yet again upon a relieved world. The fact that we mourn him in 1969 rather than 1968 is a tribute to more than the miracles of medical science. It is a tribute to the unquenchable spirit of man—surely the greatest glory of God's earth.

Dwight Eisenhower has left us many legacies. To my mind, perhaps the greatest is the memory of his unbroken will and transcendent character when his body was at its weakest. For his refusal to slip easily into death is an enduring inspiration to all who must undergo adversity.

Mr. Speaker, no matter what they may have been in life, many men have died well. Shakespeare celebrated that fact in the famous speech in Macbeth which begins:

Nothing in his life became him like the leaving it.

In the case of Dwight David Eisenhower, however, everything in his life became him like the leaving it.

Mr. FREY. Mr. Speaker, the world has lost a friend. People of all ages, all political ideologies and all nations respected and revered Dwight D. Eisenhower. He was a great military leader in times of war. But more important, he was the President who united this Nation and led it to peace. A deeply religious man, his strong spirit and will were evident even in these last days and hours. Dwight Eisenhower's mission in life was to chart a course toward permanent world peace and human benefit. The greatest tribute we can pay him is to do everything in our power to fulfill this mission.

Mr. McEWEN. Mr. Speaker, we are all saddened by the death of Dwight D. Eisenhower. Soldier and statesman, his life was one of distinguished and disciplined devotion to service.

As the general commanding the greatest military force ever assembled, he led American and Allied armies to victory in Europe.

Called by his countrymen to the highest office in this Republic, he brought an end to the Korean conflict and maintained the peace during his years as our President.

For his great leadership in these accomplishments, he received the deep and continuing appreciation of a grateful people. For his dignity, humility, and warmth of personality, he was held in affection by all.

To Mrs. Eisenhower and his family, I extend my deepest sympathy as we all share in their loss and bereavement.

Mr. WATSON. Mr. Speaker, because of the universal esteem with which General Eisenhower was held, I deem it appropriate for Congress to take immediate action to preserve the memory of this honored American by renaming the District of Columbia Stadium, the "Dwight David Eisenhower Memorial Stadium."

Therefore, in order to pay this initial tribute to this distinguished American, I plan to introduce a resolution to attain just such a goal.

This magnificent stadium was built during the administration of President Eisenhower. As we all know, he was a sports enthusiast. His example of courage, fair play, devotion to duty, and deep humility are the attributes of a great athlete and it was this example which inspired untold millions to conquer life's adversities.

I know that all my colleagues will want to join in this worthy endeavor.

Few men of history have ever received the universal love, respect, and acclaim during their own lifetime as that accorded to General Eisenhower. His continuing strength and abiding faith were an inspiration to people everywhere, and when he finally succumbed to an illness which had plagued him for so long, we could not help but be exalted by the tenacity with which a man his age clung

to life. His universal appeal as soldier, statesman, humanitarian and those other accomplishments of such a great and noble spirit will be forever enshrined in the hearts of all who aspire to make this earth of ours a better place to live. There will be countless ways in which Ike will be remembered in the years ahead. While I am certain that each of us will recall him in a different way, I shall remember most of all his indomitable courage and boundless optimism during the dark days of World War II. Just as his contemporary, the great Sir Winston Churchill, Dwight David Eisenhower stands as one of the giants of the 20th century, because he and Churchill played such an important role in leading us through the most monumental crisis that our century has thus far been confronted with—the Second World War. The Nation, indeed the world, stands a little sadder today because of his passing. But, we can take heart. His life made it possible for us to stand taller as we face the future with renewed purpose, direction, and above all, hope.

Mr. MINSHALL. Mr. Speaker, twelve hundred miles of railroad track tie Washington to Abilene.

America's heart is on the train carrying home the body of Dwight David Eisenhower from the Capital of the Nation he served so devotedly to the vast golden wheat fields of the Kansas he loved.

Soldier, statesman, he epitomized all that we like to think is best in the American character. He was friend to the world, and the world responded to his warmth. "I like Ike" probably has been repeated in nearly every language spoken on the globe.

As President Nixon said in his beautiful eulogy yesterday in the rotunda, General Eisenhower undoubtedly was loved by more people in more parts of the world than any other American President.

Each of us who had the privilege of calling him friend has his own special memories of the 34th President of the United States.

Mine extend back to World War II when I first met him in the European Theater. He was a soldier's soldier, a commander who inspired confidence, devotion, courage, the will to win.

Yet Great Britain's Lord Moran, who knew him well, sensed even then the real Dwight Eisenhower, the man of peace. In the bleak days of 1943 Lord Moran wrote of the general that—

> Could he have had his way he would have spent a quiet life in the country stillness, near some tree-reflecting stream, but that was not to be his lot. He loathed war.

It was precisely because he knew the horrors of war and the blessings of peace, that as Commander in Chief he was able to give our Nation the only virtually untroubled 8 years this country has known since the end of World War II. The times were no less demanding, the decisions he made during his two terms in office were as critical as any during the European campaign. But while he was President not one drop of American blood was shed in battle, not one inch of free world soil lost.

First and foremost his objective was a world in which free men could live in harmony together. This was his crusade. It was his fervent prayer during the years after he left the White House.

The last time I visited General Eisenhower, a little more than a year ago, at Gettysburg, the famous grin was as infectious as ever, the twinkle in his blue eyes seemed to mock at time. It came with a stab of pain to realize that he was, indeed, growing old.

We who fought under him in Europe and shared his victories, we who worked with him to carry out his programs in Congress, we who were privileged to counsel with him at Gettysburg in later years—we had grown accustomed to Eisenhower victories over impossible odds, even those posed by his failing health.

After so many victories, it was hard to accept the inevitable, that one day he would fight his last great battle and would lose, as all men must. We are grateful that death came to him quietly and gently.

His long life was filled with mighty and heroic struggles. His valiant spirit endures to inspire all men who love freedom.

Dwight David Eisenhower combined the best qualities of ordinary Americans and thereby became the most extraordinary American our country has produced. He was a man's man who loved the outdoors, who once wistfully remarked, of the squirrels on the White House lawn:

> They have a freedom I would personally dearly love.

And now, after so many years of striving to bring new understanding of the words freedom and brotherhood to the world, his work is finished.

Abilene was little more than a frontier town when young Dwight Eisenhower moved there as a boy. The names of Bat Masterson, Wyatt Earp, and other Kansas heroes were not mere legends to him, they were vivid memories on the lips of his elders. He grew up on stories of pioneers, hardships, of the right and wrong of the western frontier. He was taught, and believed, and proved, that a man can be anything he aspires to be, if he is honest, willing to work hard, has courage and faith in his Creator.

Speaking of his childhood, General Eisenhower once said:

> I found out in later years that we were very poor, but the glory of America is that we didn't know it then.

The boy from Abilene now is part of the glory of America. He has left a heritage neither time nor death can extinguish.

After a life of devotion to his country, to the cause of freedom throughout the world, he is going home to what he always called "the heart of America." Not far from his resting place flows the "tree-reflecting stream," the Smoky Hill River. Spring is a burst of loveliness on the Kansas plains, summer a blaze of heat and ripening grain, fall a triumph of harvest, winter harsh and cold and a time for fireside stories of the days when Kansas was young, stories Dwight Eisenhower loved all his life.

And he can say, with Benet's "William Sycamore":

> My youth returns, like the rains of Spring
> And my sons, like the wild geese flying,
> And I lie and hear the meadow-lark sing,
> And have much content in my dying.
>
> Go play with the towns you have built of blocks,
> The towns where you would have bound me.
> I sleep in my earth like a tired fox,
> And my buffalo have found me.

Godspeed the train to Abilene.

Mr. ZION. Ike is gone. The courageous heart is finally stilled. The grand old soldier whose life and career were so closely entwined with the destiny of his country has been permitted to rest at last.

Dwight David Eisenhower was never a quitter. He fought his way from the poverty of a prairie farm boyhood to the ranks of West Point. His career sent him to the summit of military achievement as commander of Allied forces in World War II. A grateful nation refused, as they had refused General Washington, the opportunity of a quiet retirement following the conclusion of his military career and bestowed upon General Eisenhower the Presidency of the United States. His tenure as President marked one of the great eras of prosperity and peace in the national history.

Ike was no speechmaker. He had little familiarity with the clever turn of phrase that characterizes the experienced politician. His own formal politics were, at best, uncertain. But his philosophy of living, of duty, of loyalty to country, of honor—these were firmly rooted in the great traditions of America. From these he never swerved. Successful politics involves the art of compromise. And history will thus not record Dwight Eisenhower as a master politician. For the principles of decency and honor learned in midwest farm upbringing simply would not be compromised by this man.

Americans sensed the character of which Ike was made. He was elected and reelected to the Presidency by overwhelming majorities. The Nation that he had served so well for so long was strangely moved by this kind, good President who cared little for the entrapments of power. He left the Presidency in 1961 enjoying a pinnacle of esteem that few men in the history of this world have enjoyed.

His greatest battle was yet before him. The ravages of world wars and 8 years in the Presidency had taken their toll. His weary heart began to fail. A nation waited and prayed with the family of Dwight Eisenhower through each new crisis—each terrible onslaught on the gallant heart.

Now, kind providence has stilled his suffering and a nation remains to mourn the passing of her faithful son. I may only hope that the collective memory of what he was will remind all of our people of what we, as a nation, have been and what we still can be.

Mr. ZABLOCKI. Mr. Speaker, in General Eisenhower's death our entire Nation, regardless of our individual views and perspectives, mourns the passing of one of our great leaders.

I join all Americans in mourning the passing of Gen. Dwight D. Eisenhower. His page in history will indeed be an

illustrious one and his contributions to the free world and his search for lasting peace have endeared him to all people.

General Eisenhower was in many ways the embodiment of the virtues which have sustained our Nation through the nearly 200 years of our existence.

Some people said that he projected a "father image." This to me is a high compliment. For in times of stress and uncertainty he was the man in whom the Nation placed its highest trust, and he lived up to that trust to the best of his ability.

He was a good soldier, an outstanding general, and above all, in a time of tension and division, a unifying force for a nation surrounded by a world of peril and trouble.

General Eisenhower's influence went beyond the years of his Presidency. Nearly to his dying day, he was a leader who provided counsel and guidance to the men who have been and are responsible for carrying on the highest responsibilities of this Nation.

Although he was elected as a Republican, he was not at heart a partisan man. He championed causes which he believed were good for this Nation and the cause of freedom. And he did it at times by rallying some fragments of his political party to the support of the undertakings of Democratic administrations.

General Eisenhower came from the Midwest, the heartland of our Nation. All of us mourn him. My wife joins me in extending heartfelt sympathy to his beloved wife and family. May they be comforted in the knowledge of the love and hope he inspired throughout the world.

Mr. GROSS. Mr. Speaker, President Eisenhower was a strong man, physically and morally.

I admired, as did all Americans, his courageous fight for life through a long series of operations and heart attacks.

History will probably record as the two greatest accomplishments of his life the fact that during the 8 years in which he served as President he kept the United States at peace, and his administration was untouched by the scandals that tarnished preceding and subsequent administrations.

In the most respected sense of the word, President Eisenhower was a simple man, uncomplicated and unpretentious in his great affection for his country.

I extend my sympathy to Mrs. Eisenhower and members of the famliy.

Mr. BIAGGI. Mr. Speaker, tributes can hardly do justice to the service that Dwight D. Eisenhower gave to his country and the entire free world. His kind does not often pass among us.

He was surely one of our greatest generals and one of our truly peace-loving Presidents. His successful leadership of the United States in war and peace made every home in our Nation safer and many times contributed to the protection of our free Western civilization.

He was both a great man and a good man who was possessed of moral courage and genuine kindness; a man you would be proud to call your friend.

Though he has fallen, his greatness and his deeds will never die.

Mr. CHAMBERLAIN. Mr. Speaker, the people of America—indeed the people of the world—mourn the death of a great man, Gen. Dwight D. Eisenhower. He gained the affection and respect of all men as a hero of peace as well as a hero of war.

As President he brought us a peaceful end to the Korean conflict. Just as he ended the war with Germany by military action. Rarely has a military leader so completely earned the world's attention and trust as a statesman. The sympathy of our Nation and the world goes out to Mrs. Eisenhower and her family in their hour of grief. Their loss is truly our loss.

Great men need no eulogies. Their character and deeds require no external illumination and in fact none is possible.

They shine out of the past unaided or not at all.

Through them the world is permanently changed and goes on changing.

Their truth, we may imperfectly understand and express, neglect and forget, but it remains unalterably part of our history.

It falls upon us, the living, however, to preserve that past in the living memory of each new generation. It is this duty particularly that prompts us to offer our thoughts at a time when a reverent and grateful silence would speak best our deepest feelings.

Many have noted the presence of many young people amidst the thousands that have come to pay their final respects to General Eisenhower. Many of these were born since the end of his final term as President and a great many more did not live through the trials and triumphs of World War II. It is for these new citizens of our country that we should direct our praise for the man we honor today.

Yesterday President Nixon eloquently stated the essential quality of General Eisenhower, saying:

> It was the character of the man, not what he did but what he was.

It is the example of this simple, honest man that commends itself to us today as our Nation strives to heal the wounds of discord that have come to trouble its spirit. The challenges that Dwight D. Eisenhower faced in his day, while perhaps different, were no less difficult than those we face today or will face tomorrow. He met and conquered them without fear or malice in the finest tradition of "duty, honor, country."

In his death by reminding us all of the immortality of these truths General Eisenhower has served his country as he served it in his lifetime.

Mr. RODINO. Mr. Speaker, I join with my colleagues, my country, and the world in mourning the death of Dwight David Eisenhower, the 34th President of the United States. The world has lost a leader; the country has lost a devoted servant; and all Americans have lost a man that was a source of courage and inspiration to them.

President Eisenhower will long be remembered for his leadership during the Second World War and later during the Korean conflict. He will long be remembered for his courage and determination in his long battle with death.

The Newark Evening News and Star Ledger has both captured the spirit and the bond between General Eisenhower and the people. They are words well and justly spoken, and I include them herewith:

[From the Newark (N.J.) Evening News, Mar. 31, 1969]

NATION IN MOURNING

A great American has died and no presidential proclamation was required to impel the nation to mourn his passing. His countrymen gave Dwight David Eisenhower honors and gratitude. And they gave him the greatest office within their power to give. But more than acclaim and reward, they gave him their affection.

To the people he was no remote hero, no aloof statesman. To the people he was Ike.

What special quality did he possess that evoked this bond? It was, it seems, a national response to a man of warmth and simplicity to whom it gave its confidence and votes in unprecedented degree. And with the presidency went a personal affection that few Americans have attained.

Dwight Eisenhower had gained world fame. He was the man who, having led an army to victory in the greatest of all wars, hated war as a "damnable thing." He hated it for what it meant in hardship and sacrifice to the countless young men he had to commit to the hazards of battle. A compassionate man, it was this bitter experience which had its origin in the fires of war that inspired his deep devotion to peace so manifest during his eight years in the presidency.

He was a man who wore his honors with easy dignity, born of a strain of religious humility so alien to the cynicism of today's world. He spoke often and proudly of his mother's training in his formative years and he did so without affectation or hesitation. He grew up in simpler, if harder, times and for today's young there is a lesson in the disciplines that he accepted without question in his youth.

Now the general of the army, the two-time president, the man from Abilene is dead, and his mourning country is diminished by the loss.

[From the Newark (N.J.) Star-Ledger, Mar. 29, 1969]

IKE: SOLDIER, POLITICIAN

For Dwight David Eisenhower, it was a full, productive and eventful life; it was a life divided into two diverse, distinct worlds, the military and politics, and profoundly influenced the life and times of hundreds of millions, in war and in peace.

Ironically, it seemed Eisenhower was never completely at ease in either pursuit that occupied his adult life . . . one for which he was trained, the other for which he was drafted to resuscitate a long mordant Republican Party.

Millions of Americans had a deep and abiding affection for the Kansas farm boy; they cast him in a heroic mold as a military leader and as a reassuring father image in political life.

Like other world leaders before him, Gen. Eisenhower was a product of his times. His early military life could hardly be described as distinguished; as a professional soldier he was resigned to rounding out his career as a colonel, but cataclysmic events dramatically decreed otherwise.

And later in private life, when he was content to live out the years in the tranquility of the academe, he was thrust into the political arena, a reluctant candidate who only four years earlier had observed that a military man should not run for President unless there were exceptional circumstances to make it necessary.

In both spheres of his life there were personal conflicts, close to the surface of this leader, that occasionally broke through the characteristic Eisenhower grin, a lifelong trait that established a warm relationship with Americans and foreigners alike.

Born of pacifist origins, he chose the Army as a profession and was later to lead three million men into battle in history's greatest military operation. But he was intrinsically a man of peace who never really strayed far afield from the pacificist teachings of a mother who frowned on his choice of a career.

As a militarist who knew on an intimate level the essential evil of war, Gen. Eisenhower was avowedly dedicated to peace in his private and political lives after he left the Army. He was a world leader who made a number of fateful decisions, including one that assured his election as President when he declared that he would go to Korea to seek an armistice.

But while there was unrestrained praise for Gen. Eisenhower, there were detractors for President Eisenhower who never seemed to get over an elemental distaste for the rough-and-tumble milieu of politics. His reluctance to exert his immense popularity as a potent lever in the civil rights area, after this volatile social issue drew an unprecedented constitutional vitality from Supreme Court landmark decision on school desegregation in 1954, was deplored in a number of quarters.

He was a caretaker President at a time when the nation was at the height of its power and vigor, determined to keep the ship of state on an even keel in foreign and domestic waters. It was a sense of caution that marked his early military life and carried over into his tenure as President.

In World War II, as commander of the Euorpean theater, the general established his niche in military history; he did not come up quite as well as the nation's peacetime commander-in-chief. He was not a social innovator like President Roosevelt before him and President Johnson after him; nor did he display the combative personal stamp that marked the Administration of President Truman.

As President, Mr. Eisenhower was a chief executive who chose to remain aloof from the fires of partisan conflict, nor was he a strong influence on Congress. It is likely that when his Administration is reviewed in historical terms, Ike will likely be categorized as a good president, not a great one.

It was an Administration largely influenced by the so-called Assistant President, Sherman Adams, a stern, implacable New Englander who became embroiled in an unsavory episode involving a Boston industrialist, and John Foster Dulles, the architect of a foreign policy that was blamed for much of America's present difficulties overseas.

Eisenhower had misgivings about running for the presidency, and there were periods when he was neither comfortable nor happy in this most demanding and lonely citadel of power. It was in one of these moments of self doubts that the President once told the late House Speaker Sam Rayburn that historians would probably rank him with George Washington and Robert E. Lee as one of the great military leaders of the nation. As President, he wasn't sure how he would be graded in history.

It was a perceptive self-appraisal that could stand as an objective accounting of this leader's life in war and peace, a dominant, influential figure whose stature never diminished in the eyes and hearts of his grateful countrymen.

Mr. PHILBIN. Mr. Speaker, I am profoundly touched and deeply grieved by the passing of President Eisenhower. He was one of our greatest Presidents and one of our greatest Americans.

His entire life was unselfishly and brilliantly devoted to our country. He was a superb military leader, who won the hearts of his men and the gratitude of our country and allies, by his inspiring, victorious leadership of our united military forces in a most crucial war.

This great American stood out for his truly illustrious service to our country and the American people as President for 8 long critical years in our history.

His motivations were always lofty; his principles were based on solid American values; and his concerns and contributions encompassed the Nation, the world, and all mankind.

He was a personal friend, and I looked upon him with highest regard, admiration, and affection.

He was kindly, generous, and humane, instinctively dedicated to the highest concepts of duty, not only in his career as a soldier but in the Presidency and throughout his entire life.

He will be greatly missed by all of us, the American people he served so well, and peoples everywhere whom he was so eager to help toward prosperity, freedom, and peace. He has left a great legacy of honest, distinguished, loyal service to our country, which will always be gratefully remembered.

I extend my prayers and most heartfelt sympathy to his wonderful, devoted wife and all his dear ones, and join them in mourning him.

Mr. GONZALEZ. Mr. Speaker, all Americans, regardless of political persuasion, mourn the passing of former President and General of the Army Dwight David Eisenhower. He was a singularly beloved President and a great military leader. Born in Texas and raised in Kansas, his achievements have made a profound mark on the history of this Nation.

Not only was "Ike" one of our most loved Presidents and a great leader of the Allied military effort in World War II, but he was prophetic in his farewell address as President in his assessment of the risks inherent in a growing military-industrial complex in a democratic society. As one who has drawn inspiration from his valedictory address before it became currently popular to do so, I have long been impressed with his perception. Nothing indicates the greatness of this fine old soldier more than his respect for rule by the people and for the due process of democracy.

San Antonio is proud of its connection with the career of this great American during his years of service at Fort Sam Houston. It was on our historic Army base in 1915 that First Lieutenant Eisenhower first met Miss Mamie Doud, and where they started their married life. "Ike" was reassigned from Fort Sam in 1917, preparatory to fighting in World War I, and it was not until 1941 that the Eisenhowers were again in residence at Fort Sam. But certainly this assignment was again a most memorable one for them, because it was at Fort Sam that "Ike" was promoted to brigadier general, receiving his first star. A recent article from the San Antonio Light which I am inserting at the end of my remarks contains interesting details of General Eisenhower's tours of duty at Fort Sam Houston.

The sympathy of the Nation goes out to Mrs. Mamie Eisenhower and the Eisenhower family. Their personal loss is shared in a very real sense by the entire country.

The article referred to follows:

EISENHOWER, MAMIE, AND FORT SAM HOUSTON

(Gen. Dwight D. Eisenhower, who died Friday, felt a special attachment to Fort Sam Houston and San Antonio. So did his widow, the former Mamie Doud. Here is the story about the couple's close affiliation to historic Fort Sam Houston.)

The most distinguished military leaders of this nation have served tours of duty at historic Fort Sam Houston.

Gen. Douglas MacArthur, Gen. John J. "Black Jack" Pershing, Gen. Jonathan M. Wainwright, Gen. Walter Krueger, were all men in whom the U.S. Army and Fort Sam Houston personnel take great pride. But for Dwight David Eisenhower, President of the United States, General of the Army, this feeling of pride and admiration has always been a little special.

Perhaps this feeling of kinship and affection for Gen. Eisenhower stems from the fact that he began his career at Fort Sam Houston as a young second lieutenant fresh from West Point, in September 1915, while assigned to the 19th Infantry, that he brought his 20-year-old bride to Fort Sam Houston on July 11, 1916, 10 days after their marriage.

He received his first star in ceremonies held at Fort Sam Houston in 1941 and from here he departed at the onset of World War II, to make military history as one of our greatest soldiers.

In his book "At Ease—Stories I Tell My Friends," the general said: "One Sunday afternoon after I'd been in Texas for some months, I walked out of the bachelor officer quarters to make a guard post inspection as Officer of the Day.

MAJOR'S WIFE

"On the sidewalk across the street was a small group of people, one of whom was Lulu Harris, wife of a major.

" 'Ike,' she called, 'won't you come over here? I have some people I'd like you to meet.'

" 'Sorry, Mrs. Harris,' I called back, 'I'm on guard duty and have to start an inspection trip.'

"She then turned to one young girl, as I discovered later, and said, 'Humph! The woman hater of the post.'

"The girl said something to Mrs. Harris that caused her to call once more. 'We didn't ask you to come over to stay. Just come over and meet these friends of mine.' "

CROSSED STREET

Lt. Eisenhower did cross the street in front of Bldg. 688, on Infantry Post Road and was introduced to the Doud family of Denver, Colo., who were spending the winter in San Antonio.

This was the first meeting of Ike and his beloved Mamie. And it did not end with a simple introduction. The young officer promptly asked the attractive and captivating 18-year-old Miss Doud if she would care to walk along with him on his rounds of the guard posts. She just as promptly accepted the invitation, although she admitted in later years that walking was not one of her favorite forms of exercise.

On Valentine's Day, 1916, Ike gave Mamie his West Point class ring and formally asked her father for her hand in marriage. He almost didn't get it.

Only his deep love for little Mamie kept Dwight D. Eisenhower from becoming one of this nation's first pioneer pilots. He desperately wanted to join the aviation section of the Signal Corps, as the Air Force was called in those days. However, Mr. Doud considered flying the sign of an irresponsible character and threatened to withdraw his consent to the marriage, Ike stayed on the ground.

On July 1, 1916, the Eisenhowers were married in Denver, Colo., at the Central Presbyterian Church. The bride received a wedding ring purchased from Hertzberg's Jewelry Store in San Antonio and the groom received a promotion to first lieutenant.

Following a 10-day honeymoon, the couple returned to Ft. Sam Houston to take up life in Ike's old quarters at 688 Infantry Post.

BRIEF VISIT

In February, 1959, Mrs. Eisenhower paid a brief visit to San Antonio. Asked about her first home at Ft. Sam Houston she was most explicit in describing the quarters. She said that she and the general had started their married life in "the building to the left hand entrance of Infantry Post, the second stairway, the first floor, the apartment on the left."

With this information officials of the Army post were able to place a historical marker over the entrance to the quarters.

Shortly after their marriage, Lt. Eisenhower was made Ft. Sam Houston provost marshal, a job he held until the spring of 1917 when his unit, the 19th Infantry, was detailed to Camp Wilson adjacent to the main post. Ike went to Camp Wilson as regimental supply officer and assistant mustering officer for the Southern Department.

LEON SPRINGS

When the 19th Infantry formed the 57th Infantry and moved to Leon Springs for training, Ike went along with the unit. It was at Leon Springs that one of the most unusual experiences of his life occurred. He was struck by lightning while standing under a tree in front of his tent.

Not only was Eisenhower knocked unconscious by the bolt, but the 57th's adjutant, Capt. Walton Walker, was also hit. Neither man suffered any permanent damage and, in fact, received a certain amount of local acclaim after their commanding officer Col. David J. Baker, made it known that he was the only regimental commander in the Army whose entire staff had been struck by lightning and lived to tell the tale.

On Sept. 18, 1917, promoted to captain, Ike left Ft. Sam Houston for Ft. Ogelthorpe, Ga., here he served as an instructor in the officer training camp. The Eisenhower family did not return to Ft. Sam Houston for almost 25 years.

YEAR BETWEEN

The years between World War I and the fall of 1941 were years of peace and years in which a career Army officer moved slowly up through the ranks while serving in various positions within the military establishment. Eisenhower was a tank corps commander, an executive officer and a recreation officer, at different times and places during this period of time.

He was promoted to major on June 17, 1918 and to lieutenant colonel on Oct. 14, 1918. These were temporary ranks however, and it was not until July 2, 1920 that he was given the permanent rank of major and not until 16 years later, on July 1, 1936, that he became a permanent lieutenant colonel.

On July 1, 1941, their 25th wedding anniversary, with Eisenhower newly promoted to the rank of full colonel, Mamie and Ike returned to Ft. Sam Houston, where their life together had begun. They moved into Bldg. 177 on Artillery Post Road and two months later to Bldg. 179, quarters the couple were to occupy until the outbreak of World War II, a few short months later.

CHIEF OF STAFF

On Aug. 1, 1941, Col. Eisenhower was assigned to duty as chief of staff of the 3rd Army under Gen. Walter Krueger.

In the months of August and September, 1941, Eisenhower, Gen. Krueger and the 3rd Army met the forces of Gen. Ben Lear's Second Army in the famous Louisiana Maneuvers.

At the close of the Louisiana maneuvers, Col. Eisenhower received his first star and promotion to brigadier general in ceremonies held on Ft. Sam Houston's Treat Field, directly across the street from his quarters at 179 Artillery Post.

On Dec. 7, 1941, Brig. Gen. Eisenhower ate lunch and took a nap. The nap was very brief. Shortly after he had retired his aide woke him to bring the news of the bombing of Pearl Harbor.

WEEK LATER

One week later on Dec. 14, Eisenhower, on verbal orders from Gen. George C. Marshall, chief of staff, reported to Washington, D.C. and the War Department.

He did not return to Ft. Sam Houston again. However, he and Mrs. Eisenhower remembered the old Army post where they had met and established their first home.

In September, 1967, a large package arrived at the Ft. Sam Houston Military Museum. It contained a pair of polished riding boots, one tropical worsted shirt and a pair of wool riding pants. The uniform was from Gen. Eisenhower and was one he had worn during the North African campaigns of World War II.

COLOR PHOTO

In 1968, he and Mrs. Eisenhower autographed a color photo of their quarters at 179 Artillery Post for historical purposes and Mrs. Eisenhower wrote a personal letter to the post's Historical Society, describing their experiences while serving in the house at the outbreak of World War II.

Ike did not forget Ft. Sam Houston—and Ft. Sam Houston will never forget him.

Mr. MARSH. Mr. Speaker, the late President Eisenhower had a close association with the Seventh Congressional District of Virginia. His mother was born in Augusta County, a short distance from Fort Defiance, a small community near Staunton, in the historic Shenandoah Valley. In fact, a number of the late President's distant kinsman are residents of that area today.

This association was a source of great pride to the citizens not only of this area but, indeed, of the entire Commonwealth of Virginia. The general received an enthusiastic welcome when, in the fall of 1960, he paid a visit to his mother's birthplace and to Staunton, Va.

His death marks the passing of one of the remaining few world figures who were the architects of allied victory in World War II. In this regard, we see the passing not only of a man, but of an era. Countless thousands have honored by word and respectful presence the virtues of this great American leader whose public service covered such a broad horizon of human endeavors ranging from military leader to college president to Chief Executive. Many can extol better than I his innumerable achievements and contributions to his country and to humanity.

In a world that is a violent one, where many governments are likely to be dictatorial and tyrannical as opposed to democratic, we see in this national loss the passing of a leader elected by the people because they respected and admired him.

When you look at the life of Eisenhower, his dedication to democracy, to the dignity of the individual, and basic decent morality, he stands as an outstanding example of leadership in a world that needs such examples.

His life is in contrast to a number of contemporary heads of government. How unlike Hitler, Mussolini, and Stalin does he stand forth as a head of state.

How unlike Castro, Kosygin, Khrushchev, and Ho Chi-minh is this man who dedicated his life to the service of his country and recognized the innate worth of the individual.

To him, power came from the people and should be used on their behalf, rather than for the ambitions and whims of any individual or privileged few.

Like so many others, I had hoped for him a recovery in order that he might return to Gettysburg and continue to enjoy what was a well-earned and looked-forward-to retirement, while ready to serve his country, as he always was, with wise and straightforward counsel to younger men who acceded to the responsibilities of national leadership.

He was a fine example of what this country can produce, and the most fitting monument America can erect to him is one honoring him for this example of the greatness this country can produce for the service of humanity.

It is an example the world will miss.

Mr. BRINKLEY. Mr. Speaker, as an Air Force pilot during the Korean war, the words "I like Ike" summed up for me a genuine, honest-to-goodness affection for my Commander in Chief. Although I never met him, he was a friend—one could accept this with complete assurance because of the quality of Dwight David Eisenhower, the man.

And this afternoon the bells will toll. Can we hear them?

For whom do the bells toll, Mr. Speaker? They toll for me; they toll for you; they toll for the American people; they toll for all men. We are all diminished by his passing.

My thoughts and prayers are with his family and loved ones.

Mr. MILLER of Ohio. Mr. Speaker, General Eisenhower was a great man in every sense of the word. He was an all-American man, universally accepted as the epitome of all that is good. Honest, able, courageous, his every act was in keeping with the highest standards of human behavior.

As I stood in the rotunda of the U.S. Capitol yesterday afternoon and witnessed the placing of General Eisenhower's casket on the catafalque, I was overwhelmed by the memory of the man.

As the leader of our combat forces in the European theater in World War II, I can well remember the manner of the man, the positive nature of his remarks, the assurance he exuded to the free world on the evening of the Normandy invasion on June 6, 1944. I clearly recall the series of military successes that followed which brought about the ultimate surrender of the Axis Powers the following May.

As the elected leader of our Government, he again exhibited his ability to lead and to bring about peace to a fractured international scene. Shortly after his assumption of the Presidency in 1952, he announced the signing of an armistice in Korea, which brought to an end another era of costly conflict.

General Eisenhower's long and successful career can best be summarized by the expressions of those that come to pay their last respects to him as the lies

in state this very moment in the rotunda of the U.S. Capitol. The people come out of admiration for a man who was loved and revered by all who knew him, who imbued in the world in which he lived a spirit of good will and cooperation. They come because "they liked Ike." We all did, and we will sadly miss him.

Mr. HORTON. "Ike" Eisenhower was a unique American hero.

He was a military leader whose biggest battle was for peace. He was a President who gave outstanding moral leadership to his people. He was an exemplary family man.

Affection for this late President transcends national boundaries. He was a world leader loved by men everywhere. His passing creates a void in our Nation that may never be filled.

The greatness of America and the promise it holds for all its citizens is exemplified in the life of President Eisenhower. He was born of parents poor in material wealth but rich in moral strength. He drove himself to fulfill every obligation he undertook.

President Eisenhower rose to world stature. His death takes from us an inspiration of a past era.

The Nation stands still at this moment. We bow our heads in a silent prayer that we may gain strength and wisdom in following the path laid down by this great man.

Mrs. Horton and I, who both served under his command in North Africa and Europe, joined the tens of thousands of people who came to the Capitol Sunday to pay last respects to the late President. I watched as the historic, black-draped caisson moved with slow and stately majesty on its sad journey to the Capitol.

Throngs of people lined the hushed streets of Washington to watch the progress of the flag-covered casket.

Despite the damp, bone-chilling cold of the afternoon, and even through snow and rain that fell briefly, the people stood patiently and respectfully. Many brought young children.

I heard one woman explain to a preschool youngster: "The old President was a great and good man. All these people have come to say goodby to him, to show that they loved him."

The love and respect in which President Eisenhower was held was reflected in many ways Palm Sunday as the Nation paid its final tribute to him.

There were the traditional rites of the funeral march, the 21-gun salute, the honor guard from all the services.

But perhaps the greatest tribute was the heartfelt one paid by great and small, old and young, rich and poor as they gathered together at the Capitol to say a sad goodby to the man they had called Ike, a man they all felt had served his country with noble self-sacrifice, far beyond what a nation could expect.

Dwight D. Eisenhower, five-star general, President, and elder statesman, was a man truly of the people. He rose from humble beginnings in a Kansas farming town to lead the Allied Armies to victory in Europe during World War II. General Eisenhower, the war hero, then became President Eisenhower, a man who searched as hard for peace in the postwar world as he had for victory during the massive conflict before.

Although he first came to fame as a war leader, I will remember him as a seeker for peace.

President Eisenhower led us through those first frightening years of history when men possessed the power to destroy civilization.

The great affection of the people for him certainly sustained him through those difficult years. I could see, in the solemn faces of those who lined Washington's streets as the funeral cortege passed by, the affection held for President Eisenhower.

To honor the late President, the heads of state from scores of countries came to Washington for the funeral services. Tens of thousands of mourners filed past the closed casket in the rotunda of the Capitol.

As if in tribute to the late President, pink buds on the magnolia trees which line many of Washington's streets started to bloom early this morning.

In a stirring eulogy, President Nixon told of the general's last words to Mrs. Eisenhower. President Eisenhower had said.

I have always loved my wife. I have always loved my children. I have always loved my grandchildren. And I have always loved my country.

The people he loved and the people who loved him came in those few days to say, "Thank you, 'Ike'—and goodbye."

His life and his accomplishments should be a constant reminder that in these times of turmoil, unrest, and tension human qualities of sincerity, integrity, duty, love, and goodness are our ultimate solution.

Mr. PATTEN. Mr. Speaker, Dwight D. Eisenhower was not only one of the most popular Presidents in American history. He was also a great patriot, whose deep love for freedom helped him achieve distinction in both military and political fields.

People of all political faiths found him a warm and sincere man, whose integrity was never questioned. Let us remember that the freedoms Americans enjoy today were preserved by his military brilliance and leadership.

Dwight D. Eisenhower's leadership qualities were so unique and strong, he was selected Supreme Commander of Allied Forces over hundreds of officers of higher rank in World War II. That decision helped America and her allies triumph over an enemy that was determined to not only rule Europe, but to subjugate the entire world.

Mr. Speaker, because of his magnificent service, he earned the permanent gratitude of not only our Nation, but the other free nations of the world. Dwight D. Eisenhower was respected for his abilities, admired for his courage, and loved for his great compassion for mankind.

Mr. STEIGER of Wisconsin. Mr. Speaker, Dwight David Eisenhower was very much an American.

As the Christian Science Monitor put it in its March 29 editorial:

Perhaps no President in history was more deeply and recognizably American than was Dwight D. Eisenhower.

It was this quality—

The Monitor continues—

which so many millions abroad instantly felt upon meeting or seeing him. It was a quality of strength which served him admirably, not only during the Presidency but during his equally distinguished career as an Army officer.

The words so eloquently spoken by those in this Chamber today are testimony to General Eisenhower's character, ability, leadership, and humility.

I am deeply saddened by the death of General Eisenhower. Saddened in a personal sense and also because this man represents one of that group of men who brought us through some of our darkest days. The stature of an Eisenhower is not achieved without sacrifice or tribulation.

General Eisenhower was truly a hero, and this Nation can never repay its debt to his leadership of nations and people during the war, and as President of the United States.

Because I began my involvement in politics in that first Eisenhower-Nixon campaign by placing an "I Like Ike" bumper strip on my bicycle, I pause today to join the millions of people who are sad at his death. I want to express my respect for the man who today lies in state in this building.

Mr. KEITH. Mr. Speaker, when I searched my thoughts and feelings to find the words of praise and commemoration appropriate for our late and beloved Dwight David Eisenhower—the one which seems to best fit is "supreme" in every sense of its meaning.

Dwight Eisenhower's service to America as a nation; to its people as citizens and, indeed, to all mankind is uniquely unparalleled in modern times. Perhaps the foundation for this supremacy was inborn at his birth; only God knows that for a certainty. However, during the course of his lifetime, from 1890 to 1969, he developed his inborn characteristics through his love of God and for his country, so as to become known and cherished by his fellow countrymen, civilian and military in every walk and rank of file. The citizens of the world—no matter whether friend or foe—came to know this man as a soldier of war who fought valiantly in the name of peace, and did just exactly that—brought peace to our world during his lifetime on it. Never before has so small a word in measure, so colloquial in sound, meant the supreme recognition of everything good in a man as "Ike."

"Ike" fought for peace, for justice, and for tranquillity.

As Supreme Allied Commander in Europe, he united the free world advocates into a victorious battle, but first he called upon Almighty God and beseeched Him to bless this crusade.

During his term as president of Columbia University, his countrymen called upon his qualities and characteristics of leadership to serve them as their President.

As the 34th President of the United States, he led America toward the goals

of peace, justice, and tranquillity. He once again brought peace to the forefront—this time in Korea. He applied his tact as a general to his performance as President, and he called upon the American people to unite into a great freedom loving force and moved them along the paths of peace, progress, and a better world relationship.

Then, as "Ike" began to fight the most difficult battle of his own personal life, the world prayed and fought in heartfelt sincerity of spirit, this battle which only he could really wage alone. He now lies within the peace and tranquillity of the almighty defender of us all.

Personally, as a major in the U.S. Army, I served as one of General Eisenhower's staff during World War II.

Later, as a Member of Congress, I again had the good fortune to serve while he was our Nation's Chief Executive. He was a perceptive planner; he was a man who could reach into the hearts of people, and a man who could get people to work together. As our President, he moved our country forward in the true tradition of its Founding Fathers.

We can best honor him by striving, whether as a private citizen or a public servant, to heed our Nation's calls or causes by continuing to work for the goals which he sought during his lifetime—goals which, if realized, will make this Nation and this world a much better place in which to live.

Such peace as we have now, even in these troubled times, is to a large degree, because of the leadership of this soldier-statesman. He achieved it through his qualities of warmth and candor and because of his confidence in the essential goodness of man. His selflessness was a unique quality in this age where most men and most countries are seeking to satisfy their physical wants.

Mr. Speaker, often I have seen these past few days, the American flag flying at half mast in full dignity and honor of the man we all knew as "Ike"—I can only pray that, as the flag of this country rises once again to its full height, so also will the principles for which "Ike" stood, will rise anew in the hearts and minds of the citizens of our great country and spill over into the hearts and minds of the world, in order that peace and tranquillity may reign supreme.

Mr. SIKES. Mr. Speaker, I think every American feels a sense of personal loss at the death of General Eisenhower. He has been prominently identified with American history and progress since the early days of World War I, and this spans more than a generation.

During wartime he was entrusted with the highest allied command in the European theater, and subsequently a grateful country called him to the Presidency. His leadership both in peace and war was of the highest caliber and the heritage which he leaves is one of dedication to our country, to duty, and of calm acceptance of responsibility.

He knew the cost of defense, but he also knew a strong defense was essential to our Nation's security. He strove with dedication to chart a safe course for a lasting peace. No man could do more and at the time of his death a sorrowing America pays homage to a great leader and remembers him with great appreciation.

Mrs. GREEN of Oregon. Mr. Speaker, Dwight David Eisenhower served the American Nation for more than half a century: as a great soldier who led us and the European democracies against brutal totalitarian regimes; as president of a great American university; as President of the United States through difficult and demanding years; and as an inspiring source of courage and resolve in his later years when illness never conquered the greatness of his spirit. He symbolizes the strength of our Nation which drew him to the highest seats of power and responsibility from humble origins in the prairie. In his life he enacted the ideal of America, to work with each other and with other nations with reason and compassion. Above all else, he advised against despair, against giving up on ourselves. He counseled all Americans to face the perils of our future with the courage of our fathers.

General Eisenhower lived a full and rewarding life, and his courageous struggle to live is in itself a memorial to his immense personal integrity, his joy in living and serving. His struggle was long and painful. Yet his will to live, along with his ability to live fully, provide example for all.

His own admonition to the cadets at the Air Force Academy in 1959 is an excellent comment on his own life. He said then:

> The one admonition I would give you is this; make sure you get enjoyment out of every day. Life should be a thing to enjoy. Make certain your face doesn't grown long as the day grows older. Go to bed with a smile and remember a fine day. And with that custom, I am quite sure you will find a long, happy, and fruitful life, fruitful to yourself, to your country, and to humanity.

Mr. CONABLE. Mr. Speaker, like many of my colleagues, I never had the privilege of serving in a National Government headed by Dwight David Eisenhower. Time flows quickly, and people come and go in our National Legislature. Nevertheless, I do not speak only as a citizen when I express my admiration for his contribution to the life of America. No one who has at any time served in Washington and understood the burdens of the Presidency can fail to have some special feeling about the grace with which General Eisenhower exercised the power of the greatest office in the world. He sensed the mood of the people, he understood their heartfelt thoughts, he identified with their fondest hopes in ways which permitted him to be much more than a leader in the classical sense; he was instead a friend, a kinsman, a partner in a common endeavor. Confidence is born of this feeling of identity, and confidence is the ingredient which makes democracy possible.

When such a man passes into history we feel a sense of personal loss even though we know that Government leaders must come and go, each leaving his own legacy. Who of us can judge the historic legacy of Dwight Eisenhower? Let us say, however, that we have lost a friend in whom we had confidence, a counsellor whose judgment we trusted, a warm and honest and unfettered spirit.

Mr. Speaker, may I add a special word of tribute to Mrs. Eisenhower, a lady I have never met, but of whose sympathetic contributions to her husband's career I am as sure as I am of today's sense of loss in his passing. We offer her our heartfelt best wishes at a time which must be very difficult for her.

Mr. BROYHILL of Virginia. Mr. Speaker, death came Friday to a great American. While it may have stilled one great and noble heart, it stirred anew in other hearts, including millions who fought beside him for freedom, solemn thoughts of the massive debt mankind owes to his memory.

Not since our Founding Fathers has an American soldier-statesman received the respect, reverence, and love accorded Dwight Eisenhower by the people of the world. He was a man worthy of any age. He belonged to our generation. He needs no monument, no cause, no cult. He was indeed a great American. I can think of no greater accolade—the true greatness of a humble man who responded to the call of duty from his countrymen. We shall all miss him.

Mr. LATTA. Mr. Speaker, General Eisenhower was not only a great military and political leader but he was a great moral leader, as well. History may well record him in this capacity ahead of the other two. He possessed a unique moral quality that few men possess and never failed to show it wherever and whenever he appeared. His deeds and his actions made people so aware of this quality that no one ever doubted that actions taken by him were morally right. Such a quality is indeed a rarity and it was good for America and it was good for all humanity. The world will miss his goodness.

Mrs. Latta joins with me in extending deepest sympathy to Mrs. Eisenhower and members of her family.

Mr. WYMAN. Mr. Speaker, there are many Members of this Congress assembled here today who have lost, with the death of Dwight David Eisenhower, more than a general and a President, more than a great man to be admired from a distance, and more than an image to which we pay respect because of his noticeable accomplishments. To us, as is the case with thousands of Americans and other citizens of the world, his death marks the passing of that rare kind of leader whose humility, energy, and understanding drew toward him our deepest confidence and highest respect. We looked to him as a man who enjoyed virtually every honor which the world could bestow on a single individual, but who remained unspoiled by the tributes. As a great soldier and hero, he was yet a man who longed only for a just and lasting peace. As a distinguished President, he was a man who used political power only to build and strengthen his country, and abhorred the weaknesses that the abuse of political power brought forth in lesser men.

His accomplishments as a military leader need not be glorified, for the fact that we are here today as free men to express ourselves in this manner is in no small part a result of his efforts. As a commander of the armies of many nations in an allied cause, his qualities of

leadership earned the praise of the leaders of the free world and the confidence of its fighting men.

His accomplishments as a President can now, in retrospect, be looked upon with longing. He successfully guided us through two terms of peace and prosperity. He served us in a time when anything short of his great knowledge of the realities of power, how it should be regarded and used, could have brought grave consequences. He brought to the Presidency a calm, quiet resolve to be guided by God and commonsense, to accomplish what he could with a humility and a trust in what is good and in what is right. And accomplish he did, for the trust was returned to him a thousandfold, and the love which he felt for his country is now and has been reflected by the love which his country feels for him, as well as the grateful thanks given to him for his role in making America mean what it does to all the people of the free world.

Mr. CLEVELAND. Mr. Speaker, Dwight Eisenhower leaves us in the fullness of years, weighted with all the honors a grateful, admiring people can bestow.

Even though within the divine order of things, his loss is a grievous one. We will miss his breadth of experience, the sense of proportion and judgment which he always applied to great problems, and the smile that warmed our hearts.

We have lost one of the truly great men of American history. In war and in peace, the Eisenhower record will stand always as a testament to his enduring qualities of greatness. His courage, integrity and wisdom, his abiding faith in God and country, his humilty, his uncomplicated, forthright character are qualities in the American tradition. They are the qualities which have made our Nation great and which have sustained us in hours of darkness.

They are qualities without which our Nation would be destroyed, as with other nations who have lost the faiths and strayed from the simple truths which inspired their foundings.

To have been acquainted with Dwight Eisenhower I shall always count as among the highest privileges of my life. He radiated integrity and unselfishness. He buoyed you up and lifted your spirits. One of the happiest benefits of our electronic age is that men like Eisenhower can be seen and studied by each new generation. What a tremendous advantage they have if they will but use it.

Through this wonderful medium coupled with his written word they, too, can come to know and understand the qualities of this great man. They, too, can someday sense something of the magic of his personality which no mere words in history books can quite convey.

So the sadness and loss we bear today is leavened by our sense of good fortune in having shared some portion of our life and times with Dwight Eisenhower. It is leavened, too, by our sense of triumphant pride in his human greatness. I think it is fair to say that no President except, perhaps, Washington has ever left office enjoying greater public affection. As President Nixon told us yesterday in the rotunda, that affection is worldwide, wherever freedom is cherished, deep rooted in the hearts of his fellow man.

I cannot close these heartfelt remarks without paying homage, too, to Mrs. Eisenhower. Her faith and graciousness and love for her husband have endured through these grievous days and set for us all yet another example of extreme grace under great stress.

Mr. GRIFFIN. I join in paying tribute to the life and character of Dwight David Eisenhower—one of America's foremost leaders. On March 28—last Friday—the inevitable took from our midst a patriot, a soldier, a statesmen, a gentleman. Throughout his entire life, Dwight David Eisenhower exhibited those traits of virtue and decency which are required of men who must lead men in time of war and in time of peace.

Mr. Speaker, Ike is gone; but his good deeds will linger in the memory of Americans as long as there is an America.

In an eloquent, front-page editorial, the Vicksburg, Miss., Evening Post noted the Nation's loss and recalled the occasion on July 4, 1947, when, as Army Chief of Staff, General Eisenhower was in Vicksburg to accept that city's "surrender" to the United States. As a part of my remarks, I include the editorial, which follows:

IKE IS GONE

The Word flashed around the world. One of the great figures of modern history has gone to his reward. The old soldier just "faded away". The rugged constitution which had withstood numerous heart attacks, three major surgeries, pneumonia and other ailments, finally won the victory over the stout-hearted soldier who not only won his victories in the greatest war of history, but also conquered the hearts of his countrymen and of the world. He was "Ike" to America—a military genius, a great president, but more than that, he was possessed of a wonderful personality which endeared him to his countrymen and to those who served under his various commands.

He is remembered with great affection in Vicksburg, where, twenty-two years ago he came as the featured speaker at a great July Fourth celebration here. We well remember his words—"Instead of accepting the 'surrender' of Vicksburg, I confess that I have surrendered to the warmth of your welcome and to the graciousness of your hospitality." He took Vicksburg by the force of his great personality, and this was genuinely reflected in the splendid vote he received each time he ran for the Presidency. Vicksburg voted for "Ike".

He was the greatest military figure of the century, and the manner in which he forged into a great command the armies of many nations, remains as one of his most brilliant feats. It was this ability to bring forth a united force that resulted in the fall of the German empire.

A great man, a splendid citizen, a truly great American has answered the last roll call. As the nation pays homage to his memory, the spirit of this outstanding American should rekindle in the breasts of the people of our nation, a dedication to our country, which was the foremost quality of our former President.

The drums are muffled. Taps is sounding. Ike has gone. May he gain the reward promised to all who serve, and serve well.

Mr. DORN. Mr. Speaker, while we knew of General Eisenhower's declining health we were still unprepared for his passing. We are deeply saddened that his intense personality and famous smile that radiated confidence throughout the world will no longer be with us.

General Eisenhower symbolized and typified an entire era. He played a major role in the struggle of free peoples to remain free as an officer in World War I, as Supreme Allied Commander in Europe, as commander of NATO, as President in ending the Korean war, and in his decision to support South Vietnam. He encouraged the cause of freedom to stand fast when the world was threatened with total war and anarchy.

As Supreme Commander of the Allied forces during World War II in Europe, I knew firsthand of his superb accomplishments. He was unsurpassed in wielding together an invincible fighting machine from so many diverse elements. As a soldier, near General Bradley's headquarters in Normandy, I learned of his diplomacy, his tact, and his ability to inspire confidence and cooperation from all branches of the service and from the armed forces of our allies. His selection by the President, and by General Marshall, as Supreme Commander in Europe proved to be a wise choice. His name became the symbol of a great crusade. He was admired and respected and loved by the free world. He even became the hope of many of the German people who had been enslaved by the raving Hitler and who saw in Eisenhower relief from slavery and oppression. His name became synonymous with justice as opposed to infamy and oppression.

When General Eisenhower became commander of NATO, it was my privilege to visit with him there at headquarters near Paris as a young Member of the Congress. I remember General Eisenhower telling us that 95 percent of his work as Allied commander and as NATO commander was diplomatic and political. He simply had, in a magnificent way, the ability to reject jealousy and envy and get people together. He was NATO commander during a critical time. When the forces of oppression and slavery threatened to engulf Europe, he inspired the peoples of Western Europe and caused them to stand firm during those critical years.

Dwight David Eisenhower, as President of the United States, provided for the American people, and those of the free world, a fatherly image of kindness and fairness. His smile, his winning personality, his character, and his modesty led America to the heights in the postwar era. We have not had a more popular President or general. The people loved "Ike." He was the one they wanted their sons and daughters to serve under in war. He was the one they wanted to lead them in peacetime. He respected the Office of the Presidency and advised and consulted with succeeding Presidents.

As an elder statesman, he was truly great. As a general, he will rank with Douglas MacArthur, George Washington, the Duke of Marlborough, the Duke of Wellington, and Robert E. Lee. Like them, he will be noted for his integrity, compassion, and devotion to, and respect for, the individual and those less fortunate. As President of the United States he will be

associated with those virtues and attributes of character associated with the greatest.

I extend on the part of my fellow South Carolinians our deepest sympathy to Mrs. Eisenhower, his distinguished and devoted son, and all of their great and wonderful family.

Mr. VANIK. Mr. Speaker, our former Commander in Chief, leader of the crusade in Europe, and two-term President has left us. We are all better men in a greater Nation because of our work with him.

Dwight David Eisenhower, general and President, gave his whole life to the service of his country. He led America's armies and then the whole Nation with rare strength and ability.

General Eisenhower believed strongly in the right and in the necessity of America pursuing the moral and right course. He had great spiritual faith and he tried to give that faith to America. He said that "faith is our surest strength, our greatest resource." Much of the courage and strength of America, through World War II and the darkest days of the cold war, was strength gained from the example of this leader of men.

It was my privilege to serve in the Congress for 6 of the years of President Eisenhower's two terms. He was never partisan; never a leader of part of the people. He was truly a national leader; a leader of all Americans—loved by all Americans.

No one can question that his greatest accomplishment was to lead us to peace and keep us in peace.

Yet he may be remembered even more for his spiritual accomplishment, for his integrity, for his honesty, for the moral example he gave us all. General Eisenhower's great contemporary, Sir Winston Churchill, wrote most beautifully of the place of men in history:

> History with its flickering lamp stumbles along the trail of the past, trying to reconstruct its scenes, to revive its echoes, and kindle with pale gleams the passion of former days. What is the worth of all this? The only guide to a man is his conscience; the only shield to his memory is the rectitude and sincerity of his actions. With this shield, however the fates may play, we march always in the ranks of honor.

General Eisenhower always marched in the ranks of honor; he will always live in the minds of honorable men.

Dwight David Eisenhower said that "men grow in stature only as they daily rededicate themselves to a noble faith." With the example of this leader before us, let us all rededicate ourselves to the faith which he had—to his faith in man, to his faith in America, to his faith in the right.

Again, my sympathy to his courageous family. May God bless them in this hour of grief.

Mr. McCORMACK. So we say to our dear beloved friend, Dwight David Eisenhower, not goodby, but good day.

REMOVE PROFIT FROM THE WAR ON POVERTY

Mr. GONZALEZ. Mr. Speaker, I have on many occasions called the attention of the House to excess profits in defense procurement. I am equally concerned that for recent months evidence has grown that there is profit in the war on poverty, too.

When I voted for the Economic Opportunity Act and its subsequent amendments, I believed that I was doing the right thing; I still believe that there is no more urgent national priority than the abolition of poverty in this country. I have, however, been disturbed by the proliferation of consultants, advisers, and other contractors who have attached themselves to the war on poverty. I have no idea of the number of instant experts available, but have every reason to believe that it is considerable. Moreover, there can be no guarantee that a consultant hired by OEO or any of its delegate agencies is in fact an expert in his field. I doubt that notwithstanding this fact there is no single community action agency of any substantial size that does not have one or more consultants working for it. A consultant can draw up project proposals, shepherd them through the bureaucracy, furnish new ideas, or redraw old proposals. He can generate a proposal at the drop of a hat and can on call advise anyone on any subject, all for a fee. What concerns me is that the profits made by these consultants are considerable, and that there is no assurance at all that a community action agency does itself any good by hiring consultants.

What is more disturbing is that OEO—and it is not unique among Federal agencies—can use a private firm to do things which it could not otherwise accomplish. Such services cost more than they otherwise would, but that is of no concern. For example, if a manpower ceiling threatens to cut off the establishment of a desired project, the agency simply hires a private firm as a funding vehicle. Then, the program is not one operated by OEO, but by a contractor, and the personnel are not chargeable to OEO. Some such projects go awry, in which case the Government agency does not have to take the blame, but can pass it on to its contractor. But the basic fact remains that in such a tactic, the contractor is essentially used as a dummy. He gets well paid for doing little or nothing, except perhaps permitting his firm to be used as a name on a bank account. I do not believe that this is a sound tactic for any Government agency, but least of all for OEO. I do not believe that the poor can afford to let their little budget be tapped for dummy accounts.

There is profit in the war on poverty. That is evident from the number of consultants and contractors around. There is nothing to show that the community action programs work any better for all the efforts of there experts, or so-called experts. On the other hand, there is some reason to believe that at least some contracts would have been better off left never signed. It might have been better for profit never to have entered into the war on poverty.

COAL MINE SAFETY

Mr. HECHLER of West Virginia. Mr. Speaker, Ben A. Franklin, of the New York Times, has written an outstanding analysis of coal mine safety and health issues, which appeared in the New York Times Magazine of March 28. This article deserves the thoughtful consideration of all Members in assessing the pending legislation on this subject. I trust that the facts contained in this article will stimulate all Members to take positive action in support of effective legislation to protect those who have suffered so long in the coal mines. In the name of humanity, Mr. Speaker, we must act to protect our fellow human beings who work in the coal mines.

The article follows:

THE SCANDAL OF DEATH AND INJURY IN THE MINES—MORE THAN 120,000 MINERS HAVE DIED VIOLENTLY

(By Ben A. Franklin)

"Of the 54 men in the mine, only two who happened to be in some crevices near the mouth of the shaft escaped with life. Nearly all the internal works of the mine were blown to atoms. Such was the force of the explosion that a basket then descending, containing three men, was blown nearly 100 feet into the air. Two fell out and were crushed to death, and a third remained in, and, with the basket, was thrown some 70 to 80 feet from the shaft, breaking both his legs and arms."

These sentences matter-of-factly describing the pulverization of a shift of coal miners, including the three men grotesquely orbited out of the mine shaft as if launched from a missile silo, are from the first detailed record of an American mine disaster. Antiquity probably explains the nursery rhyme quality—*"two fell down and broke their crowns . . ."* For this earliest remembered mine catastrophe, in the Black Heath pit near Richmond, Va., occurred March 18, 1839.

A primitive time, no doubt. The nation was then so new that Martin Van Buren, warming his feet at the coal-burning grates in the White House, was the first President to have been born a United States citizen. The daguerreotype was introduced here that year by Samuel F. B. Morse, while awaiting the issuance of a patent on his telegraph. Half the coal-producing states were not yet in the Union.

The coal mines, on the threshold of fueling a manufacturing explosion that was to make this country an unmatched industrial power, produced barely one million tons in 1839, less than 1/500th of the output today. In the absence of all but the crudest technology, men relying on the death flutterings of caged canaries to warn them of imminent suffocation obviously would die in the mines. Some mines employed suicidal specialists known as "cannoneers," whose mission was to crawl along the tunnel floors under a wet canvas before a shift, igniting "puffs" of mine gas near the roof with in unpraised candle. Dead miners were not even counted. Their enormous casualty rate was not archived until less than 100 years ago.

A glimpse into this dim crevice of American industrial history is necessary to put into perspective the myths and realities of the men who work in the mines today. For the real story of coal is not its multiplying inanimate statistics—tons and carloadings and days lost in strikes. It is the agony of those men—a tale as old as Black Heath and one that is so full of extravagantly evil personalities and atrocious acts that Charles Dickens would have loved to tell it. For behind and beneath the mountains of the Appalachian coalfield, miners have remained since Black Heath the most systematically exploited and expendable class of citizens (with the possible exception of the American Indian and the Negro) in this country.

The story at last may have an un-Dickensian ending. For now, coal miners can see light at the end of the tunnel. In this 1969 spring, 130 years after the Black Heath dis-

aster, the mining industry may finally agree to pay the modest cost of keeping its work force alive, of abandoning the embedded idea that men are cheaper than coal. And—small pittance—we may all be involved in helping pay what it costs to write this long delayed postscript to the industrial revolution; the price of bringing miners into the 20th century probably will appear, as we shall see, as pennies on our electric bills.

In the context of technological advancement in nearly every other area of human enterprise, very little has changed for men who go down to the mines in shafts. Only four months ago, 78 coal miners were trapped and killed below ground in West Virginia in one of the most volcanic eruptions of explosion and fire in the memory of Federal mine inspectors. As at Black Heath, the explosion at the Consolidation Coal Company's 27-square-mile No. 9 mine at Farmington, W. Va., almost certainly was caused by an ignition of methane gas, a volatile, highly flammable, usually odorless and invisible hydrocarbon gas liberated from virgin coal.

At Consol No. 9, a modern, "safe" mine operated by one of the wealthy giants of the industry, the daily methane emission was 8 million cubic feet, enough to supply the heating and cooking needs of a small city if it were captured and sold. The explosion hazard was dealt with there as it is generally in mining today, by only modestly more sophisticated methods than those at Black Heath.

Fresh air is drawn into the mines by giant fans and circulated and directed constantly through the honeycomb of tunnnels by means of doors, ducts or sometimes by curtains called brattices (miners call them "bradishes"). The intake air is supposed to dilute and, by law, "render harmless or carry away" the methane and hold the mine atmosphere to less than the legal limit of 1 per cent gas. Unless coal dust is mixed with it—in which case the explosion threshold drops significantly—methane will not ignite or explode in concentrations of less than 5 per cent. Miners live and die today on a margin of 4 percentage points—or less if coal dust is suspended in the air.[1]

It is known that the giant electric mining machines in use for the last 20 years—machines that chew up and claw coal from the face with rotary bits the size of railroad wheels—churn up an immense amount of dust. The machines have water sprays to settle the dust. But the machines' rapid rate of advance through the seam also liberates much methane.

The first explosion at Consol No. 9 came at 5:25 A.M., Nov. 20, during the cateye shift. It was a day after the passage over northern West Virginia of a cold front accompanied by an abrupt drop in barometric pressure. In the primitive mythology of mine safety, these natural events—the arrival of cold, dry air and a barometric low, which increases the methane liberation in a mine—have been associated for years with disasters. The legendary great mine explosions, from Monongah and Darr in 1907, Rachel & Agnes in 1908 and on up to Orient No. 2 in 1951, have occurred in November and December and in cold, dry weather. The dry air dehumidifies a mine and sets coal dust in motion.

Every fall through 1967, the United Mine Workers Journal had published a fraternal warning to union brothers to observe special precautions in "the explosion season." But, no research having been done in a century of such meteorological coincidences, the industry can and does take no account of what it, therefore, regards as a folklore factor—which might interfere with production. The U.M.W. Journal had not got around to running the 1968 warning when Consol No. 9 blew up. "We figured afterward it would be no use," a Journal editor said later.

No one yet knows what death befell the 78 men in No. 9. Miners who survive the shock wave, heat and afterdamp (carbon monoxide) of an underground explosion are instructed to barricade themselves in good air, if any, and await rescue. But during the nine days and nights that rescue teams stood by helplessly on the surface at Farmington, there were at least 16 further explosions in the mine. The first blast had burst up 600 feet through the portals and ventilation shafts, blowing the internal works of the mine to atoms and knocking out ventilation circuits. At the top, the main shaft became the muzzle of a mammouth subterranean cannon. The massive headframe, a trestled structure of bridge-size steel I-beams that supported the main hoist, was blown apart. For days, a boiling plume of poisonous black smoke alternately belched from the shaft and then unaccountably reversed its flow and inhaled, bursting forth again with renewed detonations below.

Finally, on Nov. 29, all five shafts and portals at the mine were sealed—capped and made airtight with tons of rock, steel and concrete. Not for months, until engineers are certain that restoring ventilation will not reignite coked embers and trigger the millions of cubic feet of methane collecting in the primordial atmosphere below, will Farmington's dead be disinterred from their gassy grave. The same mine was sealed for more than a year following a less violent explosion in 1954 that killed 16 men (including one, Black Heath-style, topside near the mine mouth), and fires continued to burn in sealed sections of the mine even after production was resumed.

If entombing a mine fire to control it seems primitive in this day of chemical fire fighting agents and automatic deluge sprinkler systems, it is futuristic, compared with the industry's performance in disaster *prevention*. There have been profitable technological advances in the extraction of coal from the seam, and today the industry is on the brink of such a long, secure production boom that big oil companies, with some of the sharpest eyes for markets and profits in the business world, are buying up and merging with coal companies at a rapid rate. But production economies in the past have more often than not been at the expense of human economies, and Big Oil may be surprised to find itself saddled with coal's amazing insensitivity to mayhem and death. It was the fatalistic acceptance of Farmington more than the disaster itself (President Nixon has since criticized this acceptance of death as "as much a part of the job as the tools and the tunnels") that finally started the mine-safety revolution.

At first, at the daily post-explosion news conferences in Consol's cinderblock company store near Farmington (many miners are *still today* in debt to their employers' merchandising subsidiaries for nearly a full paycheck before they are paid), William Poundstone, Consol's executive vice president for mining operations, insisted that the mine was "only technically gassy." W. R. Park, a senior Federal mine inspector familiar for years with the mine, insisted it was "extremely gassy," and John Roberts, a Consol public relations man, called it "excessively gassy." Roberts, a master of malapropism who greeted the news corps before one vigil news conference by asking cheerily, "Are all the bodies here?" also described the No. 9 explosion hazard as "something that we have to live with."

Then came the parade of V.I.P.'s. U.M.W. president W. A. (Tony) Boyle came to the mine head not only to congratulate Consol on being "one of the better companies as far as cooperation and safety are concerned," but to add that if this "safe" mine blew up, "you can imagine what the rest are like." "As long as we mine coal," said Boyle, the philosophical miners' ombudsman "there is always this inherent danger of explosion." The then Assistant Secretary of the Interior, J. Cordell Moore, the Department's top minerals man, flew up from Washington to add that "unfortunately—we don't understand why these things happen—but they do happen," and to venture that "the company here has done all in its power to make this a safe mine." (In fact, Moore's own Bureau of Mines had reported substandard rock dusting at Consol No. 9—the most basic of explosion-prevention measures involves rendering coal dust inert with 65 percent crushed limestone—in all 24 of its inspections there since 1963. The Bureau had cited No. 9 for 25 other safety violations since December 1966. Moore probably saw nothing unusual in that because violations are the norm in most mines.)

Hulett C. Smith, then the Governor of West Virginia, also stood before the television cameras and observed more in sadness than in anger that "we must recognize that this is a hazardous business and what has occurred here is one of the hazards of being a miner."

With that, the fuse, delayed so long, finally blew in Washington. The then Secretary of the Interior, Stewart L. Udall, after eight years of more concern for California redwoods than for miners, denounced the whole system of coal mining—the technological and moral systems—as "unacceptable." As an astonished layman, Udall noted that Consol was mining "in an area that really is a low-grade gas field" and that "obviously it is not a solution that is completely adequate to dilute the gas by pumping in air." Within three weeks, Udall summoned a national coal-safety conference which turned out to be one of the most amazing gatherings in bureaucratic history. In a Soviet-style mood of confession, Udall publicly admitted that "we have accepted, even condoned an attitude of fatalism that belongs to an age darker than the deepest recess of any coal mine. At every level of responsibility, from the individual miner to the highest councils of Government, we have looked with horror on the specters of death and disease that haunt our mines. Then we have shrugged our shoulders and said to ourselves, 'Well, coal mining is an inherently hazardous business' or 'It's too bad, of course, but as long as coal is mined men inevitably will die underground.' These easy rationalizations are no longer acceptable in this time in history."

The stubborn Black Heath syndrome—so costly in human life and so profitable to the industry—finally was broken. Within a week, Bureau of Mines Director John F. O'Leary, on the job one month, issued orders to his inspectors. They were to cease immediately giving prior notification of impending inspections to the operators, a practice known for years to encourage a sudden, temporary kind of mine housecleaning for the benefit of the inspector—"baking a cake," one inspector called it. They were to cease reviewing mine violation reports with owners. Where violations occurred involving imminent danger of explosion, they were no longer merely to write them down as before, they were to close the mine. The list was startling for what it said about past practices.

It is hard to tell which is more gripping—the penny-pinching, corner-cutting and profiteering waste of human life in mines still operated today—Black Heath-style—with bland abandon of what the U.S. Bureau of Mines calls "ordinary regard for safety," or the callous result, the history of human carnage in the mines. The record to date, even the most contemporary chapters of it, is appalling. In the 100 years that par-

[1] One example of the retarded technology of mine safety is that miners testing for gas still rely today on the Glame safety lamp of Sir Humphrey Davy, perfected more than 150 years ago. The safety lamp is rugged and safe if used properly, but it requires highly skilled operators to read it accurately, and then its accuracy is no more than half a percentage point—or 10 per cent of the margin between survival and explosion.

tial records of fatal mine accidents have been kept (the early figures are incomplete) more than 120,000 men have died violently in coal mines, an average of 100 every month for a century. The total does not include those who died of what passes for "natural causes" in work that is as notoriously hazardous to health as it is to life and limb. Today, among men aged 60 to 64, the "natural" death rate of miners is eight times that of workers in any other industrial occupation.

Chronic lung disease may, in fact, turn out to be a far worse killer of miners than accidents. The U.S. Public Health Service, in unfinished research that is 25 years behind completed medical findings in British mines, has recently documented that coal dust—not the rock dust associated for decades with miners' silicosis—has become perhaps the pre-eminent threat to survival in the mines.

A prevalence study completed in 1965 found that, conservatively, 100,000 active and retired American coal miners suffered from the progressive, gasping breathlessness associated with prolonged inhalation of fine coal dust, a condition known (from autopsy observation) as "black lung" or pneumoconiosis. The U.M.W. estimates that in the 20 years that electric mining machines have been churning up greater and greater clouds of dust at least one million men have been exposed to an occupational disease whose ravages do not stop with removal to a dust-free environment.

The black-lung hazard—as the coal industry and physicians in its employ constantly point out—is as yet a qualitatively and quantitatively uncertain threat to life. It is real enough, however, to have caused more than 30,000 West Virginia miners, normally among the last in the industry to engage in wildcat strikes, to walk off their jobs for three weeks in February of this year to demand that the State Legislature include black lung in the list of injuries and diseases for which disabled miners are eligible to collect workmen's compensation benefits. Until then, only three coal-producing states—Alabama, Virginia and Pennsylvania—authorized workmen's compensation payments (generally financed by the industry) to black-lung victims, and only Pennsylvania has paid any claims. (In Pennsylvania, the benefits are paid for by the taxpayers, *not* the industry, which may explain how the legislation survived there. Coal has a history of very aggressive lobbying to protect its economic interest.)

In West Virginia's Statehouse last month, a doctor testifying in support of the industry's proposal of further medical studies of black lung before changing the compensation law "in haste," charged that Drs. I. E. Buff, Donald L. Rasmussen and Hawey Wells, the three crusading physicians in that state who had galvanized the miners to strike for health reform, had done more damage as "alarmists" than the disease itself. There was nothing more pathetic, the lachrymose industry witness testified, than a coal miner told to quit the only work he knows just because he is a little breathless. It was a Dickensian performance.

The coal operators, or some of them, have taken the position that pneumoconiosis does not exist. But sudden violence in the mines has been documented monotonously since Black Heath. Last year, alone, 309 miners died in accidents—"needlessly," according to O'Leary, the new and aggressively safety-conscious director of the Bureau of Mines—and miners' death and injury rates, already the highest of any industry, are on the rise this year.

The injury severity rate in mines, also the highest, is two and a half times that of lumbering, nearly four times that of trucking. Since records of nonfatal accidents began to be archived in 1930, the number of men temporarily or permanently disabled digging coal has risen to 1.5 million. Today, a miner surviving a lifetime in coal (and there is one chance in 12 that he will not) can expect three or four lost-time injuries, not counting one chance in 5 or 10 of serious and eventually fatal lung disease.

Mining, like prostitution, is one of the oldest occupations in the world and is probably as impossible to stop. From the beginning, coal has been a curse on the land from whence it came, blighting the landscape with strip mines and culm banks and polluted streams, extracting for absentee owners vast fortunes from Appalachian states that are today synonymous with poverty, and plunging generations into despair.

But the scandal of gratuitous death and injury in the mines—almost all of it recognized, as the Interior Department report put it recently, as the result of the operators' "tendency to cut safety corners when profits are low and ignore good safety practices when profits are high"—has finally reached the point at which a Republican Administration in Washington is talking about limiting coal production to save lives.

In testimony this month supporting the sudden rush of mine-safety bills in Congress following the explosion at Farmington, this radical notion was put forth by none other than Secretary of the Interior Walter J. Hickel. "It is clear that our society can no longer tolerate the cost in human life and human misery that is exacted in the mining of this essential fuel," Hickel said. "Unless we find ways to eliminate that intolerable cost, we must inevitably limit our mining of coal, which has an almost inexhaustible potential for industrial, economic and social good."

Republican coal barons must have rolled in their graves. Even from Democratic Administrations, this most destructive of industries had never received such a radical warning. In fact, Democrats in Congress have been the protectors of the industry's economic interests over the survival interests of its workers.

In 1941, at the end of three decades during which miners died at an average rate of better than 2,000 a year, a series of terrible disasters which had killed 276 men during the closing months of 1940 finally forced passage of the so-called Coal Mine Inspection and Investigation Act. It was conceded, as the Bureau of Mines timidly put it then, that "speed of operation and demand for maximum tonnage at a minimum cost resulted in a neglect of ordinary safety measures."

In 1941, when technology in the United States had advanced to the threshold of the atomic era, the gross and calculated neglect of ordinary prudence in the powderhouse atmosphere of coal mines was evidenced by the fact that barely half the underground coal miners had been equipped with battery-powered electric cap lamps, approved by the Bureau of Mines for the absence of spark hazards. Incredibly, the rest still wore carbide lamps, which gave their light by generating acetylene gas and emitting an open, two-inch jet of flame.

In 1941, half the mines still used unstable black powder for blasting rather than the safer "permissible" explosives recommended for 30 years by the bureau. The carbide lamps were handy for lighting fuses. Some mines had advanced to the employment of "shot firers," solitary men whose job was to shoot down the drilled coal after everyone else had left the mine. It was a concession to modernity. If the mine blew up, only one man was lost.

Everyone knew that disasters could be stopped. "In view of the present knowledge of preventing explosions, disasters are inexcusable and discredit the mining industry," the Bureau of Mines said in 1940. Everyone knew that more improvements in the feeble state mining laws were being blocked than passed. But Congress heeded the industry's states' rights argument. The 1941 act gave the Bureau of Mines for the first time authority to enter and inspect mines and write reports containing noncompulsory safety recommendations, but no powers of enforcement. The states would take care of that.

Since 1910, when the Bureau of Mines was established, its engineers have been testing and recommending to the industry as approved or disapproved—as "permissible" or "nonpermissible" (words that convey more authority than the bureau had then or has today to require their use)—a whole range of mining equipment, including explosives and electric wiring, lights, drills, cutting machines and haulage devices. Such safety-designed machinery is obviously the key to disaster prevention in mines full of a mixture of inflammable methane gas and explosive coal dust.

Yet, nearly half the explosions—835 miners dead—between May, 1941, when the bureau got its authority to inspect and recommend, and July, 1952, when Congress next amended the mine-safety law, were caused by electric arcs from nonpermissible mine machinery. Most of the rest involved nonpermissible—but still not illegal—use of explosives.

Unbelievably, when the misnamed Federal Coal Mine Safety Act of 1952 finally emerged from the coal lobby's permissible cutting machine, it contained a "grandfather clause" which allowed the indefinitely continued use of knowingly dangerous nonpermissible electrical machinery "if, before the effective date of this section. . . the operator of such mine owned such equipment . . . or had ordered such equipment." The law also set up two classes of mines—gassy and nongassy—and it stretched the loophole for nonpermissible equipment even further for the 85 per cent of mine owners lucky enough to meet the nongassy standard.

In effect, Congress told the mine operators that "if you were creating an avoidable explosion hazard before we passed this law, it's all right to go on doing so until the dangerous machinery wears out." Today, this means that spark-hazard machines—some of them rebuilt twice and three times over under the same serial numbers—are still in use in some mines 17 years after the law was passed. A count by the Bureau of Mines in 1967, when the law had been on the books 15 years, showed 1,117 pieces of nonpermissible electrical equipment in use in 159 mines.

The 1952 mine-safety act may have been one of the great legislative mirages of all time. It specifically exempted small mines, those with fewer than 15 employes. Although the small mines were depicted in the industry's testimony as to inefficient and limited in capital resources to bear the cost of retooling for the most basic disaster prevention, their number immediately doubled after the law was passed. Large mines were simply separated into smaller units to evade the law. (In 1966, the small mines were finally brought in—with all "grandfather clauses" still intact.)

Moreover, the law was deliberately written to apply to, and to give Federal mine inspectors jurisdiction over, only certain kinds of "major disasters"—defined by Congress as those killing five or more miners in one stroke. More than 90 per cent of mine deaths then occurred in lonely ones, twos and threes. Far more than half were caused by rock falls from the mine roof, largely at the working face. The 1952 law established roof-control standards, but only for established tunnels used as haulageways where such accidents were least common.

Having extended Federal safety jurisdiction to the kinds of "major disasters" that made the news wires and brought discrediting publicity, Congress emphasized that the new law was *not* to protect the miners from "the lack of, or inadequacy of, guards or protective devices." It was totally silent on hazards to health.

In signing the act into law, former Presi-

dent Truman obviously did not overstate the facts in observing that "I consider it my duty to point out its defects so that the public will not be misled into believing that this is a broad-gauge accident-prevention measure . . . I am advised that loopholes in the law were provided to avoid any economic impact on the coal-mining industry."

Congress has considered mine-safety legislation only three times in the last three decades. But in the years between enactments, there was activity. In 1962, after explosions in the Robena and Compass mines had killed 59 men, President Kennedy commissioned a task force to review the situation. Its report concluded that the industry's continuing disregard of the most basic hazards to life and limb deserved Congressional attention. For one thing, the task force proposed to put a deadline—one year after enactment of an implementing amendment by Congress—on the nonpermissible machinery "grandfather clause." It also noted that Britain, producing only a fraction of the coal output of the United States, was spending more than twice as much on mine health research.

But then in a series of private conferences with Bureau of Mines and Interior Department officials, the Bituminous Coal Operators Association, the union-negotiating arm of the coal industry, persuaded them to recommend to Congress a "grandfather clause" deadline of *five* years. Since Congress took no action on it, the B.C.O.A. had another opportunity last year to persuade the Bureau of Mines to propose an even further extension to *ten* years. The capitulation was so flagrant that the White House, overseeing the draftsmanship of the 1968 mine-safety bill, demanded its exclusion from the bill, which went up to Congress in September. It died without hearings.

Other capitulations to the industry have perpetuated the Bureau of Mine's reputation as the submissive captive of the industry it is supposed to police. As recently as a year ago, a long-proposed revision of the 1952 law specifically requiring diversion of a minimum flow of dust-and gas-diluting forced air ventilation to the working face of coal mines—a point beyond the last moving air current in the established workings—was dropped by the bureau upon the B.C.O.A.'s complaint that it would be too costly.

It has been known for years that progressive contamination of mine ventilation air—a pickup of dangerous amounts of methane or coal dust, or both—results from coursing air from one working section of a mine to another before routing it to the surface. The practice is known to have caused explosions and deaths. Yet a year ago the B.C.O.A. was still dickering privately with the bureau, demanding language in the bureau's proposals for tougher mine ventilation standards which would say that if it cost too much to provide a separate "split" of air to each active working plaoe it would not be required until after "a reasonable time"—not, of course, defined.

It is not that any of these proposals were new. The industry could claim no element of surprise—except at the idea of being compelled to adopt them after so long a history of lethal *laissez-faire*. Mine technology has been equal to all of these proposed measures for at least all of this century—for 101,000 mine deaths.

The inclusive almanac of mine disasters published by the Bureau of Mines in 1960 (it is now out of print) says that the violently explosive and unpredictable characteristics of suspended coal dust in mines were known as long ago as 1886. A team of mining engineers which visited all the major coalfields in 1908, a year after the worst mine explosion in American history had killed 362 men at Monongah, W. Va., published a detailed report identifying every source of all the subsequent mine disasters (72,501 deaths from 1909 through 1968) and recommending disaster-prevention standards which are *still* not observed.

While lobbying privily against safety, the industry has publicly promoted the idea that the death and mutilation of its workers was a cost of doing business. It got a depletion allowance on its taxes. Its workers got none for their depletion. The industry reaction to disaster was in the brave tradition of "what can you expect in an inherently risky business"—*and* with some of the most effective lobbying in legislative history to perpetuate the trade-off of cheap life for cheap coal. And it has not been alone.

Even on the left in this medieval atmosphere, the miners' union, the United Mine Workers of America, has been so concerned with helping the industry survive its post-war slump and with preserving coal's low-cost competitive advantage over other basic fuels—oil, natural gas and nuclear energy—that it long ago sacrificed what could have been the leadership of a mine-safety crusade for high wages, mechanized high production, and the highest accident rate of any industry.

Some of the accidents were no accident. In 1947, the U.M.W. in Illinois was found to have voluntarily signed a labor contract with coal operators in that state whose terms forbade the union from seeking improvements in Illinois' mine-safety law, upon which the industry placed such store in opposing greater Federal control. The Federal law of 1941, then in effect, was no threat to the cheapest production economies; the 1941 act had been so considerate of the industry's faith in state regulation that Federal mine inspectors were denied enforcement powers.

Since 1946, moreover, the U.M.W. had become locked in an embrace with the operators nationally. Through the 1946 coal labor contract, which set up the U.M.W. Welfare and Retirement Fund and financed it by an industry royalty—now 40 cents a ton for all coal taken out of union mines—the U.M.W. also acquired an immense interest in production. The Welfare and Retirement Fund collects income from *operating* mines, not from those harried by mine inspectors or closed down for safety violations.

The U.M.W.'s obvious conflicts of interest are a legacy of John L. Lewis, the 89-year-old former president. Lewis's postwar decision to help the coal industry survive by sacrificing 400,000 miners' jobs to mechanization in return for the company royalties was regarded then as a modernizing act of industrial statesmanship. But it established alliances that obviously are not in the best interests—on mine safety, if nothing else—of the rank-and-file membership. For example, under Lewis the U.M.W. bought control of the National Bank of Washington, a profitable sideline that has furthered the appearance, if not the fact, of shared interests by making loans to coal companies.

Since Congress was no help, in 1946 the Interior Department, which was then operating the mines under President Truman's strike-induced Federal seizure order, negotiated with the unions (as a condition in the contract) safety standards unobtainable by other means. Compliance with the contract's so-called Mine Safety Code, which incorporates many of the reforms talked about since the early nineteen-hundreds is monitored by Federal mine inspectors. But its enforcement depends on the union, through its contractual right to withdraw men from mines in violation of the code.

Compliance, according to Bureau of Mines Director O'Leary, "leaves much to be desired." The compliance average in 20 of the largest mines is 65 per cent, O'Leary has told Congressional committees, but in some states (depending on coal operator attitudes and union militance) it is as low as 30 per cent and in one state as low as 7 per cent. The U.M.W.'s "safety division" at its headquarters in Washington consists of one man.

The Welfare and Retirement Fund is not the only loser when the men walk out of an unsafe mine. The miners lose wages. When I asked him several months ago whether the U.M.W. had considered negotiating with the companies a requirement that they pay regular wages to men who left a shift while demonstrable code violations were corrected, the U.M.W.'s Boyle, a slight, normally combative Irishman from Montana, told me that would be impossible because even among miners there were "lazy men"; there would be abuses to get pay for no work. Later, in a safety proposal prepared by the U.M.W., the union finally supported the idea that miners should be paid for time off the job if a *Federal inspector* closed a mine.

But more than any other witnesses on this year's crop of catch-up mine-safety bills, Boyle has agreed with the industry's position. On the proposed revision that Secretary Hickel and O'Leary have called the reform of "paramount importance," Boyle's stand is significantly less reformist than the industry's. In view of the miserable record of Congressional inaction and protection of the industry, the Administration this year is asking Congress to give the Secretary of the Interior the flexibility of administrative rule-making authority. After hearings, he would establish the safety standards. There would be the right of appeal. It is the system in use since 1938 in nearly every other area of Federal regulatory activity, and the coal industry now says it will go along with it if the Secretary's authority is suitably circumscribed to prevent "arbitrary" decisions. Boyle, however, has said he "would rather take our chances with Congress."

Those chances this year are very good indeed, partly because Boyle himself has underlined the unequal forces working for mine safety in the private sector. The U.M.W. is clearly embarrassed by the reformist zeal of what it calls "Johnny-come-lately experts" since Farmington, like Udall, Ralph Nader and Representative Ken Hechler of West Virginia. For suggesting that the union bears some responsibility and that it has compromised and "snuggled up to" management on safety issues, the U.M.W. Journal recently labeled Nader and Hechler as "finks" in a front-page editorial. And the union magazine has engaged in such a Mao Tse-tung glorification of Boyle and his record as a safety crusader—it refers to him as a "union chieftain"—that the U.M.W. has become an embarrassment to its friends in Congress. While fulminating at the charges of collaboration with the industry. The Journal has not reported that weeks before the Consol disaster, the U.M.W. was convicted along with the Consolidation Coal Company in a Federal court in Lexington, Ky., of conspiring to create a monopoly in the soft coal industry. With the conviction, which is being appealed, went a $7,300,000 damage award, to be paid half by the union and half by the company that Boyle has praised for "cooperation." The case involved Consol's alleged withdrawal of coal marketing services from South-East Coal Company after the company went non-union.

Moreover the coal industry can hardly cry poor this year. Because of its secure grip on a growing share—now more than half—of the fuel market in the surging electric utility business, even the National Coal Association is calling the future "glittering." It turns out that local boosters who, through depression upon depression, have been calling the state of West Virginia "The Billion Dollar Coal Field" were not far from wrong.

As Senator Harrison A. Williams Jr. of New Jersey noted in starting mine-safety hearings, coal has become so profitable that since 1966 the three largest coal producers have been taken over by other giant mineral corporations—Peabody Coal Company by Kennecott Copper, Consolidation by Continental Oil Company, and Island Creek Coal Company by Occidental Oil. According to the National Coal Association, the list of oil corporations that have acquired coal-mining companies now includes at least

20 of the major petroleum producers—Gulf, Shell, Humble, Standard of Ohio, Atlantic-Richfield, Sun, Ashland and Kerr-McGee among them. It was a relief to know, Senator Williams noted, that the safety hearings would not be "complicated" by the usual coal claims of imminent bankruptcy. To the oil owners of coal, Williams pointedly observed that the spectacle of oil-well pollution of the Pacific Ocean off Santa Barbara, Calif., and new evidence of "lung pollution" in the mines "may be trying to tell us something," "In both cases," he said, "we find at the top of the ownership structure big oil companies."

Whether or not by corporate edict from these powerful new coal owners, the fact is that the National Coal Association, the largest industry group, is taking a remarkably calm and even welcoming view of the strenuous safety legislation before Congress this year. By enacting the Nixon Administration bill, which is among the strongest of the lot, Congress could close all the old loopholes at once and take—for coal—a daring new step into industrial human ecology. The Nixon bill would require mine operators to attack the black-lung epidemic among miners by reducing coal dust contamination in mine air to 4.5 milligrams of respirable dust per cubic meter of air, as a starter. The standard is a compromise of the U.S. Public Health Service's 1968 recommendation—3 milligrams. It would become effective six months after passage of the law and could be lowered later by decision of the Secretary of the Interior. The dust-control problem is publicly pictured as a cost nightmare by the industry. The Bureau of Mines estimates that the cost will be only pennies per ton.

The economics of mine safety are the one great unknown in this year's reform spree. No one knows what the cost of a century of neglect has been. Lee White, the chairman of the Federal Power Commission, which regulates wholesale electric power rates, opened the door a crack during Secretary Udall's post-Farmington *mea culpa* last December by observing that, as a nation, we have lost money as well as life in the mines, "and we must pay." The F.P.C. is anxious to pass on to consumers "all savings in costs that are properly made," White said. But if it takes an increase in the cost of electricity to indemnify the miners who dig the coal for steam-electric power, "I believe the American people are willing and should be willing to pay that extra case . . . . For all I know, we are not talking about increased rates but only a smaller decrease in rates."

Some but not all of coal's new 20-year and 30-year contracts to supply the huge fuel demands of electric power contain escalator clauses, which would permit certain price increases to pay for safety. But a share-the-cost program may not be as easy to work out as White made it seem; one reason that the coal industry is so mercilessly cost-conscious has been the strong downward pressure on prices exerted by the electric utilities, including the Government's own Tennessee Valley Authority, the biggest of all coal consumers. The average value per ton of coal at the mine has dropped from $4.99 in 1948 to $4.62 last year.

It may be significant that John Corcoran, the president of Consol—a moderate man to start with, by coal industry standards, and one who has been deeply affected by the Farmington disaster—also is chairman of the National Coal Association and a director of the American Mining Association and the Bituminous Coal Association. The industry does seem to be speaking with a new voice. But the coal industry is still a very loose coalition of new humanists and old buccaneers. And as one of its publicists put it recently, "We are like any association—we reflect the lowest common denominator. We have a few members who think the world is flat, so we have not publicly endorsed the use of globes."

TRIBUTE TO SERVICE OF APPALACHIAN COCHAIRMAN

Mr. JONES of Alabama. Mr. Speaker, the man who has served as the Federal Cochairman of the Appalachian Regional Commission for the past 2 years, the Honorable Joe W. Fleming II, recently resigned, and I want to take this opportunity to commend his dedicated and exceptional service to the people of the 13-State Appalachian region.

He was appointed to the Federal cochairmanship by President Johnson in February 1967, before his 30th birthday. Prior to the appointment, he had served as a special assistant to the Commission and had worked on Capitol Hill.

Mr. Fleming, who is more generally called "Pat" by his many friends, has exhibited unique insights into the needs and problems of the Appalachian area. He used imagination in seeking solutions to problems and meeting needs. He displayed unusual skills and diplomacy in exercising his function as the Federal Cochairman of the Commission.

As chairman of the ad hoc Committee on Appalachia for the Public Works Committee, I have just concluded hearings on extension and revision of the Appalachian Regional Development Act. It would have been encouraging to every Member of the House to have heard the testimony of the Governors, our fellow Members, and private citizens concerning the advances which are being made in Appalachia, and equally important, the unusual praise for the operation and function of the Commission. This was particularly refreshing at a time when critics seem plentiful for many Federal activities. The testimony indicates a total State endorsement of the concepts and implementation of the regional development approach which is proving so beneficial to the people of Appalachia.

The Federal Cochairman, as the representative of the Federal interest in the program, is due a large measure of credit for the success and excellent relationship evident with the various States.

In his relations with the Congress, Pat Fleming was always responsive to requests for information and assistance important in preparing legislation for the program. His cooperative attitude and constructive approach to problems made my work as chairman of the ad hoc committee less burdensome.

Pat Fleming is intelligent, knowledgeable, capable, and industrious. He has amply shown this in the discharge of his responsibilities as Federal Cochairman of the Appalachian Regional Development Commission. I commend him for his service. He has a bright future, and I wish him every success in the years ahead.

A NEW CREDIBILITY GAP

Mr. ADDABBO. Mr. Speaker, as the new administration faces its first hard decisions concerning our involvement in Vietnam, and recalls its magic plan mentioned during the presidential campaign, the administration should awaken to the ever-mounting casualties in Southeast Asia and should reevaluate its no cease-fire decision while the diplomatic talks proceed in Paris.

At the same time, I am somewhat distressed by the discussion in the Congress about the imminent release of some $30 billion now being spent in Southeast Asia. As a member of the House Committee on Appropriations, I know what could be done to meet the challenges at home if $30 billion were suddenly made available for our domestic priorities. I also know that such talk misleads the American people. Former Secretary of State Dean Rusk in a recent statement pointed out that if we decided to withdraw all our troops from Vietnam tomorrow, it would take about 2 years to evacuate. In addition, billions of dollars worth of heavy equipment would remain in South Vietnam—not to mention economic aid to that Nation.

There are enough reasons to press for settlement of this war and to end the tragic death tolls, without holding out the unrealistic promise that $30 billion will suddenly be available for domestic programs.

Those who mislead the American people on that score are simply creating a new credibility gap—a practice they have condemned in the past.

ENROLLED JOINT RESOLUTION SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 584. Joint resolution making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes.

THE LATE HONORABLE DWIGHT DAVID EISENHOWER

Mr. ALBERT. Mr. Speaker, I offer a resolution.

The Clerk read the resolution as follows:

H. RES. 351

Resolved, That the House of Representatives has learned with profound regret and sorrow of the death of General of the Army Dwight David Eisenhower, beloved former President of the United States of America.

Resolved, That in recognition of the many virtues, public and private, of the illustrious soldier and statesman, and as a mark of respect to one who has held such eminent public stations, the Speaker shall appoint a committee of the House to join with such Members of the Senate as may be designated, to attend the funeral services of the former President.

Resolved, That the House tenders its deep sympathy to the members of the family of the former President in their sad bereavement.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and trans-

mit a copy of the same to the family of the deceased.

The resolutions were agreed to.

The SPEAKER. The Chair appoints the Speaker and the entire membership of the House to attend the funeral services for former President Dwight D. Eisenhower this afternoon at the Washington National Cathedral.

Members' wives have also been invited to attend these services.

The Chair appoints as members of the committee on the part of the House to attend the funeral services in Abilene, Kans., the gentleman from Texas, Mr. FISHER, and the gentleman from Kansas, Mr. MIZE.

Transportation will be furnished to the cathedral this afternoon for Members and their wives and will also be available for the return to the Capitol at the completion of the services.

Buses will leave from New Jersey Avenue, between Independence Avenue and C Streets, promptly at 3:15 p.m. for the trip to the cathedral.

The Clerk will report the remaining resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect to the memory of the former President, this House do now adjourn.

The resolution was agreed to.

ADJOURNMENT

Accordingly (at 1 o'clock and 30 minutes p.m.) the House adjourned until tomorrow, Tuesday, April 1, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

633. A communication from the Acting Director, Office of Economic Opportunity, Executive Office of the President, transmitting a report of an independent study and evaluation of the implementation of sections 210 and 211 of the 1967 amendments to the Economic Opportunity Act, pursuant to the provisions of section 233(c) of that act; to the Committee on Education and Labor.

634. A communication from the Assistant to the Commissioner of the District of Columbia, transmitting a draft of proposed legislation to amend title 5 of the United States Code with respect to pay received by public school teachers of the District of Columbia for employment during the summer vacation period; to the Committee on Post Office and Civil Service.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred, as follows:

By Mr. ANDERSON of California:

H.R. 9674. A bill to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs and for other related educational purposes; to the Committee on Education and Labor.

H.R. 9675. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. BROOMFIELD:

H.R. 9676. A bill to amend title 18, United States Code, to prohibit the mailing of obscene matter to minors, and for other purposes; to the Committee on the Judiciary.

By Mr. CELLER:

H.R. 9677. A bill to amend section 1866 of title 28, United States Code, prescribing the manner in which summonses for jury duty may be served; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 9678. A bill to amend the Internal Revenue Code of 1954 to provide that the first $5,000 received as civil service retirement annuity from the United States or any agency thereof shall be excluded from gross income; to the Committee on Ways and Means.

By Mr. FOREMAN:

H.R. 9679. A bill to amend the Internal Revenue Code of 1954 to allow teachers to deduct from gross income the expenses incurred in pursuing courses for academic credit and degrees at institutions of higher education and including certain travel; to the Committee on Ways and Means.

By Mr. FRASER:

H.R. 9680. A bill to amend the Internal Reveune Code of 1954 to liberalize both the minimum standard deduction and the percentage standard deduction, and to increase from $600 to $1,000 the personal income tax exemption of the taxpayer; to the Committee on Ways and Means.

By Mr. FRIEDEL (by request):

H.R. 9681. A bill to amend the Interstate Commerce Act, with respect to recovery of a reasonable attorney's fee in case of successful maintenance of an action for recovery of damages sustained in transportation of property; to the Committee on Interstate and Foreign Commerce.

By Mrs. GREEN of Oregon:

H.R. 9682. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. HAMMERSCHMIDT:

H.R. 9683. A bill to repeal chapter 44 of title 18, United States Code (relating to firearms), to reenact the Federal Firearms Act, and to restore chapter 53 of the Internal Revenue Code of 1954 as in effect before its amendment by the Gun Control Act of 1968; to the Committee on the Judiciary.

By Mr. KARTH:

H.R. 9684. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. McEWEN:

H.R. 9685. A bill to regulate imports of milk and dairy products, and for other purposes; to the Committee on Ways and Means.

My Mr. McMILLAN (by request):

H.R. 9686. A bill to provide public assistance to mass transit bus companies in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. MINSHALL:

H.R. 9687. A bill to amend section 3006A of title 18, United States Code, relating to representation of defendants who are financially unable to obtain an adequate defense in criminal cases in the courts of the United States; to the Committee on the Judiciary.

H.R. 9688. A bill to extend benefits under section 8191 of title 5, United States Code, to law enforcement officers and firemen not employed by the United States who are killed or totally disabled in the line of duty; to the Committee on the Judiciary.

By Mr. MURPHY of New York:

H.R. 9689. A bill to amend the Railroad Retirement Act of 1937 to provide a full annuity for any individual (without regard to his age) who has completed 30 years of railroad service; to the Committee on Interstate and Foreign Commerce.

By Mr. PHILBIN:

H.R. 9690. A bill to expand the definition of deductible moving expenses incurred by an employee; to the Committee on Ways and Means.

By Mr. RIEGLE:

H.R. 9691. A bill to amend the Internal Revenue Code of 1954 to increase certain personal income tax exemptions of a taxpayer (including spouses and dependents), to allow a credit against income tax to individuals for certain expenses incurred in providing and obtaining higher education, to expand the definition of deductible moving expenses incurred by employees, to protect funds invested in series E U.S. savings bonds, to provide a credit for certain single persons, to provide a deduction for transportation and personal exemption for disabled individuals, to repeal manufacturer's excise tax on passenger automobiles and trucks, to revise and improve the income tax treatment of senior Americans, to limit the maximum rate of percentage depletion, to provide an incentive for corporate investment in developing countries, to provide a tax credit for certain local residential and property taxes, to modify the capital gains treatment of property acquired from a decedent, and to repeal multiple-surtax exemptions; to the Committee on Ways and Means.

By Mr. SCHERLE:

H.R. 9692. A bill to amend section 204(a) of the Coinage Act of 1965 in order to authorize mining of all new quarter-dollar pieces with a likeness of the late President Dwight David Eisenhower on one side; to the Committee on Banking and Currency.

By Mr. SIKES:

H.R. 9693. A bill to permit civilian employees of the United States employed outside of the United States to import certain firearms and ammunition purchased abroad; to the Committee on the Judiciary.

By Mr. THOMSON of Wisconsin:

H.R. 9694. A bill to amend the Internal Revenue Code of 1954 to allow an incentive tax credit for a part of the cost of constructing or otherwise providing facilities for the control of water or air pollution, and to permit the amortization of such cost within a period of from 1 to 5 years; to the Committee on Ways and Means.

By Mr. GRAY:

H.J. Res. 611. A resolution authorizing the President to proclaim February of each year as "American History Month"; to the Committee on the Judiciary.

By Mr. GRIFFIN:

H.J. Res. 612. A resolution proposing an amendment to the Constitution of the United States requiring the advice and consent of the House of Representatives in the making of treaties; to the Committee on the Judiciary.

H.J. Res. 613. A resolution proposing an amendment of the Constitution of the United States to prevent interference with, and eliminate the limitations upon, the power of the States to regulate health, morals, education, domestic relations, all property rights, transportation wholly within their borders, the election laws, with the limitations contained in this proposed amendment, and good order therein; to the Committee on the Judiciary.

By Mr. LONG of Maryland:

H.J. Res. 614. A resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week"; to the Committee on the Judiciary.

MEMORIAL

Under clause 4 of rule XXII, memorials were presented and referred, as follows:

97. By the SPEAKER: Memorial of the Legislature of the State of North Dakota, relative to regulation of outdoor advertising; to the Committee on Public Works.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred, as follows:

By Mr. ADDABBO:

H.R. 9695. A bill for the relief of Carmelo DiFiore; to the Committee on the Judiciary.

By Mr. BIAGGI:

H.R. 9696. A bill for the relief of Cirino Carroccetto; to the Committee on the Judiciary.

H.R. 9697. A bill for the relief of Rita Del Grosso; to the Committee on the Judiciary.

By Mr. BURKE of Massachusetts:

H.R. 9698. A bill for the relief of Christos G. Pappas; to the Committee on the Judiciary.

By Mr. FLOWERS:

H.R. 9699. A bill for the relief of Catherine E. Spell; to the Committee on the Judiciary.

By Mr. HANNA:

H.R. 9700. A bill for the relief of Mrs. Jasmine T. Dillon; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

84. The SPEAKER presented a petition of Mrs. Katarzyna Zerucha, Oleszyce, Poland, relative to widow's social security benefits; to the Committee on Ways and Means.

HOUSE OF REPRESENTATIVES—*Tuesday, April 1, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

He that giveth, let him do it with simplicity; he that ruleth with diligence; he that showeth mercy with cheerfulness.—Romans 12: 8.

O God, our Father, in whose love is our life, in whose service is our strength, and in whose will is our work, grant unto us increasing power that we may labor unceasingly for the welfare of our country and the well-being of all mankind.

Save us from discord and disunity, from pride and prejudice, from vice and violence. Fashion us into a people united in purpose and program to promote justice, to proclaim freedom, and to provide food for the hungry, housing for the ill housed, and jobs for men who will work.

May the spirit of wisdom abide in all our hearts that we may make decisions daringly, plan procedures patiently, and live with love the light in our lives.

In times of trouble let not our faith in Thee falter and in periods of prosperity let our faith find its fulfillment in humble service and a grateful spirit.

In the name of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed a resolution of the following title:

S. RES. 175

Resolved, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Dwight David Eisenhower, the former President of the United States and General of the Army of the United States.

Resolved, That as a token of honor to his illustrious statesmanship, his leadership in national and world affairs, his distinguished public service to his Nation, and as a mark of respect to one who has held such eminent public station in life, the Senate hereby expresses its deep sensibility of the loss the Nation has sustained by his death, and its sympathy with the family in their bereavement.

Resolved, That the two Senators from Kansas be appointed by the President of the Senate to attend the funeral of the deceased, to be held at Abilene, Kansas.

Resolved, That the Secretary of the Senate transmit these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the deceased the Senate do now adjourn.

SWEARING IN OF A MEMBER

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Tennessee, Mr. EDWARD JONES, be permitted to take the oath of office today. His certificate of election has not arrived, but there is no contest, and no question has been raised with regard to his election.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. JONES of Tennessee appeared at the bar of the House and took the oath of office.

RELIGIOUS INSTRUCTION IN THE ARMY

(Mr. SIKES asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SIKES. Mr. Speaker, a shocking proposal has been brought to light in Army plans to require chaplains to eliminate all reference to God and religious philosophy in lectures designed to instill moral responsibility in our soldiers. I would hope that the Army has a greater interest in God than it has in the protests of the American Civil Liberties Union.

Apparently the Army is bowing to complaints from the American Civil Liberties Union. Fortunately, Secretary of Defense Melvin R. Laird has ordered a high Pentagon review of Army plans and it is to be hoped that the plans will be dropped.

I find it extremely distasteful that the Army would feel a compulsion to bow to groups which object to religious teachings. The military services have an obligation to present inspiring programs of character guidance to members of the Armed Forces and this is particularly needful to the young men and women who first enter the service. Our Nation has a strong religious background and one of its principal strengths has been a firm faith in the Almighty.

I find myself completely out of patience with the Army proposal, and I have protested this action in strongest terms, both to the Army's Secretary and Chief of Staff and to Secretary Laird. America is not ready to give up religious teaching, either in or out of the Army.

CONGRESS MUST ACT NOW TO INSURE HEALTH AND SAFETY IN THE MINES

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HECHLER of West Virginia. Mr. Speaker, it was announced today that a fiery blast of methane gas trapped 145 to 168 men in a Mexican coal mine, located 75 miles from Eagle Pass, Tex. It may take as long as 15 days to reach all of them.

Mr. Speaker, other coal mine disasters in this Nation will surely occur unless Congress acts quickly to pass effective legislation, and the attitude of the entire coal industry changes. Every day that passes risks the danger in this Nation of a new and major tragedy in this most dangerous of all occupations.

Lots of coal mine representatives today, and even Members of Congress, are talking about the economic impact of increased safety, and the burdens that protection of health and safety may place on the coal industry. They should be talking instead of the human impact on the human beings who work in the coal mines.

Even if we pass a good law, it will not do any good unless there is a genuine will to safety on the part of the coal industry, the United Mine Workers, and the American people.

Every day that passes 28 more people are injured in the mines. Since the Farmington tragedy, 60 underground coal miners have been killed. I say in the name of humanity it is time that Congress act, and the American people back up action to clean up the coal mines and protect the safety of those who work in the mines.

GENERAL EISENHOWER'S NOBLEST CHARACTERISTIC WAS HUMILITY

(Mr. DANIEL of Virginia asked and was given permission to address the House for 1 minute, to revise and extend

his remarks and include extraneous matter.)

Mr. DANIEL of Virginia. Mr. Speaker, permit me to associate myself with the good and kind things which have been said here on the floor of the House about Dwight David Eisenhower.

Saturday night, March 29, I spoke to a junior chamber of commerce chapter at Clarksville, Va. A memorial service was held for General Eisenhower during the course of the meeting at which time I spoke briefly, and I should like to submit my remarks for the RECORD.

Of all the noble characteristics of General Eisenhower, perhaps his greatest was humility. Let me relate to you a personal experience that occurred during my term as national commander of the American Legion.

General Eisenhower gave me the opportunity to meet and discuss with him some of the problems with which we were faced at that time. During our discussion he evinced this humility in a remark about Gen. Omar Bradley. The general said:

When Stonewall Jackson was killed at Chancellorsville, General Lee is reported to have said, "With the death of General Jackson, I have indeed lost my right arm."

General Eisenhower continued—

Had I lost Bradley in Europe, I would have lost both arms.

General Eisenhower was a man of God who manifested deep feeling for his fellow beings. He served his Nation and the cause of freedom well. It is my prayer that God will grant him the peace and the rest that He has reserved for those who served Him well.

MISSILE TESTIMONY

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute.)

Mr. PUCINSKI. Mr. Speaker, this morning's paper reports that physicist Herbert A. York has seriously criticized Deputy Secretary of Defense Packard for trying to discredit his testimony on the anti-ballistic-missile system controversy. Mr. York startled the Senate recently when he testified before a committee that the main objections to the ABM is that the speed required to use such a weapon to knock down an oncoming enemy missile would not make it possible to bring the President in on a decision.

Apparently, what Mr. York does not understand and appreciate is the fundamental difference between the ABM Sentinel system, which is a defensive system, and the ICBM, the long-range intercontinental ballistic missile system, which is an offensive system.

Mr. York apparently is unwilling to understand that the Sentinel is designed purposely to be a quick response system so as to be able to intercept and render useless an enemy missile.

We have built into the ICBM a vast system of checks and balances to make sure that there can be no accidental launching of an ICBM, the intercontinental ballistic missile, because this missile could travel 6,000 to 8,000 miles over continents and involve this Nation in a nuclear war. We properly feel that only the President shall have the right to make the decision for use of our ICBM's. But such precautions are not necessary in the Sentinel, where the long-range missile, the Spartan, has only a 400-mile range and could not possibly be detonated in outer space over any country outside this continent.

It is rather appalling that a noted physicist of the stature of Mr. York has been unable to draw this distinction, and Mr. York now continues to oppose the ABM on a totally fallacious and spurious argument. I think Mr. Packard was right, and I would like him to know that some of us in the House stand behind his judgment.

THE ABM SHOULD BE RENAMED

(Mr. HAYS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAYS. Mr. Speaker, my contribution to the remarks of the gentleman from Illinois and the whole anti-ballistic-missile controversy might be summed up very succinctly. I think they ought to change the name of it from the Sentinel to "The Civil Servant," because it would not work and you cannot fire it.

CONGRESS NOT FOR SALE

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, I recently received in the mail a check for $95 from an organization calling itself "Another Mother for Peace" along with a statement that this was a "final payment" on an "invest for peace" project. This check was sent to me, the group said, because of my vote against what it called arms appropriations. Since I have consistently voted for strong defenses for the Nation, I cannot understand where the group obtained its list of Congressmen to be so rewarded.

The activities of this group are a slur on the integrity of Congress, a petty and improper attempt at vote buying. I wonder how many other Members have received checks from this group. Also, why an odd amount such as $95?

The implication of a final payment is that other checks had been sent; however this is the first I have ever heard about this organization and in checking with the House Internal Security Committee I find that they have no records on this group. It is lobbying activity such as this that damages the cause of those sincerely interested in promoting peace, and casts aspersions on Congress. In returning this check I am informing this organization that Congress is not for sale, that its votes for peace come from conscience, not contributions, and that the surest path to peace is a strong United States.

Mr. JONAS. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from North Carolina.

Mr. JONAS. I received one of those letters and one of those $95 checks, and I promptly sent it back advising the organization that I do not accept money for any of my votes in the House.

Mr. MICHEL. I appreciate the gentleman's contribution.

CHAPLAINS ORDERED TO ELIMINATE REFERENCE TO GOD IN LECTURES

(Mr. WHITEHURST asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WHITEHURST. Mr. Speaker, I have just learned through the alertness of the Honorable WILLIAM G. BRAY that the Army has ordered chaplains to eliminate all reference to God and religious philosophy in lectures aimed at instilling moral responsibility in its soldiers.

Mr. Speaker, I regard this as one more step in the steady erosion of our moral fiber. I understand that this new policy was prompted by a complaint from the American Civil Liberties Union.

Having forced a major branch of the armed services to take this step, they are now asking that the Air Force and Navy do the same. I suppose that the next move will be to pull down the words above your chair and remove the same phrase from our coins and bills. It is inconceivable to me that we should so willingly submit to such demands. We cry out in remorse over the loss of our moral values and we deplore the ungodlike behavior of so many of our citizens and particularly our youth—yet the kind of action where we voluntarily omit any reference to the Almighty in trying to instill moral responsibility in our soldiers is conclusive proof that we are engaging in the abdication of a principle on which this Nation was founded. We are saying in effect "In God we no longer trust."

TO EXTEND THE TIME FOR THE MAKING OF FINAL REPORT BY COMMISSION TO STUDY MORTGAGE INTEREST RATES

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 37) to extend the time for the making of a final report by the Commission To Study Mortgage Interest Rates.

The Clerk read the title of the Senate joint resolution.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 37

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4(g) of the Act of May 7, 1968 (Public Law 90–301) is amended by striking out "Said report of the Commission shall be made by April 1, 1969," and inserting in lieu thereof the following: "The Commission may make an interim report not later than April 1, 1969, and shall make a final report of its study and recommendation not later than July 1, 1969,".

Mr. TEAGUE of Texas. Mr. Speaker, when the Congress enacted Public Law 90–301, there was included in this law a 15-member Commission To Study Mortgage Interest Rates, with particular reference to those which apply to mortgages guaranteed by the Veterans' Administration and insured by the Federal Housing Administration. The original law provided for a report by April 1, 1969. While the Commission has been diligent in proceeding in regard to making appropriate recommendations and findings, it is obvious it will not be possible to meet this deadline. The resolution which has been passed unanimously by the Senate extends the period of time by 3 months to July 1, 1969.

I know of no opposition to the resolution and hope that it may be promptly approved.

Mr. GROSS. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I ask the gentleman from Texas if this will require any additional appropriation?

Mr. TEAGUE of Texas. No, sir. This will require not 1 cent.

Mr. GROSS. Mr. Speaker, I thank the gentleman from Texas.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

PRIVATE CALENDAR

The SPEAKER pro tempore. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

CLAIM OF JOHN T. KNIGHT

The Clerk called the bill (H.R. 1507) conferring jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of John T. Knight.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MUTUAL BENEFIT FOUNDATION

The Clerk called the bill (H.R. 2214) for the relief of the Mutual Benefit Foundation.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

JOHN THOMAS COSBY, JR.

The Clerk called the bill (H.R. 2275) for the relief of John Thomas Cosby, Jr.

There being no objection, the Clerk read the bill, as follows:

H.R. 2275

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 2401 of title 28 or any other statute of limitations or delay or laches or any prior release, jurisdiction is hereby conferred upon the United States District Court for the Southern Division of the Northern District of Alabama to hear, determine and render judgment on the claim of John Thomas Cosby, Junior, of Prattville, Alabama, based upon the injuries and disabilities suffered in an accident which occurred on or about October 28, 1955, in Birmingham, Alabama, when he was struck by a wheel which allegedly had come off a United States Post Office truck. The action provided for in this Act shall be instituted within one year of the effective date of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

WILLIAM J. HURLEY

The Clerk called the bill (H.R. 1721) for the relief of William J. Hurley.

There being no objection, the Clerk read the bill, as follows:

H.R. 1721

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That William J. Hurley of Los Altos, California, is hereby relieved of liability to the United States in the amount of $602.56 representing an overpayment of compensation as an employee of the National Aeronautics and Space Administration in the period from July 21, 1964, through July 31, 1965, inclusive, which resulted from retroactive adjustment in his salary by reason of a change in the law made by Public Law 88–426.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to said William J. Hurley, the sum of any amounts repaid or withheld from him by reason of the liability referred to in section 1 of this Act. No part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ENRICO DEMONTE

The Clerk called the bill (H.R. 2335) for the relief of Enrico DeMonte.

There being no objection, the Clerk read the bill, as follows:

H.R. 2335

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in the determination of the right of Enrico DeMonte, of Niagara Falls, New York, to widower's insurance benefits under section 202(f)(1) of the Social Security Act, as amended (42 U.S.C. 402(f)(1), as amended), the said Enrico DeMonte shall be held and considered to have been receiving at least one-half of his support from his late wife, Rose DeMonte, at the time of her death on October 15, 1962.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BEASLEY ENGINEERING CO., INC.

The Clerk called the bill (H.R. 2876) for the relief of the Beasley Engineering Co., Inc.

There being no objection, the Clerk read the bill, as follows:

H.R. 2876

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the Beasley Engineering Company, Incorporated, of Emeryville, California, the sum of $23,746.55 in full satisfaction of its claims against the United States for losses sustained as the result of damage or destruction of portions of the Dalles irrigation works being constructed under Bureau of Reclamation contract numbered 14–06–D–4014, specifications numbered DC–6004, as a result of floods and high waters during December 1964 and January 1965, which destroyed or damaged work already in place and necessitated reconstruction and repair of installations covered by said contract: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

On page 1, line 6: Strike "$23,746.55" and insert "$11,873.27".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HENRY E. DOOLEY

The Clerk called the bill (H.R. 2940) for the relief of Henry E. Dooley.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CLAIM OF SOLOMON S. LEVADI

The Clerk called the bill (H.R. 3213) conferring jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of Solomon S. Levadi.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

FRANK KLEINERMAN

The Clerk called the bill (H.R. 3377) for the relief of Frank Kleinerman.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ESTATE OF PIERRE SAMUEL DU PONT DARDEN

The Clerk called the bill H.R. 3348) for the relief of the estate of Pierre Samuel du Pont Darden.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

SFC. PATRICK MARRATTO

The Clerk called the bill (H.R. 3379) for the relief of Sfc. Patrick Marratto, U.S. Army (retired).

There being no objection, the Clerk read the bill, as follows:

H.R. 3379

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Sergeant First Class Patrick Marratto, United States Army (retired), of Springfield, Massachusetts, is hereby relieved of liability to the United States in the amount of $786.46, the amount of an overpayment of compensation as a member of the United States Army in the period beginning June 1, 1950, and ending May 24, 1964, because of an administrative error. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for any amount for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Sergeant First Class Patrick Marratto, an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, in complete or partial satisfaction of the liability to the United States specified in the first section. No part of the amount appropriated by this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

On page 1, line 6, strike "$786.46" and insert "$786.20".

On page 1, line 8, strike "May 24, 1964" and insert "January 31, 1967".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NEW BEDFORD STORAGE WAREHOUSE CO.

The Clerk called the bill (H.R. 3480) for the relief of the New Bedford Storage Warehouse Co.

There being no objection, the clerk read the bill, as follows:

H.R. 3480

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the New Bedford Storage Warehouse Company of New Bedford, Massachusetts, the sum of $365.98 in full settlement of the claims of said company against the United States arising out of services performed for the United States Coast Guard, pursuant to Government bill of lading A–0022724. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HARVEY E. WARD

The Clerk called the bill (H.R. 3990) for the relief of Harvey E. Ward.

There being no objection, the Clerk read the bill as follows:

H.R. 3990

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Congress hereby consents, for the purposes of the eighth clause of section 9 of article I of the Constitution of the United States, to the acceptance by Harvey E. Ward, United States Coast Guard, retired, of Taipei, Taiwan, from the State of Tasmania, Commonwealth of Australia, of the office and emoluments of teacher in the department of education in such State during the calendar years 1960 through 1964.

SEC. 2. Said Harvey E. Ward is relieved of any liability to the United States which the Comptroller General (in the decision numbered B–154213) held arose from his receipt of United States Coast Guard retired pay in violation of the eighth clause of section 9 of article I of the Constitution. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for amounts for which liability is relieved by this Act.

SEC. 3. The Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Harvey E. Ward an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, with respect to the liability to the United States specified in section 2 of this Act. No part of the amount appropriated in this section shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PEDRO IRIZARRY GUIDO

The Clerk called the bill (H.R. 5000) for the relief of Pedro Irizarry Guido.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

REDDICK B. STILL, JR., AND RICHARD CARPENTER

The Clerk called the bill (H.R. 6400) for the relief of Reddick B. Still, Jr., and Richard Carpenter.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

AMERICAN JOURNAL OF NURSING

The Clerk called the bill (H.R. 6583) for the relief of the American Journal of Nursing.

There being no objection, the Clerk read the bill, as follows:

H.R. 6583

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Comptroller General of the United States be, and he hereby is, authorized and directed to settle and adjust the claim of The American Journal of Nursing, New York, New York, for an advertisement placed in its August 1966 issue of The American Journal of Nursing by the Department of Health, Education, and Welfare, and to allow in full and final settlement of such claim the sum of $238.50. Such amount shall be payable from the appropriation "Hospitals and Medical Care, Public Health Service, 1970".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CORBIE F. COCHRAN, JR.

The Clerk called the bill (H.R. 6584) for the relief of Corbie F. Cochran, Jr.

There being no objection, the Clerk read the bill, as follows:

H.R. 6584

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding section 1310 of the Supplemental Appropriation Act, 1952, as amended (5 U.S.C. 3101, footnote), the advancement in grade of Corbie F. Cochran, Junior, an employee of the Department of the Army, Fort Eustis, Virginia, from GS–6 to GS–9, effective April 29, 1964, shall be deemed to have been in conformity with law, such advancement in contravention of said section 1310,

having been made as a result of administrative error without fault or knowledge of its illegality on the employee's part.

SEC. 2. (a) That the said Corbie F. Cochran, Junior, is relieved of any liability to the United States arising out of the advancement described in section 1 of this Act. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for the amount for which liability is relieved by this subsection.

(b) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Corbie F. Cochran, Junior, an amount equal to the aggregate of the amounts paid by him or withheld from amounts otherwise due him in partial liquidation of his liability to the United States referred to in subsection (a) of this section. No part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on accounts of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MR. AND MRS. A. F. ELGIN

The Clerk called the bill (H.R. 6585) for the relief of Mr. and Mrs. A. F. Elgin.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

NOEL S. MARSTON

The Clerk called the bill (H.R. 6378) for the relief of Noel S. Marston.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

BASIL ROWLAND DUNCAN

The Clerk called the bill (S. 165) for the relief of Basil Rowland Duncan.

There being no objection, the Clerk read the bill, as follows:

S. 165

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Basil Rowland Duncan shall be held and considered to have been lawfully admitted to the United States for permanent residence as of February 13, 1962.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

NGUYEN VAN HUE

The Clerk called the bill (S. 586) for the relief of Nguyen Van Hue.

There being no objection, the Clerk read the bill, as follows:

S. 586

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Nguyen Van Hue may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Master Sergeant Norman Leon Snyder, RO 43011064, United States Army, and Muriel Guest Snyder, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COSMINA RUGGIERO

The Clerk called the bill (H.R. 1437) for the relief of Cosmina Ruggiero.

There being no objection, the Clerk read the bill, as follows:

H.R. 1437

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Cosmina Ruggiero may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, and a petition filed in her behalf by Giovanna Martinelli, a citizen of the United States, may be approved pursuant to section 204 of the Act.

With the following committee amendment:

On page 1, line 8, at the end of the bill, change the period to a *colon* and add the following: *"Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AI BOK CHUN

The Clerk called the bill (H.R. 1708) for the relief of Ai Bok Chun.

There being no objection, the Clerk read the bill, as follows:

H.R. 1708

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in the administration of the Immigration and Nationality Act, Ai Bok Chun may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Carl and Gertrude Eggebeen, citizens of the United States, pursuant to section 204 of the Act. Section 204 (c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

With the following committee amendment:

On page 1 after line 10 at the end of the bill change the period to a colon and add the following: *"Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. MARJORIE J. HOTTENROTH

The Clerk called the bill (H.R. 1939) for the relief of Mrs. Marjorie J. Hottenroth.

There being no objection, the Clerk read the bill, as follows:

H.R. 1939

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mrs. Marjorie J. Hottenroth shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That, in the administration of the Immigration and Nationality Act, Mrs. Marjorie J. Hottenroth, the widow of a United States citizen, shall be deemed to be an immediate relative and the provisions of section 204 of the Act shall be inapplicable in her case."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARIO SANTOS GOMES

The Clerk called the bill (H.R. 1960) for the relief of Mario Santos Gomes.

There being no objection, the Clerk read the bill, as follows:

H.R. 1960

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mario Santos Gomes shall be held and considered to have complied with the provisions of section 316 of that Act as they relate to residence and physical presence.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOSEFINA POLICAR ABUTAN FULIAR

The Clerk called the bill (H.R. 2315) for the relief of Josefina Policar Abutan Fuliar.

There being no objection, the Clerk read the bill, as follows:

H.R. 2315

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 203(a)(1) and 204 of the Immigration and Nationality Act, Josefina Policar Abutan Fuliar shall be held and considered to be the natural-born alien daughter of Mr. and Mrs. Benjamin Fuliar, citizens of the United States: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARIA PRESCILLA CARAMANZANA

The Clerk called the bill (H.R. 2948) for the relief of Maria Prescilla Caramanzana.

There being no objection, the Clerk read the bill, as follows:

H.R. 2948

Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That, for the purposes of sections 203(a)(1) and 204 of the Immigration and Nationality Act, Maria Prescilla Caramanzana shall be held and considered to be the natural-born alien daughter of Adolfo Caramanzana, a citizen of the United States: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Olga Concepcion Perez de Lanio shall be held and considered to have been lawfully admitted to the United States for permanent residence on April 21, 1962.

Mr. MATSUNAGA. Mr. Speaker, I rise in support of H.R. 6896, a private bill which provides that, for the purposes of the Immigration and Nationality Act, Dr. Olga Concepcion Perez de Lanio shall be held and considered to have been lawfully admitted to the United States for permanent residence on April 21, 1962. If the legislation is enacted, the beneficiary would be eligible for immediate naturalization, provided, of course, she meets the requirements other than those relating to the period of permanent residence in the United States.

Dr. Lanio, a native and citizen of Cuba, first entered the United States as a parolee on April 21, 1962. After a 1-day journey to Canada on November 23, 1964, to obtain an immigrant visa, she was lawfully admitted to the United States as a permanent resident on that day. She now resides at 8810 Lanier Drive, Silver Spring, Md., with her husband, Jose Antonio Lanio, an accountant, and their two children, Jose Antonio Lanio, Jr., age 16, and Maria Isabel Lanio, age 13. Both children were born in Cuba.

A dentist by profession, Dr. Lanio received her diploma from the University of Havana and gained several years of professional experience in her native country before coming to the United States. She is presently employed as a supervisor in a clinic of orthodontists located at 5010 Wisconsin Avenue, Washington, D.C. She is not licensed to practice her profession in any State or in the District of Columbia.

The beneficiary believes that American citizenship, with all of its attendant rights and privileges as well as duties, would enhance her opportunities to study and work at the same time. In order to practice her profession in the United States she has determined that she would have to enter a university and take certain additional courses to satisfy curricular requirements.

As as American citizen and with a license to practice dentistry in the United States, Dr. Lanio would be able to help relieve the shortage of dentists in this country. She is aware of the many social action programs sponsored by the Federal Government which could utilize her services, and her interest at present leans heavily toward eventual employment in this field. She is convinced that she would be able to render better service to the community as an active professional, and American citizenship would help immeasurably to her early attainment of this objective.

The same legislation as H.R. 14654 was passed by this body on July 2, 1968. It was not acted upon by the Senate before the 90th Congress adjourned sine die. Favorable action today on H.R. 6896 would afford the other body sufficient time in which to act. Enactment of this legislation would be beneficial not only to Dr. Lanio, but also to the country of which she desires so much to become a citizen. I strongly urge a unanimous vote for this private bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ELISABETA HORWATH

The Clerk called the bill (H.R. 2464) for the relief of Elisabeta Horwath.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

ANNA DEL BAGLIVO

The Clerk called the bill (H.R. 4546) for the relief of Anna Del Baglivo.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MRS. ARANKA MLINKO

The Clerk called the bill (H.R. 6366) for the relief of Mrs. Aranka Mlinko.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

TERESINA FARA

The Clerk called the bill (H.R. 6670) for the relief of Teresina Fara.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

GIUSEPPE DeSTEFANO

The Clerk called the bill (H.R. 6931) for the relief of Giuseppe DeStefano.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. BOLAND. Mr. Speaker, I ask unanimous consent that the further call of the Private Calendar be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

SPECIAL PAY FOR CERTAIN NUCLEAR QUALIFIED SUBMARINE OFFICERS

Mr. RIVERS. Mr. Speaker, pursuant to the unanimous-consent agreement of March 27, 1969, I call up for immediate consideration the bill (H.R. 9328) to amend title 37, United States Code, to provide special pay to naval officers, qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Clerk read the bill, as follows:

H.R. 9328

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 5 of title 37, United States Code, is amended—

(1) by adding the following new section:

"§312. Special pay: nuclear-qualified submarine officers extending period of active service

"(a) Under regulations to be prescribed by the Secretary of the Navy, an officer of the naval service who—

"(1) is entitled to basic pay;

"(2) is currently designated 'qualified in submarines';

"(3) has the current technical qualification for duty in connection with supervision, operation and maintenance of naval nuclear propulsion plants;

"(4) has not completed ten years of commissioned service; and

'(5) executes a written agreement to remain in active submarine service for one period of four years in addition to any other period of obligated active service,

may, upon the acceptance by the Secretary or his designee of the written agreement, in addition to all other compensation to which he is entitled, be paid a sum of money not to exceed $3,750 for each year of the active-service agreement. The Secretary of the Navy shall determine semiannually the necessity for continuance of the special pay and the rate of special pay per year for such active-service agreements accepted within each six-month period. Upon acceptance of the agreement by the Secretary or his designee, the total amount payable shall become fixed and shall be paid in four equal yearly installments, commencing at the expiration of the initial obligated service; except, the Secretary or his designee may accept the active-service agreement not more than one year in advance of the expiration of the initial obligated active service and the amount may then be paid in five yearly installments, not to exceed $3,000 per year, commencing with the date of acceptance of the agreement.

"(b) No more than one agreement for each officer shall be accepted under this section.

"(c) Pursuant to regulations prescribed by the Secretary of the Navy and subject to such exceptions as may be prescribed in those regulations, refunds, on a pro rata basis, of sums paid pursuant to this section may be required if the officer having received the payment fails to complete the full period of four years of active submarine service which he agreed to serve.

"(d) Nothing in this section shall alter or modify the obligation of a regular officer to perform active service at the pleasure of the President. Completion of the additional period of four years' active submarine service under this section shall in no way obligate the President to accept a resignation submitted by a regular officer at the end of the four-year period.

"(e) The provisions of this section shall be effective only in the case of officers who, on or before July 30, 1973, execute the required written agreement to remain in active service."

(2) by inserting the following new item in the analysis:

"312. Special pay: nuclear-qualified submarine officers extending period of active service."

Mr. RIVERS. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, the bill, H.R. 9328, provides special pay to a small group of officers in the submarine service who are nuclear qualified.

This measure is urgently recommended by the executive branch as the proposed short-term solution to a serious problem confronting our nuclear submarine Navy.

RESIGNATION PROBLEM

Briefly, all of us in the Congress have heard rumors that an unprecedented number of junior officers who man our nuclear attack and Polaris submarines have submitted resignations requesting their release from active duty.

Unfortunately, these rumors are true. For example, almost half of year groups 1961 to 1964 have already submitted resignation requests.

The Committee on Armed Services was told that this officer community, that is officers who are nuclear qualified and assigned to our submarine service number fewer than 2,000. These officers currently man and operate 82 Polaris crews—41 SSBN's—and 47 nuclear attack—SSN—submarine crews. Nine more newly commissioned SSN's will require additional manning prior to June 30, 1970.

Since each of these submarines require a minimum of 11 nuclear qualified officers, it is evident that more than 1,400 officers are currently required to man these nuclear submarines presently in our inventory leaving precious few for necessary assignment to hard core shore billets and refresher training.

As a consequence of this circumstance, these officers have not been given the normal sea-to-shore rotation opportunity that is afforded their service contemporaries. Thus for example, there are officers in this program who have not been assigned to a shore billet in more than 18 years—an absolutely astounding and shameful situation.

The nuclear submarine program, by its very nature, requires officers of the highest possible quality and technical competence. Yet, the best efforts of the Navy to date have precluded the development of an adequate inventory of trained officers to meet the critical manning demands posed by our vital nuclear submarine fleet.

There are many reasons given for this unfortunate condition all of which the Navy hopes in some manner to correct or alleviate. However, one of the most critical requirements is that these young men be given an additional substantial monetary incentive. Surveys and questionnaires made by the Navy gave every evidence that a substantial monetary incentive would go a long way toward stemming the flood of resignations now being received from officers in this program.

THE BILL

The bill before you today is directed to this problem and provides authority to the Secretary of the Navy to provide a bonus of $15,000 payable in four yearly increments of $3,750 per year for its submarine officers who are nuclear qualified and agree to extend their active service for a period of 4 years beyond their obligated service.

THE COST

The estimated annual cost of this program of from $2.4 to $3.8 million is almost negligible when viewed in the perspective of the alternatives.

It costs us conservatively $124,500 to train one nuclear qualified submarine officer and bring him to the point where he is capable of becoming a department head or a commanding officer of a nuclear submarine. Therefore, if we can persuade only a few of these officers to continue their active service, we will have saved the Government a great deal of money and more importantly assured the maintenance of this absolutely indispensable strategic force capability.

VARIABLE REENLISTMENT BONUS

I might also point out that the law presently provides a similar management tool in the case of enlisted personnel. This is the so-called variable reenlistment bonus which has been payable to enlisted personnel upon the occasion of their first reenlistment. The success of this management device in respect to enlisted personnel is eloquently demonstrated by the fact that we do not have any problem in retaining nuclear qualified enlisted personnel in our submarine program.

The Committee on Armed Services reported this bill unanimously and I therefore urge that you give it your wholehearted support and approval.

Mr. GERALD R. FORD. Mr. Speaker, will the distinguished gentleman from South Carolina yield?

Mr. RIVERS. I yield to the distinguished minority leader.

Mr. GERALD R. FORD. I agree with the basic purpose of this legislation, but let me ask the chairman of the Committee on Armed Services this question: When the men leave active duty on board nuclear submarines and become commanding officers not on such duty, would they receive the additional pay at that time?

Mr. RIVERS. No. They have got to be qualified in nuclear submarine operations

and remain in the nuclear submarine service.

Mr. GERALD R. FORD. When the gentleman says "remain in the submarine service," does that mean actually serving on board or does it mean something else?

Mr. RIVERS. Of course, they have a system of rotation from ship to shore because these men study all the time. They go through this intensive training. As the gentleman knows all of the Polaris crews are divided into two parts, one at sea and one on shore. Also a very few are rotated to hard-core shore billets or to advanced or refresher nuclear training. They would receive it during such rotation.

Mr. GERALD R. FORD. I thank the gentleman for his explanation and I am in favor of this extra compensation. However, when a man has previously served on active duty with a nuclear submarine and subsequently attains the rank of captain and is no longer in the nuclear submarine service would he receive this compensation?

Mr. RIVERS. Oh, no; he has got to remain in the nuclear submarine service. If he goes into the nonnuclear submarine service or the surface Navy, he loses his entitlement.

Mr. GERALD R. FORD. In other words, he loses his extra compensation when he leaves active duty with the nuclear submarine service program?

Mr. RIVERS. That is right.

Now, mind you—mind you—these junior officers have 10 years or less of service. To be a captain you have to have considerably longer service, 16 to 18 years of service ordinarily.

Mr. GERALD R. FORD. If the gentleman will yield further, when they go to the Pentagon and are no longer in the nuclear submarine program, they lose the pay also; is that correct?

Mr. RIVERS. The answer to the question as posed by the gentleman is that they would not receive it. I would point out, however, that there are so few of them that there would be no place in the Pentagon for them. There are only 2,000 at the most, and they are all junior officers. So again I say to the gentleman that that would not occur.

Mr. GERALD R. FORD. It is my clear understanding, then, that when they get to a higher rank and no longer serve specifically in the nuclear submarine program that the extra pay would not go to their subsequent assignment?

Mr. RIVERS. The gentleman is correct. It does not follow them. Let me emphasize that this is a one-time bonus proposition. That is, in accordance with the bill, an officer is not eligible for this one-time bonus unless he has, first, less than 10 years of commissioned service; second, is currently designated qualified in submarines; third, has the current technical qualification for duty in connection with supervision, operations, and maintenance of naval nuclear propulsion plants; and finally fourth, has executed a written agreement to remain in the active submarine service for one period of 4 years in addition to any other period of obligated service.

Moreover, the law specifically provides that no more than one agreement can be made with each officer under the bill and that in the event he fails to complete the full period of 4 years of submarine service to which he agreed to serve, he is required to refund the bonus on a prorata basis.

Stated another way, the law is clearly aimed at junior officers, not captains. The Navy now has resignations from these junior officers amounting to more than 400, with new resignation requests being received at a rate of 30 per month. Thus, we have a very vital and serious problem confronting our nuclear submarine service and Congress must act immediately.

Mr. GERALD R. FORD. I thank the gentleman for his explanation.

Mr. ARENDS. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in support of H.R. 9328, and urge its unanimous adoption by the House.

The distinguished chairman of our committee, the Honorable L. MENDEL RIVERS, has done his usual outstanding job in describing the purpose and justification for the legislation. Anything that I may say further in the way of explanation and justification would therefore be anticlimactic.

However, I think it particularly pertinent to emphasize the absolute urgency of this legislation.

On the basis of testimony received by the committee, it is abundantly clear that we may already be too late. Many of our highly trained nuclear submarine officers are disenchanted with their service life, and it is quite possible that this effort here today may not be satisfactory for some of them.

Yet, it is evident that we have no alternative. We must approve this legislation to make it possible for the Navy to attempt to persuade these young men to remain in their present profession.

All the members of the Committee on Armed Services on both sides of the aisle voted unanimously for this legislation. I am sure therefore that you will do likewise.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CALL OF THE HOUSE

Mr. MATSUNAGA. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

Mr. BOGGS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 32]

Abernethy	Brown, Calif.	Dwyer
Alexander	Brown, Ohio	Edwards, Ala.
Andrews, Ala.	Carey	Edwards, La.
Barrett	Celler	Esch
Bates	Clark	Evins, Tenn.
Bell, Calif.	Colmer	Fish
Berry	Conyers	Flynt
Blatnik	Daddario	Foley
Bow	Davis, Ga.	Fulton, Tenn.
Brasco	Dawson	Gallagher
Brock	Dent	Garmatz
Brooks	Diggs	Gettys
Gray	Meeds	Rosenthal
Green, Pa.	Miller, Calif.	Roybal
Griffin	Minshall	Rumsfeld
Harvey	Moorhead	Ruppe
Hébert	Murphy, Ill.	Scheuer
Jones, Ala.	Murphy, N.Y.	Schwengel
Karth	O'Neal, Ga.	Shipley
Kirwan	Ottinger	Smith, Calif.
Kyros	Patman, Tex.	Snyder
Landrum	Pirnie	Sullivan
Long, La.	Pollock	Ullman
Long, Md.	Powell	Van Deerlin
Lukens	Pryor, Ark.	Watkins
McClure	Purcell	Watts
Macdonald, Mass.	Rarick	Wyatt
Mathias	Rees	Wydler
May	Reid, Ill.	Zwach
	Ronan	

The SPEAKER pro tempore. On this rollcall 342 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

AUTHORIZING FUNDS FOR EXPENSES OF COMMITTEE ON INTERNAL SECURITY

Mr. HAYS. Mr. Speaker, by direction of the Committee on House Administration, I submit a privileged report (Rept. No. 91–43) on the resolution (H. Res. 270) authorizing the expenditure of certain funds for the expenses of the Committee on Internal Security, and ask for immediate consideration of the resolution.

The Clerk read the resolution, as follows:

H. RES. 270

Resolved, That, effective February 18, 1969, expenses of conducting the investigations authorized by clause 11 of rule XI of the Rules of the House of Representatives, incurred by the Committee on Internal Security, acting as a whole or by subcommittee, not to exceed $425,000, including expenditures for employment of experts, special counsel, investigators, and clerical, stenographic, and other assistants, shall be paid out of the contingent fund of the House on vouchers authorized by said committee and signed by the chairman of the committee, and approved by the Committee on House Administration.

SEC. 2. That the official stenographers to committees may be used at all hearings, if not otherwise officially engaged.

SEC. 3. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House, and the chairman of the Committee on Internal Security shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration under existing law.

SEC. 5. Effective January 3, 1969, funds made available pursuant to this resolution shall be available for expenses incurred by the Committee on Un-American Activities pursuant to clause 19 of rule XI of the Rules of the House of Representatives as in effect during the period beginning January 3, 1969, and ending February 18, 1969.

With the following committee amendment:

On page 1, line 5, strike out "$425,000", and insert in lieu thereof "$400,000".

Mr. HAYS. Mr. Speaker, I yield 5 minutes to the gentleman from California

(Mr. EDWARDS) for the purpose of debate only.

(Mr. EDWARDS of California asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. EDWARDS of California. I thank the gentleman from Ohio, the distinguished chairman of the subcommittee, for giving me this time.

Mr. Speaker, if given the opportunity at the appropriate time I will offer a motion to recommit this additional appropriation—the recommittal motion to require that the House Committee on Internal Security hold open hearings on the need for this money.

I refer to this legislation as an additional appropriation because that is what it is. The Committee on Internal Security is provided sufficient funds automatically under the Legislative Reorganization Act of 1946 as a standing committee of the House. The bill you are considering today is a request for additional funds.

In 1969 the Internal Security Committee will receive automatically $166,340. To this must be added other automatic emoluments such as printing, stationery, stamps, telegrams, office equipment, furniture and office space. A modest estimate of these costs is $75,000 per year. So we see that even if you deny this bill, the Internal Security Committee should continue to survive comfortably with an income of approximately $20,000 per month.

I suggest that there is a sound legal reason why this additional $400,000 should not be appropriated. A substantial part will obviously be spent on the "public" library maintained by the Internal Security Committee. Nowhere in the authorizing resolution for the committee is there authority to create and maintain this library.

I refer to the library as "public." The information is available to all Members of Congress and their staffs. The Congressman can disseminate the information as he sees fit. In addition, more than 40 Federal agencies or departments have access to the files with no apparent restrictions regarding public distribution of the information.

The library consists of hundreds of thousands of dossiers on individual Americans and organizations. Derogatory information is collected from newspapers, magazines, letterheads, the committee's investigation files, and presumably from unsolicited letters. I do not know if attempts are made to verify what is put in the files. What is clear is that the most outrageous gossip, innuendo, and outright lies have been distributed throughout the country as official House of Representatives information.

I hold here examples—excerpts from 30 pages of the CONGRESSIONAL RECORD of July 29, 1963, purporting to prove that the National Association for the Advancement of Colored People is subversive and infiltrated with Communists. Among the NAACP leaders whose loyalty is impugned in the most reckless manner in these excerpts from HUAC files are Secretary Robert C. Weaver, Ambassador Ralph Bunche, Roy Wilkins, A. Philip Randolph, Clarence M. Mitchell, and Supreme Court Justice Thurgood Marshall. I have asked unanimous consent that these excerpts be included in the RECORD immediately following my remarks.

A recent example of the shocking methods by which these files are used took place last week in Sacramento, Calif. A subcommittee of the California State Senate was considering a resolution memorializing the tragic assassination on April 4, 1968, of Dr. Martin Luther King. One of the Senators presented to the subcommittee a file including information from the library of the House Internal Security Committee accusing Dr. King of having had Communist connections. I do not have to explain to my colleagues, Mr. Speaker, that all of the implications impugning the patriotism of this great American were false.

The additional money for the committee you are asked to vote for today supports this "public" library.

I recognize that the Internal Security Committee has a new chairman, the distinguished gentleman from Missouri (Mr. ICHORD), who is making efforts to maintain a dignity and decorum that the committee has lacked in the past. Mr. ICHORD has stressed, however, that he intends to preserve "the full jurisdiction and all the power it has possessed during the almost 25 years of its operation under its present mandate" including, we must assume, the library.

It is my position that this "public" library is unauthorized and that funds should not be approved for it. If the Committee on Internal Security wants to maintain such a library, then it should proceed as would any other committee and request the appropriate legislation.

We should refuse to authorize House Resolution 270 until we get a clear understanding of how the committee intends to spend its money.

That is the purpose of my motion to recommit—to hold public hearings on the committee's need for the money.

I urge a yea vote on the motion to recommit.

The material referred to follows:

FEBRUARY 13, 1956.

Subject: Robert C. Weaver, national board of directors, NAACP, 1961.

The public records, files, and publications of this committee contain the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or findings of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow traveler unless otherwise indicated.

Robert C. Weaver, identified from Washington, D.C., as an economic adviser to the Secretary of Interior, was discussion leader of a panel on "The Federal Housing Program and the Negro" at the Second National Negro Congress as shown by the program of that congress which was held in Philadelphia, October 15–17, 1937.

The National Negro Congress was cited as subversive and Communist by the Attorney General of the United States in letters released December 4, 1947, and September 21, 1948. The special committee in its report of January 3, 1939 (p. 81), cited the National Negro Congress as "the Communist-front movement in the United States among Negroes." The Attorney General had cited the group previously as follows: "From the record of its activities and the composition of its governing bodies, there can be little doubt that it has served what James M. Ford, Communist vice presidential candidate elected to the executive committee in 1937, predicted: "An important sector of the democratic front," sponsored and supported by the "Communist Party" (CONGRESSIONAL RECORD, Sept. 24, 1942, pp. 7687 and 7688).

The Daily Worker of February 8, 1939 (p. 2), listed Robert C. Weaver, identified as Assistant Housing Administrator of the Department of Interior, as one of the signers of the Negro People's Committee to Aid Spanish Democracy letter to lift the Spanish embargo. The special committee in its report of March 29, 1944 (p. 180), cited the Negro People's Committee to Aid Spanish Democracy as a Communist-front organization.

Robert C. Weaver, Washington, D.C., contributed financially to Social Work Today as shown by the January 1941 issue of that publication (pp. 16–18). Social Work Today was cited as a Communist magazine by the special committee in its report of March 29, 1944 (p. 129).

R. C. Weaver, 1206 Kenyon Street, Washington, D.C., was listed as a member of the Washington Book Shop on a 1941 membership list of the organization subpenaed by this committee. The Washington Book Shop Association was cited as subversive and Communist by the Attorney General in letters released December 4, 1947, and September 21, 1948. The Attorney General cited the organization previously as showing "evidence of Communist penetration or control" according to the CONGRESSIONAL RECORD, September 24, 1942 (p. 7688). The special committee in report of March 29, 1944 (p. 150), cited the organization as a Communist-front organization.

Robert C. Weaver was the author of The Negro Ghetto which was reviewed by Herbert Aptheker in the August 1948 issue of Masses and Mainstream (p. 85). The congressional committee, in its report on the Congress of American Women, April 26, 1950 (p. 75), cited Masses and Mainstream as successor to New Masses, a Communist magazine.

FEBRUARY 13, 1956.

Subject: Dr. Ralph Bunche, national board of directors, NAACP, 1961.

The public records, files, and publications of this committee contained in the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or findings of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow traveler unless otherwise indicated.

Dr. Ralph Bunche was a member of the executive board of the Washington committee, Southern Conference for Human Welfare, as shown on their letterhead of June 4, 1947. The special Committee on Un-American Activities cited the Southern Conference for Human Welfare as a Communist-front organization in its report of March 29, 1944. In 1947 the Committee on Un-American Activities released a report on the conference, in which it was cited as a Communist-front organization which sought to "attract southern liberals on the basis of its seeming interest in the problems of the South," although its "professed interest in southern welfare" was "simply an expedient for larger aims serving the Soviet Union and its subservient Communist Party in the United States" (Report No. 592 of June 12, 1947).

Ralph Bunche was a sponsor of the Conference on Civil Rights of the Washington Committee for Democratic Action, April 20–21, 1940, as shown by the conference call, page 4. A letterhead of the Washington Committee for Democratic Action dated April 26, 1940, named Dr. Bunche as one of the sponsors of that group.

The Washington Committee for Demo-

cratic Action was cited as subversive and Communist by the Attorney General of the United States in letters to the Loyalty Review Board, released December 4, 1947, and September 21, 1948. The organization was redesignated by the Attorney General, April 27, 1953, pursuant to Executive Order No. 10450, and included in the April 1, 1954, consolidated list of organizations previously designated. The Attorney General had previously cited the group as an affiliate or local chapter of the National Federation for Constitutional Liberties (CONGRESSIONAL RECORD, Sept. 24, 1942, pp. 7688 and 7689). The special Committee on Un-American Activities cited the organization as successor in Washington to the American League for Peace and Democracy and an affiliate of the national federation (reports of June 25, 1942, and Mar. 29, 1944).

Official proceedings of the National Negro Congress for 1936, pages 5 and 40, named Dr. Ralph Bunche, Washington, D.C., as a member of the presiding committee and a member of the national executive council of that organization.

The Special Committee on Un-American Activities cited the National Negro Congress as a Communist-front movement in the United States among Negroes, and reported that "the officers of the National Negro Congress are outspoken Communist sympathizers, and a majority of those on the executive board are outright Communists" (report of January 3, 1939). The Attorney General cited the National Negro Congress as a Communist-front organization (CONGRESSIONAL RECORD, September 24, 1942, pp. 7687 and 7688; press releases of December 4, 1947, and September 21, 1948; consolidated list of cited organizations, dated April 1, 1954).

The Washington Post and Times Herald, May 29, 1954, p. 6, reported that "A Federal loyalty board announced today that it has unanimously cleared Dr. Ralph J. Bunche of any and all charges," the article quoted the official announcement as follows:

"The full board had its second meeting with Dr. Bunche yesterday following which it unanimously reached the conclusion that there is no doubt as to the loyalty of Dr. Bunche to the Government of the United States.

"This conclusion has been forwarded to the Secretary of State for transmittal to the Secretary General of the U.N. At the same time it has been informally transmitted to Dr. Bunche."

Reference to the loyalty board's clearance of Dr. Bunche is found also in the Washington Evening Star, May 28, 1954, p. A–1.

FEBRUARY 13, 1956.

Subject: Thurgood Marshall, director counsel, NAACP Legal Defense Fund and Educational Fund, 1961.

The public records, files, and publications of this committee contain the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or findings of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow traveler unless otherwise indicated.

Thurgood Marshall was a member of the national committee of the International Juridical Association, as shown in the pamphlet, What Is the I.J.A.? The special Committee on Un-American Activities cited the International Juridical Association as "a Communist front and an offshoot of the International Labor Defense" (Rept. No. 1311, dated March 29, 1944). In a report on the National Lawyers Guild, prepared and published September 17, 1950, by the Committee on Un-American Activities, the International Juridical Association was cited as an organization which "actively defended Communists and consistently followed the Communist Party line."

A list of officers of the National Lawyers Guild, as of December 1949 (printed in the committee's report on the National Lawyers Guild, p. 18) contains the name of Thurgood Marshall, New York City, among the members of the executive board. He was shown to be an associate editor of the Lawyers Guild Review in the issue of May-June 1948 (p. 422). It was reported in the Daily Worker of November 30, 1942 (p. 1), that Mr. Marshall, special counsel of the National Association for the Advancement of Colored People, was one of those who submitted a report denouncing lynching and discrimination which was adopted by the national executive board of the National Lawyers Guild. It was also reported in the Washington Evening Star (February 8, 1948, p. A–22 and February 12, 1948, p. A–82), that Mr. Marshall, identified as special counsel, NAACP, criticized the loyalty program in a public forum held under the auspices of the National Lawyers Guild in Washington, D.C.

The National Lawyers Guild was cited by the special Committee on Un-American Activities as a Communist front in Report No. 1311 of March 29, 1944 (p. 149). In the committee's report on the organization, released in 1950, the guild was cited as a Communist front which "Is the foremost legal bulwark of the Communist Party, its front organizations, and controlled unions" and which "since its inception has never failed to rally to the legal defense of the Communist Party and individual members thereof, including known espionage agents."

The Daily Worker of November 24, 1947 (p. 4) reported that Thurgood Marshall was among a group of attorneys who sent a telegram to New York Congressmen asking them to oppose the contempt citations in the case of the so-called Hollywood 10.

FEBRUARY 13, 1956.

Subject: Clarence M. Mitchell, director, Washington Bureau, NAACP, 1961.

The public records, files and publications of this committee contain the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or finding of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow traveler unless otherwise indicated.

Clarence Mitchell, a representative of the National Association for the Advancement of Colored People, appeared before the Committee on Un-American Activities, May 3, 1950, in opposition to H.R. 7595, at which time he stated that he was not then and had never been a member of the Communist Party. He stated that the question as to whether or not he was a member of the Communist Party "is an unfair question, because it immediately precludes from appearing before this committee many of the people who would be on trial under a bill of this kind (H.R. 7595). Presumably there are people who may, for sincere and personal reasons, wish to be members of the Communist Party, but they may want to come here and object to this bill, but I suppose if they had to answer that question they very likely would not come." (Public hearings, pp. 2296–2302.)

It is noted by the Daily People's World of February 12, 1952 (p. 2) that Clarence Mitchell, director of Washington bureau of the National Association for Advancement of Colored People, "blasts civil rights record of presidential hopeful." The Daily Worker of February 15, 1952 (p. 1) reported that Clarence Mitchell, director of Washington bureau, NAACP, appeared before the Senate Armed Forces Committee in protest of universal military training.

FEBRUARY, 1956.

Subject: Roy Wilkins, national administrator and executive secretary, NAACP, 1961

The public records, files and publications of this committee contain the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or findings of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow-traveler unless otherwise indicated.

The Daily Worker of July 15, 1949 (p. 5), in an article datelined Los Angeles, July 14, reported that "Roy Wilkins, acting secretary of the National Association for the Advancement of Colored People, told a press conference * * * he voted for Benjamin J. Davis, Negro Communist, at the last election. Davis is now on trial for his Communist beliefs, along with 11 other national Communist Party leaders in New York City. Wilkins, however, refused any comment on the trial itself." The same information appeared in the Daily People's World of July 13, 1949 (p. 1).

Mr. Wilkins was a member of the national committee, International Judicial Association, as was shown on the leaflet entitled "What is the IJA?" and a letterhead of the group dated May 18, 1942; he was identified as being from New York State. The special Committee on Un-American Activities cited the International Judicial Association as "a Communist front and an offshoot of the International Labor Defense" (report 1311 of March 29, 1944); the Committee on Un-American Activities cited the organization as having "actively defended Communists and consistently followed the Communist Party line" (report dated September 17, 1950, p. 12).

A letterhead of the Conference on Pan American Democracy dated November 16, 1938, contains the name of Roy Wilkins in a list of sponsors of that group, cited by the Attorney General as subversive and Communist (press releases of June 1 and September 21, 1948; also included on his consolidated list released April 1, 1954); the special Committee on Un-American Activities cited the Conference as a Communist-front organization which defended Carlos Luiz Prestes, a Brazilian Communist leader and former member of the executive committee of the Communist International (report 1311 of March 29, 1944; also cited in report dated June 25, 1942).

According to the Daily Worker of September 24, 1937 (p. 6), Roy Wilkins was one of the sponsors of a joint meeting of the American League Against War and Fascism and the American Friends of Chinese People.

The American League Against War and Fascism was cited by the Attorney General as subversive and Communist (press releases of December 4, 1947, and September 21, 1948; also consolidated list of April 1, 1954); it had previously been cited by the Attorney General as a "Communist-front organization" (in re Harry Bridges, May 28, 1942, p. 10); and as "established in the United States in an effort to create public sentiment on behalf of a foreign policy adapted to the interests of the Soviet Union." (CONGRESSIONAL RECORD, September 24, 1942, p. 7683.) The special Committee on Un-American Activities cited the American League * * * as "completely under the control of Communists" (reports of March 29, 1944; January 3, 1939; January 3, 1940; and June 25, 1942). American Friends of the Chinese People was also cited by the special Committee on Un-American Activities as a Communist-front organization (report of March 29, 1944).

The Daily Worker of January 23, 1937 (p. 8), reported that Roy Wilkins spoke for the International Labor Defense in Brooklyn. The International Labor Defense was cited by the Attorney General as the legal arm

of the Communist Party and as subversive and Communist. (CONGRESSIONAL RECORD, September 24, 1942, p. 7686; and press releases of June 1 and September 21, 1948; also included on consolidated list released April 1, 1954.) The special Committee on Un-American Activities cited the ILD as the legal arm of the Communist Party (reports of January 3, 1939; January 3, 1940; June 25, 1942; and March 29, 1944); the Committee on Un-American Activities also cited the group in a report released September 2, 1947.

Roy Wilkins spoke at a New York State convention of the Workers Alliance, as reported in the Daily Worker of February 11, 1939 (p. 1), and February 7, 1939 (p. 5). The Workers Alliance was cited as a Communist-penetrated organization and later as subversive and Communist by the Attorney General (CONGRESSIONAL RECORD, September 24, 1942, p. 7684; and press releases on December 4, 1947, and September 21, 1948; included on consolidated list released April 1, 1954). The special committee cited the Workers Alliance as among the successes in the Communist-front movements (report dated January 3, 1939; also cited in reports of January 3, 1940; June 25, 1942; and March 29, 1944).

In an article by Blaine Owen which appeared in the Daily Worker of June 17, 1936 (p. 1), entitled "1936 Communist Party Convention Significant to Negroes," he stated: "The greatest significance undoubtedly attends the 1936 convention of the Communist Party," Roy Wilkins, assistant national secretary of the National Association for the Advancement of Colored People and editor of the Crisis, said today. "It must be patent to anyone who has kept track of the news that the political leftwing—and especially the Communist program—has been an important factor in bringing the plight of the Negro people, along with other underprivileged groups, more sharply to the attention of those parties which have been in power. * * * Nevertheless, there is no doubt in my mind that the program and demands of the Communists have had a very wholesome effect on the Negro people themselves. They have been emboldened by the basic and basically right demands put forth." This, it was pointed out to Wilkins, is what the Communist Party means when it bases its entire campaign on the proposal for and toward the realization of the broad People's Front. He nodded.

FEBRUARY 13, 1956.

Subject: A. Philip Randolph, national vice president, NAACP, 1961.

The public records, files, and publications of this committee contain the following information concerning the subject individual. This report should not be construed as representing the results of an investigation by or findings of this committee. It should be noted that the individual is not necessarily a Communist, a Communist sympathizer, or a fellow traveler unless otherwise indicated.

The Daily Worker of September 12, 1950 (p. 2), reported that A. Philip Randolph, president, AFL Brotherhood of Sleeping Car Porters, opposed the jailing of the Communist leaders.

The Attorney General of the United States reported that A. Philip Randolph, president of the National Negro Congress, refused to run in April 1940 "on the ground that it was 'deliberately packed with Communists and Congress of Industrial Organizations members who were either Communists or sympathizers with Communists'" (CONGRESSIONAL RECORD), Sept. 24, 1942, pp. 7687 and 7688).

Walter S. Steele, in testimony in public hearings, Committee on Un-American Activities, July 21, 1947 (p. 92), referred to A. Philip Randolph as follows:

"A. Philip Randolph, one-time president of the National Negro Congress, resigned his position because of the Communist control thereof. At the time of his resignation, at a meeting held in Washington, D.C., he charged that the congress was controlled by the Communist Party, through which he found it was chiefly financed."

George K. Hunton, testified in public hearings, Committee on Un-American Activities, July 13, 1949 (p. 451), concerning the Communist infiltration of the National Negro Congress with reference to A. Philip Randolph as follows:

"In the National Negro Congress they did make progress. That was a sound, constructive organization started about 10 years ago. It was a good organization, with a sound, constructive program, and the Commies moved in, and within a year and a half the white Communist members completely outnumbered the Negro members and took over. Be it said to his credit that the then president, A. Philip Randolph, roundly denounced them and then resigned, and said no longer would the National Negro Congress represent the feeling of the Negro people who organized it * * *."

Manning Johnson testified in public hearings, Committee on Un-American Activities, July 14, 1949, as follows concerning the National Negro Congress and A. Philip Randolph:

"Mr. TAVENNER. What was the relationship of that commission (Negro Commission of the Communist Party) to the American Negro Labor Congress, the League of Struggle for Negro Rights, and the National Negro Congress?

"Mr. JOHNSON. The Negro League was formed by the Communist Party, and its program was identical with the program of the Communist Party for the Negro.

"The majority of members of the American Negro Labor Congress were Communists or fellow-travelers. It was a very narrow, sectarian organization, and the party decided to change its name and broaden its activities, so the name was changed to the League of Struggle for Negro Rights. * * *

"The League of Struggle for Negro Rights was never successful in penetrating any broad sections of the Negro people. It remained a very narrow and sectarian organization. So the party, after having received the open letter, which was really drawn in Moscow and called for breaking away from narrow organizations, in line with this open letter, at a meeting of the national committee which, as I recall, was in the latter part of 1934 or early part of 1935, we discussed the general situation among Negroes, and the conclusion was that there was considerable unrest among them and that the time was historically right for the formation of a broad and all-inclusive organization.

"As a result of that discussion and that conclusion, the national committee of the party, upon the recommendation of one of the members of the Negro commission present at that meeting, decided to set up the National Negro Congress. The national committee gave James W. Ford the responsibility, along with the Negro commission of the national committee, to form that congress.

"We were fishing around for someone to head the congress, and we found there was no finer person to get who was not a member of the party than A. Philip Randolph. He was approached and agreed.

* * * * *

"The third—and fatal—National Negro Congress was held in Washington, D.C. The Communists had become so drunk with power, and they felt they had such strong control over the congress, that they thought they could walk roughshod over the liberals, and they antagonized A. Philip Randolph and he began to fight James W. Ford and others.

"James W. Ford and others insisted I fight A. Philip Randolph, and I refused to do so, and at that time I predicted they were on the road to breaking up the congress.

"The fight widened to such an extent that Randolph began to speak openly against Communist domination. I used to wonder how Randolph could be so naive as to not know it was a Communist-front organization.

"Before the third congress met, we got wind that Randolph was going to resign. We had Communists go to that congress representing various paper organizations so as to give them control in voting.

"When Randolph saw the congress was packed with Communists, Randolph resigned and walked out * * *." (Pp. 510–512).

A. Philip Randolph supported a statement to Congress issued by the American League Against War and Fascism against neutrality measures as reported by the Daily Worker of February 27, 1937 (p. 2). The Daily Worker of April 22, 1938 (p. 2), reported that A. Philip Randolph was one of the signers of a letter urging open hearings on the neutrality act which was sent to Congress under auspices of the American League for Peace and Democracy. A. Philip Randolph was nominated as a member of the National Labor Committee of the American League for Peace and Democracy at the American Congress for Peace and Democracy held in Washington, D.C., January 6–8, 1939, as shown by the pamphlet, "7½ Million * * *" (p. 32). Letterheads of the China Aid Council of the American League for Peace and Democracy dated May 18, 1938, and June 11, 1938, name him as a sponsor of the council. He was a sponsor of the Easter drive of the China Aid Council of the American League * * *, as shown by the Daily Worker of April 8, 1938 (p. 2). A photostatic copy of a letterhead of the American League for Peace and Democracy dated April 6, 1939, listed A. Philip Randolph as a national sponsor of that organization.

The Attorney General of the United States cited the American League Against War and Fascism as subversive and Communist, in letters to the Loyalty Review Board, released December 4, 1947 and September 21, 1948. The organization was redesignated by the Attorney General April 27, 1953, pursuant to Executive Order No. 10450, and included it on the April 1, 1954, consolidated list of organizations previously designated. The organization was cited previously by the Attorney General as a Communist-front organization (in re Harry Bridges, May 28, 1942, p. 10). The Special Committee on Un-American Activities, in its report dated March 29, 1944 (p. 53), cited the American League Against War and Fascism as "organized at the First U.S. Congress Against War which was held in New York City, September 29 to October 1, 1933. Four years later at Pittsburgh, November 26–28, 1937, the name of the organization was changed to the American League for Peace and Democracy. * * * It remained as completely under the control of Communists when the name was changed as it had been before."

The Attorney General cited the American League for Peace and Democracy as subversive and Communist in letters released June 1 and September 21, 1948; redesignated April 27, 1953, and included on the April 1, 1954, consolidated list. The Attorney General cited the group previously as established in the United States in 1937 as successor to the American League Against War and Fascism "in an effort to create public sentiment on behalf of a foreign policy adapted to the interests of the Soviet Union * * * The American League for Peace and Democracy * * * was designed to conceal Communist control, in accordance with the new tactics of the Communist International" (CONGRESSIONAL RECORD, Sept. 24, 1942, pp. 7683 and 7684). The special Committee

on Un-American Activities in its report of January 3, 1939 (pp. 69–71), cited the American League for Peace and Democracy as "the largest of the Communist-front movements in the United States."

A letter head of the organization, Commonwealth College, dated January 1, 1940, listed A. Philip Randolph as a member of the National Advisory Committee. He endorsed the reorganization plan of Commonwealth College, as shown by the August 15, 1937, issue of Fortnightly, a publication of the college (p. 3).

The special Committee on Un-American Activities cited Commonwealth College as a Communist enterprise in its report of March 29, 1944 (pp. 76 and 167). The Attorney General cited the Commonwealth College as Communist in a letter released April 27, 1949; resdesignated April 27, 1953, and included on the April 1, 1954, consolidated list.

An undated leaflet of the League for Mutual Aid listed A. Philip Randolph as a member of the executive committee of that organization. He was a guest of honor at the 17th annual dinner of the League for Mutual Aid held February 1, 1937, as shown by New Masses, January 26, 1937 (p. 37).

The League for Mutual Aid was cited as a Communist enterprise by the special Committee on Un-American Activities in its report of March 29, 1944 (p. 76).

A. Philip Randolph was a sponsor of the Medical Bureau and North American Committee To Aid Spanish Democracy, as shown by letterheads of the organization dated July 6, 1938, and February 2, 1939. The Daily Worker of June 2, 1938 (p. 5), reported that A. Philip Randolph was a supporter of a meeting of the Medical Bureau * * *.

"In 1937–38, the Communist Party threw itself wholeheartedly into the campaign for, in support of the Spanish Loyalist cause, recruiting men and organizing multifarious so-called relief organizations." Among these was the Medical Bureau and North American Committee To Aid Spanish Democracy. (Special Committee on Un-American Activities, report Mar. 29, 1944, p. 82.)

New Masses for October 26, 1937 (p. 11), reported that A. Philip Randolph was chairman of the National Negro Congress. A. Philip Randolph was president of the National Negro Congress, as shown by the Daily Worker of January 1, 1938 (p. 4), January 13, 1938 (p. 3), April 19, 1938 (p. 3), and the pamphlet, Second National Negro Congress, October 1937. He was president of the Third National Negro Congress, as reported by the June 1940 issue of the Communist (p. 548). The official proceedings of the 1936 National Negro Congress (p. 41), listed A. Philip Randolph as a member of the national executive council of the organization. He spoke at a gathering of the congress, as reported by the Daily Worker of March 8, 1938 (p. 3). The Daily Worker of February 15, 1938 (p. 7), reported that A. Philip Randolph contributed to the official proceedings of the Second National Negro Congress.

The Attorney General cited the National Negro Congress as subversive and Communist in letters released December 4, 1947, and September 21, 1948; redesignated April 27, 1953, and included on the April 1, 1954, consolidated list. The organization was cited previously by the Attorney General as a Communist-front group (CONGRESSIONAL RECORD, Sept. 1942, pp. 7687 and 7688). The special Committee on Un-American Activities, in its report of January 3, 1939 (p. 81), cited the National Negro Congress as "the Communist-front movement in the United States among Negroes * * *."

A. Philip Randolph was a consultant of the Panel on Citizenship and Civil Liberties of the Southern Conference for Human Welfare, as shown by an official report of the organization, dated April 19–21, 1942. The call to the second conference, Southern Conference for Human Welfare, April 14–16, 1940, listed A. Philip Randolph as a sponsor of that conference.

The special Committee on Un-American Activities, in its report of March 29, 1944 (p. 147), cited the Southern Conference for Human Welfare as a Communist front which received money from the Robert Marshall Foundation, one of the principal sources of funds by which many Communist fronts operate. The Committee on Un-American Activities, in its report of June 12, 1947, cited the Southern Conference for Human Welfare as a Communist-front organization "which seeks to attract southern liberals on the basis of its seeming interest in the problems of the South" although its "professed interest in southern welfare is simply an expedient for larger aims serving the Soviet Union and its subservient Communist Party in the United States."

The Daily Worker, issues of March 28, 1938 (p. 3) and April 4, 1938 (p. 3), listed A. Philip Randolph as a sponsor of the World Youth Congress. The special Committee on Un-American Activities, in its report of March 29, 1944 (p. 183), cited the World Youth Congress as a Communist conference held in the summer of 1938 at Vassar College.

A. Philip Randolph signed a petition of the American Friends of Spanish Democracy to lift the arms embargo as shown by the Daily Worker of April 8, 1938 (p. 4). The special Committee on Un-American Activities, in its report of March 29, 1944 (p. 82), cited the American Friends of Spanish Democracy as follows: "In 1937–38, the Communist Party threw itself wholeheartedly into the campaign for the support of the Spanish Loyalist cause, recruiting men and organizing multifarious so-called relief organizations * * * such as * * * American Friends of Spanish Democracy.

A. Philip Randolph is listed as a sponsor on a letterhead of the American Relief Ship for Spain dated September 3, 1938. The American Relief Ship for Spain was cited as "one of the several Communist Party front enterprises which raised funds for Loyalist Spain (or rather raised funds for the Communist end of that civil war)." (Special Committee on Un-American Activities Report, Mar. 29, 1944, p. 102.)

The proceedings of the Congress of Youth of the American Youth Congress, July 1–5, 1939 (p. 3), listed A. Philip Randolph as a signer of the call to the congress.

A Philip Randolph was a sponsor of the Conference on Pan-American Democracy (letterhead, Nov. 16, 1938). The booklet, These Americans Say, published by the Coordinating Committee To Lift the Embargo, named him as a representative individual. He was a sponsor of the Greater New York Emergency Conference on Inalienable Rights (program of conference, Feb. 12, 1940).

The Conference on Pan-American Democracy (known also as Council for Pan-American Democracy) was cited as subversive and Communist by the Attorney General in letters released June 1 and September 21, 1948; redesignated April 27, 1953, pursuant to Executive Order No. 10450. The special Committee on Un-American Activities, in its report of March 29, 1944 (pp. 161 and 164), cited the organization as a Communist front which defended Carlos Luiz Prestes, a Brazilian Communist leader and former member of the executive committee of the Communist International.

The special Committee on Un-American Activities, in its report of March 29, 1944 (pp. 137 and 138), cited the Coordinating Committee To Lift the (Spanish) Embargo as one of a number of front organizations set up during the Spanish civil war by the Communist Party in the United States and through which the party carried on a great deal of agitation.

The Greater New York Emergency Conference on Inalienable Rights was cited as a Communist front which was succeeded by the National Federation for Constitutional Liberties (special committee report, Mar. 20, 1944, pp. 96 and 129). The Committee on Un-American Activities, in its report of September 2, 1947 (p. 3), cited the Greater New York Emergency Conference on Inalienable Rights among a "maze of organizations" which were "spawned for the alleged purpose of defending civil liberties in general, but actually intended to protect Communist subversion from any penalties under the law."

A. Philip Randolph was a sponsor of the Spanish Refugee Relief Campaign, as shown by the back cover of a pamphlet, Children in Concentration Camps. He signed the call to a United May Day conference, according to the Daily Worker of March 17, 1937 (p. 4). An undated letterhead of the United May Day Committee listed him as chairman.

The special Committee on Un-American Activities cited the Spanish Refugee Campaign as a Communist-front organization (report, Jan. 3, 1940, p. 9).

The United May Day conference was cited as "engineered by the Communist Party for its 1937 May Day demonstrations" and also organized by the party in 1938 (special committee report, Mar. 29, 1944, pp. 124 and 139).

The Attorney General cited the United May Day Committee as subversive and among the affiliates and committees of the Communist Party, U.S.A., which seeks "to alter the form of government of the United States by unconstitutional means." (Letter released December 4, 1947; redesignated April 27, 1953, and included on the April 1, 1954, consolidated list.)

The Daily Worker of January 23, 1937 (p. 3), announced that A. Philip Randolph was scheduled to speak at the Southern Negro Youth Congress, Richmond, Va., February 12–14. "The People Versus H.C.L." listed him as a sponsor of the Consumers National Federation. He was shown as a sponsor of the Public Use of Arts Committee on an undated letterhead of that crganization.

The Southern Negro Youth Congress was cited as subversive and among the affiliates and committees of the Communist Party, U.S.A., which seeks to alter the form of government of the United States by unconstitutional means. (Attorney General, letter released December 4, 1947; redesignated April 27, 1958, and included on April 1, 1954, consolidated list.) The special Committee on Un-American Activities, in its report of January 9, 1940 (p. 9), cited the Southern Negro Youth Congress as a Communist-front organization. The Committee on Un-American Activities, in its report of April 17, 1947 (p. 14), cited the Sotuhern Negro Youth Congress as "surreptitiously controlled" by the Young Communist League.

The Consumers National Federation was cited as a Communist-front group by the special committee in its report of March 29, 1944 (p. 155).

Public Use of the Arts Committee was cited as a Communist front by the special committee in its report of March 29, 1944 (p. 112).

Mr. HAYS. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Speaker, the House is once again asked to appropriate funds for a standing committee of the House which throughout its history has infringed upon basic civil liberties embedded in the Bill of Rights.

The Committee on House Administration is recommending $400,000. This amount is in addition to the funds auto-

matically provided under the Legislative Reorganization Act, which for 1969 will be $166,340. This recommendation is the seventh largest request for a standing committee this year, and it is $50,000 more than was appropriated to the House Un-American Activities Committee in 1967, and $25,000 more than was appropriated to HUAC in 1968.

On March 13, 1968, when the appropriation request of $375,000 was being considered for the predecessor of the Internal Security Committee, HUAC, I said that "this committee serves no useful legislative purpose"; that its purpose is "to harass and expose"; that it "flaunts our constitutional principles"; and that "it has brought discredit on the name of the House of Representatives."

As a result of the passage of House Resolution 89 on February 18, 1969, the name and mandate of the committee have been changed. According to the chairman of the committee, the gentleman from Missouri (Mr. ICHORD), the purpose of these changes was "to strengthen the committee in every possible way, clarify its mandate and eliminate any possible misunderstanding and confusion about the specific powers and jurisdiction of the Committee"—CONGRESSIONAL RECORD, January 18, 1967.

I know that several conscientious members of the committee, who have been recently assigned, intend to guard against the kind of outrageous denial of rights and due process which characterized the proceedings of HUAC.

However, this should not prevent us from confronting the basic issues which the House Internal Security Committee still presents to the House.

First, the mandate for this committee is open-ended, giving it significantly broader powers than rule XI formerly gave to HUAC. The committee's investigatory powers are no longer limited to a determination of the "extent, character, and objects of 'un-American propaganda' activities in the United States" and to investigation of the "diffusion of 'un-American propaganda.'" Its new mandate now permits it to investigate the activities of individuals or organizations, giving it sanction to initiate new investigations into civil rights, peace, student, and other organizations.

The powers of the House Internal Security Committee encroach on the jurisdiction of other committees of the House, particularly the Judiciary Committee, the chairman of which, the gentleman from New York (Mr. CELLER), made clear his objections to the powers assigned HISC during the House debate on House Resolution 89. Seven other members of Judiciary Committee, including myself, also outlined our reasons for opposing House Resolution 89 in a letter which we sent to our colleagues on February 13.

The Judiciary Committee has long had jurisdiction over matters of espionage, sedition, and the criminal penalties associated with these crimes. The fact that the Internal Security Committee intends to deal with these subjects as well constitutes a clear encroachment on the jurisdiction of the Judiciary Committee which will continue so long as the Members of this body continue to fund the House Internal Security Committee.

Mr. Speaker, this request for additional funds cannot be considered in isolation from the record of the predecessor committee. That committee is, of course, HUAC.

As I have pointed out whenever appropriations for HUAC were before the House, this committee serves no useful legislative purpose. It serves to harass and expose, not to investigate. Its past activities have made a mockery of the most basic guarantees of justice and due process, bringing disrepute to the name of the House of Representatives.

If a committee is to be judged by its legislative record, then the record of this committee is almost completely devoid of any accomplishment. Throughout its existence only six bills reported out of this committee have been enacted into law. During the 89th Congress not one bill reported out by this committee was enacted into law; in the 90th Congress one bill was passed by both Houses of Congress and signed into law.

While the Congress as a whole considered 17,180 measures during both sessions of the 90th Congress, only 32 bills were referred to the House Un-American Activities Committee, the predecessor of the House Internal Security Committee. Of these 32 bills, 23 were either identical or similar to other bills, leaving the committee with a real workload of only nine pieces of legislation. Moreover, each of these nine bills properly belonged to the jurisdiction of other standing committees of the House.

The only bill, which was reported out and actually signed into law, extended the life of the previously dormant Subversive Activities Control Board, whose record of achievement, appropriately enough, is comparable to that of HUAC.

Let me outline briefly the nature of those nine principal bills which were referred to the committee.

H.R. 8, the pool bill, was opposed by the Departments of Justice, Defense, State, Treasury, and Commerce. Although it was reported out of committee on November 11, 1967, it was not acted upon by the House.

H.R. 735, a perennial bill to establish a National Freedom Academy, which belongs under the jurisdiction of the Foreign Affairs Committee, was reported out by the committee, but no rule was granted for its consideration by the House Rules Committee.

H.R. 5942 proposed restrictions on the travel of U.S. citizens to several countries in the Communist bloc. Passport legislation comes under the jurisdiction of the Judiciary Committee.

H.R. 7025 is the so-called Klan bill.

During the legislative hearings in the 89th Congress on a bill identical to H.R. 7025, the Attorney General of the United States expressed serious apprehension at the vagueness of the bill and about its constitutionality. The language of the bill was such that both civil rights leaders and Government law enforcement officials feared that the legislation might be used against civil rights workers. Nevertheless, 1 year later, on October 21, 1966—only hours before the adjournment of the 89th Congress—HUAC reported the bill out of committee. Due to the lateness of the session, the bill was not considered. This legislation was resubmitted in the 90th Congress, however, as H.R. 7025.

H.R. 12601, the lone HUAC bill to be approved by the 90th Congress, extended the life of the moribund Subversive Activities Control Board, which was about to expire for lack of renewal by Congress.

H.R. 11675, which proposed to abolish the Subversive Activities Control Board, was obviously not reported out of the committee.

H.R. 15626 was aimed at overturning the Robel case decided by the Supreme Court in December of 1967 which declared unconstitutional certain employment restrictions embodied in the Internal Security Act. Some of its provisions, in addition, went far beyond the scope of the Robel decision in seeking to establish new restrictions on the employment of persons with controversial political affiliations in defense-related industries. Although the bill was reported out of committee, a rule was not granted.

H.R. 16030, which was introduced by former chairman Willis, proposed powers which could be used to dismiss summarily Federal employees who express or organize opposition to policies of the Government of the United States during wartime—whether or not an actual declaration of war has been officially approved by Congress. This legislation was clearly aimed at Federal employees who had organized opposition to the war in Vietnam through the peaceful and constitutionally protected dissemination of petitions and pamphlets. No provisions for due process or the right to a hearing were included.

H.R. 19646, submitted by the gentleman from California (Mr. GUBSER), was to repeal title II of the Internal Security Act, which permits the incarceration of individuals for indefinite periods of time in the interest of "national security." This bill also was not reported out of committee.

In addition to the funds allocated under the Legislative Reorganization Act, which in past years have averaged more than $150,000, the Un-American Activities Committee received $725,000 in additional funds during the 90th Congress, the fifth largest sum allocated to any committee in the House. The Judiciary Committee, by contrast, received $500,000.

It also had the fourth largest staff, employing more employees—47—on its payroll through December 31, 1968, than all but the Committees on Appropriations, Education and Labor, and Government Operations.

This, then, is the record of the predecessor to the House Internal Security Committee—HUAC; the committee which again is before this body asking for more money. If the recommendation of the House Administration Committee is approved, the House Internal Security Committee will receive $400,000, giving it the seventh largest budget of all of the committees in the House; larger than such important committees as the Judiciary Committee, $250,000; the Committee on Ways and Means, $50,000; the In-

terior Committee, $115,000; the Agriculture Committee, $250,000; and the Foreign Affairs Committee, $200,000.

Mr. Speaker, this allocation is inconsistent with the legislative workloads of the various committees in the House. As I have pointed out, HUAC considered only nine bills of differing substance during the 90th Congress. The Education and Labor Committee, by contrast, received 836 bills. The Judiciary Committee received 2,656 public bills and 7,059 private bills. The Ways and Means Committee received 3,806 bills, and the Banking and Currency Committee 668 bills.

The abysmal legislative record of HUAC is reason enough to deny this request for $400,000 in additional funds. But, in addition to that record, we must also bear in mind the discredit which the committee through the conduct of its hearings has brought upon the House. The hearings held in August of 1966—during which a member of the bar was forcibly evicted from the hearing room for protesting the sham which the committee was making of due process—is perhaps the prototype of the kind of hearings so long identified with HUAC. That spectacle led even Senator DIRKSEN, who is not noted for his opposition to HUAC, to comment: "This spectacle can do the Congress no good."

The most recent hearings of the committee, which were held last fall, provided yet another example of its singular unproductivity. Ostensibly called for the purpose of investigating the demonstrations which took place at the Democratic National Convention in Chicago, hearings produced little more than acrimonious banterings between the witnesses and the committee members. The contrast between the style of investigation pursued by HUAC, and the well-reasoned and thoroughly documented report of the Walker Commission—which issued its report on the Chicago disorders a few months later—illustrates the point I am making—that there is no legislative justification for giving this committee one penny.

HUAC, it is clear, has seriously tarnished the reputation and prestige of the House of Representatives. Moreover, it has discredited the investigation processes which are so important to the formulation of meaningful and efficient legislation. Beyond this fact, however, we must consider the effect HUAC has had on the lives of the hundreds of individuals who have been called before its inquisitions during the past 30 years. Reputations have been tarnished and many lives lastingly and adversely affected by the actions of this committee. With its newly expanded mandate, the committee will be free to embark on still more witchhunts during the 91st Congress.

Since 1960, the committee has recommended that 130 individuals be cited for contempt of Congress. Despite the fact that only 10 of these citations have been upheld by higher courts, the reputations of those cited have been permanently damaged.

The House itself must accept the blame for the excesses and outrages of this committee. By its approval of funds, the House has sanctioned the actions of this committee. It is high time for the House to withdraw that sanction.

I urge my colleagues to vote against this appropriation. Although the name may have been changed, civil liberties will enjoy no more protection under this version of HUAC than they had under the last. It is time for the House to write an end to this committee.

Mr. HAYS. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. PODELL).

Mr. PODELL. Mr. Speaker, the House has before it today a request for an appropriation of $400,000 for calendar year 1969 for the House Committee on Internal Security. I do not see any reason why this appropriation should be approved by the House.

It seems to me that existing professional organizations such as the Federal Bureau of Investigation are doing as good a job now as they have done in the past of combating internal subversion of the Republic.

One of its sole aims seems to be to provide a forum for professional witnesses, glorifying in the process the very people it purports to investigate in the public interest.

Additionally, this committee in the past has played fast and loosely with the civil liberties of many individual Americans. In the name of liberty they have taken liberties which has lessened the quality of life in our country for many citizens. Such abrogation of freedom is not to be suffered any longer in silence or without opposition.

It is the duty of this House, in the name of the Republic and its institutions, to curb dictatorial excess, especially on the part of an organ of government. Approval in this case constitutes allowing license and standing mutely aside as excess masquerades under the name of legally constituted authority.

Now this body, acting as a Committee of the Whole, has the opportunity to abolish the House Committee on Internal Security. I hope and fervently ask that this appropriation be refused and voted down.

By such an act, we shall prove that we have no need for nor will we allow any star chamber proceedings, complete with conviction by publicity, of any innocent citizen. We shall also refuse a forum and glorification for those who could never hope for it in any other manner. Let us finally put a finish to the activities of this futile and grotesque parody of a congressional inquiring body.

Mr. HAYS. Mr. Speaker, I yield 5 minutes to the gentleman from Missouri (Mr. ICHORD).

(Mr. ICHORD asked and was given permission to revise and extend his remarks and include extraneous matter.)

Mr. ICHORD. Mr. Speaker, on February 18 of this year, this House by an overwhelming vote of 306 to 80 adopted my resolution establishing the House Committee on Internal Security.

After listening to my three preceding colleagues, and with all due respect for their opinions, it appears to me today that this controversy is a manifestation of the frustrations of the more determined opposition to that resolution adopted so overwhelmingly by the House.

I recall the words of the past used to describe another frustrated group—

Each day they pray for their daily bread and then they pray for their daily illusion.

I think these gentlemen today are praying for their daily illusion. In view of the overwhelming vote by this House of Representatives and in view of the very recent nature of the action, I do not feel that this House, at least at this early date, would, in effect, reverse itself by denying the Committee on Internal Security appropriations or by starving the committee to death.

Now I do not care to become involved in any argument as to whether or not the House changed the name of the House Committee on Un-American Activities with a clarified mandate or whether it abolished the House Committee on Un-American Activities and established a new committee, the House Committee on Internal Security. Such arguments are, in my opinion, purely semantical.

Likewise is the argument whether you increase or decrease the jurisdiction of the House Committee on Internal Security. If one makes a broad interpretation of the word "un-American," then we decreased the jurisdiction of the House Committee on Internal Security. If one makes a narrow interpretation of the word "un-American," then we increased the jurisdiction of the House Committee on Internal Security.

Members of the House, what is important is the final result—the establishment of a House Committee on Internal Security with limited legislative jurisdiction in the very important area of criminal subversion. In addition the House Committee on Internal Security has been given certain permanent and defined investigative powers in the field of criminal subversion and thus it joins the House Committee on Appropriations and the House Committee on Government Operations as one of the three permanent investigating committees of this House.

The gentleman from New York has observed that this is one of the largest appropriations in the Congress for a congressional committee. Let me again remind the House that this is a permanent investigating committee. But this appropriation is not the largest, if the figures that have been provided me are correct.

On March 26, 1969, we approved the following:

Committee on Government Operations, $850,000.

Committee on Public Works, $486,000.

Committee on Banking and Currency, $692,500.

Committee on Education and Labor, $769,600.

Committee on Post Office and Civil Service, $412,000.

Interstate and Foreign Commerce, $595,000.

All larger than the $400,000 requested by the House Committee on Internal Security.

Mr. Speaker, since February 18 the committee has undergone a great deal of restructuring and reorganization, among which was the adoption of what I con-

sider the most comprehensive and the fairest investigating rules ever adopted by a committee of Congress.

On February 20 the committee ordered an in-depth investigation into the revolutionary violence in this Nation. On March 6 the committee ordered a full-scale investigation of certain specific organizations which were not named by the committee in the interest of an orderly and fair investigation.

Mr. Speaker, if the House desires these investigations to go forward. I ask that the previous question be voted up, and that the Committee on House Administration be supported.

Before closing, however, I would like to address myself to recent activities in opposition to my committee outside the Congress.

On March 19 my attention was directed to a meeting of the National Committee to Abolish the House Committee on Un-American Activities that was to be held on March 22 and 23 in Washington, D.C., when I received a letter from an individual stating that he was going to attend the meeting and would like to have an appointment with me afterwards. I was very intrigued about the meeting as it came so soon following the action of the House on February 18. The meeting was held and the committee is now known as the National Committee to Abolish HUAC/HCIS even though the House Committee on Internal Security is still in the organizational stage and has yet to hold a hearing. I have been impressed with the organizational ability of this organization, its apparently well-financed operations, the smoothness of its very expert lobbying activities, and was very interested in its esoteric argument that the House Committee on Un-American Activities should be retained in order that it might be abolished.

An observer who was in attendance at the open sessions has furnished me with a narrative account of the speeches and discussions which transpired. The very name of the National Committee to Abolish speaks for its primary purpose and is well known to all who are concerned with the internal security of the United States. The devices and tactics which the organization employs, and intends to employ, I feel are not well known. They are, however, of such significance to each citizen and his elected representative to Congress that they should be spread upon the RECORD. Surely each Member of this Congress has a vital interest in understanding the true nature and motivation of persons who visits his office, and in understanding the source responsible for the generation of mail in this regard. That the organization contemplates expansion of its targets to include Senate committees is also of interest. This account which follows, vividly depicts the strategy which the National Committee to Abolish intends to pursue to frustrate the House Committee on Internal Security. I am submitting this material for the RECORD in order to more fully explain the attacks that have been mounted against the committee which I head even before it begins its work. The report is very objective and reveals an extremely clever and effective lobbying activity which I admire from the organizational standpoint. The account follows:

ACCOUNT OF THE RECENT ANNUAL CONVENTION OF THE NATIONAL COMMITTEE TO ABOLISH THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

At 12:00 p.m. the convention was called to order. A very brief introductory statement was given by the Chairman, Professor Robert J. Havighurst. He then turned the program over to Frank Wilkinson, Executive Director.

Mr. Wilkinson first commented on the growing oppression that HUAC is perpetrating upon the citizens of this country. He then discussed briefly the format of the afternoon session and evening session. He noted that a majority of the people present at the meeting represented new and different faces from the group that initially formed the Committee approximately ten years ago. He traced rather briefly the approximate ten year history of the Committee, beginning with a synopsis of the endeavors of James Roosevelt, California Congressman, to the present. He noted they had 79 votes against H. Res. 89.

He placed great stress, as in his remarks later in the evening session, on the practical politics that the Committee is presently following. These practical politics were first enunciated by Aubrey W. Williams. The essence of these "practical politics" is that you do not hold meetings, demonstrations, etc. in Washington, D.C., or elsewhere, *until* you have done the essential homework of education in your own congressional district. The key is educate your Congressman. In conjunction, he noted that originally the tactics of the Committee were large meetings and demonstrations, in particular in Washington, D.C. The tactics have now shifted from defensive to offensive; from protecting people to actually attacking HUAC.

He noted that they now have a hard core of the congressional urban vote (against HUAC) in the Los Angeles, Chicago, and New York urban areas. He emphasized that they were weak in rural areas and had to have the rural votes. He further noted that they are strong on both the west coast and the east coast, relatively strong in the midwest, but extremely weak in the south. He emphasized that they had to get the southern support. He suggested one tactic they should utilize is to demonstrate to people who are working in other related areas (i.e., civil rights, peace movements, anti-Vietnam, etc.) how the restrictions of HUAC hurt their cause. He emphasized that both Congressmen and their constituents must be educated to see that the First Amendment principles of freedom of speech and association comprise the fundamental underlying principles.

The next speaker was Lyle Mercer, Director, Western Regional Office. His comments traced the growth and development of both the ACLU and the Committee in the northwest. He noted that five of the seven Congressmen from Washington are Democrats and have taken some timorous steps in opposition to HUAC, in particular, voting to send the appropriations bill back to the committee. He also noted that two of the Democrats voted against H. Res. 89. He observed that there is an approximate membership of 25,000 to 30,000 members of the ACLU Chapter in the State of Washington and that this group is the backbone of the liberal movement in that State. In his opinion, the Western Region is the focal point or hub of the abolish HUAC movement.

The next speaker was Richard Criley, Director, Midwest Regional Office. His comments were largely directed toward organization of the various chapters of the Committee. He began by stating as a general premise: every Congressman can be influenced to some extent by his constituents. He then built upon this premise the various arguments for, and methods of, influencing or educating Congressmen to vote for abolition of HUAC.

The first thing that must be accomplished is the development of an office geared to work on a congressional district level. The starting place in that office is a mailing list. He commented that they shouldn't just list a group of names of people thought to be sympathetic to the movement, but that they should be selective. In particular, they should find people who can influence other people. He singled out ministers, letter writers, and members of other organizations. Create a list of people who are opinion makers. He then discussed where the names of people for such lists can be obtained. He stressed that working relationships with people working for other organizations is critical. He again noted religious organizations working on social issues. He suggested that most people working in the social area, peace area, and civil rights area are particularly receptive to the idea of abolishing HUAC when they are educated and propagandized how important the right to dissent is to their movement.

He noted that the Committee has a potential constituency ranging from the far left to the far right, each wishing to abolish HUAC for his own particular reason.

In each Congressional District they should start with people who are closest to the heart of the political district's constituency (i.e., in a largely Irish Catholic District, start with Irish Catholics) and then work to represent all groups. He noted that published documents are a good source for names. He singled out Chicago and noted that there are published names of people working in the open housing movement and that these people have, or should be contacted to work for the Committee. He also noted that another source of names is people who write, what they consider, good letters to editors of various papers.

He then discussed the problem of getting the recipients to read the literature. He suggested that the best method is personal contact—to follow up every letter, where possible, with a telephone call. The problem is to get people from the position of sympathetic agreement to the position of action for the movement. As a practical matter, he noted that many people simply do not act. He stressed that they had to make things as simple and as easy as possible. They should begin with the most prestigious names on their lists in the communities with the thought in mind that most people like to associate and work in concert with important people. He suggested giving people lists of other people in the community working on the same project—power of association. Where possible he would like to have systematically organized small group meetings to further bring in the personal element. In synopsis, his approach would be from listing names to letter writings, to telephone calls, to small group meetings.

At this juncture, the meeting was opened for general discussion from the floor. Hereinbelow set forth is a synopsis of what each individual who spoke thought important to the movement to abolish HUAC.

A. A comment that their attempts had been directed for some time toward trying to influence Congress and the Executive Branch. Forty Federal Judges are to be appointed by the President within the next sixty to ninety days. This would be a good opportunity to try to press for selection of Judges more favorable toward, not only the Committee, but all liberal organizations or groups. He suggested that they should do everything possible to bring favorable witnesses to testify before the Judiciary Committee and that all possible pressure should be brought to bear on the Senators by letter writing. He noted that the areas of Civil Rights, Vietnam, and the activities of the ACLU were the

three principal areas toward which the prospective Judges should be favorably disposed.

B. A request for the names of any sympathetic influential people from Congressman Richard Ichord's district with, presumably the thought in mind of trying to form an organization or branch of the Committee in Congressman Ichord's own district.

C. A suggestion of reorganization of the Committee. He noted that in the past the Committee was democratically orientated, but suggested more work with the Republican Party. Also the suggestion was advanced of a more closely and formally organized National Committee with branches at the state and local political subdivision level.

D. This speaker, a Puerto Rican, noted that everyone present was Caucasian and asked why and how they should, or could, relate to Negroes, Japanese, Chinese, etc. Later in the proceedings there were two or three Negroes present.

E. The question was raised with some discussion thereon, about how to relate the advocacy of the position to abolish HUAC to the best interests of a Congressman. Also the question was raised as to how they should relate to "young people."

F. A very strong plea was made toward considering state and city legislation which pressed very hard on college students and black citizens. The remark was made that there is much state and city legislation now passed, or pending, which is directed toward repressing the younger generation.

G. The suggestion was made that the Committee should oppose not only the House Committee on Internal Security but, also, the Senate Committees of Senator Eastland and Senator McClellan and any such state committees. In short, work for the abolition of Internal Security Committees wherever they arise.

H. The point was stressed that when attempting to sell the principle of abolishing HUAC to any organization, it is extremely difficult, almost impossible, to sell that organization unless HUAC is at that time "attacking" them. In short, the best time to try to line up an organization in the fight to abolish HUAC is at the time when HUAC is investigating that organization.

I. The point was made that they should not be so negative in their approach. That is, not emphasize "abolish the committee," so much; rather emphasize the affirmative aspects of free speech and right to dissent. It was also suggested that they should consider the question of freedom to speak and dissent in the military.

J. There was some discussion about how broad or how narrow an objective the Committee should pursue. The issue in discussion was whether the Committee should branch out and pursue other related activities, or whether it should stick to the rather narrow objective of working to abolish HUAC. The consensus was remain with the singular objective of abolishing HUAC and other comparable committees.

K. Noted that press releases and press conferences are effective means to educate the public. The opinion was expressed that generally, the news media is rather sympathetic to the abolition of HUAC campaign.

The format then reverted to scheduled speakers, the first being Donna Allen, Washington Representative of the Committee. She informed the group that, while talking with some unidentified Congressman, he informed her that a member of the Supreme Court had called him and requested a copy of the bill he had introduced to abolish the House Internal Security Committee and for a copy of his speech directed thereto.

She then discussed how to influence Congressmen. She began by noting that their basic purpose is to abolish HUAC. Only Congressmen can do this. She strongly emphasized that there was not enough information coming from the field to the Congressmen. She, in fact, termed it a dangerous communication gap. The Committee was doing a good job educating the public by making certain that they get appropriate material; but was not doing a good job of educating and sending material to the Congressmen.

She discussed how Congressmen should be informed. She emphasized that ridicule is one of the best weapons at their disposal. Anytime, she suggested, that a person comes across a satirical or otherwise ridiculing column, cartoon, etc., it should be clipped and sent to a Congressman. She noted that sending material to a Congressman serves three purposes: (1) It informs him. (2) He thereby knows that you know about that particular area, and (3) most important, it shows him that people aren't afraid to discuss this subject matter any more.

She then made a few comments and suggestions on what the people should do when they visit their Congressman on Monday. She suggested they ask each Congressman how his mail is "running." In her opinion, most of the mail received by the various Congressmen is anti-HUAC. A Congressman, therefore, has no justification for refusing to vote against the HUAC, if he is, in fact, against it. She suggested that if the Congressman states his mail is basically for HUAC, the individual should find out why, where it is coming from, etc. She suggested that, assuming the Congressman is against HUAC, the individual ask him what he can do to help. She noted that the individual should treat the visit to the Congressman's office not so much as an attempt to tell the Congressman what the individual thinks, but to ask him questions. Ask questions such as what do you think of the name change, of Congressman Ichord's promises of fairness, of witness procedures, etc. In short, find out what the Congressman thinks; get information.

She concluded by observing that she has detected a change in attitude from the congressional offices over the years that she has been here. When she first began her lobbying attempts, she noted that secretaries, when she showed up in an office, told her that a Congressman was pro or con and that he knew all about HUAC. She notes that now she tells the secretaries or the Administrative Assistants that she really doesn't care one way or another about HUAC, but she simply has some information for the Congressman and asks if she can come back from time to time with more information. Now the Congressmen "light up" and ask her, "What do you have for me today?" She said that the information that she carries to the Congressmen does the job, it speaks for itself.

Some of the comments that were made from the floor after Donna Allen concluded are worthy of brief mention. There was a suggestion that each individual talk to his Congressman when he returns to his district. A comment was made that Congressmen who voted in favor of HUAC are defensive about the position. Those who voted against it really love to talk about it. A suggestion was made that in any political campaign an anti-HUAC element should be injected with an argument raised that many politicians do not want it injected. A former Congressman, Charlie Porter, commented on how to "set up" a Congressman who is pro-HUAC. He suggested that individuals get the Congressman committed in writing. He said that a person should send back any form letter received from a Congressman, with comments thereon asking why he didn't bother to answer personally or actually answer the questions raised in the letter to him. Pin him down. He then stated that if the Congressman's answer is anti-HUAC that it should be taken to the newspapers, etc. If pro-HUAC, it should be given to the Congressman's opponent in the next election.

Following a break for lunch, Professor Hugh H. Wilson, Professor of Politics at Princeton University spoke. Among other things, he noted that HUAC had done its best to strengthen the anti-democratic elements, it has undermined our capacity for social discourse, and it has encouraged racist discourse. It has accomplished all this by silencing liberalism. It is more interested in destroying people than in furthering change.

The next speaker was Professor Oliver Clubb, Asian Studies, Syracuse University. The printed title of his dissertation was "On Foreign Policy." The whole dissertation was psychiatrically orientated with such theories as angelic forms overthrowing forces of darkness, forces of death and dissolution, and an interesting theory: all people have three layers—an outer layer of suppression, a second layer of violence, and an inner layer of biological functions. Since we all suppress our second layer of violence, we need some outlet. Wars form what we consider a legitimate outlet. HUAC perpetuates the war by stifling dissent directed thereto.

The next speaker was Abe Feinglass, Vice President, Amalgamated Meat Cutters and Butcher Workmen of North America. He spoke generally on the history of labor and HUAC. He was extremely derogatory to HUAC, blaming it on much of labor's ills. In particular he noted that HUAC had gone out of its way to "get" the CIO. He noted that many times HUAC had timed its hearings to coincide with strikes and organizational attempts. Further, that more than once news of subpoenas was leaked to management before they were actually issued. He alleged that HUAC played a major role in splitting the U.S. Labor Movement in the 40's and 50's. HUAC is, according to Feinglass, against everybody who wants progressive change away from, to use his terms, "rugged individualism and private enterprise." He further noted that HUAC has "destroyed" the labor leaders who today could or would have stood up and dissented in favor of the liberal movement. It was also his thought that HUAC utilizes political terrorism to stifle everything which he considers healthy to our society. He acknowledged that what he termed the "old left" through some mistakes has partially contributed to our present problems.

The next speaker was Professor Thomas I. Emerson, Yale University. His remarks centered around the new committee mandate. His initial comments were directed toward the First Amendment (freedom of speech and association) and the Fifth Amendment (due process of law as it is associated with constitutional notions of vagueness.) He gave a short lecture on the difference between the constitutionally protected right of expression and non-constitutionally protected right of action. He acknowledged that the new mandate is an improvement over the old mandate. However, in his opinion it "comes down" to much the same problem as the old mandate. He then analyzed parts of clauses (1), (2), and (3) of subparagraph (b) showing how various words or phrases run afoul, in his opinion, of the First Amendment's right of freedom of speech and association.

The concluding remarks at Saturday's session were given by Frank Wilkinson who went into a rather elaborately detailed history of the Committee. Perhaps the content of his dissertation could be summarized by his repeated emphasis that they should emphasize the First Amendment principles of freedom of speech and freedom of association to all other groups and organizations. The theory being that these other groups and organizations who are engaged in some sort of dissent, legitimate or otherwise, by whatever methods, should and would feel that any committee which could impinge or infringe upon those First Amendment principles could thereby impinge or infringe

upon their movement. This was a general tenor noted throughout the day's events, one of appealing to other groups and organizations who are engaged in dissent to show or illustrate to them that their right to dissent is impaired by the establishment and functions of the House Internal Security Committee and, therefore, it should be abolished.

The second session of the Convention was called to order on Sunday, March 23, by Chairman Phillip J. Hirschkop.

The first speaker was Lawrence Speiser, Director, Washington, D.C. American Civil Liberties Union. He spoke on "An Evaluation of the 91st Congress; What Can We Expect." In his opinion more of the same general type of legislation that emanated from the 90th Congress can be expected. In particular, general problems concerning law and order, crime, student and other demonstrations would be considered. He noted, with reference to the problem of crime in the streets, what he considered a trend to infringe on constitutional rights, rather than use the poverty program to get to the roots and cause of the crime. He discussed organized crime and attacked the wiretap laws. He pointed out that under the omnibus crime bill of last year, the states potentially have wider leeway than Federal authorities to wiretap. He discussed briefly student demonstrations and obscenity problems. In his estimation, Congress will probably legislate further in the area of obscenity. His concluding remark was: ". . . civil liberties are indivisible. What can be done to organized crime can be done to you."

The next speaker was Professor Arthur Kinoy, Rutgers University. He began by asking a question: "Is it relevant to fight to abolish HUAC today?" Citing examples from the last two weeks, particularly the Chicago indictments, he concluded that the Nixon Administration is moving, or is prepared to move, against the national leaders of all liberal radical movements. He feels there has been a major decision made to attempt to isolate and destroy the leadership of "peoples' movements." His analysis is that the Federal Government is unable to cope with the fundamental, exploding erupting problems of Vietnam, the new young generation in the universities, and the black problems; therefore their only answer is force to suppress those problems. One of the elements of the force to suppress those problems, obviously, is congressional committee investigations. Therefore, answering his initial question, the present struggle against HUAC is extremely relevant.

Mr. Kinoy noted three basic lessons which he feels have emerged from the anti-HUAC fight which should be taught to all new movements. First, and most important, don't be defensive, don't sit back and wait, fight back at the earliest possible opportunity. Take the offensive. The minute any governmental action is taken or even proposed, the group should ask the question "What are we going to do to get them back?" Second, Mr. Kinoy feels that the Committee will die without the unity of the "American peoples movements". They have a common enemy, HUAC, and should unite all peoples movements in the common fight against the common enemy. He noted that "the man" (President Nixon) is going to try to to everything within his power to prevent this unity. Third, in the "peoples' fight" there is no generation gap—the generation can be bridged. In Mr. Kinoy's opinion, the myth that there is a generation gap comes directly from "the man".

The next speaker was Jerry Gutmann who discussed rather briefly, and without much detail, the *Krebs*, *Davis*, and *Young*, and *Stammler* and *Cohen* cases. He noted that the Krebs case is now pending before a single District Judge in Washington, D.C. who has already indicated that he considers the question moot. There are, he noted, additional questions of mootness because of the change of the committee name and the fact that the present Congress cannot cite contempt in those cases. They will not accept a disposition of the cases based on the issue of mootness. The real issue of the case is, not the power to cite contempt, but that of inquisition and interference with peoples' lives and First Amendment rights. He inferred that they will argue that it is really the same committee with the same powers, notwithstanding the name change. He mentioned either expanding this litigation, expanding other litigation, or initiating new litigation to include an issue of disposition of the House Internal Security Committee files. He argued there is no legitimate legislative purpose served by retention of these files. Therefore, a request will be made to seal the files or records so they cannot be examined without a ocurt order.

He then discussed briefly the *Young* and *Davis* case, noting that a motion to quash the subpoenas had been overruled by the District Judge. He then discussed briefly the old HUAC motion to produce Dr. Young's bank account. He noted that when the motion was drawn, but not served, to quash, Congressman Ichord called and told them he was withdrawing the subpoena for a technical reason and, to date, no new subpoena has been issued. This was interpreted as a victory for the Committee.

He then discussed briefly the *Stammler* and *Cohen* case. He noted that these cases had been "knocked-out of court" on the constitutional theory that a Congressman cannot be sued—can't even be enjoined from pursuing unconstitutional matters.

The next speaker was William F. Kunstler, Esquire. He spoke briefly on legal problems arising in the Kentucky and Wisconsin areas. He noted that the Kentucky Un-American Activities Committee had been effectively destroyed because the Governor had cut off its funds. He emphasized the point, previously raised by Mr. Kinoy, of positive and offensive reaction at the first possible moment. He made some brief comments on the draft, noting that the draft statute was being used as an adjunct of the system in an attempt to destroy the "peoples' movement". In his opinion, the draft system is loaded with inequities and absence of due process at every level. He also made some reference to Kennedy's recent resolution with respect to the draft. He closed with the comment that "peoples' movements" must stand and fight in the most positive way. "The man" cannot be cajoled or intellectualized out of his stand, but he can be worn down. He can be tied down.

The next speaker was Donna Allen whose topic was "Pending Repressive Legislation and Hearings." She spoke briefly on S. 12 noting that it is the same as S. 2988. In her opinion, it contains every single repressive thing the authors of the bill can think of. She noted rather briefly the anti-riot bill passed as a rider to the Civil Rights bill. She then spoke briefly on six bills presently pending before HISC, all referred to it on January 3, 1969.

At this point, there was a break with some general discussion from the floor. The general tenor of the conversation was the undesirability of transferring HISC to the Judiciary. They do not want it under the respectability of the Judiciary. They want it to stand alone where they feel it is more vulnerable to attack.

The next speaker was Professor Thomas Emerson, Yale University. He began by noting that HISC is most interested at present in disorder on the campuses and demonstrations in general. He briefly discussed Congressman Ichord's bill to establish a Committee of seven Congressmen to review contempt citation requests. His only comment was that it contains nothing really objectionable. He also noted Congressman Ichord's bill to amend the statute to subject a person who "misbehaves" before a committee to contempt charges. In his opinion, this is extremely vague and he didn't think there was any reason for it. He noted that other committees have gotten along without it.

Professor Emerson then discussed Congressman Gonzalez' bill (H.R. 46). He singled out four main provisions: (1) It reduces the power of a single member of a committee to take certain actions. It, in effect, eliminates the one-man subcommittee. (2) It contains provisions regarding the right of witnesses to explain answers, read or give statements at the end of testimony, and gives the witnesses' counsel right to question certain aspects of the Committee's jurisdiction. (3) It extends rather extensive rights to people (other than the witness) mentioned in committee proceedings, including right of cross-examination and right to call witnesses on his own behalf. (4) It contains provisions which provide, in part, for a court decision whether a witness would be held in contempt if he refuses to answer a question, before he in fact does refuse. In Professor Emerson's opinion, H.R. 46 would afford more substantial right to a witness called to testify before a committee than he now has. He then asked whether the Committee should support this bill. He noted that H.R. 46 goes to form (procedure) and not substance (abolish HUAC) and, therefore, answering his own question, he felt that no formal action should be taken to support it. He suggested that while it does give a witness more protection, the position should be taken that people shouldn't have to testify at all. The comments that came from the floor at this point seemed to be in favor of endorsing the Gonzalez' bill because, basically, it applies to all committees. There was some comment that it should be strongly endorsed. The Committee will, probably, endorse and support the Gonzalez' bill as a sort of secondary measure, retaining as its first priority its continued fight to abolish HUAC. The whole issue is one of emphasis or priority.

The next speaker was Professor Douglas Dowd, Cornell University. He spoke on "Attacks On Academic Freedom." He initially remarked that we live in a very dangerous period. He was referring to people with general indifference to, or support of, those attempting to suppress dissent. He noted that all news reports of events that he personally was acquainted with were distorted; therefore he assumes the rest are. He doesn't think any news reports are really reliable. When he reached this conclusion there was a resounding round of applause from the audience.

He then observed that, at the present time, there is no problem on the campus with respect to freedom of speech. In his opinion, people are free to say, and are saying what they want. However, this freedom of speech, on the campus, is now being used as a means of preventing change, not promoting change. This was the whole basis of his remarks.

He noted that today the youthful academic world is trying to stop and break up the corporate war economy. Students are trying to change things both on and off the campuses. He feels that the universities are now turning out people who will fit into slots, who will work and perpetuate the system, and the students want to change the system. The students are saying things must be changed and, many times, the faculty say "we agree," but present procedures to effectuate that change must be respected and obeyed. The students, however, see nothing change, or if the change does come, it is too slow or only temporary. Students are saying we want to change, we will use your procedures, but if they don't work, we will build up our own. The whole point, in Professor Dowd's opinion, is that many times the faculty agrees with the students that some change must be made, that something must be done, but they don't

do anything about it. In short, there is much free speech about what should be done, but such free speech does not accomplish anything. All the free speech results in is talk, talk, talk, but no concrete results. Therefore, the observation that, in effect, free speech is preventing, not promoting, change. Professor Dowd closed with the comment that when repression comes to the campus, it will come wrapped in a cloak of free speech. Talk, while necessary, is not enough.

The next speaker was Carl Braden who talked rather briefly about the Kentucky Un-American Activities Committee and how it is presently rendered ineffectual by the Governor's denial of funds. He again emphasized the concept that the first thing to be done when a "repression measure" is instituted is to counterattack. He advocates, as did everyone else, the theory that you fight both in the courts and on the street; using the term "fight" in terms of organizing and educating people—in short, combined legal, propaganda, and organizational techniques.

The next speaker was Ginny Guild, an associate staff member of the Southern Conference Educational fund. Her very brief general comments were directed toward the problems of organizing people against repression in the South. She noted that people should look at repression in its totality—wherever and by whomever it arises.

The next speaker was Jim Rowan, Chairman, Southern Committee Against Repression. He noted that they have made advances in the South in their coordination of groups. He made some general comments about what he called "creative losing" noting that the courts make an excellent forum from which they can express their views. He also touched rather briefly on problems created by state and city agencies.

The next speaker was Juan Lopez. He commented on the black and brown people's fear of concentration camps (Title II of the McCarran Act). He again asked the National Committee how they intend to relate to the black, brown, Chinese, labor movements, etc. He suggested that every time a group of people or organization is "oppressed" by a local, state, or federal authority, that is the ideal time to educate them of the evils of the McCarran Act. He closed with a suggestion that the Committee consider hiring black and brown organizers.

The next speaker was Terry Carter, from Camden, New Jersey. She began by telling of her experiences in the Civil Rights field in Camden, New Jersey, and how "they" brought in a "red scare" to break up the group or organizations. She noted that the "HUAC tactics" of name calling is particularly effective in the black and brown communities because of (1) their lack of education and (2) they have been subjected to the same "mom and apple pie" Americanism as the rest of us and are, in her opinion, more susceptible to the concept of this Americanism because of their constant struggle for equality. She noted that if you cannot convince the white middle-class community that the HUAC-type repressive and oppressive tactics are bad, how can you expect to convince the black and brown people. She noted they are simply too busy with the mundane problems of living to intellectualize with this problem.

She recommended a full-fledged campaign designed to reach the black and brown community at their level. The type of campaign launched against the white middle-class citizenry will not be effective against the black and brown community for the simple reason that they stand on two different levels of education. She noted that letter writing, phone calls, etc. will not work in the black and brown community. In her opinion, it is necessary to actually go in and personally talk with these people—and the organizers must be black or brown people.

She commented that in her experience HUAC "oppresses" black men by repressing and oppressing the white liberal groups trying to help them. HUAC doesn't actually touch or interfere with the black people; therefore, the majority of the black community does not think that any of the HUAC action-type of activities, particularly she pointed out, the McCarran Act, Title II, pertains to them. She closed with a plea to organize the black community.

The next speaker was John Learner of the Students for a Democratic Society. He began by noting that imperialism, capitalism, and racism are the real problems in America today. He made some general comments about the present problems of the Washington Free Press, the SDS demonstrations which precluded Mayor Alioto from speaking at Georgetown University, and the Texas universities refusal to allow SDS to hold their March National Council meeting there. He also spent a few brief minutes discussing varying examples of what he considered to be repression of the SDS. Interestingly, he commented that the SDS knew the House Internal Security Committee is planning to investigate them, and made the comment that "we will learn very quickly how to respond to that form of repression."

He noted that the SDS is learning how to use the HUAC-type hearing for its own purposes, how to utilize it to show just how undemocratic and repressive those mechanisms of government really are. He further commented that history had shown them that the channels of petition for redress are not open to the SDS. He commented, "we are, in fact, a movement of people for power in this country." He concluded by noting that it is impossible to separate the attacks against SDS from attacks against any other groups and organizations for reform in this country. He made a plea for unity of all groups with the closing remark, "power to the people, by any means necessary."

The next two speakers, Wayne Holley of Utah and Scarlet Patrick, made a few brief general comments on "Defense Against Prosecutions Under HUAC's Revived Internal Security Act."

The next speaker was Milton Cohen, Social worker-executive, one of the plaintiffs in *Stammler, Hall and Cohen* v. *Willis*. It was his opinion that the "establishment" is trying to carry out a policy of [sharp] repression, because they can't solve the problems. He further noted that the change of name from HUAC to House Internal Security Committee is a sign of their strength and a sign of the Committee's weakness.

At this point, the group engaged in a rather general discussion over various issues that had been raised. The only thing of particular interest at this point was a question raised by an individual from St. Louis. He commented that when groups use more radical means to get what they want, people were asking him the question, "In pursuing your goals, you are violating my First Amendment freedoms to do what I want to, how do you justify that?" He then asked, "How do I answer a question like this?" It was extremely interesting that no one attempted to answer the question. In fact, the question was ignored with the next two people making eloquent remarks toward protection of the First Amendment freedoms, the need for a change in society, calling the Convention a victory celebration, and imploring a renewed emphasis on attacking the Nixon Administration and the House Committee on Internal Security.

There was, also, some discussion at this time regarding the direction the Committee was to take. The general question the members of the Convention discussed was how broad a front should be pursued. Should they limit themselves simply to attacking the House Internal Security Committee, or should they branch out and encompass more activities. There was really no answer given, merely much discussion.

The last speaker was Dennis J. Roberts, Esquire, Counsel, Law Center for Constitutional Rights. He noted that the Law Center has filed suit, in effect, against Title II of the McCarran Act. They are specifically after the "detention" aspect of Title II. He discussed briefly a hearing held about a week ago on the Government's motion to dismiss this suit and noted that the Judge had taken it under advisement. He inferred rather strongly that the Judge was kindly disposed toward the Plaintiff's view to declare Title II unconstitutional. He suggested that this suit be used as a unifying tool to unite all forces and all people against repression.

This concluded scheduled speakers and discussions of the assembled people.

Mr. LEGGETT. Mr. Speaker, at a time when this country is reaching fiscal extremes and the administration is attempting budget cuts across the board, I think it is incumbent on this body to closely scrutinize the pending request for a special appropriation of $400,000 for the Committee on Internal Security. This committee already receives the statutory sum of $166,340 in addition to the automatic amenities such as printing, stationery, stamps, equipment, furniture and office space allowances. There seems no reason why this committee should not be able to operate within its budget. Certainly, a special appropriation of about 250 percent in excess of the statutory allowance is unnecessary. This committee has the mandate to investigate internal subversion within the country and recommend necessary legislation. In past years, the committee operating under the title of the House Committee on Un-American Activities has indeed held many investigations. Its legislative accomplishments have not been overwhelming however.

There has been no explanation of why the committee cannot carry on its designated function within its regular budget. The only reason I can surmise for this request is to fund the extensive publishing activities of the committee. These publications do not fall within the authorized purposes of the committee, and in many cases consist of unverified allegations from dubious sources on the activities or associations of certain public figures. I can see no reason for Congress to fund the dissemination of conspiratorial theories advanced by private citizens or organizations.

For these reasons I would recommend the passage of the motion to recommit this additional appropriation.

Mr. ANNUNZIO. Mr. Speaker, on the first day of this session of Congress I introduced a proposal, House Resolution 20, calling for the abolition of the House Un-American Activities Committee. Recently, when the name of this committee was changed to the House Internal Security Committee, without any perceivable change in its functions or its mandate of authority, I introduced a bill, House Resolution 287, calling for the abolition of this newly named, but relatively unchanged, committee.

Today the question of appropriations for the House Internal Security Committee for this session is before us, and today I take the floor again to urge that we put an end to the activities of this committee. House Resolution 270, which we have before us today, would appro-

priate $400,000 for the committee. I am sure that my colleagues are aware this authorization is not necessary to keep the committee in existence. This funding is in addition to the funds authorized for the committee—more than $160,000 this year—under the Legislative Reorganization Act of 1946.

In the 89th Congress, the Un-American Activities Committee received additional funds in the amount of $845,000 by specific House resolutions. In the 90th Congress, it received additional funding of $725,000. By comparison, the House Judiciary Committee, received an additional funding of only $500,000.

It is incredible, Mr. Speaker, that so much money should go for such little legislative accomplishment. The functions of a legislative committee are to consider, report, and oversee legislation. Since its establishment as a standing committee in 1945, the Un-American Activities Committee—predecessor of the present committee—had to its credit two acts—the Internal Security Act of 1950 and the Communist Control Act of 1954—together with four amendments to the Internal Security Act. Indeed, the last of these amendments, passed by the 90th Congress, was made necessary to keep alive the Subversive Activities Control Board because the Supreme Court found that the most important part of the Internal Security Act—that which sought to compel registration of groups and individuals with the Attorney General by order of the Board—violated the fifth amendment.

Mr. Speaker, this committee, by the very kinds of investigations which it conducts, necessarily invades the area of first amendment rights—speech and assembly—which are specifically exempt from congressional action and therefore from congressional investigation.

This committee, by the very kinds of investigations which it conducts, unavoidably punishes individuals without due process of law in flagrant violation of the fifth amendment as well as of the constitutional prohibition against legislative punishment.

More than this, Mr. Speaker, we must ask whether we need this committee to expose subversive activities. Not only is the Federal Bureau of Investigation eminently capable of uncovering activities aimed at overthrowing the United States by force and violence and deception, but the kinds of activities at which the committee is now taking aim—protest and dissent by New Left groups—are not masked by front groups as was Communist activity in the past. When the committee interrogates protestors and agitators like Rennie Davis and Tom Hayden, it is not drawing aside a curtain of deception and exposing subversion to public view. These people are only too eager to state their views to the country and to the committee.

Not only does the legislative record of the committee fail to justify its continuation, but even the function of exposing subversion to which it has appealed for justification is rendered less necessary by the overt character of arrest, protest, and dissent.

Mr. Speaker, I urge my colleagues to vote against House Resolution 270, for it is obvious from the past record of the committee that its activities tend to do more to weaken our constitutional guarantees of individual rights rather than strengthen the internal security of our Nation.

Mr. SCHERLE. Mr. Speaker, on February 18, 1969, the House overwhelmingly approved, by a vote of 306 to 80, the duties and jurisdiction of the House Internal Security Committee. This resolution today merely authorizes the money for the committee to do the job.

The chairman of the committee, Mr. ICHORD, has outlined to those of us on the committee a very comprehensive schedule of activity. The committee intends to hold hearings on subjects such as: The protection of national defense facilities; the security of classified information released to industry; Federal employment security; vessel, ports, and harbor security; the protection of our Armed Forces during periods of undeclared war; passport security; proposals with respect to the Emergency Detention Act of 1950; and the role the Federal Government should have in helping to stem the growing tide of revolutionary activity. In addition the committee has a responsibility, as do all House committees, to conduct legislative oversight hearings to see whether the present laws are adequately achieving their purpose and whether they are properly enforced.

Because of the nature of the field in which this committee is involved the investigations must be conducted in depth to assure that the committee obtains the proper information. I urge Members of the House to support this bill.

Mr. HELSTOSKI. Mr. Speaker, I rise in opposition to the resolution now under consideration for the authorization of expenditures of $400,000 by the newly named Committee on Internal Security, but the same old House Committee on Un-American Activities.

Ever since I became a Member of Congress, I have opposed this committee as one that is useless to the functions of the U.S. Congress. It has shown little for its expenditures of public moneys. But, it has been flamboyant in its conduct of committee business.

Of all the committees of this House, the House Internal Security Committee is requesting the greatest appropriation, for which we receive the least amount of legislative proposals.

I have felt that the powers of this committee could be well incorporated into the functions of the House Committee on the Judiciary. I still feel that way. Yet, in making a simple change in the name of this Internal Security Committee, we have given it the right to delve into the matters of espionage, a phase that was under the jurisdiction of the Judiciary Committee for 42 years—and which still should be there. Are we going to chip away from the authority of the Judiciary Committee in small pieces and finally leave the committee nothing to do?

Mr. GILBERT. Mr. Speaker, I am profoundly opposed to this resolution to provide $425,000 to the Committee on Internal Security, known until recently as the Committee on Un-American Activities. Last month we were asked to change its name, to provide it, in effect, with sheep's clothing. But the committee remains the same. If it exists at all, it should be a subcommittee of the Judiciary Committee, but I believe this committee is inappropriate to our constitutional system.

What upsets me, Mr. Speaker, is that we take up this resolution without regard to our own strictures for saving money. We all know the committee is notoriously unproductive of legislative proposals. We could very well begin cutting our budget right here. I am voting against House Resolution 270, Mr. Speaker, not only because I disapprove of the committee's investigatory procedures, but I believe the committee appropriately belongs under the Judiciary Committee.

Mr. RANDALL. Mr. Speaker, I rise to support House Resolution 270, which provides the funds for the operation of the House Un-American Activities Committee. Out of habit I used the foregoing description, and I know I should refer to it as the Committee on Internal Security. While I supported the change of name, it was with some reluctance.

I have listened this afternoon to those few Members who have spoken against adequate funding for the Internal Security Committee. They are entitled to their views. I had great difficulty following their reasoning that the funding would undermine the civil liberties of everyone in America. On the contrary, the work of this committee has contributed significantly to strengthing the rights or liberties of all of us by ferreting out the enemies of this country who would destroy it.

It has just come to my attention that about a week ago there was a meeting here in the city of Washington by a group that call themselves, the Committee To Abolish HUAC.

While my information about what went on in the committee meeting is incomplete and admittedly based on hearsay, it comes from a source which is usually reliable. I believe what I have heard should be made a part of the record of this debate.

In the meeting the members of the Committee To Abolish HUAC were urged to talk to their Congressman when he returns to his district. They suggested that all Congressmen who vote in favor of HUAC are on the defensive, while those who voted against HUAC are proud to say they have opposed it. It seems that a former Congressman from Oregon, Mr. Charles Porter, was present and proceeded to point out the best way to "set up" a Congressman who is pro-HUAC. He advised those assembled in the Washington meeting to mail back to a Congressman any of his so-called pro-HUAC form letters and demand that the Congressman write a personal letter setting forth with particularity why he favored funds for the use of HUAC. The former Member from Oregon was very gleeful in telling how to hurt a Congressman. He said if the answer was anti-HUAC, take it tc the newspapers. If the answer was pro-HUAC, give it to the Congressman's opponent for use in campaign material in the next election.

Now, Mr. Speaker, had there been any doubt in my mind how I intended to vote on this resolution, it would have been erased by the knowledge that the Committee To Abolish HUAC has been in session discussing ways to embarrass those who support adequate funding for this committee. I hope we can get a rollcall vote today on this resolution. I want my constituents and future opponents to clearly understand my position on this issue.

In the years that I have been in Congress I was privileged to know the former distinguished chairman of the House Un-American Activities Committee, the gentleman from Pennsylvania, the late Mr. Walter. I knew the former chairman from Louisiana, Mr. Willis. I suggest today that our colleague the gentleman from Missouri (Mr. ICHORD), the new chairman of this committee, will carry the tradition of the former chairmen. He will lead the committee with fairness and objectivity. He will make a record that we can all be proud of.

Yes, I suppose we will always have a few opponents of this committee, whether it is called HUAC or the Committee on Internal Security. It is my observation that with the passage of time the opponents are becoming fewer. Anyhow, a rollcall vote would enable most Members to stand up to be counted in support of a committee which over the years has conducted many important inquiries which have contributed to the security of the United States.

Mr. HAYS. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the resolution.

MOTION TO RECOMMIT

Mr. REID of New York. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the resolution?

Mr. REID of New York. I am, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. REID of New York moves to recommit House Resolution 270 to the Committee on House Administration.

Mr. HAYS. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. REID of New York. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 74, nays 283, not voting 74, as follows:

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Ronan for, with Mr. Hébert against.

Mr. Macdonald of Massachusetts for, with Mr. Long of Louisiana against.

Mr. Rees for, with Mr. Gray against.

Mr. Foley for, with Mr. Abernethy against.

Mr. Conyers for, with Mr. Andrews of Alabama against.

Mr. Dawson for, with Mr. Evins of Tennessee against.

Mr. Powell for, with Mr. Gettys against.

Mr. Scheuer for, with Mr. Griffin against.

Mr. Roybal for, with Mr. O'Neal of Georgia against.

Until further notice:

Mr. Celler with Mr. Bow.

Mr. Murphy of New York with Mrs. Dwyer.

Mr. Dulski with Mr. Fish.

Mr. Barrett with Mr. Gude.

Mr. Brooks with Mr. Watkins.

Mr. Blatnik with Mr. Pirnie.

Mrs. Sullivan with Mrs. May.

Mr. Kirwan with Mrs. Reid of Illinois.

Mr. Alexander with Mr. Berry.

Mr. Carey with Mr. Bates.

Mr. Fulton of Tennessee with Mr. Dickinson.

Mr. Dent with Mr. Harvey.

Mr. Colmer with Mr. Snyder.

Mr. Green of Pennsylvania with Mr. Pollock.

Mr. Kyros with Mr. Wyatt.

Mr. Long of Maryland with Mr. Mathias.

Mr. Moorhead with Mr. Lukens.

Mr. Edwards of Louisiana with Mr. Brock.

Mr. Flynt with Mr. Edwards of Alabama.

Mr. Jones of Alabama with Mr. Hammerschmidt.

Mr. Patman with Mr. Roth.

Mr. Murphy of Illinois with Mr. Minshall.

Mr. Landrum with Mr. McClure.

Mr. Meeds with Mr. Esch.
Mr. Shipley with Mr. Bell of California.
Mr. Wright with Mr. Watts.
Mr. Van Deerlin with Mr. Ullman.
Mr. Purcell with Mr. Rarick.

Mr. MADDEN changed his vote from "nay" to "yea."

Mr. GUBSER changed his vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER. The question is on the resolution.

Mr. ROUDEBUSH. Mr. Speaker, on I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 305, nays 51, not voting 75, as follows:

[Roll No. 34]

Mr. Wright with Mr. Wyatt.
Mr. Leggett with Mr. Alexander.
Mr. Landrum with Mr. Ullman.
Mr. Colmer with Mr. Dent.
Mr. Rarick with Mr. Purcell.
Mr. Patman with Mr. Ottinger.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on House Resolution 270, which has just been agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

ADJOURNMENT FROM THURSDAY, APRIL 3, TO MONDAY, APRIL 14, 1969

Mr. ALBERT. Mr. Speaker, I call up House Concurrent Resolution 191 and ask for its immediate consideration.

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 191

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, April 3, 1969, they stand adjourned until 12 o'clock meridian, Monday, April 14, 1969.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZATION FOR THE CLERK TO RECEIVE MESSAGES AND FOR THE SPEAKER OF THE HOUSE TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS FOUND TRULY ENROLLED

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House from April 3 to April 14, 1969, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. HALL. Mr. Speaker, reserving the right to object, may I inquire of the distinguished majority leader if there is any further business scheduled for either Wednesday or Thursday next, in view of the past resolution that we just agreed to?

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. HALL. I will be delighted to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, in view of the fact that we have completely disposed of all of the legislative business on the program for this week, there will be no further legislative business during the remainder of the week.

Mr. HALL. Mr. Speaker, I thank the distinguished gentleman.

It is understood that our meetings for tomorrow and Thursday will simply be pro forma meetings, with no legislative business to address ourselves to, barring some unforeseen emergency; is that correct?

Mr. ALBERT. I know of none, I will say to the gentleman.

Mr. HALL. Mr. Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

AUTHORIZING THE SPEAKER TO ACCEPT RESIGNATIONS, APPOINT COMMISSIONS, BOARDS, AND COMMITTEES

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that notwithstanding any adjournment of the House until April 14, 1969, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON APRIL 16

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday, April 16, 1969, may be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PERSONAL EXPLANATION

Mr. OTTINGER. Mr. Speaker, on the last vote I was unavoidably detained on official business. I would like the RECORD to show that had I been here, I would have voted "nay".

TELEVISION NETWORKS

(Mr. CLARK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CLARK. Mr. Speaker, my colleagues and I have concerned ourselves with the television industry for some time now because we have not seen the improvement that we were promised after extensive investigations 2 years ago, and because our constituents are increasingly demanding some method of control that the industry has thus far refused to exercise over its own destiny.

I would be the last Congressman to advocate the increase of Federal control over any industry which continuously exhibits genuine concern for the public good and which implements sound judgment and constant supervision of what it considers to be in the public interest, but I must admit that I am apprehensive over the trend—when the most potent and powerful medium of communication we have yet devised seems to have directed itself toward chaos instead of any possible utopia.

There is an ancient expression, "I will not believe it until I have seen it with my own eyes." The electronic media has established a believeability that has taken full advantage of this adage. We all know that the adage itself is false; we do not always see what we think we see with our own naked eye. The captioned picture tells you what the producer wants you to see and the commentators on television interpret the moving action for you according to their own personal judgment and taste; and within the framework of their individual network policies, aims, and particular mission at the time.

I believe that in some instances the network policies must be determined by the fantastic competition: The mission of the moment therefore overrides propriety and discretion. The competition must rank among the most harsh and demanding ever known in the business world, because it is fed and nurtured by vast advertising fortunes. To keep the millions of viewers watching, this competition therefore actually challenges the rights and principles of the same audiences.

The networks have seemingly turned a deaf ear to pleas for security and propriety with their repetitious trumpeting of a questionable axiom: "the public has a right to know." I think this has formed a mandate for them which does not now recognize a governmental—or even individual—right to any degree of secrecy—for privacy. At times, it seems to me, the network disclosures and their words and their pictures border on treason.

All media thrives on controversy, but the electronic media has become so steeped in the necessity to portray controversy that they contribute to controversy, they excite controversy, they accelerate controversy, they continue controversy, and they exploit controversy—with or without all of the facts and in or out of context, depending on what will best suit the script of the moment.

While I have concern as a parent and a citizen over the portrayals of violence and the vast amounts of time allotted by the networks to rioters and dissidents, I rise now to specifically voice my concern as a U.S. Congressman over the divulgence of classified materials, the callous disregard by the networks for our national security, and actual disclosures on the battlefield, which may well have cost the lives of our soldiers.

From my experience as an Army officer, I was shocked and dismayed to witness television shots and listen to radioed reports, relayed via satellite from our embattled Marine outpost at Khesanh, describing the effect of Vietcong artillery fire on this exposed position. There they took pictures of installations and targets and broadcast information that we spent actual lives to procure in World War II. Taking advantage of the lack of wartime censorship, they broadcast the effect of enemy artillery fire so that in my opinion, the enemy artillery commander could easily consult his fire direction tables for a given day and determine his direction and azimuth for the next, after listening to the description of the effect of his fire, which he could not otherwise observe from the fog-shrouded hills he occupied.

I cannot accept the excuse that the permission of some headquarters presumes the license to operate in a battle area without restraint. We know that the military has long considered wartime censorship methods, but refrained from this imposition in light of the rather weird consideration of this conflict and the many restrictions placed upon such a tactic by various branches of the executive department. Thus, an added responsibility has been inadvertently placed on field commanders and small unit officers—to retain whatever degree of security they can amongst roving reporters and searching cameramen.

The military commander in the field is usually not prepared by training or through experience to cope with this new dimension which amounts to yet another "infiltration" of his position under friendly auspices, but with potentially disastrous results. The military commander, too, in a combat situation is a besieged individual in desperate circumstance and I think he has all he can handle with his troops, his tactics, and his strategy.

I have been to Vietnam on seven occasions and talked at great length to many of our commanders and I have heard some of their private opinions on the freewheeling camera coverage of the war there. I would rather not repeat some of their advice at this time.

I listened in despair to a network oracle as he criticized the tactics of an embattled Marine major during the battle of Hue and I listened to some of our electronic ambassadors, who seemingly lauded the effort of our enemy, questioned our policies, challenged our commanders and even misinterpreted some of the actions of our GI's in actual combat.

The straw that broke the camel's back for me was a recent airing entitled "First Tuesday in February." This televised fiasco purported to explore the mystery of the accidental death of some sheep in Skull Valley, Idaho, and utilizing this—now ancient—event as a newspeg, the network went on to clobber the Army's Chemical Warfare Service.

They delved into areas clearly marked "Secret" and ridiculed the "secrecy." They took airborne pix of storage site for so-called "nerve gasses" so that any of

our adversaries may plot these targets for future reference. They showed endless pictures of various animals struggling in death throes, supposedly from the introduction of nerve gas and they questioned people at length—without single success I might add—as to their part in chemical warfare studies. They even sought to pinpoint an island in the Pacific whereat various aspects of chemical warfare and delivery means were under study.

I doubt this exposure will rank very highly on any public opinion poll, either for the TV treatment or the contemplation of the work of our Chemical Warfare Service, but we cannot alter the fact that this weapon must be taken into consideration by our military: It is not the type of warfare we ever intend to initiate and certainly we do not broadcast our research, but we know the enemy has this capability and we must therefore consider both the potential countermeasures and the antidotes and other protective measures we may be forced to utilize for the protection of our people.

What possible public good was served by this disclosure? What might have been considered treasonable in past periods of our Nation's struggle for survival, is now seemingly accepted as an enlightenment of the masses for the good of mankind, and the hell with the United States of America.

NEXT COME BONFIRES OF BOOKS, AND OF MEN

(Mr. PODELL asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. PODELL. Mr. Speaker, recently a report from California caught my attention. In it, the present Governor of California commented to the effect that political attitudes of applicants for teaching jobs at State colleges and universities must be considered before applicants are hired. He continued on to speak of the "one-sided ideological viewpoint" existing among college and university professors.

The good Governor contended that whether a potential teacher is a conservative or a liberal "must be a consideration in hiring of faculty." This statement was made by the chief executive of our largest State in spite of the fact that State statutes and the Federal Constitution both make it illegal to consider a person's political ideology as a criterion for employment as a State college or university teacher.

Mr. Speaker, this is a frightening statement, in direct contravention of America's history, her way of life and her heritage of civil liberties.

Ordinarily, I refuse to take such off-the-hip comments seriously. But coming from such a high source, I am forced to. Several years ago, the State of California was adorned by a glowing crown of education. Its most brilliant gems were professors who had won international acclaim and honor for their genius. Academic freedom flourished there, providing an atmosphere in which their efforts could be utilized to break new ground for all men. Now that atmosphere is chilling and dissipating itself, and the ugly head of negative political reaction rears its head.

How can any institution of higher learning progress or fulfill its function if its faculty members must toe a political line or be subject to political judgments of the laity?

Albert Einstein looked very much like the "hippie" so many make a profession out of criticizing today. Almost every towering mind in the groves of academe has possessed and exercised various idiosyncrasies which puzzled and perhaps disquieted his fellows. Most of these intellectually gifted people have subscribed to various ideologies which have not hewed closely to the norm. Now the present Governor of California proposes to penalize today's academics job-wise because of it. Forget excellence. Replace it with conformity. Down with genius. Forward the mundane.

Mr. Speaker, New York State will be proud to welcome any of these scholarly gentlemen to its many excellent universities and colleges, where their political ideals will not deprive them of employment. We do not fear different ideologies. Our very differences have enriched us.

If California wishes to ship them east by the carload, we shall hail their arrival with joy. In fact, we shall be proud to have them among us. We may not have a year-round mean temperature of above 70 degrees, but we do not have anyone as chief executive of our State who acts, thinks, and talks like the present chief executive of California.

Aristotle once wrote:

> The basis of a democratic state is liberty.

No greater or more precious form of liberty exists than the guarantee of academic liberty and freedom. Let us never forget that every dictator, from Phillip of Macedon to Nero; from Napoleon to Hitler; from Stalin to Mao; has begun to take freedom and liberty away by silencing and stifling the academic community.

TIRE SAFETY LEGISLATION

(Mr. MIKVA asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I am introducing today a bill to provide an effective and enforceable procedure for notification to purchasers and dealers of defects in automobile tires. This bill, a companion to a measure introduced in the Senate by GAYLORD NELSON, of Wisconsin, would amend the National Traffic and Motor Vehicle Safety Act of 1966 which has already established a similar system for other faulty automobile parts. My bill does what has already been done for automobile parts—and for an item which is at least as essential as any mechanical part to the safe operation of a motor vehicle. I believe it is not too much to say, Mr. Speaker, that a requirement for tire defect notification and recall is an absolute necessity to guarantee the safety of millions of Americans who travel the highways of this Nation everyday.

Senator NELSON, long an advocate of consumer protection legislation, has pointed to two recent incidents which illustrate clearly why a tire recall bill such as I am introducing here today is so vital to the safety of automobile-owning Americans. In a letter to Secretary of Transportation John A. Volpe, released on February 18, 1969, Senator NELSON described the all too common, and too inadequate steps which were taken by two of the Nation's major tire manufacturers today.

The first recall announcement came from Mohawk Tire and Rubber Co. Under agreement with the Department of Transportation, Mohawk originated a press release in Akron announcing that they were recalling 10,000 Airflo tires for a defect which could cause blowouts. In their release, Mohawk urged customers to return any of the suspect tires to their dealers immediately for replacement. Because Mohawk—and all other tire companies—do not keep records on where their tires go after they leave the factory, they said they had to rely on the public news media to spread this information to consumers.

It is, therefore, difficult to understand why a real attempt was not made to get this information out to as many of the media as possible. Instead, the announcement was made in Akron at noon on Saturday, January 18 by Mohawk. Copies of the release were not sent to any of the major metropolitan newspapers around the country. The timing of the release in combination with the poor distribution made it impossible to get adequate play in Sunday's newspapers. It was only the hard work of an enterprising reporter with an inside knowledge of the recall that brought the story to a prominent place in the New York Times and the Washington Post on Sunday, January 19.

On February 4, the second recall announcement was made in the same way. On that day, General Tire announced that they were recalling 40,207—the number was not disclosed in the release—General Jet Safety tires, manufactured between April 1965 and January 1969 because tests indicated that a number failed the endurance test. The fact is that 19 out of 21 tires tested blew out half-way through the test. This vital information was also not mentioned in the release.

Again with the knowledge of the Department, General Tire announced the recall in Akron at 5 o'clock in the afternoon. Again no releases were sent to the major newspapers. The result was that the great majority of morning newspapers of February 5 carried no story at all. The New York Times and the Washing Post carried a totally inadequate wire service story, received late in the evening and with no mention of the blowout potential, in one edition.

Lest there be any question, Mr. Speaker, about the effectiveness of the recalls instituted by Mohawk and General Tire in the two instances described by Senator NELSON, I should complete the story. I have learned that as of last

week out of the 10,000 tires involved in the Mohawk recall, less than 200 were located in the hands of private owners. In the case of the General Tire recall, 42,000 tires were involved, but less than 500 were recovered. Mr. Speaker, those figures indicate that the present procedures for tire recall are a complete and total failure. It also means that there are many Americans riding around on defective tires, blissfully unaware of the danger they may be in. It is almost as if the tire manufacturers were saying: "Happy motoring—if you can find the flaw on your own."

The provisions of the tire-recall proposal, Mr. Speaker, are simple enough, and wherever possible are parallel to comparable procedures for notification of defective automobile parts. The Secretary of Transportation is directed to establish within 6 months of enactment of the bill procedures by which tire manufacturers shall notify within a reasonable time after discovering a defect affecting safety the last purchaser of such tire known to the manufacturer. The procedures will specify how manufacturers are to keep track of the names and addresses of purchasers of its tires. The bill provides that certified mail is the standard method of notifying purchasers of defects. Notification procedure will, wherever possible, be parallel to that required for other defective automobile parts.

Notification to the owner of the tires must contain a clear description of the defect, a reasonable evaluation of the risk to traffic safety presented by the defect, and a statement of the measures to be taken to repair such defect or to replace, if necessary, any defective tires. The manufacturer is required to furnish a copy of the notification to the Secretary of Transportation who is authorized to take such steps in publicizing the notification as he believes necessary to alert owners to the existence of the defect.

The provisions described so far, Mr. Speaker, contemplate a kind of self-enforcement system. They envision that manufacturers will in good faith notify consumers of defects which are discovered by the manufacturer in his own product. But this protection does not go far enough. The Federal Government itself carries on extensive research on the quality of automobile tires. Under the National Traffic and Motor Vehicle Safety Act of 1966, the Secretary of Transportation is charged with establishing for the benefit of the consumer a quality grading system for motor vehicle tires. It would be both shortsighted and dangerous not to give American consumers the direct benefit of this quality grading program as part of the tire recall program.

For the reasons just described, Mr. Speaker, the tire recall bill I have introduced today provides that the Secretary of Transportation may, on his own initiative, inform a tire manufacturer that any or all of his products do not meet the minimum safety standard which the Secretary has established. Once the manufacturer is notified that the Secretary has found his tires defective, he is given time to reply and to prove that the tires are not defective. If the manufacturer cannot prove this, the Secretary can then direct him to initiate the notification procedure described earlier. Thus the bill contains this additional safeguard to insure that the voluntary tire recall program of manufacturers is effective and enforceable.

It might be of interest, Mr. Speaker, in light of the controversy over whether the present administration is sufficiently consumer-oriented, to examine its position on tire recall. Before President Johnson left office, then Secretary of Transportation Alan Boyd sent to Congress, along with his request for DOT appropriations for fiscal 1970, a bill to establish a tire recall program very much like the one Senator NELSON and I are proposing. When the Nixon administration took office, this proposal was withdrawn "for study." So far, Mr. Speaker, it has not been resubmitted to the Congress. I would hope that this "study" period will be brief; while the tire recall proposal is being "studied," there may be millions of Americans running the risk of blowouts—a risk of which they are not even aware. I would hope that within the next several weeks Secretary Volpe would follow the example of Secretary Boyd—so that all of us can buy and use tires without the fear that the next tire we buy will be our last.

Mr. Speaker, I think all Americans owe Senator GAYLORD NELSON a debt of gratitude for his initiative in proposing an effective tire recall program such as I have described. Personally, I am proud to introduce in this body the companion bill to Senator NELSON's own tire recall bill now pending in the Senate Commerce Committee, S. 661. I would urge all of my colleagues to support this long overdue piece of highway safety legislation. I know that every American who owns and drives an automobile will support it.

HALT THE ABM

(Mr. PELLY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PELLY. Mr. Speaker, the people of America have reason to tremble at this critical juncture in history on account of the spiraling arms race between the United States and the U.S.S.R., both of which in the past 2 years have instituted new generations of offensive and defensive nuclear weapons systems. By 1972, Red China is expected to become a nuclear power and thereby the existing so-called "balance of terror" between the two superpowers may be upset. As a result, yet another upward level of weapons and increased danger of a nuclear missile exchange may be in the making unless successful arms-limitation talks between us and the Soviet Union occur.

Tied in with any forthcoming negotiations and an interim policy which would contribute to the success of these talks is the pending decision by the U.S. Congress as to implementation of a new nuclear antimissile system.

At the heart of this particular controversial debate is the question of building a multibillion-dollar defense system to protect our offensive missile sites and to try to protect our capability to retaliate if we are first attacked by enemy missiles.

Secretary of Defense Laird has advanced the assumption that the Russians intend to acquire first-strike power sufficient to destroy our existing retaliation capacity.

On the other hand, other witnesses who have testified before congressional committees disagree with this assumption and say it is extremely implausible; that our retaliatory capability is not in jeopardy.

However, I think some facts should not be overlooked. One fact is that if disarmament talks fail and it becomes clear we will have to defend our missile sites, then a much better ABM than the converted Sentinel system will be needed. Testimony indicates such an improved antimissile could be built at much less than the estimated $2.1 billion estimated for the first phase of the proposed so-called "Safeguard" ABM.

Meanwhile, on the basis of the statement of Gerard Smith, Director of Arms Control and Disarmament, that a delay will not jeopardize the security of the United States, I continue to urge the Congress to halt the anti-ballistic-missile program except research to improve it, until joint nuclear disarmament talks with the Soviets have taken place. If in due course these talks fail, then let us reevaluate the need for safeguards and deterrents to enemy missile attack.

As it is, the existing U.S. retaliatory power is sufficient to deter any such attack.

COMMENDATION FOR THE CORPS OF ENGINEERS

(Mr. TEAGUE of California asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous material.)

Mr. TEAGUE of California. Mr. Speaker, all of us from time to time find it necessary to criticize some section of the executive branch of the Government, including the military. I am happy on this occasion to commend the Corps of Engineers for the splendid work performed during the recent major floods in my congressional district. I include herewith a resolution of commendation adopted by the Ventura County Board of Supervisors:

RESOLUTION OF THE BOARD OF SUPERVISORS COMMENDING CORPS OF ENGINEERS EFFORT

Whereas under the provisions of Public Law 875 and pursuant to the Declaration by the President of a disaster due to flooding in Ventura County, the Board requested and obtained the assistance of the Corps of Engineers for flood protection work; and

Whereas since its first appearance within the County in February, 1969, the personnel of the Corps of Engineers, Los Angeles District, have effectively pursued the accomplishment of its assignment, both in flood protection and flood fighting within the watercourses of the County; and

Whereas expressions of appreciation of the Corps of Engineers' effort to date by the public at large have been made to individual members of this Board; and

Whereas the Board of Supervisors of this County desires to express its appreciation to the Corps of Engineers, Los Angeles District,

on behalf of all the citizens and organizations of this County: *Now, therefore,*

The Board of Supervisors hereby resolves to commend, and does commend Colonel Norman E. Pehrson, District Engineer, Los Angeles District, Corps of Engineers, and members of his Staff assigned to assist in the disaster work in Ventura County, including especially Mr. Kingsley Benham of the District Staff, for the responsive, effective, and cooperative effort expended to date to protect the citizens of this County from the dangerous effect of two consecutive disastrous floods in this area.

Passed, approved and adopted this 25th day of March, 1969.

J. N. APPLETON,
Chairman, Ventura County
Board of Supervisors.

PRESIDENT NIXON'S PRIMARY CONCERN IS THE SETTLEMENT OF THE VIETNAM WAR

(Mr. MORSE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. MORSE. Mr. Speaker, three different articles by three highly respected journalists appeared last week in the Washington Post and I think they give testimony to the fact that the settlement of the Vietnam war is, and has been, the primary concern of the Nixon administration these past 2 months. And I think the course of action that President Nixon has adopted, while not explicitly laid out before us, is beginning to bear fruit.

There can be no question but that the President faces a highly complex and difficult situation in trying to bring a settlement to this war—a war in which it took us several years to become enmeshed, and from which it will take time and, above all, patience and self-restraint, to get out.

Don Oberdorfer's column of Thursday, March 27, indicated that Vietnam has been the major preoccupation of the new administration since shortly after Christmas. Clearly the President has been trying to use to best advantage the so-called honeymoon period to accomplish as much as possible in terms of moving the peace negotiations forward to some fruitful results. As Mr. Oberdorfer correctly points out—and I insert his article at this point in the RECORD—patience at home and a relative lack of controversy offer the President the maximum freedom of action to work out solutions. And I must say that I believe criticism at this time may inhibit the President's freedom of action and reduce the time available to him to work out those solutions. The article follows:

BASIC STRATEGY FOR SETTLING WAR DRAFTED BY MID-FEBRUARY

Three days after Christmas in the sunny screened porch of his new house on Biscayne Bay, Richard M. Nixon sat down with his chief foreign policy and defense advisers to begin to chart his course in the Vietnam War. At that meeting, Mr. Nixon and his colleagues decided on a systematic review of all practical courses of action as the basis for policy choices and new instructions to U.S. diplomats and generals.

From then until this week, a great deal of time has been devoted in high circles to this decision-making process—roughly half the time of the National Security Council staff, for example—but very little has been said about it. Mr. Nixon and his key men would rather talk about almost anything else. This grave and most important public problem, the one which brought the Administration to power and may determine its chances for success, has provided the most notable exception to its effort to establish an "open government."

In discussing war and peace in Vietnam, Mr. Nixon has faced a dilemma. Any word or sign tending to reassure the American public is considered likely to reduce U.S. pressure and hence U.S. bargaining power in the negotiations at Paris. Any word or sign tending to enhance U.S. pressure and bargaining power, on the other hand, may bring forth an alarm at home. Controversy at home saps the thin public patience with Vietnam, reducing both freedom of action and the time available in which to work out acceptable solutions. This familiar ticking Vietnam clock—which finally ran out on the Johnson Administration just a year ago—is a vital factor in the calculations of the new Administration.

Those deeply engaged in the Vietnam problem with Mr. Nixon hoped for perhaps six months of maneuver time after Inauguration Day before the clock began to run for them. They acknowledge now they were probably too optimistic. In response to public uneasiness and Senatorial challenge, Secretary of State William P. Rogers is to appear in televised session today before the Senate Foreign Relations Committee to discuss Vietnam and other matters. Preparing for this encounter, Mr. Nixon and his associates have begun to appeal for patience and to open the door a crack on their deliberations to date.

One result of the initial Key Biscayne meeting about Vietnam was a day-long session of the National Security Council shortly after Jan. 20 at which intensive discussion and study was devoted to four possible military options, and five possible international political results, in the Vietnam situation. In each case, consideration was given to the costs of the course of action, to the specific instructions, which would have to be given, and to the consequences of failure.

About the same time, a series of toughly-worded questions was dispatched to the major U.S. agencies dealing with Vietnam in an effort to establish the facts on which policy could be based. In Saigon, the field headquarters of each agency—including the Embassy, the military and the CIA—was encouraged to give its own honest assessment without clearance with the other. When the answers were in, they showed that the Vietnam-related empires of the U.S. Government do not agree even on the facts, much less on the solution.

By mid-February, it is said, Mr. Nixon had settled on the basic strategy he will follow for the foreseeable future in the attempt to settle the war. As it is now being signalled and explained, that policy centers on the negotiating process—though not necessarily in the Paris forum—and is designed for serious bargaining with North Vietnam about mutual withdrawal and other issues, while the Saigon government takes a larger role in the arrangements for a political settlement. President Thieu's announcement of his willingness to talk privately to the National Liberation-Front is greeted with knowing nods and satisfaction.

The Nixon strategy is not centered on the battlefield, it is said. There is a consciousness at the White House—if not in all ranks of the Pentagon—that the enemy is not going to collapse. The kill ratios so highly valued by the Johnson Administration are not read any more in the top reaches of the White House.

Beyond this, the plan which has been formulated is not being revealed. At the moment, the prime need is time for it to work or to fail. If a little bit of public discussion can buy time, Mr. Nixon appears to be willing. Even with leeway from the clock, though, his plan to negotiate an end to the war faces trying days. Somehow he must convince the American people that he is eager to get out of Vietnam while convincing North Vietnam that he is not.

President Nixon has clearly opted for a political solution to this terribly frustrating war, understanding as he does that a military solution is both undesirable and impossible. He has thus far successfully resisted efforts to move him in the direction of military responses that might reescalate the conflict. And, while he has exercised self-restraint militarily, he has moved forward diplomatically. As Mr. Joseph Kraft pointed out in his article, the announcement by President Thieu of South Vietnam that he is willing to talk directly with the National Liberation Front is a most encouraging sign and a development for which I believe the President deserves considerable credit.

At the same time, I think we are finally making progress in Paris. Chalmers Roberts gives credence to this in his article on the Paris talks, stating that the four delegations at last appear to be in agreement on how to proceed with the talks. We must expect it will take some time for the talks to produce dramatic results but we should be encouraged by the fact that private discussions are apparently proceeding simultaneously. I believe we can be encouraged by all these developments taken together—they are certainly the most promising evidence of progress toward a settlement in Vietnam that we have seen to date.

Mr. Speaker, I include the Kraft and Chalmers articles at this point in the RECORD:

NIXON CHOOSES POLITICAL WAY OUT OF VIET WAR, NOT MILITARY WAY DOWN

(By Joseph Kraft)

The important thing about the latest Vietnamese developments is that the Nixon Administration is going for the political way out—not merely the military way down.

The President is aiming at the slow—but sure—exit of a settlement that will in some way change the nature of the South Vietnamese regime. He has, so far at least, not accepted the easy—but dubious—course of covering the mistakes of the past by going for a stalemate in the war.

The chief sign of the political emphasis lies in the press conference given Tuesday in Saigon by South Vietnamese President Nguyen Van Thieu. The mere fact that peace news was being made in Saigon was of itself significant. For the one thing Saigon can do—that no other capital, including Washington, can do—is negotiate on arrangements for the political future of South Vietnam.

That implicit fact was explicitly underlined by President Thieu. General Thieu said that he was prepared to negotiate "a political solution" in direct secret talks with the National Liberation Front—the Communist-dominated insurgency movement in South Vietnam.

That commitment takes on tremendous significance against the evolution of the past. Not very long ago, the Thieu regime was treating the Liberation Front as a gang of "bandits and terrorists" who could be dealt with only on an individual basis after they had laid down their arms—that is to say, surrendered.

It was considered a major concession only six weeks ago when Vice President Nguyen Cao Ky said the Saigon regime would deal with the Front as an entity, provided all North Vietnamese troops were pulled out of South Vietnam. Now President Thieu accepts to negotiate with the Front, without

any advance condition. It is logical to suppose that in time the Saigon leaders will extend even further openings to the leaders of the Front for some kind of political collaboration.

Sooner or later, the leaders of the Front are bound to respond—and respond favorably—to this kind of evolution. That much is acknowledged by virtually everybody with Tran Buu Khiem, the chief of the Front delegation to the Paris peace talks.

Khiem told this columnist, in the midst of a violent attack on the Saigon leadership during an interview about a month ago, that the Front would accept changes by the men of the Thieu regime "even at the eleventh hour." He then added: "Even at the eleventh hour and the fifty-ninth minute."

But the process of blocking out a compromise between Saigon and the Front is bound to be slow and full of difficult times. And in the interim it is essential to keep the goal of a political settlement firmly and clearly in mind.

For there is another prescription, seemingly most attractive, which is now being put forward by the hawks of Saigon and the Pentagon and State Department in a last effort to make it seem they were right all along. According to this view, all the United States needs to do is to build up the South Vietnamese army, and then begin the withdrawal of American troops.

The South Vietnamese forces would supposedly be strong enough to hold the other side in a kind of military stalemate. There would be no need to take the painful compromise and adjustments that a political settlement would require.

The trouble with that view, of course, is that the stalemate is no more likely to be achieved than the other military prospects put forward by the hawks. By following the hawks' prescription, the American role in the war would go down. But it would not go out, and it might have to go up again.

It is a far better thing, difficult and slow as the course ahead is bound to be, to move toward a political settlement. And it is encouraging that President Nixon has so far had the strength and confidence to resist the pressure for a quick fix that would almost certainly lead to things getting worse very soon after they got better.

PARIS TALKS CLEAR HURDLE

(By Chalmers M. Roberts)

PARIS, March 26.—The Paris peace conference, it now appears almost certainly has cleared its first big hurdle in the way to ending the Vietnam war. The four delegations appear in agreement on how to proceed.

This is the net result of what has been said at the last two Thursday sessions of the conference, plus some discreet private meetings and finally the public statement in Saigon by South Vietnamese President Thieu that his government is ready to talk to the National Liberation Front (Vietcong).

Thus far there has been no public reaction by either the Front or the North Vietnamese to Thieu's statement. A Front spokesman said today that newsmen could ask questions about that during the press briefing sessions after the tenth conference session Thursday.

The fact that the Front has avoided any quick reaction is being taken here tonight by the Americans and South Vietnamese as an encouraging sign. They see this as meaning the communists are seriously considering the Thieu remarks.

Assuming the agreement on how to proceed—and it would be both a surprise and a major disappointment if it collapses—a series of secret meetings under cover of the conference structure should begin shortly. It is on these meetings that President Nixon has drawn a curtain of silence.

One set of meetings likely will be between the United States and North Vietnam on the problem of mutual withdrawal of troops. The South Vietnamese are prepared to agree to such meetings on the presumption that they will be kept fully informed. It can be assumed that the Front will likewise hear from Hanoi about what is going on.

The other set of meetings will involve the more complex problem of the political future of South Vietnam. The crux of these meetings is that the Front and the Saigon government will talk to each other. This was the centrol point of the Thieu statement and of the Front representative's comment last Thursday that he was prepared to talk with all other delegations.

It is almost certain that neither half of such tandem talks will make prograss unless the other half is making progress. After all, as American officials put it, why should Hanoi "remove the pain"—the force of their arms—until they have used it to produce the best political settlement they think they can get.

It is possible, of course that the Communists will attempt to bargain further on the nature of the two sets of meetings before actually agreeing to sit down to them. If so, even more patience will be required on the allied side.

On the matter of patience, the South Vietnamese here take the position that an agreement by the end of the year would be quite satisfactory. The Americans want to see an agreement well before that, but they have carefully avoided mentioning any possible date other than to indicate hope that concrete results wil be discernible within six months.

It now has taken two months to create the framework for such private talks, again assuming that they will soon begin. The results on the battlefield in the coming months, as in the past two months, surely will be reflected in some way at the conference tables.

Unless there is a new hitch, the preliminary skirmishing is over and the real bargaining will begin. That, at least, marks the end of the beginning.

TAX REFORM ACT OF 1969

(Mr. PATTEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PATTEN. Mr. Speaker, after a detailed study and analysis of the Treasury Report on Tax Reform and after evaluating the various calls for tax reform from my constituents, I have this day introduced a comprehensive tax bill entitled the "Tax Reform Act of 1969."

I believe there are four important factors that must be evaluated by the Members of Congress serving on the House Ways and Means Committee relative to the merits of consideration of tax reform: namely, fairness, justice, equity, and simplicity.

The majority of people in our country today advocate tax reform and they have raised the question of whether our tax system accords each individual with a fair treatment of taxation—a loss of confidence and a system of inequity is a fair conclusion to draw from the loud voices of our constituents. In an effort to remedy this loss of confidence, and to endeavor to establish the principle of equity in our tax system, this Congress must move forward and carry out the will of the people and enact a comprehensive tax reform bill. My bill, in 12 areas of tax reform, has sought to attain the objective of the foregoing four important factors and thus remove this "crisis of confidence" among our people.

Estimates are contained subsequently that estimate the revenue effect on the U.S. Treasury relative to the enactment of each of the 12 provisions in my bill. Although the net effect of this bill would at first produce an adverse effect upon our treasury, one must evaluate the additional purchasing power that the enactment of this bill would generate which in turn would find its way into the gross income of our business enterprises and thus resulting in additional treasury collections by added Federal taxes based thereon.

Tax reform is developing as one of the major issues of the 91st Congress. Inaction in this area has taken place for nearly 10 years, ever since President John F. Kennedy advocated a comprehensive reform of our tax laws. The time for action is in this Congress.

A Nixon administration Cabinet member, Treasury Secretary Kennedy, stated a very practical analysis:

> Are all Americans in similar circumstances paying approximately the same amount of income taxes?

The answer to this question is very clearly "No"—thus advocating the need for reform. Furthermore, he stated:

> The American people are saying something and it is getting through . . . They are reading in the papers that a lot of rich people are getting away with not paying much in taxes.

My correspondence has reaffirmed this fact and also my statement herewith cites and sets forth this fact in the form of a chart of tax rates on incomes of high income individuals.

The summary of the revenue estimates which I have compiled relative to each provision in my bill and also my statement attributable to each provision follows:

Summary of revenue estimates for income tax provisions—Revenue effect on U.S. Treasury

[In billions of dollars]

Individual income tax changes:	
Increase deduction for exemptions from $600 to $900	−9.0
Relief for persons in poverty—liberalization of minimum standard deduction	−1.1
Increase standard deduction from 10 to 14 percent	−1.4
Correct abuses of farm loss deductions	+ .145
Repeal of gasoline tax deduction for individuals	+ .310
Elimination of tax abuses:	
Imposition of minimum income tax on high income individuals	+ .420
Allocation of deductions to taxable income	+ .405
Corporation tax changes:	
Elimination of more than one surtax exemption	+ .235
Extractive industries—oil and timber: Repeal oil depletion allowance and allow deduction only for costs expended	+1.600
Eliminate 7-percent investment credit	+2.300
Repeal accelerated depreciation in year of purchase	+ .800
Foundations: Imposition of a 20-percent tax on gross income exclusive of contribution income	+ .300
Total net revenue effect on U.S. Treasury	−4.985

INCREASE DEDUCTIONS FOR PERSONAL EXEMPTIONS FROM $600 TO $900

This proposal, one of the most far-reaching in its actual effect upon the taxpayer, will provide tax relief to every taxpayer and in a proportionate amount to the size of each family by providing a 50-percent increase, from $600 to $900, in the amount that may be claimed as a tax exemption.

This provision will attempt to give consideration to personal and social factors such as: The increases in costs of living, students within a family, other dependent relatives, and equitable tax relief in general.

Revenue loss—estimated at $9 billion per year.

MINIMUM STANDARD DEDUCTION

This provision would increase the minimum standard deduction by providing for an increase from $200, plus $100 for each exemption, to $600, plus $100 for each exemption, subject to a maximum of $1,000.

This area of our tax code represents the most equitable and efficient method available of directing tax relief to persons in the lowest income ranges. This provision would greatly reduce the income tax payments of all persons at or near the poverty level and would completely exempt from tax the majority of those persons below the poverty level who now pay income tax. This provision would be an excellent example of the social implications and principles that are incorporated into our Federal tax system.

It is estimated that 2.2 million families living in poverty are subject to Federal income tax; about 1¼ million would become nontaxable, and the remaining 1 million would receive "tax reductions."

Revenue loss—$1.1 billion per year.

INCREASE STANDARD DEDUCTION FROM 10 TO 14 PERCENT

A liberalization of this area of the tax law would be obtained by the enactment of this provision which would increase to 14 percent, the standard deduction, with the imposition of a maximum amount of $1,800.

Major factors why this provision should be enacted are: First, it would provide a simplification in filing tax returns because more taxpayers would use this provision. Second, the increase in rate would provide some relief for the effect that inflation and the rise in the cost of living has had upon our people. In addition, wages have increased, but the present maximum amount has been retained. Third, it would reduce the number of Internal Revenue Service audit of returns and thus provide a more efficient administration of our tax laws.

The Treasury report reveals that the number of taxpayers using the standard deduction has declined from 82.2 to 57 percent during the period, 1944 to 1969. In 1944, Congress enacted this provision to simplify the tax system which then resulted in this provision being used by over 80 percent of our taxpayers. The Congress must keep up with the changing conditions of today and adopt this provision which would result in its use by about 80 percent of our taxpayers which would be equivalent to those that used it upon its original enactment. This year, there will be 65 million taxable returns filed—the simplification and efficiency of this proposal warrant its enactment into law.

The substantial impact of this provision would provide more than $1.4 billion of tax relief to taxpayers in the income range of $5,000 to $20,000. With the present, unfair tax burden—Federal, State, and local—which this economic group is encountering, this reform would provide the needed practical tax relief that is necessary if we are to have an adequate working tax system in our complicated society of today. Our people are demanding reform, and this is one area where we can provide the needed tax relief of which they should have the benefit.

Revenue loss—$1.4 billion per year.

CORRECTION OF FARM TAX RULES BY NONFARMERS

The deduction of "farm losses" against nonfarm income would be limited to $15,000 in any taxable year—carrybacks and carryforwards would not be effected. This limitation would be applicable to individually operated farms and to farms operated by a corporation or a partnership.

This proposal would effect about 14,000 taxpayers and would have little or no effect on taxpayers earning less than $15,000 of nonfarm income.

Revenue gain—about $145 million per year.

REPEAL OF GASOLINE TAX DEDUCTION FOR INDIVIDUALS

I advocate repeal of existing law which provides that State gasoline taxes are deductible in computing Federal income taxes. This item of expenditure is more closely related to a personal item and should be within the same nondeductible status as other user charges such as highway tolls, State park fees, hunting and fishing licenses, and auto registration fees and drivers licenses.

Revenue gain—$310 million per year.

MINIMUM INDIVIDUAL INCOME TAX

Enactment of this provision is necessary so that "high-income individuals" who are not presently contributing their fair share of Federal income tax, would be required to pay an equitable share of the cost of government. The low tax rate encountered by this group of taxpayers results from various exclusions from taxable income and also from deductible expenses, thus further eroding their taxable income figure.

Current statistics reveal that "high income individuals," that is, over $100,000 per year, pay a "low effective tax rate" in comparison to other taxpayers earning from $10,000 to $30,000 per year. Illustrative of the foregoing inequity, I would like to set forth the following table which highlights the low tax rate of this group.

SCHEDULE OF LOW-TAX RATES PAID BY HIGH-INCOME INDIVIDUALS

	Income levels		In millions	
	Over $100,000	$100,000 to $500,000	$500,000 to $1,000,000	$1,000,000 and over
Amended adjusted gross income	$16,720	$12,205	$1,875	$2,640
Taxable income (after deductions and exclusions)	$9,870	$7,700	$905	$1,265
Tax as a percent of total income	28.2	29.2	26.1	25.1
Tax as a percent of taxable income	47.8	46.3	54.1	52.3

Source: Treasury Department Tax Reform Study.

An analysis of the foregoing table of income levels reveals the practical low effective tax rates actually being encountered by high-income taxpayers, when related to gross income—before exclusions and deductions. This provision would attempt to correct this tax avoidance scheme. Furthermore, it must be noted that these figures are only averages and do not reflect the real abuses which are sought to be brought more in line with the principle that every taxpayer should bear his fair share of the tax burden.

Revenue gain—$420 million per year.

ALLOCATION OF DEDUCTIONS OF HIGH-INCOME TAXPAYER

Taxpayers with excluded income enjoy an unwarranted double benefit from that income inasmuch as no tax is paid on the excluded income and personal deductions are used to offset income from taxable sources as revealed by the Treasury Department tax reform study. To remedy this inequitable situation, high-income taxpayers should be required to allocate their nonbusiness personal deductions between income from taxable sources and income from nontaxable sources.

This provision would affect about 400,000 taxpayers, and mostly, all those would be with incomes over $50,000. Allocation would not be required unless the taxpayer had excluded items of at least $5,000. The excluded items to consider would be: capital gains, State and local bond interest, percentage depletion in excess of cost, and appreciated property donated to charity.

Revenue gain—$405 million per year.

ELIMINATION OF MORE THAN ONE SURTAX EXEMPTION

This proposal calls for the elimination of the ability of a controlled group or chain of corporations to claim more than one single surtax exemption. This provision would go into full effect over a 7-year period by limiting the maximum number of surtax exemptions that could be claimed in accordance with the following schedule:

Taxable years including the first Dec. 31 after—	*Maximum number of surtax exemptions*
Jan. 1, 1970	500
Second Dec. 31	250
Third Dec. 31	100
Fourth Dec. 31	50
Fifth Dec. 31	25
Sixth Dec. 31	10
Seventh Dec. 31	5
Eighth and subsequent Dec. 31's	1

The original congressional intent was to limit this special provision to small business as was stated in 1950 when this legislation was considered. However, many large corporate organizations have established a number of separate corporate units which are so arranged so as to produce an income of less than $25,000 so that they can each qualify for the special tax savings under present law.

The value of the surtax exemption under current corporate rates is $6,500, per exemption—26 percent multiplied by $25,000.

Revenue gain—estimated $235 million per year.

EXTRACTIVE INDUSTRIES—OIL AND TIMBER—DEDUCTION ONLY FOR COST EXPENDED

This "special deduction," the "percentage of depletion," should be eliminated and in lieu thereof, a deduction should be allowed for these extractive expenses based on a "cost concept"—or known as "cost depletion."

It is a fact that 90 percent of the current percentage of depletion deduction allowed is not represented by any direct cost expenditure and would not be allowed under a "cost depletion" concept.

Revenue gain—adoption of the "cost depletion" provision would yield an estimated $1.3 billion annually from all extractive industries.

Extractive industries should bear their fair share of the tax burden, which presently is only 21.1 percent, whereas "all industries" pay 37.5 percent. This favorable treatment must be corrected and an equitable provision enacted into our tax laws.

Revenue gain—$1.600 billion per year.

SEVEN PERCENT INVESTMENT CREDIT

This special tax incentive provision should be repealed due to the inflationary circumstances confronting our economy today. The original purpose of enactment was to create increased equipment purchases and increase new construction in a lagging economy; this condition does not exist today. Ordinary accounting principles of reporting should be reverted to.

A special report, released on March 13, 1969, by the Department of Commerce and the Securities and Exchange Commission, revealed that American businesses have planned a booming 13.9-percent increase in investments in plants and equipment this year. This economic spiral of investments will not slow down one of the major domestic problems—the high increasing rate of inflation. This rate increase of nearly 14 percent in investments compares to a rate of 4 percent in 1968, and 2 percent in 1967. Planned investment in 1969 is $72.96 billion; in 1968 it was $64.08 billion.

Revenue gain—estimated $2.3 billion per year.

Furthermore, added significance to the merits which warrant repeal of the 7-percent investment credit are set forth in a column by a leading economist, Mr. Paul A. Samuelson, which appeared in the March 31, 1969, issue of Newsweek magazine, the column follows:

INVESTMENT TAX CREDIT

Inflation watchers were rocked last week by news from the SEC and Commerce Department that businessmen intend to increase their plant and equipment investments by almost 14 per cent.

The new outlook for excessive investment spending should, in my opinion, cause President Nixon to suspend the 7 per cent investment credit temporarily. Here's why:

1. The economy is still on an inflationary binge. To bring the rate of price increase down from 4 per cent toward a more moderate figure of, say, 3 per cent, some actions are going to be needed. Every weapon counts.

2. Already the Federal Reserve is being called upon to take Draconian measures to fight inflation. This will mean not only painfully higher interest rates; it will also bring in most of the discomforts associated with the money crunch of 1966—uneven rationing of credit between new and old business, growing and stagnant business, small and large business.

3. Experience demonstrates that tight money takes for its principal casualty the housing industry. When there is a scramble for more resources than the total resources available, it is right that housing should share in the restraint. But it is not, in my judgment, good national policy to have housing starts cut by 40 to 50 per cent as happened in 1966. In the 1970s, with their bumper crop of young marrieds, we shall pay in higher rents and zooming residential costs for any serious diminution of home construction in the waning years of the Vietnam war.

4. Admittedly, inflation could be fought by adding onto the present surcharge another 5 or 10 per cent tax. But I see no evidence that this would be politically popular or feasible. Nor is it clear that consumer spending is the prime villain in the present inflationary scenario.

5. Admittedly, inflation could be fought by still further tightening of the Federal Reserve money screw. And the impact of such tightness on the housing industry could be alleviated by special financial subsidies to home construction through the Federal housing agencies, through the U.S. Treasury, or through the Federal Reserve. Since all such measures will add to the nominal public debt, I don't expect that anything but tokenism would, in fact, be politically feasible in this area.

Even if it were possible to cushion the impact of tight money on residential housing, to get the same restriction of aggregate demand from enforced reductions on plant and equipment spending would, I suspect, require very high interest rates. These will cause difficulties for our partners abroad. And they may hang on to plague us in the years to come when the winds may be blowing up deflation rather than inflation.

6. In September of 1966, to alleviate the money crunch and moderate what looked like an excessive fixed investment boom, the Johnson Administration did suspend the 7 per cent investment tax credit. Almost at once relief was felt in the money markets of the country. On the whole (despite the protests of the Treasury, which naturally found it a headache), the operation seems to have been a successful one in accomplishing its purpose—namely, ensuring against an overexuberant fixed investment boom.

So historical experience, as well as the common-sense view that firms will invest less when their returns from doing so are reduced, justifies suspending the tax credit.

What are the possible arguments against suspension of the tax credit?

1. The Nixon Administration might be regarded as a pro-business Administration. Why should it take from business this accustomed source of profit?

2. Perhaps the inflationary danger is being exaggerated. Perhaps it will involve overkill if suspension of the investment tax credit reduces investment severely.

3. Vigorous growth requires as much capital formation as we can get. Adjusting to inflation by reducing investment will reduce our future capacity to produce an enlarged total of real national product.

4. It is a bad thing to use variations in the investment tax credit as a deliberate weapon of stabilization. Why? Because it is plain immoral. Because it involves discretion by government, which is wicked. Because it disturbs business planning.

5. Suspension creates administrative problems for the Treasury.

In economics, every decision involves pros and cons. Judgment is necessary. My advice to Mr. Nixon: suspend the investment tax credit.

SPECIAL DEPRECIATION DEDUCTIONS

Special depreciation deductions; namely, "accelerated depreciation" over straight line depreciation should be terminated inasmuch as the purpose for enactment of this provision has been accomplished—to stimulate new purchases of equipment and new construction. Our current rate of inflation warrants enactment of this provision.

Revenue gain—estimated $0.8 billion per year.

FOUNDATIONS

A tax of 20 percent should be imposed on the total annual gross receipts—exclusive of contributions received—of foundations income. The nature of some of the items of income that would be included in the foregoing gross receipts are: Gross profit from business activities, interest, dividends, rents and other ordinary income.

In conjunction with producing an equitable tax distribution in our society, I believe it is imperative that foundations bear a share of the tax burden and thus serve to relieve our 65 million taxpayers of a comparable amount. Furthermore, the growth in the number of foundations, to more than 30,000 today, plus an estimated ordinary income of $1.5 billion per year, exclusive of contributions, justify this provision in our tax laws. In addition, large amounts of assets have been accumulated, free of taxation, to the extent of a current value whose estimate may exceed $18–$20 billion.

Revenue gain—$300 million per year, based on estimated ordinary income for the year 1970.

THE DECENNIAL CENSUS

(Mr. HAGAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. HAGAN. Mr. Speaker, beginning April 1, 1970, the decennial census will be taken. As you know, the 1970 census questionnaire will contain 67 subjects involving 120 questions. A good number of these questions are highly personal and many of the other questions are far from pertinent to a population count. As the law now stands, a citizen's refusal to answer any of these questions could bring criminal penalties of a $100 fine, 60 days in jail or both.

The word has gotten out on this proposed census form and the newspapers are informing the people through editorials and columns of this lengthy questionnaire. The mail we are receiving in my office, and I am sure I am not alone in this, is reflecting the fact that our citizens have become aware. The folks in my district are protesting this plan, they

believe it to be an intrusion into their private affairs and are resentful of the imperative that all questions be answered under threat of fine or jail. Here are some excerpts:

It is urgent that you limit the census taking to the way it was in the past. I do not appreciate the plan to interfere in my private affairs

Another letter said:

There are seven questions I would answer without equivocation, name, address, age, sex, race, whether head of household, and visitors, if any, at the time of the Census.

Anything of common knowledge, I will answer. Anything else is an invasion of privacy.

Another:

Little by little we have lost our freedoms and it is a most distressing situation in this beloved country of ours. I trust you will resist vigorously any further invasion of our privacy. It is later than we think, to be sure.

And another:

I believe this is a little too much regimentation and an invasion of privacy that is not necessary. I hope that you will do what you can to help change this penalty.

And, a final excerpt:

Its been in the papers, also magazines, about this invasion of privacy in the 1970 Census. As the paper states, and I AGREE, there's about 7 questions that should be answered to give the information they are supposed to have, let the remaining questions be answered on a voluntary basis.

Now, we all know that the American people, on the whole, are patient and forbearing when it comes to putting up with bureaucratic plans and redtape but in these already troubled days my mail and personal conversations tell me that the people are not going to sit back and accept this compulsory demand that these prying questions be answered or else face the unduly heavy penalties, particularly, while hard-core criminals are getting the velvet-glove treatment for crimes of much greater magnitude than that of not answering a question about who shares your shower or whether you own a TV set.

I believe we must stop and recall that the original intent of the census under the Constitution is to provide an accurate population count for an equitable apportionment of the House of Representatives. And, as far as I know, this is still the intent of the census. We have to remember that this is a decennial census, not an industrial and commercial census which would be an entirely different matter.

I would further state that commonsense tells us that an unnecessarily lengthy and complex census will tend to weaken the system and bring about an inaccurate count which would ultimately affect other areas dependent upon the popoulation count for the distribution of funds and other decisions.

Because I am deeply concerned that our citizens should not be subjected to an uncalled for invasion of their privacy and to mandatory compliance should they not wish or be able to answer some of the questions, I have joined a number of my colleagues in introducing a bill which requires that only seven questions, pertinent to the decennial census, be answered with a penalty only for failing to respond to these seven questions. The remaining questions would be answered on a voluntary basis. I believe early consideration of this legislation is very important in order that the American people will not be compelled to accept this invasion of their privacy due to inaction in the House and Senate.

AMERICA'S 200TH BIRTHDAY

(Mr. ADAIR asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. ADAIR. Mr. Speaker, Mr. THOMSON of Wisconsin proposes that Congress recognize the role of historical societies in observance of America's 200th birthday, and he notes, too, the need for commemorating discovery and exploration—a century earlier—in the Mississippi Valley. I cite here, Mr. Speaker, a few such events which are today's historical legacy in nearly a fifth of the congressional districts:

First. In 1668 the Miami welcomed explorer Nicolas Perot to their village on Fox River—near present Berlin, Wis.—where the farthest French outpost toward the unknown Mississippi—St. Jacques mission—would be started.

Second. In 1669 Robert Cavalier de la Salle, led by Seneca over a portage to an Ohio River headwater in western New York, descended La Belle Riviere to the rapids—at Louisville—and was, perchance, first European on Hoosier soil.

Third. In 1673 Louis Jolliet and his expedition's Jesuit chaplain, Father Jacques Marquette, followed Miami guides over the short path—at Portage, Wis.—from Fox River and Great Lakes basin to Wisconsin River and Mississippi basin. Discovery of the Mississippi, the Indians' "Father of Waters," occurred—at Prairie du Chien—on June 17.

Fourth. In 1675 Father Marquette, now on his final journey, passed by canoe along Lake Michigan's southern shore, the first non-Indian known to reach Indiana—this, in the Gary area.

Fifth. In 1679 La Salle voyaged from Niagara across Lakes Erie, Huron, and Michigan to Green Bay, in the first sailing of these waters. In December he traversed the St. Joseph-Kankakee portage—at South Bend—his destination a suitable base on the Illinois—near Peoria. Miami—a people of the portages—were again encountered at this crossing.

Sixth. In 1682 La Salle descended Mississippi River to the Gulf of Mexico. His subsequent letter—from St. Ignace, Mich.—in October, indicates he had learned of still another strategic portage, which he describes as affording a shorter route from Canada to the Illinois. This ancient trail—called Glorious Gate by Miami and under their resolute guard—links Maumee River—at Fort Wayne—to Wabash River at the forks thereof—at Huntington—all within the district I am privileged to represent.

Mr. Speaker, no less than 103 Members of the House of Representatives share directly in the inspiring heritage of these achievements. On behalf of my fellow citizens in one such district and because pride permits no other course, I warmly endorse House Concurrent Resolution 161 introduced by Mr. THOMSON of Wisconsin, believing that our general support without waiting for "pressure from home," will move the resolution to early adoption.

CHANGE IN RULES OF PROCEDURE FOR PRIVATE IMMIGRATION BILLS

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. FEIGHAN. Mr. Speaker, I would like to take this opportunity to remind my colleagues of the recent change which took place in the rules of procedure of the Subcommittee on Immigration and Nationality. The subcommittee is no longer automatically requesting departmental reports on bills for aliens who entered the United States as visitors, exchange visitors, or students. This latter group is now subject to rule 6 of the rules of procedure as are crewmen, stowaways, transits, and surreptitious entrants who evade immigration inspection. A Member introducing such a bill is required to request a waiver of rule 6 and to show the extreme hardship on which such request is based. Until a report is requested, the alien's case is handled as if there were no bill. This means that if there is an outstanding order of deportation the alien will be deported.

Since March 12 a number of bills have been referred to the subcommittee, which are subject to rule 6, and for which there was no accompanying information to show extreme hardship. The subcommittee has assumed that this oversight was a result of the newness of the change and is notifying the authors of these bills of the necessity for additional information if they wish to have the subcommittee consider a waiver of rule 6. A prompt decision will be made by the subcommittee. However, I do urge that the Members be mindful of the fact that the mere introduction of a bill and furnishing the subcommittee with identifying information as specified in rule 4 will not stay the departure of an alien who entered as a visitor, exchange visitor, student, crewman, stowaway, transit, or surreptitiously evading immigration inspection.

For the convenience of Members, I am including in my remarks the text of rule 6 of the Subcommittee Rules of Procedure:

6. The Subcommittee shall not address to the Attorney General communications designed to defer deportation of beneficiaries of private bills who have entered the United States as visitors, exchange visitors, students, stowaways, in transit, or deserting seamen, or by surreptitiously entering without inspection through the land or sea borders of the United States.

Exemption from this rule may be granted by the Subcommittee in cases where the bill is designed to prevent extreme hardship. However, no such exemption may be granted unless the author of the bill has secured and filed with the Subcommittee full and complete documentary evidence in support of his request to waive this rule.

CHEMICAL AND BIOLOGICAL WARFARE: QUESTIONS TO BE ANSWERED

The SPEAKER. Under previous order of the House, the gentleman from New York (Mr. McCARTHY) is recognized for 30 minutes.

Mr. McCARTHY. Mr. Speaker, early in February it was brought to my attention that I did not know very much about the chemical and biological warfare programs of the United States. Some disturbing public policy questions about the practices that govern their use, the activities of universities and public institutions, and public safety of chemical and biological activities became apparent at that time.

As a result, I asked the U.S. Army to give a briefing to interested Members of Congress on the public policy aspects of our chemical and biological warfare programs. On March 4, 1969, the U.S. Army presented a short unclassified general description of our activities in these fields and then a more detailed classified review. Although I had indicated in my request that the questions that needed to be considered did not appear to require classification, being of the same nature as the sorts of questions that we ask about deployment of our troops in Vietnam, Korea, and Germany or about the ABM or our Polaris submarines, the Army said that they believed that most of the briefing should be secret. It is my opinion, following the briefing, that the public policy questions do not require classified answers.

Nineteen Members of Congress and a number of staff attended the briefing. I indicated at the time that I did not believe that the public policy questions had been answered and that I would ask the Secretary of Defense and some of the other Department heads for their views on our policies in these fields. I will include the text of my letters to Secretary Laird and Secretary Rogers in the RECORD at the end of my remarks.

I have received interim replies from the Departments concerned indicating that they are preparing replies to my questions. I am pleased that the Departments of Defense and State are taking the time to give these questions the consideration they merit, for I do not believe that they should be answered hastily or without rethinking some of the policies that I believe we may have been drifting into without adequate consideration by our top officials and Congress.

Because I have not yet received answers to my letters, I do not want to go into a thorough review of the questions that I have raised. The U.S. Army has, however, asked that I place in the RECORD a copy of the unclassified presentation of March 4, 1969. This copy, of course, does not cover the questions that were asked concerning the unclassified briefing. It is not a transcript. I am glad to do this for the information of my colleagues who were unable to attend. I do, however, want to take this opportunity to point out some of the inadequacies of the presentation made by the U.S. Army and also to point up my growing concern about the safety aspects of moving poison gases around the United States by rail.

I will include the Army's unclassified presentation in the RECORD at the end of my remarks.

First, one of the more glaring inaccuracies in the Army's presentation is the statement:

> Among chemical systems some include as chemical weapons the riot control agents, herbicides and smoke and flame. The U.S. clearly does not consider these categories as weapons to fall within the purview of the Geneva Protocol of 1925.

This statement is preceded by the following statement:

> The incapacitating agents were not available for consideration when the Geneva Protocol of 1925 was formulated.

In fact, the French Army used tear gas grenades fired from rifles in August 1914. The German Army also used several forms of tear gas. And the U.S. Army's tear gas, known as CN, was developed by the United States in 1918. Large quantities of tear gas, an incapacitating agent by the Army's definition, were produced in World War I. Obviously they were available for consideration at the time that the Geneva Protocol was formulated.

Not only were the incapacitating agents available for consideration when the Geneva Protocol was signed; they were specifically included in the prohibition against the use of gas. Because some confusion had arisen on the question of whether the original treaty had included incapacitating agents, the League of Nations Preparatory Commission for the Disarmament Conference that met in Geneva on January 15, 1931, discussed the problem at some length. The nations that had ratified the Geneva Protocol generally agreed that tear gas was covered by the protocol. Ironically, even then, the United States took an equivical stand.

To briefly quote from the minutes of the Commission:

> The British Delegation: "It may be recalled that, during the first part of the sixth session, certain delegations assumed that the intention was to prohibit the use of all chemical methods of warfare of every kind. On the other hand there were some indications that this view is not shared by all States. It is at least possible that this difference in interpretation owes its origin to a serious ambiguity in the Geneva Gas Protocol of 1925, as well as in all Treaties and Conventions regulating gas warfare signed since the war. In the Geneva Protocol of June, 1925, though the relevant portion of the French text is identical with the article quoted above, in the English text the French word 'similaires' is translated by 'other.' Basing itself on this English text, the British Government has taken the view that the use in war of 'other' gases, including lachrymatory gases, was prohibited. They also considered that the intention was to incorporate the same prohibition in the present Convention."

The French then commented:

> The French Government therefore considers that the use of lachrymatory gases is covered by the prohibition arising out of the Geneva Protocol of 1925 or Chapter IV of the draft Convention.

The Yugoslavian delegation said:

> We fully agree with the interpretation given by the British delegation.

The Spanish delegate said:

> I agree with the British delegation's interpretation, because I think that the text approved at the second reading is so clear that it cannot give rise to any objections. It provides that the use in warfare of any kind of gas is prohibited—doubtless because it is very difficult to distinquish between lethal and non-lethal gases.

I will include the minutes of the Preparatory Commission relating to this question of whether tear gas was covered in the Geneva Protocol in the RECORD at the end of my remarks.

Mr. Speaker, second, the U.S. Army stated that herbicides have proved useful as defoliants and for use against Vietcong crops. The Army goes on to say:

> They are harmless to the soil and to life and have no residual effect on the soil, being effective no longer than one growing season.

Mr. Fred H. Tschirley, of the Department of Agriculture, reported in Science magazine the results of a survey that he made of the U.S. defoliation program in Vietnam. He comments that the mangrove tree is particularly susceptible to damage from herbicides and that he had seen quite a few dead mangrove trees. He does point out that this tree is more easily damaged in this way than others. And he goes on to say that it takes about 20 years to grow a mangrove tree.

More telling, however, is this comment:

> A single treatment with 3 gallons of Orange or White (the defoliants that we use) would not be expected to have a great or lasting effect on a semi-deciduous forest in Vietnam. Some trees would be killed, and the canopy would be less dense temporarily. But within several years the canopy would again be closed, and even a careful observer would be hard pressed to circumscribe the treated area. *A second application during the period of recovery would have a wholly different effect.* (Emphasis supplied).

It is my understanding that we spray more than once. I will include Mr. Tschirley's article in the RECORD at the close of my remarks.

Third. Although the unclassified presentation did not include a prepared discussion of safety measures taken to protect the American public against chemical or biological testing or possible accidents during the transportation of poison gas, the problem was brought up during the question period following the unclassified portion. We were assured by the Army that it had guards on trains that carried poison gas and that every precaution was taken to protect the American public.

However, I have learned since the Army's briefing that on the night of February 18, 1969, television station KBTR–TV received a call saying that there were open railroad cars containing cylinders and marked "poison gas" located on a siding in downtown Denver, Colo. The station sent a cameraman down to the yards. The cameraman arrived at the yards at 8 p.m. and found a string of open gondola cars filled with metal containers, each car bearing a ticket marked "poison gas." There were no guards in evidence around these cars, and the KBTR–TV cameraman climbed

up on one of the cars and photographed the cylinders.

When the cameraman returned to KBTR–TV with his film the station contacted the Rocky Mountain Arsenal to ask about the shipment. The Army admitted that it had shipped the material and said that it would look into the question of why it was unguarded.

The next morning, when the station again contacted the Army, the Public Information Officer stated that the arsenal's official position was that there were guards with the train.

I, for one, am not satisfied with this answer, and it is answers of this type that raise questions about the credibility of the responses regarding German gas warfare by the U.S. Army.

Mr. LLOYD. Mr. Speaker, will the gentleman yield?

Mr. McCARTHY. I am happy to yield to the gentleman from Utah.

Mr. LLOYD. Do I correctly understand the gentleman to indicate in his opinion there was not a security unit attached to that train?

Mr. McCARTHY. What I said was that the television station, KBTR–TV, received a call about these uncovered cars in a siding in downtown Denver. The station dispatched the cameraman, who arrived at the scene and experienced no difficulty and no prohibition, saw no guards, and went ahead and took his film without any questions being raised by anyone. I believe we can conclude from the testimony of the television station that at that time, at least, there were no guards in evidence.

Mr. LLOYD. I should like to compliment the gentleman on his diligence in pursuing this. I may say that that chemical agent was en route to the Dugway Proving Ground, which is in my district. When that information was communicated to the public, that there were no guards attached to that train, I made an on-the-spot investigation after the chemical agent had arrived at the Dugway Proving Ground. I interrogated the military.

At this point I should like to say, at no time was there ever an effort made by the military to prevent full disclosure to my inquiries. Their assurance to me was that there was a six-man security unit attached to that train, which obviously was not within camera range at the time the television station made these pictures.

I should like to assert at this point in the gentleman's very excellent presentation the fact that as an individual, I was satisfied in my own mind that the train itself was not lacking in its security.

Mr. McCARTHY. Mr. Speaker, I thank the gentleman from Utah. He would be interested to know that what prompted me to ask this question in the unclassified portion of the briefing was the awareness which I will cite here shortly of an alarming increase in the number of railroad accidents in the United States in recent years. There has been an 85-percent increase in derailments in the United States in the period between 1961 and 1967. This rate is continuing at the present time and actually is showing a sharp increase. They advised me that they were now putting guards on the trains. I wanted to know why they thought this was necessary. It was pointed out that incidents had occurred. I asked, "Could you elucidate on those incidents?" They explained that in St. Louis apparently there was a sniping incident where apparently some deranged person had a gun and was attempting to puncture these containers containing poison gas. That is what prompted them to put guards on the train but we had no reason to dispute that until we were advised by station WTOP here in Washington, D.C., which obtained this film footage that this station in Denver took which showed there were no guards in evidence.

A further hazard to the public is brought out by the shipment of large amounts of this poison gas by railroad. The National Transportation Safety Board reports that the rate of derailments has increased 85 percent between the years 1961 and 1967. In 1967 there were 4,960 derailments. When these derailments occurred, there could have been great hazards to public safety.

Mr. Speaker, I ask that the United Press International article which appeared in the Buffalo Courier Express concerning railroad accidents be printed at the conclusion of my remarks.

The SPEAKER pro tempore (Mr. PRICE). Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. McCARTHY. Mr. Speaker, in Crete, Nebr., for example, a freight carrying anhydrous ammonia was derailed, loosing the deadly ammonia gas in the town. Five persons were killed and 35 people were injured by the fumes. In Dunreith, Ind. a derailment caused a fire and explosions that caused over $1 million in damage. However, there were more ominous aspects to this derailment.

This Dunreith derailment contained some lessons for us because of two factors. When the fire broke out on the cars that were derailed, the flames were so intense that the tickets, presumably bills of lading on the cars which described the nature of the hazardous materials in the cars, were destroyed or burned. The firefighters did not know what substances were burning and hence they could not use their equipment effectively. A similar fire might well destroy tickets on other cars carrying the Army's poison gases.

The second problem in the Dunreith incident occurred when a tank car carrying poisonous chemicals were punctured, and the liquid drained into the ground and entered the local water table. This chemical contained the poison cyanide. Local authorities became aware of the problem when dead farm animals were sighted in and along a nearby creek. This showed that the cyanide was entering the local river and that water supplies might be endangered. A total of 6,200 pounds of chemicals were added to the river in order to attempt to counteract the cyanide. Fortunately no human beings were killed as a result. The cyanide did affect the local water table, because wells had to be dug and pumps installed to take out the cyanide. Over 2 million gallons of contaminated water had to be taken from the wells. Is this a chance that we want to take?

Mr. Speaker, in conclusion I should point out in connection with the Geneva protocol of 1925 the record should show that President Franklin Delano Roosevelt stated during World War II that it is the policy of the United States to abide by the Geneva protocol of 1925, even though it had not been ratified by the U.S. Senate. And, as recently as 2 years ago the then Under Secretary of Defense Cyrus Vance declared that it is still the policy of the United States to abide by the Geneva protocol of 1925.

Mr. Speaker, it would seem from the summary of the Disarmament Conference of 1931 that the United States is in fact not abiding by the Geneva protocol of 1925 at this time in Vietnam.

Finally, I have only touched upon a few of the questions that need to be answered with reference to a thorough examination of our chemical and biological warfare policies and I intend to discuss these questions more thoroughly when I receive answers from the departments involved.

Mr. LLOYD. Mr. Speaker, will the gentleman yield?

Mr. McCARTHY. I am happy to yield to the distinguished gentleman from Utah.

Mr. LLOYD. I think the distinguished gentleman from New York has made a very helpful and useful statement. It is not my intention to debate the issue in any way or to suggest that any of this information is inaccurate. I think that it would be well, however, on the record for me to state at this point that at many times since the sheep incident of about a year ago in Utah when about 6,000 sheep, or thereabouts, were involved in what the Army now admits, according to my understanding, was an accident in the spraying of this agent—in all of my inquiries of military officials I have never found any attitude except one of full disclosure.

I think it might also be well to say at this point that this chemical agent, an agent somewhat heavier than water, does not spray out into the air, unless it is sprayed by human action. It simply runs out on the ground if a container is punctured.

A six-man security unit, or more, on a 24-hour basis is assigned to take the necessary precautionary measures in dealing with the transportation of this agent. They are very carefully educated and prepared in the science of decontamination of these nerve agents.

In 1963 the then Secretary of Defense Cyrus Vance while testifying before the Senate Foreign Relations Committee had this to say in justification of our chemical and biological warfare program.

> As long as other nations such as the Soviet Union maintain large chemical and biological warfare programs we believe we must maintain our defensive and retaliatory capability. It is believed by many that President Roosevelt's statement in 1943, which promised—

And this is quoting President Roosevelt—

> "to any perpetrators full and swift retaliation in kind," played a significant role in preventing gas warfare in World War II.

And, Secretary Vance went on to say:

Until we achieve effective agreement to eliminate all stockpiles of these weapons, it may be necessary to be in a position to make such a statement again in the future.

So, I believe again that the gentleman in the well has made a very important contribution in requesting increased disclosure of all pertinent facts and in questioning whether or not so much information as is now classified should be classified.

I, myself, feel that it is in the public interest to release more of this information for the consideration of the public and for discussion by the public.

I am sure that the gentleman from New York would also agree that it is neither his intention nor certainly it would not be my intention to go beyond the statement of what the facts and reasons present and to be very careful that we do not spread unjustifiable and unnecessary alarm.

Mr. McCARTHY. Mr. Speaker, I thank the gentleman from Utah. I certainly agree with the gentleman in that I would like to see the cloak of secrecy removed from this program. I might say that the deeper we get into this the more convinced I become, anyway, that this program has been allowed to develop, especially in recent years, without serious consideration at the highest level of our Government.

We were told by one professor of biology, who is very familar with the program, that a former White House official said that he just did not care what they did in this program so long as they did it behind closed doors.

I do not believe that, really, that is going to serve our purpose. I believe this is the kind of program that has the most serious implications in terms of international agreements, in terms of a breakdown of the concensus that prevailed during World War II, and prevented the use of gas or germ warfare agents.

I believe these things should be discussed, and certainly the public policy question should be discussed openly. We are not asking the Army for secret information. I do not believe that the type of gas or the quantities of it are relevant here, but what our policy is in this field is relevant.

At present the policy is vague. In the unclassified portion of the briefing the Army actually could not give us answers to questions such as what is our policy regarding retaliation in kind to a gas or germ attack, and many other questions that arise in the public policy sphere.

We do know about the ABM system, the Polaris submarine fleet, about our troop strength in Korea, Germany and Vietnam, but in this field it is hidden from public view.

Mr. Speaker, I become more convinced that if these questions were applied to public scrutiny, if hard questions were posed by intelligent experts, that this program would not stand up under that kind of scrutiny.

Mr. Speaker, I believe that I should state that our purpose here is simply to get this out into the open where it can be examined by the Members of Congress, and by the executive branch, and thus reach certain basic decisions about what the policy of the United States should be in this field of chemical and biological warfare.

Mr. LLOYD. If the gentleman will yield further, I would like to state that I trust that the dialog which he is continuing will be in the public interest.

Mr. McCARTHY. I thank the gentleman from Utah.

Mr. Speaker, I include the following material which I have referred to earlier for the information of the Members:

Hon. MELVIN LAIRD,
Department of Defense.

DEAR MR. SECRETARY: Recently my lack of knowledge of United States' programs and policies in the fields of chemical and biological warfare was brought home to me. I realized that I did not know, as I did concerning our ICBM's, our B–52 bomber force, our troops deployed in Germany or Vietnam, the basic reasons for these programs. I also did not know the policies that guide our use or non-use of weapons in these areas. And I did not know what safeguards are being taken to protect the American public from any danger from activities in these areas.

With the advice of my colleagues from New York State on the Armed Services Committee of the House, I asked the United States Army to give me and any other interested colleagues in the House and Senate a briefing on the basic reasons for, the safeguards, and the public policies that applied in the fields of chemical and biological warfare.

Apparently my interest was shared by many other members of Congress for 19 Members, 3 Senators, and 16 representatives from members' offices attended the briefing which was held on March 4, 1969. The number of staff would certainly have been larger had attendance even for the unclassified portions of the briefing, not been restricted to those with active security clearances.

In discussing the nature of the briefing with the U.S. Army, I asked that the basic public policies governing our activities in the chemical and biological warfare fields be covered in the nonclassified section of the briefing. I stressed that our national capabilities and policy in this area should be subject to the same discussion, public review, and constructive criticism as are our ICBM, Polaris fleet, F–111 bomber program, and ABM system. I deliberately refrained from raising questions which I believed would legitimately fall within the area of secrecy.

General James A. Hebbeler presented a briefing that was informative and interesting to those attending. But many of the public policy questions remained unanswered. I am therefore sending to you for reply a list of the public policy questions, the answers to which are essential to an intelligent and rational appraisal by Members of Congress and the concerned public towards these programs. I would appreciate your considered answers to these questions:

1. Is it our national policy to respond in kind to a gas attack against the nation? Do we state that we will use lethal gas against a nation that launches a gas attack against us, rather than a nuclear attack? Wouldn't it be cheaper and just as effective to retaliate with another weapon with which we have had operational experience?

2. Is it our national policy to respond in kind to a massive biological weapon attack? Wouldn't it be cheaper and infinitely safer for all of mankind to respond to a biological weapon attack with other weapons with which we have had operational experience?

3. If our gas biological warfare efforts are purely defensive in nature, what steps have been taken to defend our public from these threats? Why hasn't the public been instructed as to what to do in the case of a nerve gas attack, a hallucinatory gas attack, or an incapacitating gas attack? Do we stockpile antidotes, serums, and vaccines for gas and biological attacks at medical centers and instruct people where they are? We do, after all, instruct people what to do in the case of nuclear attack. We stockpile supplies in fallout shelters that are marked so that the public will know where they are. Why don't we do the same for the threat from gas and biological weapons?

4. We have been told by former Under Secretary of Defense Cyrus Vance, that the "why" of chemical and biological warfare is defense. Are our soldiers in the field, Vietnam, Korea, Germany, and sailors at sea able to defend themselves against all forms of chemical and biological weapons attack? Since we are using marginal forms of a chemical warfare in Vietnam, are our forces prepared for an escalation in the use of chemical weapons? Are our troops prepared for the possibility of the enemy responding with a stronger weapon than the incapacitating gases we use?

5. Why do wo choose to call defoliants herbicides of the type we use in our own agriculture rather than chemical warfare? What defoliants or chemicals, if any, are being used in Vietnam to destroy plant life which are not customarily used in the United States? To what extent are they used? What is the distinction between a chemical that is used to destroy crops and a plant disease from the field of biological warfare that could be used against rice or wheat?

6. Do we have in practice or in policy an anti-food policy through the use of defoliants in Vietnam? What are our plans to restore the environment of Vietnam which has been significantly altered as a result of our defoliant policy? Will we establish a commission similar to the Atomic Bomb Casualty Commission that operated in Nagasaki and Hiroshima after the war to study and correct some of the damage that we caused?

7. Why do we exclude incapacitating gases such as those used in combat operations in Vietnam from the chemical warfare category? Why are vomiting gases, incapacitating gases, and other irritants regarded as being different from other forms of gas? Apparently we have a policy of using nonlethal, or at least non-lethal by intent, gas in combat. Are there occasions under which the gases in use are or have been lethal? Under Secretary Vance has said that these gases are not chemical warfare because they are used by police for riot control and the like. Even if they are, this still appears to be a policy of using incapacitating agents as an offensive weapon. Any distinction made by Secretary Vance is semantic and once again opens the credibility gap.

8. What precautions are taken to insure that chemical and biological warfare experiments are of no danger to the public? What precautions did not work at the sheep kill at Skull Valley in Utah? What precautions are taken when the Army moves chemical agents from a plant to a storage depot or to a port of embarkation or an airfield? What are the risks if there is a train wreck? Are the agents being transported volatile? Are they inert? Are the chemicals moved in tanks under pressure? Is the statistical probability of an accidental discharge of poisonous chemicals greater than of the probability of a nuclear explosion from, say, an ABM warhead? What can be done to counter the damage that would be done if there were an accidental discharge of a chemical agent while in transit through a city or town?

9. What is the annual cost of our activities in the fields of chemical and biological warfare? What is the cost of munitions and weapons in these fields. Since comparable figures are available for our procurement and research programs on ICBM's, the ABM, Polaris, and similar forces, I assume they can

be made available for our CBW program. If they can't, why can't they?

10. Do we have the capability to respond to a massive nationwide gas or biological warfare attack? That is, could we launch a similar and immediate attack against the aggressor? The deterrent effect of our ICBM's is based on the enemy's knowledge that we can and will respond. This has been a policy publicly stated by the Secretary of Defense. Is the same true in the fields of chemical and biological warfare?

11. Do we have a rapid warning system that will alert the public to a chemical or biological attack?

12. Does the Army use any discretion as to what types of institutions should be encouraged or pressed into accepting funds for work in chemical and biological warfare? Does the Army see any conflict in asking a purely civilian institution, such as the Smithsonian, to do work that might conflict with the institution's activities abroad?

13. Would the United States or any other major nation be risking its national security by dispensing with chemical and biological weapons altogether, especially in view of their many skills with weapons that have already been used?

14. Isn't it correct, as Dr. Joshua Lederberg has said, that biological weapons are regarded as a tool of dubious value at best?

Sincerely,

RICHARD D. MCCARTHY,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 10, 1969.

Hon. WILLIAM P. ROGERS,
Secretary, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: Recently my lack of knowledge of the United States' policies in the fields of chemical and biological warfare was brought home to me. I realized that I did not know, as I did concerning our presence in Vietnam, our commitment to South Korea, our deployment in NATO, or our nuclear deterrent, the basic policies that guide our use or non-use of chemical and biological weapons.

With the advice of my colleagues from New York State on the Armed Services Committee of the House, I asked the United States Army to give me and any other interested Members of the House or Senate a briefing on the basic reasons for, and the public policies that applied in the fields of chemical and biological warfare.

Apparently, my interest was shared by many other members of Congress for 19 Members of the House, 3 Senators and 16 representatives of Members' offices attended the briefing which was held on March 4, 1969. The number of staff would certainly have been larger had attendance, even for the unclassified portions of the briefing, not been restricted to those with active security clearances.

In discussing the nature of the briefing with the Army, I asked that the basic public policies governing our activities in the chemical and biological warfare fields be covered in the non-classified section of the briefing. I stressed that our national capabilities and policy in this area should be subject to the same discussion, public review, and constructive criticism as are our strategic weapons procurement and deployment, and our foreign commitments. I deliberately refrained from raising questions which I believed would legitimately fall within the area of secrecy.

General James A. Hebbeler presented a briefing that was informative and interesting to those attending. But many of the public policy questions remained unanswered. I subsequently sent to Secretary of Defense Laird and am sending to you for reply a list of the public policy questions, the answers to which are essential to an intelligent and rational appraisal by members of Congress and the concerned public towards these programs. I would appreciate your considered answers to these questions:

1. Is it our national policy to respond in kind to a gas attack against the nation? Do we state that we will use lethal gas against a nation that launches a gas attack against us, rather than retaliate with another weapon with which we have had operational experience?

2. Is it our national policy to respond in kind to a massive biological weapon attack? Wouldn't it be cheaper and infinitely safer for all of mankind to respond to a biological weapon with other weapons with which we have had operational experience?

3. If our gas biological warfare efforts are purely defensive in nature, what steps have been taken to defend our public from these threats? Why hasn't the public been instructed as to what to do in the case of a nerve gas attack, a hallucinatory gas attack, or an incapacitating gas attack? Do our civil defense policies make the statement that our efforts are purely defensive credible?

4. Why do we choose to call defoliants herbicides of the type we use in our own agriculture rather than chemical warfare? It is not sufficient to say as Ambassador Nabrit did, that so-called herbicides are not a form of chemical warfare. It only extends the credibility gap between our statements and our practices. What is the distinction between a chemical that is used to destroy crops and a plant disease from the field of biological warfare that could be used against rice or wheat?

5. Do we have in practice or in policy an anti-food policy through the use of defoliants in Vietnam? What are our plans to restore the environment of Vietnam which has been significantly altered as a result of our defoliant policy? Will we establish a commission similar to the Atomic Bomb Casualty Commission that operated in Nagasaki and Hiroshima after the war to study and correct some of the damage that we caused?

6. Why do we exclude incapacitating gases such as those used in combat operations in Vietnam from the chemical warfare category? Why are vomiting gases, incapacitating gases, and other irritants regarded as being different from other forms of gas? Apparently we have a policy of using non-lethal, or at least non-lethal by intent, gas in combat. Are there occasions under which the gases in use are or have been lethal? Under Secretary Vance has said that these gases are not chemical warfare because they are used by police for riot control and the like. Even if they are, this still appears to be a policy of using incapacitating gas as an offensive weapon. Any distinction made by Secretary Vance is semantic and once again opens the credibility gap.

7. Do we have the capability to respond to a massive nationwide gas or biological warfare attack? That is, could we launch a similar and immediate attack against the aggressor? The deterrent effect of our ICBM's is based on the enemy's knowledge that we can and will respond. This has been a policy publicly stated by the Secretary of Defense. Is the same true in the fields of chemical and biological warfare, and do we make such a statement as a part of our foreign policy?

8. Would the United States or any other major nation be risking its national security by dispensing with chemical and biological weapons altogether, especially in view of their many skills with weapons that have already been used?

9. Why isn't the United States initiative in chemical and biological warfare control and disarmament as active or apparent as it is in the field of nuclear weapons?

10. Lethal chemicals have not been used at all in warfare by the major powers for the past fifty years and biological weapons have never been used. Why shouldn't we initiate steps at the international level to dispense with those weapons altogether, beginning with biological weapons?

11. What are the United States' plans for bringing up limitations on the use of chemical and biological weapons at the United Nations, and other international forums?

Sincerely,

RICHARD D. MCCARTHY.

CHEMICAL AND BIOLOGICAL WARFARE BRIEFING BY BRIG. GEN. J. A. HEBBELER, MARCH 4, 1969, AT REQUEST OF CONGRESSMAN RICHARD MCCARTHY

INTRODUCTION

Gentlemen, it is my privilege to appear before you today in response to Congressman McCarthy's request for a briefing on chemical and biological warfare and the basic reasons and necessity for a chemical and biological warfare program.

ELEMENTS OF CHEMICAL AND BIOLOGICAL WARFARE

We should keep in mind that we are talking about weapon systems in the same context that we talk about any other weapon; that is, we are talking about instruments of war, weapons specifically designed for use in war. However, effects of chemical weapons differ from those of biological weapons and from other weapons just as the effects of nuclear weapons differ from those of conventional weapons. So to provide a common ground and to help us understand these differences, I shall separate chemical warfare from biological and look at each in detail.

The first thing to bring to your attention is that we are not talking one system; we are talking many systems, all with different effects and different uses. Let us look at the offense first because only by understanding the weapons and their effects are we able to determine the defensive equipment and tactics associated with each category.

Some chemical weapons are categorized as lethal weapons which are designed to kill. The modern lethal chemical agents which are components of chemical weapons include the nerve agents, two of which have the symbols GB and VX. Both are liquids which are disseminated as aerosols. GB is a non-persistent material which is relatively volatile. It is put down in heavy concentrations to catch troops before they can put on their protective masks.

VX is a persistent compound which can penetrate the skin. It is complementary to GB in that it can circumvent the protective mask. It penetrates normal combat clothing.

Both agents are odorless, tasteless, and colorless. Consequently it is practically impossible to detect them with the unaided senses. They can enter the body through the respiratory tract, the eyes, and the skin. Action within the body is rapid. Very small amounts will cause paralysis, prostration, and death. Even microscopic quantities will impair vision, and cause nausea and muscular incoordination.

Why do we have a lethal chemical program? Mr. Cyrus Vance, as Deputy Secretary of Defense in 1967, before the Senate Subcommittee on Disarmament, stated: "As long as other nations, such as the Soviet Union, maintain large programs, we believe we must maintain our defensive and retaliatory capability." Let us look at the nature of the Soviet Union program which constitutes a lethal chemical threat to the US, her NATO allies and other Free World countries.

Today the Soviet Union is better equipped militarily and physiologically for chemical warfare than any other nation in the world. She has placed a great deal of emphasis on these systems in her military machine. She envisions the usage of these the same as for conventional weapons.

Her planning at all levels, from the very top to the very low echelon units, includes considerations for chemical warfare training, offensively and defensively.

She has a wide spectrum of chemical munitions. She considers chemical tactical weapons to be used in conjunction with nuclear weapons or separately as circumstances may dictate.

Her agent stockpiles includes a spectrum of agents capable of creating military effects over a wide range.

The soldier is well equipped with defensive equipment. He trains vigorously and for long periods of time with this equipment. He looks upon chemicals as a real possibility in any future conflicts, and he respects his equipment.

The research program in the Soviet Union for chemical warfare has encompassed every facet.

The basis for these comments appears in the testimony of Willis E. Black before the House Appropriations Subcommittee in 1968.

In addition, we know that the state of Soviet chemical science which has direct application to chemical warfare technology is unsurpassed. I have here some physical evidence of their diligent and exhaustive effort in this field.

This stack of documents contains abstracts of translations of selected Soviet scientific literature which reflects the magnitude of this effort during the past several years alone. Each of these documents also contains abstracts pertaining to biological research which has military applications.

In summary, the USSR is well equipped to wage warfare with these weapons and indications are that they would be used if this served its purpose.

Other chemical systems employ incapacitating agents designed specifically to avoid killing—approach unique among weapon systems. These weapons suggest employment where military necessity requires control of a situation, but where there is a good reason for not harming the surrounding population or even the intended target troops.

Among chemical agents in the incapacitant category are some which exert mental effects, and there are some which affect the body. There also are types which affect both the mind and the body. Physical types have some advantages over the mental types, however, since the degree of incapacitation will be more apparent to the user.

Such agents would include, for example, those which would cause loss of physical coordination, paralysis, or loss of vision. The effects would be temporary and those exposed would recover without after effects. These agents are selected for possible use because of the wide safety factor between the amount of agent which incapacitates and that which would cause lethal effects.

Actually, many compounds have some temporary effects on mental processes as well as on physical performance. For example, the ability to concentrate on a given task may be severely limited at the same time that physical tasks may become more difficult to perform.

The incapacitating agents were not available for consideration when the Geneva Protocol of 1925 was formulated.

These incapacitating chemical weapons would be a marked asset to US forces in military situations where it is necessary to gain control of an area in which both civilian and insurgents are co-mingled or where civilian and enemy military troops are inter-mingled. This would be particularly true on peacekeeping missions in underdeveloped nations where insurgency is a problem and where the US is asked to assist in maintaining stability of a state.

Among chemical systems some include as chemical weapons the riot control agents, herbicides and smoke and flame. The US clearly does not consider these categories as weapons to fall within the purview of the Geneva Protocol of 1925; public statements by Secretary of State Dean Rusk, by former Deputy Secretary of Defense Cyrus Vance and by Ambassador to UN Nabrit provide the basis for the US position. I will cover these later in a discussion of policy.

The riot control agents, used for control of civil disturbances and adapted for use in Vietnam operations, are designed to irritate, to cause people to move (vacate an area), with only temporary effects. The effects of CS, the standard military riot control agent, are pronounced and instantaneous—coughing, severe burning of the eyes, tightness of the chest, acute discomfort. These effects are much the same as the tear gas, CN, which has long been used by civil law enforcement agencies world wide. But CS works faster to temporarily disable and is much safer. In tests using troop volunteers, in actual riots, and in battle, there has never been a fatality attributed to CS.

In Vietnam commanders find CS a valuable weapon in combat situations when it is apparent that explosives are not the best weapon. Viet Cong have frequently forced women and children to accompany them as hostages; they do not hesitate to use them as protective shields against anyone seeking to clear their tunnel hideouts. In such situations, CS quickly proved its value. In one reported operation, 17 Viet Cong and some 400 non-combatants being held as hostages were forced from a tunnel complex by CS, with nobody wounded on either side. Again, 43 armed Viet Cong were captured with no friendly losses and one enemy killed when he tried to break away. These examples indicate that lives are frequently saved on both sides when CS is used as a weapon.

Herbicides have proved useful in Vietnam primarily as defoliants. Dense jungle, which is home to the Viet Cong, provides the enemy with effective ambush cover. Wooded areas along trails, roads, railroads, canals and powerlines have been hiding areas for Viet Cong units until the US Air Force began to spray defoliating agents. Removal of the jungle canopy and overhanging foliage permits a view for analysis of trail activity, storage site locations and targeting and exposes the ground area to photographic surveillance and direct fire. Army units use herbicides around local base areas to keep them clear for ground surveillance and fire lanes and prevent surprise. Herbicides have also been used against Viet Cong crops; they are harmless to the soil and to life and have no residual effect on the soil, being effective no longer than one growing season.

The biological weapons are categorized by their effects against man, against animals and against crops. Biological weapons designed for use against man are further categorized by their effects as lethal or incapacitating. Again, lethal biological weapons are designed to kill; incapacitating to avoid killing.

Biological agents can be produced, can be stored under specific conditions, and can be disseminated effectively to cover large areas. Because of the delay between infection and symptoms, as well as the large area coverage capability, biological warfare is generally considered to have strategic implications rather than tactical.

Biological agents, like the chemical nerve agents, cannot be detected by the senses. Being colorless, odorless and tasteless their early detection is a difficult problem, complicated by the delay which occurs before effects become evident.

There is a wide variety of bacteria, rickettsia, viruses and fungi which cause disease in man. Many of these can be used as biological agents. Examples of some that could be considered as lethal agents are plague, tularemia, anthrax, yellow fever and typhus.

In addition, it is entirely possible that mutant types of disease could be developed which would not respond to known methods of treatment. They would be difficult to diagnose. Diagnosis and treatment could be complicated by using mixtures of two or more agents.

Biological agents can be delivered in a variety of ways, such as aerosol generators and spray tanks. Generators and spray tanks could be carried in missile warheads and in manned or drone aircraft. Another possibility is the use of insect vectors, such as the mosquito, as a deliberate carrier of microorganisms.

In a different category are the biological incapacitants. They are designed to permit control of an enemy—to remove his ability and will to fight, with minimum risk of mortality. There are a number of mild diseases which will make a person very uncomfortable and make him inactive for a short period of time without serious effects.

In another category are the weapons which can be used to attack a nation's food sources—crops and livestock. These are generally considered weapons for strategic use.

Why do we have a program? We can refer back to Mr. Vance's statement which included both chemical and biological weapons and the need for a program in view of the large USSR program. We can also refer back to Mr. Black's testimony when he stated that "Today Russia is better equipped militarily and psychologically for chemical and biological warfare than any other nation in the world." However, it is even more important that one looks at the rapid advances being made in the bio-medical sciences. The US must keep an active and viable program in this field so that we are not technologically surprised and so that such surprise cannot threaten our national security.

From this brief review of the elements of the CB weapons program, it is evident that an increasing variety of effects have become available, with a consequent increase in variety of purposes to which they could be applied. The alternatives presented are now so many that distinctions between purposes have tended to submerge purely technical differences.

Thus, at one end of the spectrum, these forms of warfare might be no more than the small-scale use of a non-lethal chemical agent against an adversary to frustrate his purpose without maiming or causing fatalities. At the other extreme of the spectrum, it is possible to conceive of the use of a lethal biological agent against an entire nation without consideration of necessity or humanity. It is difficult, if not impossible, to weigh in a single balance situations so disparate in intent or consequences.

It appears, then, that with respect to chemical and biological systems one should look toward the *principle of proportionality*, which is not only a general principle of international law, but is also fundamental to moral law. It applies even though the target, the weapon and the method of attack may be legitimate. It requires that belligerents refrain from employing any kind or degree of violence which is not necessary for military purposes. In this context it would appear that the norm of proportionality could require controls to prohibit certain elements of the chemical and biological field, while others of the non-lethal type would be preferred over alternatives now employed.

DEFENSE

In developing a modern defensive posture, one must recognize the threat and the toxicity of current nerve agents. With these, even very low concentrations for short periods of time can quickly produce severe symptoms. Further, one must protect against absorption of these agents through the skin as well as by inhalation. As a result, a lethal chemical protective system consist of several interrelated elements. The total chemical and biological defensive system consists of detection, warning, protection, decontamination, and preventive medicine and medical therapy. Each of these elements requires available equipment and materials (alarms, masks, etc.) which must be integrated into an overall logistics system. The defensive

equipment requires concepts and doctrines for use which must be integrated into the training cycle. The lack of any element increases the vulnerability to a chemical or biological attack.

There are two implications to the complexities of equipment and training for defense against lethal chemical weapons.

For one thing, a force against which lethal chemicals are used will be at much lower combat effectiveness than will a force not suffering the same casualty threat with its attendant requirement for protective equipment and decontamination procedures. The Geneva Protocol of 1925 recognizes this as a basis for retaliation against the initiator of lethal chemical use. In the present era, a force without the option of chemical retaliation could well be forced to an alternative option of tactical nuclear employment, if that were available to him.

The second implication is that the cost of protective equipment is high and serves as a constraint on less affluent nations against initiating use of lethal chemicals, since use carries with it the requirement for protection against retaliation.

POLICY

What is our national policy in regards to these weapons and their use? We can turn to the statements of our Presidents and their Cabinet officers to explain a basis for our current policy.

First, we can begin with President Roosevelt's statement in 1943 when he stated: "* * * we shall under no circumstances resort to the use of such weapons unless they are first used by our enemies." President Eisenhower re-affirmed the Roosevelt policy statement. Very few public statements have been made until recently when as a result of the Vietnam conflict, questions were raised.

Secretary of State Rusk in 1965 declared with respect to U.S. use of tear gas and herbicides that the U.S. was not engaging in gas warfare in Vietnam and that the country was not using gas "that is prohibited by the Geneva Convention of 1925 or any other understandings about the use of gas."

Ambassador Nabrit before the United Nations General Assembly in 1966 stated that the Geneva Protocol of 1925 does not apply to all gases and further "It would be unreasonable to contend that any rule of international law prohibits the use in combat against an enemy, for humanitarian purposes, of agents that Governments around the world commonly use to control riots by their own people. Similarly, the Protocol does not apply to herbicides, which involve the same chemicals and have the same effects as those used domestically in the United States, the Soviet Union and many other countries to control weeds and other unwanted vegetation."

Deputy Secretary of Defense, Cyrus R. Vance, in his 1967 testimony before Congress indicated "That we seek international understandings to limit chemical and biological warfare and that we have not used weapons of the sort condemned by the Geneva Protocol." He pointed out that "as long as other nations, such as the Soviet Union, maintain large programs, we believe we must maintain our defensive and retaliatory capability."

In line with seeking limitations, the most significant current action which may affect policy is the United Nations study on chemical and bacteriological (biological) warfare, requested by the Eighteen Nation Disarmament Conference. This study, intended to provide a technical and non-political appraisal of the effects of chemical and biological weapons, is being done by experts of fourteen countries, including the U.S. and the USSR. It is to be completed by July 1969, will be unclassified and will be given wide distribution.

Our posture today is concerned first with the development of a credible and viable lethal chemical capability as a deterrent to the use of these weapons against us, and to give us the ability to fight effectively if deterrence fails. Further, it is essential that in the rapidly advancing technology of the biomedical-pharmacological sciences we not permit ourselves to be surprised by a capability in the hands of a potential enemy. And, finally, the exploitation of a chemical incapacitating capability may permit us to effectively control a critical situation while at the same time using weapons designed to avoid killing.

[Distributed to the Council and the Members of the League of Nations, Geneva, Jan. 15, 1931]

DOCUMENTS OF THE PREPARATORY COMMISSION FOR THE DISARMAMENT CONFERENCE

(Entrusted with the preparation for the Conference for the Reduction and Limitation of Armaments)

MINUTES OF THE SIXTH SESSION (SECOND PART) OF THE PREPARATORY COMMISSION FOR THE DISARMAMENT CONFERENCE

Memorandum by the British Delegation

The English text of the first paragraph of this Chapter, as agreed to at the second reading, is as follows:

"The High Contracting Parties undertake, subject to reciprocity, to abstain from the use in war of asphyxiating, poisonous or similar gases, and of all analogous liquids, substances or processes."

It may be recalled that, during the first part of the sixth session, certain delegations assumed that the intention was to prohibit the use of all chemical methods of warfare of every kind. On the other hand, there are some indications that this view is not shared by all States. It is at least possible that this difference in interpretation owes its origin to a serious ambiguity in the Geneva Gas Protocol of 1925, as well as in all Treaties and Conventions regulating gas warfare signed since the war. In the Geneva Protocol of June 1925, though the relevant portion of the French text is identical with that of the article quoted above, in the English text the French word "similaires" is translated by "other".

Basing itself on this English text, the British Government have taken the view that the use in war of 'other' gases, including lachrymatory gases, was prohibited. They also considered that the intention was to incorporate the same prohibition in the present Convention.

From every point of view it is highly desirable that a uniform construction should prevail as to whether or not the use of lachrymatory gases is considered to be contrary to the Geneva Protocol of 1925 and/or to Chapter IV of the Draft Convention.

The British delegation proposes, therefore, to invite an expression of opinion on this point from all the States represented on this Commission.

Note by the French delegation regarding the British memorandum

I. All the texts at present in force or proposed in regard to the prohibition of the use *in war* of asphyxiating, poisonous or similar gases are identical. In the French delegation's opinion, they apply to all gases employed with a view to toxic action on the human organism, whether the effects of such action are a more or less temporary irritation of certain mucous membranes or whether they cause serious or even fatal lesions.

II. The French military regulations, which refer to the undertaking not to use gas for warfare (*gaz de combat*) subject to reciprocity, classify such gases as suffocating, blistering, *irritant* and poisonous gases in general, and define irritant gases as those causing *tears*, sneezing, etc.

III. The French Government therefore considers that the use of lachrymatory gases is covered by the prohibition arising out of the Geneva Protocol of 1925 or Chapter IV of the draft Convention.

The fact that, for the maintenance of internal order, the police, when dealing with offenders against the law, sometimes use various appliances discharging irritant gases cannot, in the French delegation's opinion, be adduced in a discussion on this point, since the Protocol or Convention in question relates only to the use of poisonous or similar gases *in war*.

[*Discussion*]

Lord CECIL (British Empire). This is not really a matter for me to make a speech about. The point is stated quite clearly. There is a little difference between the English and French text of the Geneva Protocol of 1925, and there seems to be a certain difference in the practice of countries as to whether the prohibition extends or does not extend to those gases which are not dangerous to health. The French delegation have been good enough to circulate a statement in which they say that their practice is the same as ours in forbidding the use of all gases; but I do not know whether that is the case with other people, and my Government is anxious, if possible, to clear up the situation in that respect.

I have made my appeal here, and it is for each Government to say whether they feel able and disposed to make any reply to this appeal on the subject.

The PRESIDENT. The French delegation has already replied in writing, and Lord Cecil would like to know whether the other delegations can also state their views.

M. ANTONIADE (Roumania). My delegation was among those that proposed this prohibition, and I am therefore entirely in agreement with the construction which Lord Cecil has placed upon this article, which has also been explicitly confirmed in the note now submitted by the French delegation.

Dr. MARKOVITCH (Yugoslavia). The Yugoslav delegation also urged the desirability of inserting in the Convention on the Limitation of Armaments an article dealing with the use of chemical arms. We fully agree with the interpretation given by the British deleation.

M. FIERLINGER (Czechoslovakia). I entirely associate myself with the declarations which we have just heard, for the simple reason that it would be very difficult in warfare to make a clear distinction between gases which are lethal and gases which are not lethal.

Proposal by the United States Delegation

The Honorable HUGH GIBSON (United States of America). I had hoped that it would not be necessary for me to make a statement on this subject, as I confess that I am not in a position to offer a sound and valuable opinion on the problem raised by the British delegation. However, as so many delegations have expressed their views on this subject, I feel there are certain considerations that should be laid before the commission.

The American delegation has examined with great interest and sympathy the memorandum on chemical warfare circulated by the British delegation. A very interesting and important problem is raised by this memorandum and one which it is essential to settle if we are to have the sort of clear-cut and straightforward international agreement on gas warfare which alone can be observed.

If, in the interpretation of the Gas Protocol, there is a broad border-line of doubtful cases. States, which endeavor to execute faithfully their treaty obligations, risk incurring the reproach of violation, if other States have a different conception of the scope of our agreement. I am particularly glad that the British delegation has brought this question forward now, and has asked for an expression of opinion from other del-

egations on the question of interpretation. This seems to me a distinctly useful step and I welcome the opportunity to lay certain considerations before the Commission, together with a suggestion as to how the whole problem may best be handled.

I confess that, after such study as I have been able to give to the matter, I find it extremely difficult to offer a useful opinion as to what sort of gas can be considered as falling within the scope of the text agreed to on second reading. This entire subject is so technical that I should like to lay before the Commission some of the problems involved in any decision, which, to my mind, show that any definite solution of this problem is beyond the technical competence of this body.

The primary question involved is as to the use of lachrymatory gases. While lachrymatory gases may serve some useful military purpose, for instance as harassing agencies, it is doubtless well-known to all my colleagues that the greatest use of lachrymatory gas is found, not in military service, but in police work either for controlling mobs, in which use it is certainly far more humane and probably more effective than the use of machine guns, sabres, or even truncheons, or it serves the purpose of effecting the capture of a barricaded criminal without bloodshed or loss of life.

Aside from this particular civil use of lachrymatory gas, the British document raises another far more interesting question of greater technical difficulty and wider ramifications. This question involves the use of smoke, which has a widely-accepted technical use for tactical screening purposes.

Smokes can either be chemical or mechanical in their nature and run the gamut from petroleum smoke, mechanical in character—inasmuch as it consists of particles of soot suspended in air—down the line to toxic smokes which are extremely lethal in character. In all probability, the most widely-used smoke for military screening purposes is white phosphorus, which has no chemical gas qualities, but which is a hideous and cruel agent if used against personnel before it has reached the stage of being a true smoke. Between white phosphorus and the true toxic smoke there exists an infinite number of gradations, most of which have well recognised chemical properties, and some of which are lethal in character. Logically, a statement as to the poisonous or non-poisonous or the lethal or non-lethal qualities, of smokes and gases, which might come under the terms of the text adopted of Chapter IV at second reading, would require prolonged study by technical experts with specialised knowledge of the subject, supported by expert specialised medical knowledge as to the properties and probable physical and pathological effects of these various agencies in normal and abnormal concentrations. I have sought to outline briefly some of the difficult problems with which the Commission might be faced, if we were to embark upon a general discussion of this subject now—difficulties which I fear we are quite unprepared to discuss without the backing of adequate technical knowledge. The problem before us is essentially one of doing away with agencies which cause unnecessary suffering, and it is important, if our prohibition of these inhumane agencies is to be all-inclusive and applicable, that we have definite knowledge of these various agencies and their effects, and of the ramification of any decisions we may take. On the other hand we seek a maximum prohibition of inhumane agencies, but, at the same time, we should not be led to bring into disrepute the employment of agencies which not only are free from the reproach of causing unnecessary suffering, but which achieve definite military or civil purposes by means in themselves more humane than those in use before their adoption. I think there would be considerable hesitation on the part of many Governments to bind themselves to refrain from the use in war, against an enemy, of agencies which they have adopted for peace-time use against their own population, agencies adopted on the ground that, while causing temporary inconvenience, they cause no real suffering or permanent disability, and are thereby more clearly humane than the use of weapons to which they were formerly obliged to resort to in times of emergency.

I have set forth the views of the American delegation on this subject at some length in order to lead up to a definite proposal. I think we are all in agreement as to the end in view. I hope the Commission will agree with me as to the difficulty, if not the impossibility, of our reaching a thoroughly sound agreement at this time, and of the need for mature scientific study.

I therefore venture to suggest that the British memorandum be noted in our report, that the importance of this subject be duly stressed, and that the various Governments represented at the Disarmament Conference be requested to give this entire subject careful study and consideration, with a view to arriving at that Conference equipped with adequate knowledge of the problem in all its aspects, in the hope that we may reach the sort of agreement we all desire.

[*Discussion*]

M. SATO (Japan). My Government agrees with the British interpretation.

M. COBIAN (Spain). I agree with the British delegation's interpretation, because I think that the text approved at the second reading is so clear that it cannot give rise to any objections. It provides that the use in warfare of any kind of gas is prohibited—doubtless because it is very difficult to distinguish between lethal and non-lethal gases.

I entirely agree with M. Politis that it would be very dangerous to try to make war less inhumane, but I would add that we must not do anything which represents a refinement of cruelty. In my opinion, nothing is more opposed to all idea of civilization than that scientific knowledge should be used to devise methods of destruction.

M. LOUNATCHARSKY (Union of Soviet Socialist Republics). In 1929, the Soviet delegation proposed not only the renunciation of the use of gases in warfare, but also of their preparation in peace-time; this proposal, however, was rejected by the majority of the Commission.

We interpret this paragraph to mean that the use of all gases, including irritant gases, is prohibited.

As regards the text proposed by the French delegation, the Soviet delegation is of opinion that it is not for the Preparatory Commission to legalise the use of these gases by police forces, and it accordingly regards the third paragraph as unacceptable, particularly as one speaker referred to the use of gases by police forces for the purpose of controlling mobs.

M. MASSIGLI (France). As the French delegation has expressed its views in writing, I need not repeat that it is in agreement with the British delegation. However, we have just heard some very interesting statements, and Mr. Gibson has touched the core of the problem. A significant silence was also observed by certain delegations, which shows that they are not at present in a position to state their views on the matter.

I therefore approve Mr. Gibson's proposal to mention the British memorandum in the report, so that it may be submitted to the Conference.

As regards the remark made by M. Lounatcharsky, I would merely point out that I have never asked this Commission to interpret the 1925 Protocol in any way, still less to unify the police regulations of the various countries. I can assure him that if this question arose, I should leave it to him to make proposals.

Dr. WOO KAISENG (China). The Chinese delegation is entirely in sympathy with the British delegation's memorandum. It also agrees with the views of Mr. Gibson, the United States delegate, and considers that chemical warfare should be prohibited, and that these questions should be carefully examined. It is also of opinion that the manufacture of all gases, both asphyxiating and poisonous, should be prohibited, or at all events, limited.

General DE MARINIS (Italy). As regards Chapter IV, the Italian delegation interprets the 1925 Protocol, to mean that "other gases" include lachrymatory gases—that is to say that, subject to reciprocity, the use of lachrymatory gases is prohibited.

I gladly associate myself with Mr. Gibson's proposal to refer the examination of this question and the final decision to the Conference.

Dr. RIDDELL (Canada). Mr. President, I wish to thank the British delegation for giving us an opportunity of discussing this very important question. We are in entire sympathy with the interpretation given in the British memorandum. We also welcome the proposal of the United States delegation that all the delegations should come to the Disarmament Conference with as full and complete information on this subject as possible.

MUNIR BEY (Turkey). In reply to the British delegation, I desire to state that we also consider the use of lachrymatory gases prohibited by the Protocol. I should like to add, after hearing the statements made by previous speakers, that none of them seems to be opposed to the use of lachrymatory gases being prohibited. As certain Governments which signed the Protocol are not represented here, it is advisable that the result of this interpretation should be brought to the knowledge of those Governments, so that this Protocol may be interpreted in a uniform manner.

The PRESIDENT. I hope Lord Cecil is satisfied with the replies he has obtained. Judging from the discussion, I take it that Mr. Gibson's proposal, which is supported by M. Massigli, is approved by the Commission. The Governments are accordingly requested to study this question so that it may be settled at the Conference.

Lord CECIL (British Empire). I should like to say a word of thanks to my colleagues for the fullness with which many of them have replied to the question the British Government laid before them. I need not say that everything they have said will be brought to the notice of my Government and they will be as grateful as I am.

I entirely adhere to the suggestion of Mr. Gibson, and I venture to hope that those Governments whose delegations have not been able to reply on this occasion will convey especially to their Governments, and bring to their attention, all that has passed on the present occasion.

With regard to what M. Lounatcharsky and M. Woo Kaiseng said about the desirability of preventing the manufacture of these gases, I am in entire agreement with them, but they, too, will agree with me that the technical difficulties of prohibition are very great, owing to the course of science in matters which are quite removed from the manufacture of poisonous gases, but I quite agree that it is of little use to forbid the use of gases in times of war unless you can prevent their manufacture, and the preparation of their manufacture, in times of peace. The matter should be carefully studied, but it does not arise at this juncture.

The PRESIDENT. We can regard the discussion as closed.

I would draw your attention to one very important point—namely, that it is essential that the reservations made in regard to the various points of the report should be formu-

lated in very precise terms. I would therefore ask you to send them in this form to the Bureau, which will transmit them to the Rapporteurs.

The Commission rose at 1.20 p.m.

[From Science Magazine, Feb. 21, 1969]

DEFOLIATION IN VIETNAM

(NOTE.—The author is assistant chief of the Crops Protection Research Branch, Crops Research Division, Agricultural Research Service, U.S. Department of Agriculture, Beltsville, Maryland. The assessment and report on which this article is based were prepared by the author when he served as an adviser to the U.S. Department of State. That report was released in September 1968 by the U.S. Embassy in Saigon.)

(By Fred H. Tschirley)

An assessment of ecologic consequences of the defoliation program in Vietnam was undertaken at the request of the U.S. Department of State. This article is based on a report made as a part of an overall review of the defoliation and crop destruction programs in Vietnam.

The timetable for completion of the policy review required submittal of a report 1 month after my arrival in Vietnam on 15 March 1968. The period from mid-March to mid-April was the end of the dry season when many tree species are naturally defoliated. This added to the difficulty of determining the effects of herbicides on vegetation.

The dry season, the short time available, and the difficulty of making on-the-ground observations were restrictive for an ecologic evaluation. Thus, this report is not a detailed analysis, but an assessment based on the observations that were possible and on discussions with foresters and others knowledgeable about the local situation. The observations were supported by scientific reports and personal research experience in ecology and the effect of herbicides on vegetation in temperate and tropical America.

There were no constraints placed on what I was permitted to see in Vietnam nor on what I reported. Some areas and vegetative types could not be visited because there was not adequate time, or because safety could not be assured in areas of military activity. In other areas, inspections were limited to aerial observations because the sites were not sufficiently secure to permit ground assessments. Civilian and military elements of the U.S. mission in Vietnam gave me all the help and cooperation that was possible. The military provided aircraft for aerial surveys of defoliated and nondefoliated forests, arranged transport to Special Forces camps and a security force for observations from the ground, arranged briefings on all aspects of the defoliation program, and made available whatever records I wished to see on where and when forests were sprayed with defoliants. Civilian elements of the U.S. mission provided background information based on their experiences in Vietnam, aircraft for additional aerial surveys, introductions to Vietnamese foresters, and background material needed for writing my report. Probably the best indication of the lack of constraints on my activities was that the report which I prepared was released, without a word having been changed, by the U.S. mission in Saigon.

This article is essentially the same as the report I prepared in Vietnam. Some material has been deleted because of space limitations, but my observations and conclusions do not differ from the original report.

DEFOLIATED AREAS SURVEYED

Time did not permit a survey of all the defoliated areas in Vietnam. Therefore, my observations were limited to those areas where large blocks of forest had been sprayed with herbicides. The ecologic consequences of the defoliation program would be expected to be most evident and most readily definable in such areas.

The most intensive defoliation treatments in the mangrove vegetational complex have been applied in the Rung Sat Special Zone, an area that surrounds the shipping channel into Saigon. Defoliation of the mangrove was started in 1966, but most of the defoliation flights were made after June 1967. A block of about 460 square kilometers had been treated by the end of January 1968. The Rung Sat Special Zone was surveyed from a helicopter ranging in height from treetop level to about 1000 feet. Mangrove on the Ca Mau peninsula was surveyed from a C–123 flying at about 2000 feet. This flight also permitted a survey of a 1962 herbicidal treatment of mangrove on both sides of the Ong Doc River.

The most intensive defoliation treatments on upland semideciduous forest have been applied in war zones C and D and in the Demilitarized Zone. My efforts were limited to war zones C and D. War zone C is northwest of Saigon between the Song Be River and the Cambodian border; war zone D is northeast of Saigon between the Song Be and Song Dong Nai rivers. Blocks of about 920 and 1920 square kilometers have been sprayed in war zones C and D, respectively. Some areas withing those blocks have received two to four treatments. Defoliation in the semideciduous forest was observed from two relatively high-level flights in fixed-wing aircraft, six high- and low-level flights in helicopters, and observations from the ground in forests surrounding the four Special Forces camps of Thien Ngon, Katum, Tong Le Chon, and Bo Dop. Several hours were spent in the forest at each location to assess defoliation, refoliation, successional patterns, and to get an idea of the possible effects to the defoliation on wildlife. In addition to my own observations, men at the camps were questioned regarding the effect of defoliation on their operation, their impressions about the relative difficulty of human movement in the forest (a rough measure of the density and composition of the understory vegetation), and sightings they had made of wildlife.

EFFECT OF DEFOLIATION ON CLIMATE

Not uncommonly one hears that large-scale modification of vegetation (forest to savanna or grassland, for example) or the vegetative denudation of an area will cause a change of climate, particularly in the amount of rainfall. The theory behind this statement is that as forest is converted to grassland or the soil is bared of vegetation, the evapotranspirational surface is reduced, and thus there is less moisture released to the atmosphere for subsequent precipitation. The fallacy of the theory is readily apparent when one considers the vast scale of atmospheric air flow, with the moisture it contains, and the relatively insignificant reduction in moisture that might be caused by reduced evapotranspiration from a small area. Some simple calculations point out the fallacy of the theory more explicitly.

By applying the reasoning used for an arid area,[1] let us apply some simple calculations to a forested area that is 100 kilometers on a side. If we assume, conservatively I think, that the total moisture in a vertical column of the atmosphere above the area has a depth of 3 centimeters and the air mass is moving over the area at a rate of 5 kilometers per hour, we can calculate that moisture is passing over the area at a rate of 4.17×10^8 grams per second. Now let us further assume that our hypothetical forest has been entirely denuded of vegetation and we reasoned that it may have been contributing 10 percent to the total atmospheric moisture. In other words, we expect a 10-percent decrease of rainfall after the vegetation is removed. Ten percent of the total atmospheric moisture would be 4.17×10^8 grams per second. In other words, our hypothetical forest would have to be contributing moisture to the atmosphere at a rate of 1.1×10^9 gallons per second. Such a figure is unreasonable. If we carry this calculation further and consider one tree with its branches in the upper or middle canopy for each 10 square meters, then evapotranspiration from each such area would have to be 417 milliliters per second. That is far beyond the measurements that have been made for salt cedar (*Tamarix pentandra*), one of the heaviest users of water.[2]

The work of Ohman and Pratt[3] also lends itself to this discussion. They measured dew point over and downwind from a desert irrigation project covering some 100,000 acres near Yuma, Arizona [annual precipitation about 3 inches]. Despite application of annual totals of from 5 to 10 feet of irrigation water on this area extending some 20 miles parallel to prevailing winds for the summer months studied, all influence of the irrigated fields upon crop-level dew points became immeasurably small only 100 feet to the lee of the downwind edge of the entire area. And at 12 feet (3.6 meters) above the crop level, dew points were not measurably increased even at points inside the irrigated acreage. These measurements were made under midday conditions in July and August when monthly totals of irrigation varied between about 0.7 and 1.5 feet of applied water. These measurements show the small effect that artificial measures have on atmosphere moisture content.

My conclusion is that defoliation in Vietnam has no significant measurable effect on atmospheric moisture and thus would have no effect on precipitation.

Another point that refutes the evapotranspiration-precipitation theory is that water molecules are not motionless in the atmosphere. Sutcliffe[4] estimated that the average time between a water molecule's evaporation into and its precipitation from the atmosphere was about 10 days. Thus, from consideration of the mean wind speed, the average water molecule must drift several hundred miles before it is precipitated.

Extensive defoliation would be expected to change temperature patterns through a forest profile simply because there would be less shielding of direct solar radiation. In addition, the average wind speed would be greater in a defoliated than in an undefoliated forest. These two factors probably would not have a great effect on higher plants and animals, but might temporarily affect lower life forms that are more dependent on specific microclimatic niches for growth and survival.

EFFECT OF DEFOLIATION ON SOILS

One of the principal fears about exposing soil in the tropics is the possibility of increased laterization. The term laterite generally refers to an indurated concretionary deposit, high in iron or aluminum oxide content, which has formed in place by the weathering of rocks. True laterite hardens irreversibly. Laterite has been found to be best developed when the following conditions exist.[5] (i) The climate must have high rainfall and uniformly high temperatures. (ii) The topography must have been fairly gentle, peneplain in nature. (iii) A well-drained soil must have been present. This is usually an alluvial soil, but soils high in iron content may be an exception. (iv) There must have been a uniformly fluctuating water table which had a definite low level during the dry season. (v) Stable geological conditions must have existed for a long time.

About 30 percent of the soils of Vietnam have a potential for laterization.[5] Many of the red soils of Vietnam (often confused with laterite) dry out and become hard but soften again when wet. The soft doughy laterite, which hardens to a rocklike material when exposed to alternate wetting and drying, is not found in significant amounts in Vietnam.

Two kinds of laterite are found in Vietnam. Wormhole laterite is generally consolidated

---

Footnotes at end of article.

and occurs as massive beds, commonly at the bottom of a 1- to 30-foot layer of well-drained soil. It is red to brown in color, and has a slaggy appearance due to numerous holes, often interconnecting, and thus facilitate the passage of groundwater. Wormhole laterite occurs throughout most of the Mekong Terrace region, in soils of both forested and cultivated areas.

Pellet laterite is unconsolidated and occurs as small pellet-like concretions in an iron- or aluminum-rich soil. The hard concretions are usually surrounded by fine-grained material that is generally clayey when moist. The coarser particles in this fine-grained material are commonly iron-stained quartz sand. Pellet laterite occurs on the iron-rich basalt plateau soils of the Mekong Terrace, the basalt plateau of Ban Me Thuot, the extreme western edge of the high plateau west of Pleiku, and in a small area around Quang Ngai. Pellet laterite has been observed forming on the metamorphic rocks near Bong Son and on some of the rocks near Qui Nhon. It is likely that wormhole and pellet laterite could occur in the northeastern coastlands, but this has not been substantiated by field studies.

Laterization under natural conditions is a long-term process. The process is accelerated when soil is exposed to direct solar radiation and wind. I do not find it reasonable to conclude that the defoliation program in Vietnam would hasten the laterization process significantly because bare soil does not result from defoliation. It is possible, however, that laterization will be accelerated around base and Special Forces camps where the soil is maintained free of vegetation.

The amount of erosion that occurs as a consequence of defoliation depends on soil type, topography, relative degree of vegetative cover, and amount and intensity of rainfall. In general, erosion is greatest on steep slopes of bare soil, decreasing as slope decreases and as vegetation becomes more dense. It was not possible to examine defoliated forest in mountainous terrain for evidence of accelerated erosion. I did not detect such evidence during flights over the defoliated areas. Gully and sheet erosion were noted around camps where there was little or no vegetation, regardless of whether or not those areas were sprayed.

The possibilities of flooding or of changes in the water table as a result of defoliation are subjects that need careful consideration. The replacement of woody vegetation with grass in the southwestern United States has resulted in perennial flow of streams that were only intermittent before and also in the flow of springs that had been dry for many years. There are cases where harvesting trees increased stream flow[6] and where clear-cutting resulted in a marshy condition unsuitable for desirable timber species.[7] I mention these points because they have occurred elsewhere and could conceivably occur in Vietnam. But I do not know the local situation well enough to make a reasonable assessment of that probability.

Microorganisms are an essential feature of the soil system. A herbicide that killed the microorganisms would have a severe effect on soil ecology. What are the possibilities of destroying the microbial population in the soil with the chemicals being used for defoliation in Vietnam?

The code names for the defoliants used in Vietnam are Orange and White. The constituents of Orange are the normal butyl esters of (2,4-dichlorophenoxy)-acetic acid and (2,4,5-trichlorophenoxy)acetic acid, better known as 2,4-D and 2,4,5-T, respectively, in a 1:1 ratio. The constituents of White are triisopropanolamine salts of 2,4-D and picloram (4-amino-3,5,6-trichloropicolinic acid) in a 4:1 ratio. There seems to be no danger that any of these chemicals will kill microorganisms. Actually, numbers of soil microorganisms capable of inactivating 2,4-D apparently increase when 2,4-D is present in the soil. Thus, repeated applications of 2,4-D were less persistent in soil than the initial application.[8] There are no reports suggesting that the effect of 2,4,5-T on microorganisms is significantly different from that of 2,4-D. Picloram does not destroy soil microorganisms, but neither is the microbial population enriched as a result of picloram application. Thus, picloram cannot be considered a good energy source for microorganisms. The decomposition of picloram is an incidental process in the breakdown of soil organic matter, requiring the loss of approximately 10,000 to 100,000 pounds of organic matter per pound of herbicide.[9]

Footnotes at end of article.

EFFECT OF DEFOLIATION ON PLANT AND ANIMAL POPULATIONS

The chemicals 2,4-D and 2,4,5-T are highly selective herbicides, but picloram is somewhat less selective. Not all plant species react similarly to them. The differential susceptibility may be a function of such factors as time of treatment, nature of the leaf surface, variable capacity for absorption and translocation of the herbicide, biochemistry of the plant, or the nature of the herbicide itself. Some established annual and perennial grasses are tolerant to rates of application used in the Republic of Vietnam (RVN). Thus, in any vegetative type, one would expect that some species would not be killed; some would be killed easily; others with difficulty. Most species in the mangrove association are highly susceptible to the herbicides being used for defoliation in Vietnam, and thus represent an exception to the general rule. For that reason, and because the mangrove association presents a different set of ecological considerations than the semi-deciduous forest does, each will be discussed separately.

MANGROVE FOREST

Botanical considerations. The mangrove association is relatively simple floristically. The principal species include: *Avicennia marina, A. intermedia, Rhizophora conjugata, Bruguiera parviflora, B. gymnorhiza, Ceriops candolleana, Nipa fruticans, Phoenix* spp., *Lumnitzera coccinea, Sonneratia acida, Melaleuca leucadendron, Excoecaria agallocha, Carapa obovata,* and *Acronychia laurifolio.*

Other plant species are represented in the mangrove type, but they are of lesser importance. Bamboo was not observed in the mangrove association.

Susceptibility to herbicides. The mangrove species seem to be almost uniformly susceptible to Orange and White, the herbicides used for their control in Vietnam. An exception is *Nipa fruticans,* which is reported to be resistant to White. Strips of mangrove on both sides of the Ong Doc River, sprayed with Orange in 1962, where of particular interest. The treated strips were still plainly visible. Thus, one must presume that the trees were not simply defoliated, but were killed.

Successful aspects. The mangrove type in the Republic of Vietnam occurs on about 2800 square kilometer.[10] *Avicennia marina* is the pioneer species of the mangrove type, colonizing on the clay accretion areas at the sea face. At the 5th and 6th year *Rhizophora conjugata, Bruguiera parviflora,* and *Ceriops candolleana* will develop where there has been partial stabilization of the soil. At about the 20th year *Rhizophora* and *Bruguiera* will dominate the site. From that point on, further succession depends on the degree of silting and the consequent decrease of water circulation. As organic matter accumulates, conditions are created for the advent of other species into the mangrove complex. The final stage in the mangrove type is the cajeput (*Melaleuca leucadendron*), found on the highest, most stable soil above high tide.

Seed production of mangrove species is annual and abundant to prolific, with seeds viviparous or otherwise, of high germinability and capable of remaining viable for long periods.[11] Germination and rooting are usually rapid and successful. In some locations, when the seeds are able to settle as a result of favorable water conditions, natural regeneration may become successfully established in less than a year. The movement of the water, however, may not only bring in seeds but may also carry them away before they can take root.

TABLE 1.—THE TOTAL CATCH, IN METRIC TONS, FOR THE PAST 3 YEARS IN THE REPUBLIC OF VIETNAM

Year	Fish		Others[1]
	Fresh water	Marine	
1965	57,000	289,000	29,000
1966	64,710	287,450	28,340
1967	54,300	324,700	31,700

[1] Including cuttlefish, mollusks, shrimp, crabs, and the like.

The most serious animal pest is the crab, which may entirely prevent regeneration by attacks on seedlings.[12] In Malaya two species of *Acrostichum* (a fern) may hinder the establishment of waterborne seedlings. The fern grows and spreads rapidly when the tree cover is removed. McKinley[10] mentions two ferns (Choai, a creeping form; Don, an erect form) as occurring in the climax mangrove, but does not comment on their possible interference with regeneration.

Ecological considerations. According to the timetable discussed by McKinley, about 20 years are required for the establishment of a dominant *Rhizophora-Bruguiera* association. That timetable was established for a situation in which newly silted areas were colonized by *Avicennia* and then were replaced by *Rhizophora-Bruguiera.* It is not unreasonable to suspect that the same timetable might apply to areas in which the trees had been killed by herbicides. Dead trees do not hold soil as well as living trees do. The amount of soil removed would depend on the rapidity of tidal recession, which is unknown to me. The greater the amount of soil removed, the greater would be the time required for regeneration of a mangrove stand similar to the original.

The regeneration of mangrove since the 1962 treatments along the Ong Doc River was observed from an aircraft flying at 2000 feet (600 meters). Regeneration was apparent as fingers extending into the treated strip, but I could not determine whether regeneration had occurred across the entire breadth of the treated strip.

In the mangrove areas treated in 1962, trees of the colonizing species were not yet discernible from 600 meters on all the treated area. Thus, if the information provided by McKinley is extrapolated, 20 years may be a reasonable estimate of the time needed for this forest to return to its original condition.

There is little information available on the effect of killing mangrove on animal populations. In that regard, I considered the food chain among aquatic organisms. Although it was not possible to obtain information on the many links in the food chain, phytophagous and carnivorous fish would be near the top of the food chain. Disruption of lower links in the chain might be expected to reduce fish populations.

Information on fish populations is based on fish catch statistics provided by the Fisheries Branch of U.S. Agency for International Development (AID) (Table 1). Fish catch appears to have been increasing. The drop for freshwater fish in 1967 was at first a cause for concern. But the assistant chief of

inland fisheries explained that the reduction was due to an absence of flooding in the Mekong Delta in 1967. When flooding does occur, fish are trapped in rice paddies and fishermen have no trouble catching them.

The statistics on the fish catch give a strong indication that the aquatic food chain has not been seriously disturbed. Data comparable to those available for fish were not available for birds and other animals.

The application of herbicide in strips or in a checkerboard pattern rather than large-area treatment would have an ecologic advantage. The trees remaining in untreated strips would provide a seed source for reforestation as well as a habitat for animals and lower plant forms. The ecological effects in large treated areas would be greater and recovery probably be slower.

SEMIDECIDUOUS FOREST

The Republic of Vietnam has a total area of 172,540 square kilometers, of which about 30 percent is forested [10] (Table 2). Some coniferous forest may have been treated in strips along roads, but I have no specific information on that point. I am sure that no large areas of coniferous forest have been treated.

Botanical considerations. I will not attempt to characterize all of the vegetation types of the Republic of Vietnam. There are different forest types, but except for the pine forest, the differences are ones of degree rather than substance. My discussion of the forests in III Corps can be extrapolated to other semideciduous forests of RVN. It cannot be extrapolated to the pine forests or to the small area of rain forest that probably exists in a small area of the northwestern part of RVN, along the Laotian border.

The forests of war zone C are, for the most part, secondary forests with an admixture of bamboo, and semideciduous forest of *Lagerstroemia* and legumes (General Forest map of RVN, Phan Thuong Tuu, 1966). The forests of war zone D are moist forest over most of the area, and semideciduous forest of *Lagerstroemia* and legumes over the remainder.

There are obvious differences among the three forest types. The differences are taxonomic for the most part. Physiognomically, they are similar. In terms of ecologic considerations, therefore, they will be discussed collectively.

The three forests are similarly characterized by having members of the family Dipterocarpaceae as dominant trees in the upper canopy. This does not mean necessarily that dipterocarps are numerically superior. Other well-represented families include the Leguminosae, Meliaceae, Lythraceae, Guttiferae, and Sterculiaceae.[10 13 14] Botanical composition, taxonomically and numerically, varies from one location to another.

The difficulty of a botanic description of the forest may be appreciated with the knowledge that about 1500 woody species occur in RVN.[10] Moreover, I saw the forests at a time when identification was most difficult. Many species are normally deciduous during the dry season; many that are normally evergreen had been defoliated by herbicides or fire.

The period from mid-March to mid-April was not an ideal time to assess the ecologic impact of the defoliation program on the semideciduous forests of the Republic of Vietnam. The combination of natural defoliation, defoliation by herbicides, and defoliation by many, many fires (civilian and military caused) made the determination of the causes of defoliation difficult. A careful delineation of the causative factors within a 1-month period was not possible. An observer making an ecologic assessment during the middle or latter part of the rainy season would not have to contend with the confounding influences of natural defoliation and fire.

Susceptibility to herbicides. Trees in the semideciduous forests of Vietnam are almost uniformly susceptible in terms of initial defoliation. But when defoliation and the percentage of plants killed are considered, the average susceptibility of the vegetative type is unknown. The best estimate I can obtain is an extrapolation of data developed in Thailand by Darrow *et al.*[15] and in Puerto Rico by Tschirley *et al.*[16]

TABLE 2.—THE TYPES OF FOREST, THEIR AREA OF COVERAGE, AND THE APPROXIMATE AREA TREATED FOR DEFOLIATION IN THE REPUBLIC OF VIETNAM

Vegetation type	Coverage (km^2)	Area treated (km^2)
Open forest (semideciduous forest)	50,150	8,140
Flooded area:		
Mangrove	2,800	960
Other aquatic plants	2,000	0
Coniferous forest:		
3-leaved pine	900	0
2-leaved pine	350	0

Darrow's tests in Thailand were conducted in a semievergreen monsoon forest having an annual precipitation of about 40 inches. Two hundred twenty plant species were identified from two test sites totaling 3400 acres, so species diversity was high. Darrow found that two or more gallons of Purple (same as Orange except that 20 percent of the 2,4,5,-T is an isobutyl ester rather than *n*-butyl ester) caused defoliation greater than 60 to 65 percent for a period of 6 to 8 or 9 months. Percentages of kill were not given, but they would have been considerably lower than for defoliation.

My collaborators and I worked in a semievergreen forest in Puerto Rico [16] having an annual precipitation of about 85 inches. Species diversity was high; 106 woody species were recorded on 2.4 acres, in an area adjacent to the aerial test pilots. We also worked in a tropical rain forest in Puerto Rico having an annual precipitation of about 120 inches.[16] About 88 woody species were recorded for the rain forest site. Defoliation of the semievergreen forest treated with 3 gallons of Purple was 61 percent 6 months after treatment. In the rain forest, an equivalent rate of Orange provided 66 percent defoliation 6 months after treatment and 55 percent 1 year after treatment.

Thus, the defoliation obtained in taxonomically distinct forests in opposite parts of the world was similar. It is justifiable, then, to expect that average defoliation in the semideciduous forests of Vietnam would be about the same. Actually, I would expect defoliation in Vietnam to be somewhat lower because applications are made from greater height than was the case for the experimental work in Thailand and Puerto Rico.

Multiple treatments were not made in Thailand or Puerto Rico, so the effects of two and three treatments in war zones C and D can only be inferred from extensive experience in woody plant control in temperate zones and from my experience in tropical America, instead of being extrapolated from actual research data. But the inference is necessary because the ecologic impact becomes greater with each succeeding treatment.

A single treatment with 3 gallons of Orange or White would not be expected to have a great or lasting effect on a semideciduous forest in Vietnam. Some trees would be killed, and the canopy would be less dense temporarily. But within several years the canopy would again be closed, and even a careful observer would be hard pressed to circumscribe the treated area. A second application during the period of recovery would have a wholly different effect.

Research on a two-storied oakyaupon forest in Texas showed that the top canopy intercepted about 72 percent of the spray droplets and the understory intercepted an additional 22 percent. Only 6 percent of the droplets reached the ground.[16] Thus, one would expect that the principal effect from an initial treatment would be on trees of the top canopy. As the density of the top canopy is reduced, subsequent treatments will kill more trees in the top canopy and have a far greater effect on the understory, regenerating vegetation.

The theoretical response to multiple herbicide applications was supported by my observations on the ground. The area visited at Thien Ngon was sprayed with Orange on 19 December 1966; the area at Katum was treated with White on 9 November 1966 and with Orange on 28 October 1967. Two areas were visited at Tong Le Chon; one was treated with Orange on 23 September 1967, and the other was treated with White on 7 November 1966. There were more dead trees and a higher percentage of defoliation at Katum than at any other site. Granting the inadequacy of the sample at each location, the difference between Katum and the other sites was obvious. Despite more defoliation and more dead trees at Katum, the ground was not bare. Many established grasses are tolerant to the herbicides used. In addition, grasses, sedges, and vines quickly occupy areas that have been defoliated. Grasses were abundant in all defoliated areas observed on the ground.

Successful aspects. I can think of no better introduction to this section than a quotation from Richards: [17]

"The process of natural regeneration in tropical forests is no doubt exceedingly complex, and though its practical importance to the forester is obvious, surprisingly little is known about it. Much of what has been written about the so-called 'natural regeneration' of rain forest refers to the reproduction of a few economic species under conditions rendered more or less unnatural by the exploitation of timber. Before regeneration under these artificial conditions can be understood or controlled scientifically, we need to know what happens under undisturbed conditions, and information about this is extremely scanty."

I must emphasize the last sentence of the quotation. Data on regeneration of tropical forests is indeed scanty—and particularly scanty for Vietnam!

There is general agreement that the usual successional series in a terrestrial tropical forest is grass—shrub—secondary forest—primary forest.[14 17 18] The same successional series could be applied equally well to deciduous forests in temperate zones.

Because of the inadequacy of data about forest regeneration in Vietnam, perhaps an example in a different situation would be instructive. The island of Krakatau presents a good example of ecologic succession. Richards described the island as follows: [17]

"Krakatau is one of a group of small volcanic islands situated between Java and Sumatra. Early in 1883 it was about 9 km long and 5 km broad, rising to a peak 2,728 ft (822 m) above sea level. At this date the whole island was covered with luxuriant vegetation. About the nature and composition of this vegetation next to nothing is known, but there is every reason for supposing that it was mostly tropical rain forest similar to that now existing in the neighboring parts of Sumatra. In May 1883, the volcano which had long been regarded as extinct began to be active and the activity gradually increased until it reached a climax on August 26 and 27. On these two days occurred the famous eruption, the sound of which was heard as

Footnotes at end of article.

far away as Ceylon and Australia. More than half the island sank beneath the sea, the peak being split in two, though its highest point still remained. The surviving parts of Krakatau were covered with pumice stone and ash to an average depth of about 30 m and a new marginal belt 4.6 km² in area was added to the southern coast. During the period of volcanic activity the bulk of the vegetation was certainly destroyed."

For a while the island remained without any vegetation. The only living thing a visitor saw in May 1884 was one spider. In 1886 there was already a considerable amount of vegetation on the island and the succeeding seral stages have developed quite rapidly.

In 1964 Richards wrote about the ecology of Krakatau:

"The development of vegetation on Krakatau has not yet reached a stable climax stage, but the general course of future changes can be predicted with some confidence, at least for the middle and upper regions of the island. In the former it may be expected that the *Macaranga-Ficus* woodland will develop by a series of changes into a stable climax rain forest to some extent similar to the mixed primary rain forest of the neighboring parts of Sumatra and Java. How long this development will take is difficult to guess, but the study of secondary successions suggests that it will be much longer than from the great eruption to the present day."

The example of Krakatau cannot, and should not, be applied to the semideciduous forests of Vietnam for at least three reasons. (i) Defoliation does not destroy all vegetation; (ii) it does not cover the soil with pumice stone and ash; and (iii) RVN is not an island. Krakatau is merely an example of the relative time needed for the development of a mature forest when it must start from nothing. That is not the case in Vietnam.

There are a few records available for tree ages in tropical forests that give an indication of the time required for regeneration of a mature forest. An average individual of *Parashorea malaanonan* in the Philippine dipterocarp forest reaches a diameter of 80 centimeters in 197 years.[19] The average maximum age of *Shorea leprosula* in Malaya is 250 years.[20] Both are primary forest species. The fast-growing trees characteristic of secondary forest have a shorter life than do primary forest species.

The principal ecologic danger imposed by repeated treatments with herbicides is that saplings and poles present in the lower story, and then seedlings, may be killed. If that happens in large areas, natural reseeding may be a problem. Dipterocarp seeds are disseminated by the wind and thus would be expected to be among the first tree species to repopulate an area. Seeds of other species, dependent on dissemination by small mammals and rodents and by birds, would probably not spread as rapidly. Seeds of some species would undoubtedly remain viable in the soil and would germinate after the last in a series of multiple treatments. Many species in the family Leguminosae have that capability. Less is known about seed characteristics in other families. Turrill[21] reported it has been proved at Rothamstead that seeds of arable weeds remained viable in soil under pasture after 300 years in one area and 30 to 40 years in others:

"Little is known of the time scale of secondary successions in the tropics. Chevalier (1948) states that the forest on the site of the ancient town of Angkor Vat in Cambodia, destroyed probably some five or six centuries ago, now resembles the virgin tropical forest of the district, but still shows certain differences. In general, it seems clear that the longer the period between the destruction of the primary forest and the onset of the secondary succession and the greater the modification of the soil and the environment in general during this period, the longer the time needed for the re-establishment of the climax."[17]

The paragraph quoted does not apply to the forests being defoliated in Vietnam because the Vietnamese forests were not primary, but secondary, at the time of treatment. The time required for the establishment of a secondary forest is much less than for a primary forest.

The greatest danger resulting from repeated defoliation treatments in Vietnam is that such areas will be invaded by bamboo. The presence of bamboo is the most constant feature of the semi-deciduous forests I saw in Vietnam. Species of large bamboo (the most common being *Dendrocalamus strictus* and *Bambusa arundinacea* according to a local RVN forester) are particularly apparent in areas where the "rai" (slash and burn) system of agriculture has been practiced. But bamboo is not limited to areas that were previously cleared of trees. A small-stemmed bamboo is present as an understory in many forested areas and can be seen frequently where trees have been defoliated. In addition, the small bamboo *Schizostachyum sollingeri*, 10 to 15 feet high, was present in the forest at all of the camps I visited. The presence of bamboo in Asian forests is well documented.[17 22] Aerial observations in RVN suggest that it first invades new areas along routes of more favorable mositure supply From there it can spread throughout the forest.

While making ground observations at the four Special Forces camps, I attempted to evaluate the relative density of seedling and sapling tree species in bamboo-infested sites. Although I have no quantitative data, seedlings were rare in dense bamboo, but frequent to numerous where there was no bamboo. Probably of more importance is the fact that saplings were rare in dense bamboo.

The length of time that bamboo might retard the natural successional progression is unknown, but I am certain it would cause a retardation. The following statement by Ahmed[23] may be cause for concern: "A bamboo will be the first member to colonize on a new site in a seed year and will be the last to leave it. Once established on a soil it is difficult to eradicate it."

The life history of different bamboo species varies, but usually culms die after flowering. The germination to flowering cycle may be from 30 to 50 years.[17 24] Flowering is gregarious (whole populations flowering in 1 year) in some species and sporadic in others. Most bamboo species have very efficient vegetative reproduction from buds on creeping rhizomes.

Seedling mortality of tree species is naturally high in tropical forests. A study of *Euterpe globosa*, a palm found in the American tropics, showed that the mortality of seedlings was 95 percent, of established seedlings 12 percent, and of shrubs 64 percent. Thus, only 1.6 percent of the seedlings survived to become trees.[25] Another study[25] showed the average half-life of all seedlings in test plots to be 6 months.

If it were not for the probable invasion by bamboo of severely defoliated areas in the forests of Vietnam, I am reasonably certain that the successional progression to a secondary forest would proceed without undue retardation. A reason for feeling so is based on data I obtained from plots in Puerto Rico that were treated at the rate of 3, 9, and 27 pounds per acre as follows: picloram, 5-bromo-3-*sec*-butyl-6-methyluracil [bromacil], 3,6-dichloro-*o*-anisic acid [dicamba], 3-(3,4-dichlorophenyl)-1,1-dimethylurea [diuron], (2,3,6-trichlorophenyl) acetic acid [fenac], and 2,4-bis(isopropylamino)-6-(methylthio)-*s*-triazine [prometone] applied to the soil. Two years after treatment, the plots were examined for the presence of seedlings. Many of the secondary forest species and several primary forest species were present as seedlings. In addition, there was no apparent differential effect of the six herbicides.

The presence of seedlings on plots treated with such high rates of herbicides is an important point. Several of the herbicides, particularly fenac and picloram, persist in soil. There is no doubt that highly susceptible plant species would be affected by herbicide residues in the soil. But experience has shown that species commonly present in forests are not so susceptible that regeneration would be prevented. The small experimental plots in Puerto Rico were treated with 27 pounds per acre of picloram; one treatment with White in Vietnam would apply only 1.5 pounds of picloram per acre.

In conclusion, the time scale for succession in a semideciduous forest in RVN is unknown. Single treatments with defoliants should not cause severe successional problems but multiple treatments probably will because of site dominance by bamboo.

Ecologic considerations. The ecologic considerations as they apply to plant populations were discussed in the previous section of this article. The effect of defoliation on animal populations is truly unknown.

Men stationed at Special Forces camps have told me of seeing deer (two reports), birds (many reports), tiger (one sighting, several sound identifications), elephant (two reports), monkey (numerous reports), and cold-blooded vertebrates (numerous reports). I saw a tiger track in the road at Katum. There were no reports of bovines. It is possible that such bovines as the kouprey, gaur, and banteng, reported to be rare,[26] are no longer present in the defoliated areas in war zones C and D. But I suspect that bombing, artillery, fire, human presence, and hunting have had a far greater effect than has defoliation.

TOXICITY OF HERBICIDES

A discussion of ecologic effects would hardly be complete without mentioning the relative toxicity of herbicides being used for defoliation and crop destruction. The herbicides used in Vietnam are only moderately toxic to warm-blooded animals. None deserve a lengthy discussion except for Agent Blue (cacodylic acid), which contains arsenic. Inorganic arsenicals such as arsenic trioxide, sodium arsenite, lead arsenate, calcium arsenate, and Paris green are extremely toxic. Organic arsenicals, such as Blue, have a low mammalian toxicity. Two series of organic arsenicals are used as herbicides. The arsonic acid series is formed by a single organic group combined directly to arsenic; the arsinic acid series have two organic groups. By varying the organic group in either series, a wide range of phytotoxicities can be obtained in products with a relatively low level of mammalian toxicity[28] (table 3).

Toxicity studies for White have shown the oral dose needed to kill 50 percent of test animals to be (LD_{50}) 3080 milligrams per kilogram for rats, 2000 for sheep, and more than 3163 for cattle.[27] The oral dose for Blue is 2600 milligrams per kilogram for rats.[28] There is no evidence to suggest that the herbicides used in Vietnam will cause toxicity problems for man or animals.

SUMMARY AND CONCLUSIONS

If my assignment had been simply to determine if the defoliation program had an ecological effect, the answer would have been a simple "yes," and a trip to the country would not have been necessary. But to assess the magnitude of the ecologic effect is an entirely different matter.

TABLE 3

The LD_{50} (dose in milligrams per kilogram of body weight needed to kill 50 percent of test animals) for the herbicides used in RVN and for several other chemical compounds are as follows:[29]

Footnotes at end of article.

Chemical:	LD_{50}
Sodium arsenite	10–50
Paraquat [1]	150
2,4,5-T	100–300
2,4-D	300–1000
Cacodylic acid [2]	830
Aspirin	1775
Picloram	8200

[1] 1,1'-Dimethyl-4,4'-bipyridinium salt.
[2] Active ingredient of Agent Blue.

One must realize that biologic populations, even those remote from man, are dynamic. Seasonal changes, violent weather events, fire, birth, maturation, senescence, and death cause a continuing ecologic flux. Normally, the ecologic flux operates within narrow limits in a climax community. It is only catastrophic events that cause an extreme ecologic shift and reduce the community to a lower seral stage.

The defoliation program has caused ecologic changes. I do not feel the changes are irreversible, but complete recovery may take a long time. The mangrove type is killed with a single treatment. Regeneration of the mangrove forest to its original condition is estimated to require about 20 years.

A single treatment on semideciduous forest would cause an inconsequential ecologic change. Repeated treatments will result in invasion of many sites by bamboo. Presence of dense bamboo will then retard regeneration of the forest. The time scale for regeneration of semideciduous forest is unknown. Available information is so scanty that a prediction would have no validity and certainly no real meaning. Most of the defoliation treatments in the semideciduous forests have been made in strips along lines of communication. The ecologic effect of defoliation in those areas would not be as severe as in areas where large blocks have been treated.

The effect of defoliation on animals is not known, but it does not appear to have been extreme. I hasten to add that I know far less about animals than about plants. Fish catch has increased during a period of intensive treatment for defoliation, which surprised and pleased me. Actual data were not available for population trends of other forms of animal life. Large mammals have been seen recently in war zones C and D, the areas of greatest defoliation activity. Included were tiger, monkey, elephant, and deer.

RECOMMENDATIONS

(1) The desirability of ecologic research in Vietnam after the war ends cannot be overemphasized. The research should be administered through an institution that will provide continuity and breadth for the research program. The opportunity of establishing ecologic research under the International Biological Program should be explored.

(2) Continuing assessment of the defoliation program as it affects forestry and watershed values should be made. Ground observations are most desirable, but aerial surveys during various seasons of the year will contribute much good information.

(3) From an ecologic point of view, the concept of defoliating in strips or in a checkerboard pattern has great merit. Undefoliated areas would serve as a seed source for regeneration and as habitat for wildlife.

CHEMICAL CARGOES POSE THREAT—DERAILMENTS NOW GRAVE DANGER

WASHINGTON (UPI).—"In the past, it wasn't a big deal, but now if you have a derailment you might blow a whole town off the map."

Talking was a government safety expert investigating the growing number of disasters triggered by the derailment of railroad tank cars filled with volatile explosives, and lethal chemicals and gases.

TANK CAR SPLIT OPEN

In Crete, Neb., last month 19 cars of a Chicago, Burlington & Quincy freight jumped the track, sliced open a tank car parked on a siding, and let loose its cargo of anhydrous ammonia, an acrid fertilizer used for its high nitrogen content.

The deadly ammonia seeped into nearby homes and killed five persons. Three others who had hitched rides on the freight died in the wreck and 36 other persons suffered injuries because of the gas.

In January, 15 cars of a Southern Railway freight train derailed at Laurel, Miss., rupturing a tank car filled with propane gas and setting off a chain of explosions and fires.

TOWN EVACUATED

The blast sent chunks of the tank car whistling through the air like mammoth pieces of shrapnel and a 10-block area of Laurel was set afire, but somehow only two persons were killed.

In Dunreith, Ind., the same type of catastrophe occurred in December, 1968, when a Penn Central freight train derailed, touching off a fire in a chemical-carrying tank car.

The fire caused an explosion and the entire town was evacuated. There were no deaths but the fire destroyed the town's major industry, a cannery, seven homes, and polluted a nearby stream. The total damage: over $1 million.

The Interstate Commerce Commission says that the output of industrial chemicals has gone up 350 per cent since World War II. Nearly two billion pounds of industrial explosives are transported each year—along with a rising tide of military explosives. Added to this list of dangerous cargoes are shipments of rocket fuel, and radioactive material.

NEW POTENTIAL FOR DEATH

"It is now obvious that railroads derailment accidents, dangerous enough in themselves, have acquired a new and catastrophic potential for death and destruction previously unknown," said John H. Reed, a member of the national Transportation Safety Board.

In addition to the vastly increased number of dangerous shipments that could cause catastrophe in a derailment, there are now more derailments themselves than there have been in the past.

Between 1961 and 1967, derailment accidents increased 85 percent. In 1967, the last year for which complete figures were available, the railroads reported 4,960 derailments. Out of this total, 1,611 were caused by defective equipment.

RAIL INDUSTRY BLAMED

The Railway Labor Executives Assn. blames the railroad industry maintenance for the rising number of derailments. They are also highly critical of the lack of federal legislation to enforce rail safety.

Most railroad accidents are investigated by the railroads themselves and the results reported to the government.

"Clearly, self-policing by the railroads puts the public's safety in second place when it comes to the biggest cause of train accidents—faulty equipment and rail lines," the RLEA claims.

The National Transportation Safety Board also has warned Congress that because of the "relatively high rate of derailments, collisions and grade crossing accidents there appears to be a need for a general re-examination of existing railroad maintenance and operating procedures."

PERSONAL EXPLANATION

Mr. JOHNSON of Pennsylvania. Mr. Speaker, during the recommittal vote on House Resolution 270, I was present and voted against recommittal. However, on final passage I was before the Subcommittee on Appropriations of the Committee on Interior and Insular Affairs, and therefore missed the vote on final passage of that resolution.

I would like to have the RECORD show

that had I been present I would have voted "yea" on the measure.

The SPEAKER pro tempore (Mr. PRICE of Illinois). The gentleman's explanation will appear in the RECORD.

REPORT ON REPUBLIC OF KOREA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. ALBERT) is recognized for 60 minutes.

Mr. ALBERT. Mr. Speaker, it was my honor and pleasure at your direction to accompany a group of Members of the House of Representatives who visited the Republic of Korea during the first week of March. All members of our delegation found the trip to be interesting, informative, and extremely worthwhile.

In order that we may properly report to you and to the House on our visit to the free and democratic Republic of Korea, I have taken this special order.

The visit of our delegation to the National Assembly of the Republic of Korea resulted from an invitation extended to the Speaker by the distinguished Vice Speaker of the Korean National Assembly, the Honorable Kyung Soon Chang, who suggested in his invitation that an exchange of views between our two legislative bodies would be beneficial to our respective countries.

The Speaker was unable to attend and he designated me to represent him and to serve as chairman of the group. The delegation from the House was made up of 23 Members of Congress who were invited after consultation with the Speaker the minority leader, and others.

Mr. Speaker, I ask unanimous consent at this point to insert the list of members of the delegation.

The SPEAKER pro tempore (Mr. PRICE of Illinois). Without objection, it is so ordered.

There was no objection.

MEMBERS OF THE KOREAN DELEGATION

DEMOCRATS

Carl Albert, of Oklahoma, chairman;
W. R. Poage, of Texas;
Melvin Price, of Illinois;
Edward P. Boland, of Massachusetts;
Thomas P. O'Neill, Jr., of Massachusetts;
Cornelius E. Gallagher, of New Jersey;
Joseph E. Karth, of Minnesota;
Richard T. Hanna, of California;
Edward J. Patten, of New Jersey;
Eligio de la Garza, of Texas;
Thomas S. Foley, of Washington;
Lee H. Hamilton, of Indiana;
David Pryor, of Arkansas;
Richardson Preyer, of North Carolina;

REPUBLICANS

Jackson Betts, of Ohio;

William S. Broomfield, of Michigan;
Albert H. Quie, of Minnesota;
Chester Mize, of Kansas;
J. William Stanton, of Ohio;
Sherman P. Lloyd, of Utah;
Thomas S. Kleppe, of North Dakota;
John N. Camp, of Oklahoma.

Mr. ALBERT. Mr. Speaker, 16 committees of the House were represented in the group. The Members ranged from among the most senior to those serving their first term. There were 14 Democrats and nine Republicans.

Nearly all geographic areas of the country were represented from the east coast to the west coast and from the North to the South.

Our delegation represented, in the very truest sense of the word, a cross section of the House, reflecting very accurately, I feel, the political philosophies and the regional as well as the national interests of this body.

We left the United States on February 28 and arrived in Korea to a very warm welcome on Sunday afternoon, March 2.

We left to return to the United States early in the morning on March 7.

We had no set agenda for our meetings and discussions and selected in advance no particular topics to be discussed.

It is impossible for me adequately to decribe the enthusiastic and warm reception and hospitality accorded our group.

Never, in my experience, has any congressional delegation been given a more heartfelt welcome.

Never have any of us come away from a country with a greater appreciation and understanding for such a strong and gallant ally.

We were privileged to visit with the President of the Republic of Korea and other leaders of his government, as well as the Speaker and leaders of the majority and opposition parties in the National Assembly.

We received extensive briefings from the Prime Minister, the Minister of National Defense, the Foreign Minister, the Economic Planning Board, and the CIA. We also received very informative briefings from our distinguished Ambassador to Korea, Hon. William J. Porter and from the able commander of U.S. and U.N. forces, Gen. Charles H. Bonesteel III, and their staffs.

Also, as I said, we met with the Speaker and leaders of both parties in the Korean National Assembly.

We discussed at length the great progress being made by the Republic of Korea.

Never have we seen a more energetic, more enthusiastic, more determined people than the people of the Republic of Korea.

The economic progress they are making is amazing.

On every hand we could see new construction and new development.

Private business is taking a new and very justified look at Korea for investment purposes.

The gross national product of the Republic of Korea increased over 13 percent last year; there was a 42-percent expansion in their exports and almost a 29-percent increase in manufacturing production.

Those of us on the delegation found these statistics to be most impressive.

Much of what has been done has, of course, been accomplished with the advice and assistance of the United States.

Korea is not yet to the point where it can do without our economic aid.

However, I am convinced that we can make no better investment than investing in the strength and prosperity of a friend and ally like Korea.

The country is developing rapidly and many members of the delegation had an opportunity to visit national development projects, industrial plants, educational institutions, to see for themselves the progress which has been accomplished.

We were also privileged to visit the demilitarized zone marking the northern boundary of the Republic of Korea which is jointly manned by Korean and United States troops.

We visited both American and Korean units.

I can tell you that we came away from there with a great appreciation of the tremendous job our boys are doing and the tremendous job being done by our Korean allies in holding that line against Communist expansion.

ROK soldiers are among the finest on earth.

The Republic of Korea is the second-largest contributor of armed forces to the struggle in Vietnam.

Today, there are approximately 50,000 Korean troops fighting side by side with U.S. forces in Vietnam.

I believe we have virtually unanimous agreement among those of us making this trip that our military aid to the Republic of Korea should continue and, if anything, it should be increased, in order that Korean troops manning the barrier against Communist infiltration south of the demilitarized zone might have the best quality of weapons available.

We should make a special effort to see that these people, among the very best of our friends, are given the military capability to defend themselves and the free world against the Communist menace of North Korea.

They are a great people and a great friend and we should help them in every way possible.

Our relationship with the Korean people has been tested in two wars during the last 20 years. They have not been found wanting.

The Koreans are among the most fervently anti-Communist people of the world due to their own bitter experience with the North Korean and Red Chinese Communist invasion. They are stalwart and brave supporters of U.S.-Asian policies. We have no stronger ally and no finer friend.

This is evidenced, as I have said, not only by the enormous contribution they make to their own defenses with one of the world's largest standing armies, but also by their valiant efforts in Vietnam.

The leaders of our armies in Southeast Asia have uniformly expressed the opinion that there is no finer fighting man than the Korean soldier. He is tough, courageous, brave and well-trained.

We were, as I indicated, impressed by the economic growth being made in Korea. U.S. aid and assistance has helped, but as I tried to point out earlier, the progress which has been made is most truly reflected in the industry, intelligence, and inherent vigor of the Korean people.

If we have any regrets at all about our trip to Korea it is that we did not have more of an opportunity to visit informally with the Korean man in the street.

He is representative of a strong and great people whom we are proud to call our friends.

We were impressed also by the way the Korean people have moved during the last several years to elective representative government. They have displayed an increased political maturity and have a devotion to democratic principles unsurpassed in the world.

The Koreans are alert to the dangers of international communism and they are among the most ardent supporters of regional political institutions and collective security arrangements as a means of combating Communist aggression and expansion.

I cannot conclude my remarks without commenting on the hospitality and generosity of the Korean people and their Government. We were honored to be received by the President who gave us the highest honors within the power of his great country to bestow.

We were welcomed and honored by the distinguished mayor of Seoul and by the great Seoul National University.

I was privileged to address the Korean National Assembly on behalf of the Speaker and our delegation and I will include as a part of my remarks the speech delivered at that time.

Mr. Speaker, I would like to thank you for making this exchange with members of the National Assembly of Korea possible through your acceptance of the invitation extended by Vice Speaker Chang. This exchange with our counterparts in Korea has made it possible for all of us privileged to make this trip to obtain a much clearer view of the task faced by the Republic of Korea in the fields of economic and social development as well as in security and other defensive needs.

It has provided us with an opportunity to bring about a better understanding of problems which give rise to misunderstanding and concern between our two countries and in the views of both our legislative groups, and it has greatly and very properly enhanced the possibility of a solution to any problems which might arise.

It is, Mr. Speaker, the consensus of our group that this exchange was indeed valuable and that in the future we should from time to time exchange views with such visits as this. It would be my hope that these exchanges could be continued and that sometime soon a delegation from the National Assembly of the Republic of Korea might be invited to visit the United States.

In that regard, I would like to read to the House from a joint statement issued at the conclusion of our visit by the Vice Speaker of the Korean National Assembly and myself:

During their visit to Korea, members of the American delegation had extensive conversations with their counterparts in the National Assembly and with many other high officials of government.

This group also had an opportunity to visit other parts of Korea to see at first hand the jointly manned military defenses as well as national development projects.

Both Koreans and Americans found these exchanges to be extremely informative, beneficial and meaningful.

It was jointly concluded that exchanges such as this should be continued.

The American group expressed the hope that a similar delegation from the Korean National Assembly might visit the United States and that future U.S. delegations might return to Korea.

Mr. Speaker, it is on this note that I want to conclude my remarks.

Exchanges such as this should be continued. I hope a delegation from the Korean National Assembly can visit the United States and that future U.S. delegations might return to Korea.

Mr. Speaker, I ask that there may be inserted a copy of the speech which I made at the Korean National Assembly.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT's speech before Korean National Assembly follows:

SPEECH DELIVERED BY REPRESENTATIVE CARL ALBERT TO KOREAN NATIONAL ASSEMBLY ON BEHALF OF HON. JOHN W. MCCORMACK, SPEAKER OF THE U.S. HOUSE OF REPRESENTATIVES

Mr. Speaker and members of the Korean National Assembly: It is a great satisfaction for all of us to have this opportunity to visit Korea and to have the pleasure of seeing for ourselves the visible and tangible evidence of the political progress and economic growth of which we have heard so much.

The Twentieth Century has been very unkind to a number of nations, great and small, in Europe as well as in Asia, but few have undergone such ordeals and suffered such devastation as the ancient nation of Korea.

Yet today we see the Korean people, who have fought so many battles not of their own choosing, fighting and winning the most glorious battle of all, the battle over the old enemies of hunger, poverty, disease.

Having suffered grievously from the evils of our century, you are now beginning to enjoy the fruits which the modern age can also offer.

You are demonstrating to other peoples how these fruits can be cultivated and harvested.

And you are doing this without sacrificing the unique culture which your ancestors developed over so many hundreds and thousands of years.

Wherever one looks in Korea today, one can see how much can be accomplished under effective leadership by an intelligent, capable and courageous people.

Many of us in the United States Congress have been deeply concerned that the military and economic assistance which the United States has been able to extend to its friends has not always served the purposes for which it was intended.

But here in Korea we can see a tangible demonstration of how judicious aid, intelligently used by a skillful and determined people, can help, among other things, to produce fighting forces of extraordinary effectiveness.

Today these forces not only defend a strategic area of the free world on the mainland of Asia but are also making a valorous and indispensable contribution to the free world's struggle in Viet-Nam.

And may I assure you that the American people will not forget your willingness to sacrifice your sons for freedom in the faraway jungles of Vietnam, just as we sacrificed ours nineteen years ago in the mountains and valleys of Korea.

Moreover, Korea today is much more than a bastion on the front lines of the free world; it is a success story in the vitally important area of economic development.

We can see here how economic aid has helped to produce dramatic economic progress and a climate favorable for foreign private investment.

And finally I can see before me now the evidence of political progress and maturity, a democratically elected parliamentary body.

Twenty-four years ago, or even fifteen years ago, who would have asserted with confidence that in so short a time Korea could achieve so much in any one of these fields, let alone in all three.

The recent history of the Republic of Korea is, quite literally, the story of the transformation of a nation from devastation and despondency to economic progress, initiative, hope, and integration into the community of nations.

A visitor need be here only a few hours to sense the new, almost visible, feeling of self-confidence and self-assurance which permeates your country.

This remarkable transformation is, above all, a product of sound governmental policies and the qualities of intelligence, diligence, receptivity to advice, and openness to innovation which characterize the Korean people.

But it is also, I believe, a product reflecting the wisdom and soundness of the unique partnership for progress between the United States and the Republic of Korea, a partnership to which both countries have contributed over many years.

We now see the fruits of our joint efforts.

The United States is deeply gratified that the external resources which it has been able to provide have been used so wisely by the Korean people.

These resources have included grant aid in dollars and in agricultural commodities, development loans, technical assistance, as well as ideas and suggestions of all kinds.

Some of the ideas have been accepted. Others have been rejected as not appropriate. Almost all of what you have accepted you have modified to meet your particular requirements. And this is as it should be in the give and take of a partnership.

It is a tribute both to you and to the Americans who have worked with you that this open and genuine dialogue of ideas has never flagged.

Success would have been impossible without genuine cooperation in our efforts to solve problems of mutual concern.

All of us can remember the years when our joint programs were attacked on the grounds that the situation in Korea was hopeless, and that the infant Republic would never be able to manage its own economic and political affairs. Events have given the lie to such negative views. Today Korea is proudly fighting by the side of the United States in Viet-Nam, taking a leading role in regional cooperation in Asia, and experiencing a phenomenal rate of economic growth.

The Korean example has, indeed, had a marked effect on the rest of Asia. I am told that representatives of other Asian nations have been visiting your country with increasing frequency over the past few years, hoping to learn how your successes were achieved.

I might add that private business in the United States, in Japan, and in many European nations is taking a vastly increased interest in Korea.

This trend shows great promise for the future.

Progress on the economic front has been a major element in Korea's growing self-confidence.

I need not enumerate all the vital statistics, but I would like to mention that the growth in your Gross National Product of over thirteen percent last year, the forty-two percent expansion in your exports, and the 28.5 percent increase in your manufacturing production are statistics which I and my colleagues find most impressive.

Major developments in the political field have accompanied economic progress.

After fourteen years of negotiation, a rea-

sonable settlement was reached with Japan and normal relations restored.

This removed a constant source of irritation and uncertainty and brought both your country and Japan into closer and broader contact with the rest of Asia.

The agreement was a major achievement whose full benefits are only beginning to be felt.

The decision to send Korean troops to Viet-Nam was also a difficult decision to make, and I can well understand how carefully you had to weigh that decision in view of the aggressive forces poised to the north of you.

The fine performance of your soldiers on the battlefield in Viet-Nam has been a source of pride and satisfaction for both our countries, as well as for the Vietnamese at whose request both we and you are helping in the fight against the aggressor.

In June 1966 your government took an initiative which I particularly applaud. You invited the Foreign Ministers of seven Asian countries, including Japan, to meet in Seoul in order to form the Asian and Pacific Council. This concept of a meeting of Asian powers to discuss Asian problems was a purely Korean idea and dramatized your growing stature in international relations.

I have also been pleased to learn that there have been numerous other international meetings in Seoul, including the Asian Parliamentary Union and the 1968 Colombo Plan meeting. You are working effectively with an international Consultative Group under World Bank auspices. Korea has made the international scene. You in the south are very much a part of the larger world.

The only "Hermit Kingdom"—as our geography books used to call Korea—is the communist regime which still occupies the northern part of Korea.

All of your economic, political, and diplomatic progress has been accomplished while you were under constant threat and harassment from the North.

The response of the Korean people to the incursions from the North has been magnificent. There has been no panic in your response, only determination—determination to defend your hard-won accomplishments and to continue to build and to progress. This should truly be an inspiration to other peoples.

The primary credit for all these encouraging developments that I have talked about must go to the Korean people themselves, and I speak to them through you, their chosen representatives. It has been their intelligence, their hard work and perseverance, their interest in new ideas, and the quality of their leadership which have brought such satisfying achievements.

We, the Korean and American peoples, have travelled a difficult road since 1945.

While the focus of policy has shifted several times in both countries, there has been a constancy of commitment to our common goals. Our commitment and our partnership will continue. There is still much for us to achieve together, and together we will reach our common goals.

Mr. POAGE. Mr. Speaker, will the gentleman from Oklahoma yield?

Mr. ALBERT. I yield to the distinguished chairman of the Committee on Agriculture, the gentleman from Texas, who was a very strong and important member of our delegation.

Mr. POAGE. Mr. Speaker, I commend the distinguished majority leader for his remarks, which I thought were most appropriate and most accurate.

I think the gentleman has done a magnificent job in describing the actions of the committee, the findings of the committee, and the relations with our Korean colleagues, which I thought were most fortuitous.

I think the majority leader has done an equally magnificent job in depicting the economic recovery of the people of South Korea and the development of democratic institutions. I know of no other country in the world which, burdened with the great cost of an active military establishment, has made the economic progress which South Korea has made. Other countries who have not had that cost have made comparable progress, but they have not carried the load of economic development and of defense at the same time. It is a grievous load, but this country has done it. I congratulate the majority leader for his explanation, and I congratulate the Korean people and their leaders on their accomplishments.

At this time I wish also to add a word of commendation to the majority leader for his fine leadership of this committee. The Speaker authorized this committee and selected the leadership and did well in the selection. I think CARL ALBERT did an outstanding job in making it possible for this congressional group to see and to hear and to understand while we were in Korea.

I express my personal thanks and I know the thanks of all who went on this tour with the majority leader, who was also the leader of this group. Then let me compliment the members who made up this group. You selected able men, Mr. Speaker. Not one failed to measure up to the high standards you would expect of our colleagues, Mr. Speaker.

I would like also to point out, Mr. Speaker, as our leader has pointed out, that the whole background of Korean life is one of concern over the threat of Communist aggression from the north. The people of South Korea, or at least their leaders, full well realize what many of our people seem to be unable to realize and that is that the Communists are always probing for a weak spot and are always ready to take advantage of weakness whether it be in Vietnam, in Czechoslovakia, in Korea, or in the United States.

Most Americans apparently suppose that the war is over in Korea and that there has been 16 years of peace in that unhappy land. This is not true. There has been no peace treaty, although there is a cease-fire arrangement. That cease-fire arrangement is honored more in the breach that in the observance—at least in order to see that it is observed—both the United States and the Republic of Korea have been forced to commit thousands of men and billions of dollars and this commitment of men and resources continues. Every day there is firing along the so-called cease-fire line. Every night Korean and American troops patrol the south half of the so-called demilitarized zone. We have built no fortfications in this area because the armistice agreement prohibits it but we have fortified the line inside the Republic of Korea just south of the demilitarized zone. On the other hand, we know that the Communists have fortified the entire north half of the zone. We know that they seek to infiltrate into the Republic of Korea both through our defense areas and by sea. Communist spies are continually captured in South Korea. They are equipped with the best weapons and intelligence instruments that the Soviet Union can supply. We know that the North Korean armies are equipped with the most modern Communist-made weapons of all kinds, including the best Russian rifles. The Communists on the other hand know that only a small part of our Korean allies have the best American equipment. Many of the South Korean troops are armed with Springfield rifles and I saw with my own eyes Korean reserves training with wooden rifles.

I think the United States is making a terrible mistake in not supplying these people with weaponry at least equal in quality to that which the Russians are supplying to the Communists in the north.

The South Koreans are ready, willing, and able to fight in their own defense but to do so effectively they must have weapons equal to those of their foe. I would rather supply the weapons rather than supply more American boys.

Since the end of World War II Russian troops have not fired a shot in cooperation with any of their satellites or allies but Russian guns have been used in almost every conflict around the world. The South Koreans are anxious to fight their own battles and they have proven their willingness to help the United States. There are approximately 50,000 South Koreans troops fighting with our boys in South Vietnam and every report I have had is that they are among the toughest and best soldiers in that conflict. One cannot, however, blame South Korea for their concern when they read that respected American officials are seriously advocating a pull-out in South Vietnam. Of course, if we pull out and let the South Vietnamese be overrun either directly by the Communists or be taken over by the kind of coalition government which brought Czechoslovakia into the Communist orbit, it is but natural that the Koreans would wonder how firm are our guarantees in Korea. And not only would our friends in South Korea wonder but our enemies in North Korea would unquestionably arrive at the same inevitable conclusion—that the United States is indeed a paper tiger.

I have not the slightest doubt but what, if we begin a disgraceful retreat from South Vietnam that we would not get all of our boys as far as Honolulu before the Communists would open an attack along the demarcation line in Korea—and here might well be the opportunity for a rapprochement between the Chinese and the Russian Communists. Here might be the place where two Communist giants would cease their conflicts and join in an attack on the rear guard of the retreating American forces.

Nor can the Koreans take any comfort from the trend of American-Japanese relations. Although the United States has helped Japan effect a most remarkable economic recovery, General MacArthur wrote into the Japanese Constitution a provision so limiting their

military activities that today Japan is able to devote all of her resources to her internal development. Japan does not bear the burden of expensive armaments as does the United States and the Republic of Korea. Now Japan asks and I feel sure the United States is already committed to the return of the great fortress at Okinawa. Of course, the United States does not want the responsibility of government in Okinawa but we do need, Japan needs, Korea needs, and all of Asia needs the stabilizing influence of this great base. To remove it will, the Koreans fear, and I fear, have an effect quite similar and probably much more far reaching that the British withdrawal from Singapore.

Koreans are not unreasonable or emotional. They simply recognize the facts. They see, as many of our own people who have never been invaded by communist hordes cannot see, that the Communists never fail to occupy any lightly defended areas that they want. The Koreans understand, just as the people of Czechoslovakia must understand, that placing a Communist in a position of power in a government is tantamount to turning that country over to the Communists. They understand, as some of our people cannot seem to understand, that you cannot turn your back on a pack of dogs and run away and leave your friends without being bitten yourselves.

Mr. Speaker, we had a far better understanding of this Korean feeling after our visit to Korea. I wish it were possible for every Member of this House to visit Korea and to see what the Koreans have done. They have done a great deal but they need the assurance that the United States is not a turncoat. They need the assurance that our country will keep its pledges. They get no comfort from what they are seeing or hearing at the other end of this Capitol and I get no comfort from it, and I do not believe that any good American does.

I congratulate the Koreans on all they have done. I am proud of them as allies. They are willing to work. Their great economic progress is based on hard work. They are willing to fight. Their very national existence is dependent on their willingness to fight for their rights. I want the United States and Korea to remain good allies and good friends. They are our kind of people. I believe visits such as this one which was recently made tend to improve those relations. Mr. Majority Leader, we thank you for your leadership and for your courtesy, and through you we thank our friends in Korea for their outstanding hospitality.

Mr. ALBERT. I wish to thank the distinguished gentleman from Texas (Mr. POAGE), for his very splendid contribution.

Mr. Speaker, I now take pleasure in yielding to the gentleman who was the ranking minority member on our trip although I may say that if there ever was a cohesive group with not the slightest partisan interest it was this informal group that went to Korea. I yield to the gentleman from Ohio (Mr. BETTS).

Mr. BETTS. Mr. Speaker, I thank the gentleman from Oklahoma for yielding to me. At the outset I wish to say that I associate myself with his remarks. And that I am in complete agreement with what he has to say. I always preface any comments I make about the recent congressional trip to Korea by stating that I seldom travel. In defense of it, however, I have always felt that there has to be some benefit in seeing the world and trying to appraise some of the problems. My own experiences in connection with this trip have left some impressions which I feel will be valuable.

I certainly have only commendation for the chairman of our group, the gentleman from Oklahoma (Mr. ALBERT) and I wish to express my thanks to the Speaker of the House and to Mr. ALBERT for asking me to go along.

The gentleman from Oklahoma always conducted himself with great dignity and eloquence on every occasion. I was proud to serve under him on this delegation. By necessity he had to make many appearances and many speeches and to be present on many occasions on behalf of our delegation. It just seemed to me that the Koreans felt we were representing the whole United States, so in a sense our chairman, the gentleman from Oklahoma (Mr. ALBERT), was really a representative of our country in Korea at that time.

For 4 days we were briefed by American military and Embassy officials, Korean legislative and executive leaders, and visited the demilitarized zone, including Panmunjom. In a few highlights, I can report only briefly on a few important subjects.

The people of South Korea are extremely friendly to Americans. When we landed at Kimpo Air Base, Seoul, we were met by bands, troops at attention, high Government officials, and little girls who gave each of us a huge bouquet. The streets of Seoul were decked with banners reading "Welcome U.S. Congressional Delegation." The Korean people remember the U.S. soldiers saved them from defeat at the hands of Communist troops and that U.S. taxpayers have contributed many, many dollars to the restoration of their economy. All of this was mentioned often enough to convince me that there is genuine feeling among South Koreans that there would be no Republic of Korea today, free of communism, except for the United States.

The economy of the country is progressing. I was amazed to hear high government officials say that U.S. economic aid will be phased out and that they are ready to go it alone. This was refreshing since so many foreign countries keep begging for our financial help. It is all the more amazing because South Korea is a relatively poor country. Communist North Korea is much richer with minerals and strategic hydroelectric power. Private U.S. and other foreign capital is being invested in South Korea. Super highways are being built through the mountains connecting the industrial cities with the capital and providing better means for the very poor farmers to market their products. The per capita wealth is rising, not rapidly but slowly and steadily. Of course, one is constantly reminded that all of this was made possible by the sizable contributions of U.S. taxpayers in the form of economic aid.

From a military standpoint South Korea has a tough fighting army. It has to. It is faced with a mighty and ever threatening Communist force from the north aided substantially by Soviet Russia, while across the Yellow Sea lies ominous Red China. The North Korean dictator has said that by 1970 he intends to unite all of Korea under communism. Seoul, the capital, is only 25 miles from the border separating the two countries. The present North Korean technique, in utter violation of the existing truce, i to harass South Korea with guerrilla raids. In doing this they aim, first, to terrorize the peasants into disenchantment with their own government and its ability to protect them; second, to discourage foreign capital from being invested in South Korea; and third, hopefully to force the United States to commit more troops, thereby causing withdrawal of our forces from Vietnam.

United States troops are conducting a grim and unpublicized operation. We visited with our soldiers at the frontlines, the outposts, and Panmunjom, and had lunch with them at their mess. At one of the outposts we saw U.S. soldiers patrolling the borderline on the side of snow-clad mountains, in bitter cold. Whether or not we agree with the policy, our boys are making a significant contribution to stemming the tide of communism.

To sum it up—I appreciate very much the opportunity to have made this trip. It showed me that the South Koreans are a friendly, energetic, and brave people. They love the United States and, most of all, are truly grateful for our help.

Mr. ALBERT. Mr. Speaker, I thank the distinguished gentleman for his kind remarks, and for his contribution.

I now have the honor of yielding to the distinguished chairman of the Committee on Ethics and Standards, and one of the ranking members of the Committee on Armed Services, whose experience and knowledge were of valuable assistance to the entire delegation during our trip, the gentleman from Illinois (Mr. PRICE).

Mr. PRICE of Illinois. Mr. Speaker, I want to first compliment and congratulate the gentleman from Oklahoma, as did our ranking minority member on the trip (Mr. BETTS), on the manner in which the gentleman from Oklahoma conducted this committee in its mission to South Korea. I felt it a privilege to serve on that committee.

I was impressed with the warmth and the genuineness of the reception we received, not only from the officials of the Republic of Korea and members of their National Assembly, but from the average South Korean with whom it was our privilege to come into contact.

I followed very closely the remarks made by the gentleman from Oklahoma, and the gentleman accurately stated the situation as we found it in that country. The gentleman also accurately stated the reception we received from the members of the National Assembly.

It was our privilege to visit with the Speaker of the National Assembly, the

Vice Speaker, the leader of the majority, and also the leader of the opposition party in their assembly. We found a stable government there. We found a good relationship between the executive and the legislative branches. We found most of all a genuine gratitude on the part of the people of South Korea for the contribution that we made in preserving their independence. We found that those people, having been assisted by us in maintaining an independent government, recognize the importance of other people lending a hand to other nations when their independence is threatened. That is the reason they have a large military force today in South Vietnam. That is the reason they understand what the problem is in South Vietnam. They understand aggression. They understand threats of aggression. They are prepared to fight not only to maintain their own independence, but to help others of their neighbors in Southeast Asia maintain their independence.

Mr. Speaker, I feel that actually the Korean war has been only a suspended war. Those of us on the committee who had the opportunity to visit the demilitarized zone and to talk with both our own forces and the forces of the Republic of Korea who are manning the demilitarized zone, understand that there is still a threat in that area of the world, and it takes watchfulness in every hour of the day to keep that threat from materializing into another all-out aggression.

I listened to the remarks of the chairman of the House Committee on Agriculture, the gentleman from Texas (Mr. POAGE) who was the ranking member of our committee. I wholeheartedly agree with the gentleman when he suggests that we should do more in providing adequate equipment to the forces of the Republic of Korea.

We have provided those members of the ROK Army who are fighting with us in South Vietnam with the most modern of equipment, and I believe we should go further and provide the full military force of South Korea with the most modern of equipment because I know that this equipment will be used for the defense of free nations in Southeast Asia. With that strong military force maintained in South Korea, and mostly of their own personnel, we will have a bulwark of defense against further aggression in that country.

I know of nothing that will contribute more to security in Southeast Asia than providing adequate equipment and the most modern equipment to the ROK Army.

It was a distinct pleasure to go to South Korea to meet with their legislators. I might say that on the committee that the distinguished Speaker of the House of Representatives selected to make this trip there were Members like the gentleman from Texas (Mr. POAGE), who is chairman of the House Committee on Agriculture, and Members who sit on various committees in the House of Representatives. So it was a cross-section of committees. We found in the national assembly of South Korea almost our counterparts in government. So it appears they have used as a blueprint the democratic form of government that they find in our country and are demonstrating it throughout the Asian world. They have their Committee on Agriculture. They have their Committee on Armed Services. They have their Committee on Foreign Affairs. The members of our group who serve on those counterpart committees in our House of Representatives met with these particular groups so that there was a good working relationship between the members of the National Assembly and the Members of the Congress of the United States.

We found that parallel, but most of all we found a strong feeling of alliance between the people of South Korea and the American people. I think we would do well to expand this feeling, to improve upon it, and to continue to hold the friendship of this great and wonderful people.

Mr. FRELINGHUYSEN. Mr. Speaker, it was indeed a privilege for me to visit Korea for the first time as a member of a delegation of House Members led by the distinguished majority leader, the Honorable CARL ALBERT.

It was unfortunate that you, Mr. Speaker, were unable personally to lead the group. However, you could not have chosen a more suitable stand-in. As chairman, the majority leader represented the delegation with intelligence and dignity, in a completely nonpartisan fashion.

As a group, the entire delegation—diverse with respect to political viewpoint, interests, age, and standing in the House—has only the highest commendation for his leadership.

Mr. Speaker, I have long believed that understanding can be greatly enhanced by such parliamentary exchanges, even if on an irregular basis. This was no exception.

Mr. Speaker, this was a most appropriate time to send this delegation. South Korea is rapidly moving toward economic viability, and in recent years has begun to play a positive and active role in the international community. It has become a leading advocate for regional political and economic cooperation in Asia.

At the same time, however, it is experiencing increasing security problems with North Korea, which seems bent upon renewing hostilities. Notwithstanding this immediate threat, South Korea has contributed almost 50,000 troops to the free world forces in South Vietnam.

We share with the Republic of Korea many of the same problems and responsibilities. Our soldiers, under the banner of the U.N., man battle positions, shoulder to shoulder with the South Koreans along the demilitarized zone in Korea. We are fighting side by side in Vietnam. Our objectives are the same. We both seek a stable, peaceful, and independent Asia, and the Koreans determination to resist Communist expansion and aggression is as unwavering as our own. There is a lot at stake in our relationship with South Korea. I hope our counterparts in the Korean National Assembly are reassured as to our continuing deep interest and support.

I should like briefly, Mr. Speaker, to pay tribute to South Korea's important economic progress. It was a great pleasure for me to visit Korea and see firsthand the tangible results of U.S. aid, which I have so long supported. In Washington it is difficult to visualize the problems facing Korea along with its development needs and defense requirements. When you can see just how much is needed and how few resources are available to meet these needs, then, and only then, can there be a true appreciation of the immense accomplishments of this small nation.

AID officials in Korea described to us in considerable detail the many gains and dramatic improvements in the key economic indicators and in the people's standard of living. They pointed out, however, that Korea still faces many economic problems. But, they believe, with well-designed policies, hard work, and continued political stability, the situation will continue to improve rapidly. By 1971, Korea should be on the verge of self-sustaining growth.

Our assistance is still required. Loans and other forms of economic aid are needed to maintain the current level of growth. Materiel and equipment to maintain and modernize the military forces are essential if they are to remain a credible deterrent. I intend to support such assistance both in committee and on the floor.

In closing, Mr. Speaker, I want to call attention to the warm reception and kind hospitality of the Korean people. I shall long remember my visit with them. Also, I want to thank the many United States and Korean Government officials who made it possible for our short stay to be so productive, and mutually beneficial. Especial recognition must be given to the tremendous efforts by Speaker Rhee and Vice Speaker Chang of the National Assembly to see that nothing was overlooked in providing for our fruitful visit.

Mr. BOLAND. Mr. Speaker, I would like to join the distinguished majority leader, Mr. ALBERT, in discussing the exchange trip we made early last month to the Republic of Korea, a spirited young democracy modeled after the political system here in the United States. In response to an invitation extended to Speaker MCCORMACK by the Honorable Kyung Soon Chang, Vice Speaker of Korea's National Assembly, Mr. ALBERT led a delegation of 22 Congressmen to Korea the week of February 28–March 8 for an exchange of views with that nation's legislators. The trip, Mr. Speaker, far exceeded my expectations. Talking frankly with Korea's able legislators and administration officials, touring the country's cities and military bases, learning firsthand of the remarkable economic and cultural growth that has thrust Korea into the forefront of Asian nations, I found the trip one of the most meaningful and rewarding that I have ever experienced. Our talks with Korean leaders were quite unlike some informal intergovernmental conferences—conferences that, unfortunately but understandably, turn out to be little more than polite shams characterized by exchanges

of affable banter and other trivialities. The Korean conferences were candid, open, and lively. I feel sure our talks with National Assembly members will help strengthen the traditional political and economic friendship between the United States and the Republic of Korea.

My first impression of Korea was its dramatic physical beauty: timbered mountains in the east, plains that sprawl out for hundreds of miles in the southwest, cities that present a striking mixture of graceful oriental architecture and giant skyscrapers. The climate—brisk and cold during our trip—is not unlike that of our own Northeast. The phrase "land of contrasts" is, of course, a cliche so worn that even magazine editors have abandoned it. Yet the saying fits Korea aptly. There you can find poverty next to affluence, sophisticated technological installations next to peasants' hovels, kimonos next to miniskirts.

The Republic of Korea faces a double challenge in the 1970's: continuing its economic growth while defending against the constant menace posed by its Communist neighbor to the north. North Korea's terrorist assaults against the Republic of Korea have been growing more and more frequent. Rattling its sabers and flexing its muscles at every opportunity, North Korea has made plain its intent to subjugate the struggling young democracy at its southern borders. What was once routine harassment near the demilitarized zone turned into armed clashes in the 1960's. The DMZ seemed to bristle with tension when we toured it last month. In 1968—the year North Korea stepped up its strident propaganda barrage against the Republic of Korea—it staged two spectacular acts of aggression: the attempted assassination of President Park and the seizure of the U.S.S. *Pueblo*. Pledged to defend South Korea against armed attack, the United States remains that country's greatest ally in this era of new North Korean belligerence.

Despite the ever-present threat from its Communist neighbor, the Republic of Korea has made truly staggering economic gains over the past decade. The economic growth rate, for example, jumped all the way from 4.2 percent in 1961 to 13.1 percent in 1968. The investment rate—the fuel of economic growth—nearly doubled from 13.1 percent to 24.5 percent in the same period. And merchandise exports swelled from $43 million to $500 million, an increase of 12 times. The single most dramatic index of Korea's economic growth is its capital city of Seoul. Its buildings reduced to rubble and its people facing starvation at the end of the Korean war, Seoul is now a booming metropolis with a modern skyline. Korea's continued growth hinges on economic aid from the United States—aid that, quite clearly, must be continued. The great strides Korea has taken in economy have been matched in health and education. Korean life expectancy, for example, increased from 33 years in 1953 to 52 years in 1967. And, as just one further example, more than 95 percent of the country's school age youngsters are now enrolled in elementary schools.

All available evidence, Mr. Speaker, indicates that the Republic of Korea will continue its striking record of economic and cultural growth in the years to come.

I would like to express my gratitude to our host for the trip, Vice Speaker Kyung Soon Chang, to President Chung Hee Park, Prime Minister Il Kwon Chung, Speaker Hyo Sang Yi, and Deputy Prime Minister Chung Hun Pak, for their many courtesies.

I include in the RECORD at this point copies of letters I have received from Vice Speaker Chang; from Young Sam Kim, National Assembly floor leader for the opposition party; from National Assemblyman Cho Han Paik, and from Howard A. Rusk, M.D., chairman of the American-Korean Foundation, Inc.

NATIONAL ASSEMBLY,
REPUBLIC OF KOREA,
Seoul, Korea, March 10, 1969.

Hon. EDWARD P. BOLAND,
The House of Representatives,
The U.S. Congress,
Washington, D.C.

DEAR CONGRESSMAN BOLAND: It was indeed my pleasure and honor to have been able to invite yourself and the distinguished members of your House of Representatives to Korea and I am sure that the pleasure and honor are also those of our National Assembly and the People of Korea. I believe that you now have returned back to your country safe and sound.

I personally wonder whether the accommodations we arranged for your comfortable stay in Korea had met your satisfaction. However, as I stated sometime while you were in Seoul, I expect the next chance of extending to the even larger delegation what we would not afford during your previous visit to our country.

As anticipated by myself and by the People of our country as well, throughout the entire course of your visit we did best of our efforts to let all of the visting members look into the variety of realities we are facing with and listen to what Korea has to say about the betterment of the existing close ties between the two Countries. I firmly believe that our efforts have effectuated to a great extent in leading the occasion of the visit to the productive and fruitful result in this regard.

I sincerely hope that your recent visit will surely make a great contribution to the even closer ties between our Countries as well as to creating the most important motivation of cooperating by the legislative bodies for the interests of the two Nations. And I further believe that the visit will certainly initiate a step forward to the creation of the parliamentarians association which I proposed earlier.

Please allow me to extend my best wishes to you and your family.

Sincerely,

KYUNG SOON CHANG,
Vice Speaker.

NATIONAL ASSEMBLY,
REPUBLIC OF KOREA,
March 18, 1969.

DEAR HON. E. P. BOLAND: I wish to take this opportunity to express my sincere thanks for your visit to this country, and hope you have made a pleasant trip back homeland despite of the bad weather.

I am very sorry for that we have not had enough time to share more conversation with you due to your too heavy schedule. However, it is my great desire to get a chance to promote our friendships by opening the proposed next round table conference between the representatives of the United States and the Republic of Korea.

Hoping for your continued cooperation for the development of this nation, I remain.

Sincerely yours,

YOUNG SAM KIM,
Floor Leader, Opposition Party,
National Assembly.

OFFICE OF THE NATIONAL ASSEMBLYMEN,
Seoul, Korea, March 13, 1969.

Hon. EDWARD P. BOLAND,
The House of Representatives,
Washington, D.C.

DEAR HON. BOLAND: It was my real pleasure to meet you when you visited Korea. It was also unforgettable opportunity that I was personally able to talk with you on various subjects including our son who is studying in the Harvard University.

Through such an occasion as your visit to Korea it will really improve our mutual understanding between the nations and will create important political relations among the democratic free world.

As our news papers have announced, it was the first and largest American Delegation we have ever received since 1882 in which we have signed a Treaty of Amity and Commerce with the United States. Your visit to Korea also emphasized that your country is the most reliable one among the friendly nations of today.

I am sorry that I was not personally able to treat you because of the heavy schedule you had. Mrs. Cho and I talked about you and we have decided to send you a small gift as a monument. This is the one I have personally ordered.

I am writing to my son, Sung Il, that he make a courtesy call to you at his convenience.

Meanwhile, I do wish you will be healthy and most prosperous in developing your political life.

Sincerely yours,

CHO, HAN PAIK.

THE AMERICAN-KOREAN
FOUNDATION, INC.,
New York, N.Y., March 14, 1969.

Hon. EDWARD P. BOLAND,
Representative from Massachusetts,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: It was good to read of your recent visit to Korea. It occurred to me that you would be interested in the attached Annual Report of the American-Korean Foundation's activities there.

We at the Foundation are proud of our part during the past seventeen years in rehabilitating South Korea in the general areas of health, welfare, housing, agriculture and education.

If it is not too much of an intrusion in your busy schedule, I would appreciate any comments or observations regarding your trip that you may have.

Cordially,

HOWARD A. RUSK, M.D.,
Chairman.

Mr. BROOMFIELD. Mr. Speaker, I have been privileged to enjoy a long association with the Republic of Korea and a close friendship with its people as the ranking minority member of the Subcommittee on Asian and Pacific Affairs of the Foreign Affairs Committee.

The economic growth and vitality of the Republic coupled with the patriotism of its people have been a continuing source of inspiration and encouragement to me.

I am deeply grateful for the Republic's willing contribution to the war in Vietnam and for the skillful and courageous performance of its 50,000 troops.

As a principal delegate to the 22d General Assembly of the United Nations

in 1967, I assumed with special enthusiasm the responsibility of presenting the arguments of the U.S. Government in opposition to withdrawal of U.N. troops from Korea.

For these reasons and a great many more I welcomed the establishment of an interparliamentary exchange between the Congress and the National Assembly of the Republic of Korea. And, I was most pleased to be invited, Mr. Speaker, to join with my colleaguges in this exchange.

Under the able leadership of our majority leader, the Honorable CARL ALBERT, our meetings with the members of the National Assembly and the other branches of the Korean Government were meaningful contributions to continued strong ties between our two nations.

The success of the exchange was due in large measure to the skillful preparation and thorough planning of our host, the Honorable Chang Kyung Soon, Vice Speaker of the National Assembly, and to the hospitality of all of the members of the Assembly.

Special contributions and insights into the goals and aspirations of the Republic were provided in meetings with the Honorable Park Chung Hee, President of the Republic, the Honorable Chung Il Kwon, Prime Minister, the Honorable Choi Kyu Hah, Foreign Minister, the Honorable Im Chung Sik, National Defense Minister, and many of the other distinguished members of the Government.

Through all of these discussions, Mr. Speaker, the reappearing themes were the Republic's remarkable economic vigor and its strong and determined defense posture.

In the midst of its second 5-year plan, the Republic is aiming for self-sufficiency in food-grain production, a doubling of international trade, and a 10-percent annual growth in gross national product through 1971.

Its economy rests on the solid foundation of a variety of major industrial enterprises including power, iron and steel, petrochemicals, and transportation. It is buttressed by rapidly expanding production of coal, fertilizer, cement, flat glass, and plywood, the latter a major export commodity.

New, large-scale harbor facilities are under construction in conjunction with the building of new petrochemical complexes, an integrated iron and steel mill, and cement plants. Multipurpose dams are being built for irrigation, electricity, and industrial water supply.

Railways are being expanded and electrified, and a massive highway construction program scheduled to be completed by 1971 will make virtually all major population centers accessible by a day's travel.

Credit for this remarkable recovery from the devastation in which the Republic found itself following the 1953 armistice belongs to the intelligent planning of the Government and the industry of its people.

Nevertheless, Americans can take a measure of satisfaction in the helpful role they played in assisting in this achievement. Like Taiwan, the Republic of Korea is one of the finest examples of the wise and prudent use of foreign aid.

As U.S. grant aid is phasing out, the Republic is turning to the Export-Import Bank, international lending institutions, and private sources for financing these projects.

The scope of economic planning and activity reflects a high degree of self-confidence and optimism.

But, the Republic's confidence and tangible accomplishments must be viewed realistically against the perpetual threat of disruption and aggression from the north.

There has been mounting evidence since 1966 that the north is organizing its population, diverting its economic resources, and stockpiling armaments toward a massive increase in infiltration and terrorism.

The dramatic and highly visible prosperity of the Republic undoubtedly has helped encourage the north to attempt to disrupt the south's economy.

Infiltration has increased steadily since the October 1966 speech by North Korean Premier Kim Il-Sung calling for stepped-up guerrilla warfare against the south.

While the United Nations Command recorded 59 significant incidents of infiltration in 1965 and 50 in 1966, the figure jumped to 338 in 1967 and a near equal number in 1968.

Most dramatic and potentially explosive of these was the abortive January 31, 1968, commando raid on the Blue House, the official residence of President Park Chung Hee.

Two days afterward the U.S.S. *Pueblo* was seized, and on April 14 the north launched a surprise attack against U.S. security personnel at Panmunjom.

In late October a company-sized force of 120 heavily armed and highly trained guerrillas intruded through the eastern coastal area to revolutionize secluded mountain villages.

We can take comfort and encouragement, Mr. Speaker, from the fact that all of these aggressive forays were defeated by the concerted counteractions of the Government and the people.

While planes and equipment provided the Republic by the United States are in need of replacement and modernization, North Korea has been stockpiling significant quantities of conventional and sophisticated equipment supplied by the Soviet Union.

The north has hardened its defenses and dispersed its cities to protect against heavy air attack and coastal bombardment of the sort we delivered in Vietnam.

In addition, guerrilla battalions are being trained in the north with the assignment of total harassment in each of the eight provinces that make up the Republic.

It was from this guerrilla battalion that men were drawn to form the commando team that attempted to assassinate President Park last year.

And, despite an economy that is suffering from lack of growth, the north is devoting larger proportions of its budget to military purposes.

While we can only speculate about the long-range intent of this buildup, it is clear that continued infiltration and terrorism in the countryside could interfere with the rate of foreign investment in the Republic which has grown steadily during the past several years.

At a time when the Republic is looking for alternatives to U.S. grant aid scheduled to phase out in 1970, a significant drop in foreign investment could seriously dampen its economy.

The dangers to the Republic from the north are both real and immediate. The outlook is for more infiltration and increased attempts at subversion.

The Republic faces the task of continuing to counter such dangers without jeopardizing either its economic growth rate or the measure of personal freedom its citizens now enjoy.

The Republic of Korea will require all of the material assistance and moral support that the United States, and others, can muster, if it is to be successful in this undertaking.

That is why, Mr. Speaker, the firsthand look which this interparliamentary exchange provided key Members of Congress was so vital. And that is why, Mr. Speaker, it is my hope that this type of exchange will become a regular and important part of our relations with the Government of the Republic of Korea. It is a foundation on which we can build enlightened and informed policy—policy which responds to symptoms of developing problems rather than crises.

Mr. O'NEILL of Massachusetts. Mr. Speaker, it was my honor and privilege to visit the Republic of Korea as part of the delegation headed by the distinguished majority leader. I commend him for taking his time to express our gratitude to our gracious and generous hosts and to inform our colleagues of the great strides being made in that nation. I benefited personally from this visit and am happy to have been able to add to my knowledge of Korea and Southeast Asia.

Our cooperative effort for the security of Southeast Asia makes the alliance between the Republic of Korea and the United States strong and lasting, added to this, the friendship and understanding achieved by the Members of this body and our Korean hosts will, I am sure, strengthen the bonds between our two nations.

Our Government has assisted many developing nations around the world with varying degrees of success, but I am overjoyed to report to the Congress that our aid to the Republic of Korea is one of the most worthwhile investments ever made. From the ruins of the Korean war, the people and Government of Korea have developed a strong, diversified, and progressive economy. For the 5-year period, 1962 to 1967, the per capita gross national product has increased 7 percent each year. Agriculture production increased 25 percent in the 5-year period 1962 to 1967. The Central Government's domestic revenues increased 49 percent each year from 1964 to 1966, and what is definitely significant for our consideration is that the share of the Government budget supported by the U.S. aid program declined from 35.3 percent in 1964 to 11.8 percent in 1968.

I believe this is one of the finest ex-

amples of our aid assisting a nation in developing its own resources. The Republic of Korea gradually and increasingly is taking over those projects formerly dependent on U.S. aid. In truth we have helped Korea to help itself. This has been accomplished only because of the dedication and determination of the people of Korea and their chosen leaders. This former agricultural nation is developing industry and diversifying its economy and production. It is extremely gratifying to me to have seen the great economic growth of this constantly threatened nation. The Central Government hopes and is working for the day when U.S. aid will no longer be needed. They project and are planning for a date only 2 years hence.

The Republic of Korea is a bastion of strength in troubled Southeast Asia. Its Government and its economy are stable, progressive and enjoy the support of the people. They have proven themselves to be good and loyal friends. Their dedication to the cause of freedom and justice is evident. They have an open society and do not fear competition in industry, political parties, or the press. They have fought and been successful in suppressing the threat from North Korea and have withstood the constant harassment of infiltrators and terrorists. They appreciate and recognize the great need for the United Nations force within their country but are determined to bear the greatest portion of their nation's defense as they can.

We visited the demilitarized zone, and I was greatly impressed by the high morale of our troops and the Korean troops. I am sure, however, that both morale and effectiveness could be improved if the means for defense were updated. The forces of the Republic of Korea are now using to a great extent F–1 rifles. I believe it would be in our interest, as well as in the interest of Korea, to modernize the weapons.

American interests lie with a stable, progressive, and free Southeast Asia. Korea is the finest example of that wished for stable democracy. We must continue to help her help herself and must see that her need to defend herself does not negate her economic growth and political stability. What, perhaps, most impressed me was the overwhelming desire of the Korean people and their elected leaders to insure that political and economic growth were not endangered by the continuing need for defense. They are determined to remain free and democratic and are dedicated to both political and economic independence.

As varying pressures are applied to us to allocate funds for both domestic and international needs, we must set priorities. I am hopeful that continued aid to Korea will be high on the list of each Member. Korea's development is one of the finest examples of what American aid and cooperation with a dedicated and determined nation can achieve.

Mr. ALBERT. Mr. Speaker, I thank the gentleman. I would like to add that every member of this delegation reflected a credit on the House of Representatives and on our country.

I yield to the gentleman from New Jersey (Mr. GALLAGHER).

Mr. GALLAGHER. Mr. Speaker, I, too, wish to join with my colleagues in thanking the Speaker for allowing me the privilege of participating in this meaningful experience.

I would like to compliment the Speaker, too, on the sensitivity that he demonstrated in making these meetings and this exchange possible. I know of no greater friend that the United States has in the world than South Korea and I know of no greater subject of greater importance that which our two countries attach to a mutual exchange of ideas and hopes.

There was a certain sadness about returning to Korea and to see, 17 years later, American troops and Korean troops still improving frontline foxhole positions, and in excess of 500,000 troops still maintaining the lines in what has been an uneasy truce for those 17 years. There is a sadness to see Korean men who have grown old maintaining the frontlines for their own freedom, a sadness also about the amount of material and expense, and the number of lives that have been poured into that area.

Yet, also, there is a sense of reality about it. There are people in our country who demonstrate for peace, yet, I know of no people who really want peace more than the South Koreans and I know of no other people who want peace more than the citizens of the United States of America. Yet the world demonstrates a different kind of reality. If those foxholes were not manned, if those lines were not patrolled night after night, day after day, terror would be streaming down from North Korea to kill our soldiers, to kill South Korea's soldiers, to assassinate their president, and to assassinate their officials. The harsh realities of the hostile world which faces the free world are summed up in Korea today.

Those people who think our presence in Vietnam is not a meaningful one, should see how meaningful our presence and the presence of troops are in maintaining the peace, the freedom and, yes, the very lives of innocent civilians in South Korea some 16 or 17 years after the firing supposedly stopped.

I know that other Members wish to participate in this discussion. But before I sit down I would like to join my colleagues in paying a high tribute to the majority leader of our party who was the chairman of our delegation. As a member of the Foreign Affairs Committee, I have been on many parliamentary exchanges. I know of no more important parliamentary exchange than this, and none has ever had greater leadership than our delegation had in CARL ALBERT. As a majority leader he has many roles, but I witnessed another CARL ALBERT in Korea, CARL ALBERT the sensitive diplomat, CARL ALBERT the leader of his country's delegation to one of our country's greatest allies.
